Dissenter*

*On Philosophy, History,
and Psychology,
1996-2024*

Chris Wright

Journal of a Dissenter, 1996–2024

Prefatory note: A journal from the age of 15 to one's 40s is bound to be, in places, pretty embarrassing, and unintentionally very funny. I used to think my journal would be of interest to future readers—wanted it to be “the most intellectually rich document in history”—and years ago even wrote this table of contents for it. My grandiose hope was that I might help preserve certain aspects of our culture's heritage from the global conflagration that I was sure is coming, by bringing them together into one document that could be read, perhaps, eventually, by those who survived the catastrophes. I also thought it might be worthwhile to record one individual's lifelong attempt to grapple with perennial questions. —But life cures one of youthful self-importance. Maybe someone will at least find interesting passages.

It might seem like shameless exhibitionism to make a document like this public, but I've deleted a lot of personal stuff and changed names. (I've kept some personal passages, however, because they depict common experiences and youthful psychological tendencies.) There's little reason for anyone to care about the author. What might be of interest, rather, are the general truths—about society, history, humanity—that, hopefully, the journal expresses.

The perspectives on subjects of intellectual substance are surprisingly consistent over two million words. On social questions, the point of view is almost always Marxian. On the nature of the human mind, the perspective is rationalist, or innatist, nativist, semi-Kantian, Chomskian. On “the human condition,” there is a fair amount of existentialist alienation, albeit tempered by themes from the Enlightenment and Marxism. On gender roles and relations between the sexes, a polemic against doctrinaire social constructionism and radical feminism runs through the whole document. On “value theory,” the point of view is pretty consistently in the skeptical and empiricist spirit of David Hume, J. L. Mackie, and the “sentimentalist” thinkers of the Enlightenment. On consciousness and the self, the journal continually returns to methods and themes from phenomenology and even Buddhism. On academic and mainstream intellectual culture, the viewpoint is highly critical, not very different from the attitudes of Marx and Chomsky.

Since I still agree with all these (and other) positions, I'd say that one useful thing about the document is that, in a world of stunning irrationality and unintelligence, it lays out a rational and comprehensive worldview. But underlying it all is a simple intellectual and moral attitude: an anti-institutional humanism, a rejection of the specialized, bureaucratized, ‘professionalized’ way of doing things. Truth and humanity are not to be found in values exemplified by intellectual, cultural, political, and economic elites.

Table of Contents (Some of the page numbers might be slightly ‘off’)

High school, Buddhism, etc.....	4–17
Freshman year of college and summer in Madison.....	17–96
Sophomore year.....	96–141
Summer and fall in Europe, thoughts on morality and other topics.....	141–225
Second semester of junior year through first semester of senior year.....	225–302
Winter break in New Zealand, Australia, and Fiji.....	302–315
Second semester of senior year, summer as a camp counselor.....	315–371
Year in South Korea, forays into fiction, long discussions of Hegel and other philosophers, travels in Thailand and Vietnam.....	371–530
Return to the U.S., year in Washington D.C., poems.....	529–584
Two years in St. Louis getting a Master's in Philosophy; long papers on aesthetics (around p. 641), epistemology (658), methodological individualism (667), ontology (729), the mind-body problem (860), morality (868), Kant (947), the analytic/synthetic distinction (1022), etc.....	584–1032
Discarded chapters from a book I wanted to write.....	899–945
More chapters from that book.....	954–1000
Year in Boston as an ESL teacher.....	1032–1327
<i>The Book of Joe</i> , a satire of capitalist society in the form of the Book of Job.....	1044–1073

Some papers from college.....	1094–1133
Random excerpts from left-wing books and journal articles.....	1178–1208
Short story about the contemporary demise of traditional Vietnamese culture.....	1219–1229
Scattered thoughts on Hannah Arendt, Max Weber, and traditional China.....	1249–1282
Two more years in Boston getting a Master’s degree in U.S. history; papers on fascism (starting at p. 1402), the Black Panthers (1417), the Russian Revolution (1527), education in the U.S. (1547), etc., and notes on Heidegger (1447), the history of modern philosophy (1425), analytic philosophy (1439), and Karl Polanyi (1559).....	1284–1713
Long paper arguing against the “clash of civilizations” idea with regard to Islam.....	1339–1358
Book on “worker cooperatives and revolution”.....	1590–1701
Ph.D. program in Chicago.....	1713–2299
Notes on: Robert Brenner’s history of the modern global economy.....	1856–1882
G.E.M. de Ste. Croix’s Marxist history of the ancient world.....	2166–2185
Thomas Ferguson et al.’s history of the decline of the Democrats.....	2186–2200
Christopher Lasch’s <i>The True and Only Heaven</i>	1829–1838
Richard Du Boff’s history of the U.S. economy.....	1942–1950
Georg Lukács’ <i>The Destruction of Reason</i>	2351–2375
Walter Rodney’s <i>How Europe Underdeveloped Africa</i> (starting at 1938); Jesse Lemisch’s leftist critique of academia (1935); Harry Braverman’s <i>Labor and Monopoly Capital</i> (1958); Leonard Bernstein’s history of modern music (1928); John Hobson’s <i>Imperialism: A Study</i> (1994); the Industrial Revolution (2001); Anthony Brewer’s <i>Marxist Theories of Imperialism</i> (2031); Roger Scruton’s <i>From Descartes to Wittgenstein</i> (2062); Walden Bello’s <i>The Food Wars</i> (2073); Jeffery Paige’s history of Central America in the 1980s (2075); Barry Eichengreen’s <i>Globalizing Capital</i> (2096); David Harvey’s <i>A Brief History of Neoliberalism</i> (2105); Bertrand Russell’s <i>The Problems of Philosophy</i> (2108); Bukharin’s <i>Imperialism and World Economy</i> (2113); David Graeber’s <i>Debt: The First 5000 Years</i> (2127); U.S. labor history (2159); Friedrich Lange’s <i>History of Materialism</i> (2200); Walter LaFeber’s works (2260); Staughton Lynd’s <i>Intellectual Origins of American Radicalism</i> (2278); George Novack’s <i>Empiricism and Its Evolution: A Marxist View</i> (2292); Eric Foner’s <i>Reconstruction</i> (2311); C. R. Gallistel’s <i>Memory and the Computational Brain</i> (2330); Karl Kautsky’s <i>Foundations of Christianity</i> (2276); Maurice Cornforth’s <i>Marxism and the Linguistic Philosophy</i> (2376); Gabriel Kolko’s <i>The Triumph of Conservatism</i> (2336); and many other works	
Articles and other writings.....	2383–2758
Notes on science, philosophy, politics, my son Aidan, etc.....	2758–2853

September 22, 1996¹

For the past year and a half I have been confused and, in general, unhappy. The unhappiness has at times been intense and at times hardly noticeable, but it has always had at least a slight damper on my temporary feelings of artificial contentment. But enough of these vague references; I'm unhappy because, in short, I'm wasting my life. How am I wasting it? In several ways. First of all, I'm not being virtuous. I was born with a foul temper; when it flares up, there's no stopping it. Only time can gradually ease my anger—but unfortunately, there's no telling what my psychotic neurons will make me do before they're stopped by the Great Healer. As a result, all of the attempts I've made in the past year to become virtuous have failed. My temper isn't the only reason, but it's a big one. Another is that my personality just won't allow it. I had to constantly remind myself to be generous, to be forgiving, or to be unselfish, and in the end I got sick of it. It just wasn't working. A third reason my life is being “wasted” is that I am one of the quietest kids I know. I rarely talk to my fellow students, and consequently I have hardly any friends. As if that weren't bad enough, I now have a slight stutter, so when I do talk I sometimes end up making a fool of myself. How can I live a prosperous and happy life if I rarely talk to anybody? These three reasons—and a few other minor ones—have led me to the conclusion that I absolutely must change if I want to have a happy life. But for the last year and a half I have tried every way I could think of to become virtuous, and I've failed. A few months ago, however, I think I may have found the answer.

It was on a trip I made to my uncle's house. John, who is a Buddhist, has more than a hundred books on this religion. When he saw me skimming through one of them he offered to give it to me. For the next few weeks I was all but attached to it: I realized that Buddhism, one of the few religions without a “supernatural” god, was going to save me. It was like a miracle: I'd come upon this book when I needed it most, and practically everything in it was related to solving my depression. At first, many of its ideas seemed highly implausible, but gradually I came to see they weren't so ludicrous. Immediately I resolved to meditate every day, so as to increase my “mindfulness”....but then the evil known commonly as ‘school’ started. This brought a temporary halt to my hopes and plans. Due to the excessive amount of homework I had, I didn't have enough time for prolonged periods of meditation. And I still don't have enough time. Today I finally decided to look at the book again, hoping I'd remember the proper way to meditate. My hopes were again dashed, though, when I opened to a page that addressed impermanence and selflessness. As I read about how there is no self, only empty thoughts and sensations, I realized I would never be able to truly believe this. And maybe I wouldn't even want to: it would mean that everything is trivial, and nothing matters. In fact, that's more or less one of the teachings of Buddhism. How could I be motivated to do anything if I believed that nothing mattered? I couldn't. So now I am again at a roadblock which seems, at least for now, impassable. One thing I do know, though: the road to happiness is in some way connected to Buddhism, because millions of people have in fact reached true happiness through this religion. Furthermore, I'm sure that the authors are right: the loss of the self can in some way lead to happiness. The problem is finding a way to reconcile this belief with all the values I've been taught. This task is indeed daunting, but I have no doubt that I'll eventually master it....somehow.

September 23

Whenever I stop to reflect on life, I'm overwhelmed. I was born even though the chances of that were infinitesimal. [...] The odds that I would be this kind of person are quite small, so I don't intend to waste this lucky combination. The problem, though, is that so far I have wasted it—because of my temper and my reclusive personality.

Buddhism is the solution. I'm almost certain that, by renouncing the self and believing that all our thoughts are just ‘processes’—just temporary conditions—happiness will come. Equanimity will result

¹ [Periodically throughout the journal there are bracketed statements. In nearly all cases, these are later interpolations. The bracketed ellipses signify deletions.]

from the belief that these thoughts are not ‘ours’, and this equanimity will be the beginning of a lifetime of imperviousness-to-suffering. There’s one difficulty, however (as I said in the last entry): if ‘my’ thoughts are not actually mine—if they’re just fleeting processes that don’t ‘mean’ anything—how can I motivate myself to do anything? Sooner or later, though, even if I never think about Buddhism again, I’ll have to confront this problem, because ‘deep down’ I already know that thoughts are simply neurons firing, and my ‘self’ is just these neurons doing their job and producing so-called thoughts. Since I’ve never deeply thought about this, the idea seems foreign and extremely depressing. Even so, I’d be much happier if I could just meditate for months and finally understand the nature of selflessness.

October 13

So far I’ve only written about depression; this entry is about a different problem I’m having. A much less serious one, but a problem nonetheless.

I’m nearly infatuated with sex. Whenever I see a beautiful girl, that’s all I think about. [...] I know this is the case with many boys, but I doubt it’s this serious with them. Sex, sex, sex! This thought occupies much of my time at school. When I look at girls I’m actually surprised I don’t lose control of my salivary glands. That’s how bad it is. I guess what it comes down to is that I am a skinny, awkward, sexually frustrated kid who happens to be intelligent and fairly reflective. The first three things, however (even the skinniness, indirectly), would change if I were to meditate on Buddhism every day, and eventually become enlightened. My self-confidence would increase, I wouldn’t be shy around people (because I’d know they aren’t really people with a ‘self’, they’re just a collection of thought-processes that produce the illusion of the self), I wouldn’t be obsessed with having passionate sex every day of my life (because Buddhism would help me lose most of the ‘desires’ I feel today), and I would exercise regularly to keep my body in shape. (Buddhism isn’t wholly concerned with the mind; it also teaches you to stay healthy.) [...]

[Deleted entry.]

February 10, 1997

The New Years resolutions have been successful so far. The pet one very much so (all my pets are still alive).

I mailed the letter to the Insight Meditation Center in January; I didn’t get a reply until last week. The woman who wrote to me took the time to write a long one, which was nice, but unfortunately it didn’t answer my questions well. It basically just repeated what all the books I’ve read have said. Fortunately, another book I got at the library (*In the Lap of the Buddha*) includes a list of meditation centers in the country, so I can mail another letter to a different place.

[...]

March 18

I’m going to keep a record of all the questions and doubts I have about Buddhism; this way, when I finally decide to start meditating seriously I’ll know what issues I have to sort out beforehand.

1. If our bodies are merely collections of cells and body parts, and there is no real me, no real self, how can people who gain a deep understanding of this be motivated to do anything in life? What’s the point? If there

is no soul (which I admit there surely isn't), then aren't humans just animals, except with bigger brains?

2. Buddhism says that people should gain complete equanimity and never be consumed by emotions, but doesn't that mean we should never be consumed by love? And isn't love one of the greatest pleasures in life? Isn't love a totally natural part of life?

3. How do people conquer pain? Supposedly you have to accept the pain and concentrate on it—and have no aversion to it whatsoever—but does this really work? How would concentrating on the pain get rid of the pain?

[...]

March 28

From now on I'm going to write down the basic beliefs of Buddhism, and its suggestions for the solutions of different problems, so that when I finish the book I'm reading (*In the Lap of the Buddha*) I won't forget everything I've read. Also, in a few days I'm going to start researching the mind, to find out how cells activated by tiny surges of electricity can create thoughts and ideas, and even the illusion of a self. Who knows?—maybe I'll even discover that my whole belief system is wrong, and that humans actually do have a 'self'—that they aren't just trillions of cells working together to prolong an empty life with empty thoughts, just as everything else is empty.

FEAR— Obviously we shouldn't try to overcome certain forms of fear, like the fear of what might happen if we step in front of a moving train. The fears that protect us from physical and psychological harm are usually justified. But in general, when you feel fear you should ask yourselves these questions: What do I feel right now? Where do I experience it in the body? Where do I experience it in the mind? Is there resistance or contraction of any kind? The most important thing is to accept the fear and analyze it. (Indeed, this is essentially what Buddhism advises with regard to most problems.) Eventually it will begin to lose its power over you.

PAIN— To conquer pain you should first realize that there's a difference between the actual pain and the worry it causes. For example, if you're sick and you're constantly groaning and wondering how long you'll be sick, etc., you're just increasing the suffering. Instead of concentrating on the pain, concentrate on the transience of your sensations. Even if your pain is due to a fatal disease and you know you're going to die, it shouldn't matter—because death doesn't matter. Death is part of life. (I'll talk about death later, though.) So, in general, just surrender to the pain: accept it and analyze it, and you'll see that it isn't "solid". It comes and goes. If you're completely "in the moment"—not concerned about what'll happen if the pain doesn't subside—then you'll lessen the pain considerably.

DIVINE ABODES— These are lovingkindness, compassion, sympathetic joy, and equanimity. Here are instructions for meditation:

Lovingkindness

-give attention to the breathing

-when the mind feels calm, repeat the following phrases: May I be happy. May I be peaceful. May I be filled with love and kindness. May love fill and heal my body and being.

-be aware of any feeling or "stirring" there might be

-if there's no lovingkindness, it's okay. Eventually there will be.

-say those same phrases about a person you love

- then say them about someone you don't know very well, and then someone you don't like
- include all creatures in your meditation; wish for the happiness of everybody and everything

Compassion

- think of the areas of difficulty in your life
- repeat these phrases: May I be free from suffering. May my pain be resolved. I care deeply about myself.
- think of someone who is suffering and consider their pain. Then recite those phrases.
- extend compassion to all beings
- wish that their minds be free of anger, terror, or any other suffering

Sympathetic joy

- think of a friend who is experiencing happiness
- direct these phrases toward him: May your happiness and good fortune continue. May prosperity and success never leave you.
- direct them to someone you envy
- wish every creature complete happiness and contentment

Equanimity

- think of someone you don't know well
- reflect on sentences like these: All beings are the owners of their karma. Good actions lead to good results; bad actions lead to bad results. Everyone must face his own situation. Although I wish only the best for you, I know that your happiness depends on your actions, not my wishes.
- think of specific people and say these sentences

FAITH AND DOUBT— We have to have faith in each moment. Forget about the past and the future; be aware of the present and let go of the yearning for stability. Life is insecure; instead of denying this insecurity, surrender to it. When there is doubt, step back and examine it. It's nothing. It's just one of the many empty experiences we have in life.

FEAR OF DEATH— Emotional states dissolve and pass away. They're not solid. No one controls them: they just come into existence and then pass out of it. Humans are the same way. We aren't solid; everything that happens in us is continuously dissolving and occurring again and dissolving—which means that we are dissolving also. So death is simply part of the lifelong process of beginnings and endings.

GENEROSITY— Everyone should be generous because we're all interconnected. We're part of nature and we're part of each other. But in the process of giving we should examine our intentions, our motivations for giving. If we're doing it because we want popularity, it isn't true generosity. Only if we truly want the recipient to be happy are we being generous. Taking care of nature also falls under the category of generosity, because everyone is interconnected and interdependent on nature. Ultimately, the most profound generosity is the loss of the self.

KARMA— Everything has a consequence that is either good or bad. For example, if you kill someone you might be arrested later in life; if you're generous you'll be happy. Etc. The theory of karma has so many holes in it I'll ignore it.

THE FIVE PRECEPTS—

1. *Refrain from harming.* Never hurt anyone or anything without first asking yourself why you are doing it. This way you'll know if the pain is in fact necessary and just.

2. *Refrain from stealing.* Many of us have stolen things, but at the time there was probably fear, confusion, paranoia and guilt. These emotions usually cause pain and sometimes self-hatred.
3. *Refrain from false speech.* Don't curse. (How does it feel to hear these words rather than soothing, sweet words?) Don't gossip. Don't engage in idle or frivolous talk. It has no meaning and can cause distraction and carelessness in the mind. Having a sense of humor, though, is important. Don't lie. It's wise to examine our intentions before speaking. In general, be kind when you talk, and if you suspect that your words will create unnecessary unhappiness (or if you're trying to be manipulative), don't say anything at all.
4. *Refrain from sexual misconduct.* Practice lovingkindness for whomever you're having sex with.
5. *Refrain from the use of intoxicants.* Pretty self-explanatory. 'Intoxicants' refers not only to drugs and alcohol but also to television and the like.

June 9

This is going to be the most important summer of my life. The summer in which I sort out every problem I'm having and get my life back in order. By the time school starts next year I'll be a new man. You're probably thinking it'll never happen; after all, this is exactly what I said last summer. This time, however, I'm more experienced, and I already have an idea how I'll make myself be more outgoing. I don't feel like describing it now; instead I'll write a list of everything I plan to accomplish this summer, so I don't forget. This way I can look back and decide whether I had a productive summer.

1. I'm going to take a six-week biology course at Roger Williams University to prepare for Bio. Med. next year.
2. I'm going to attend a one-week biology camp at RWU, dealing with DNA.
3. I recently got a job at a grocery store called Clements' Market.
4. I'll probably read a lot of material to prepare for the SATs at the end of next year.
5. Almost everything else I'm going to do this summer is related to changing my personality, or answering questions that have been plaguing me for a long time. I'll describe these in the next few entries.

[...]

June 13

The next thing I have to sort through is the resolution relating to music. When I made the resolution back in January I didn't explain why I wanted to start thinking about music, because I didn't know, and I didn't want to waste time figuring it out. But I should. I want to have a good, solid reason for becoming more involved in music—a reason that will keep me motivated for many years. Unfortunately I have no idea what it is.

....I've thought and thought about the problems I have relating to music, and I think I've partially solved some of them.

1. I want to know why I'm so interested in music. That is, I want to be sure I'm not wasting my time spending hours every day playing music. If it doesn't make my life more meaningful, what's the point of being obsessed with it?

2. Even if I decide that playing and listening to music are profitable activities, I still have to decide whether learning about music history and theory is.

3. One of my problems is that I always want to play impressive pieces in recitals. I suppose it's because I want recognition, but the reason doesn't matter. What I'm concerned about is whether I'd be motivated enough to play these pieces just for myself rather than in public. That is, I don't know whether I'd want to play them if the only person who would ever hear them is me. I want to convince myself that I

don't actually have to play them in public to make all the trouble of learning them worthwhile.

4. This summer I intend to make a list of all the different styles of music in decreasing order of quality. In other words, classical music would be at the top, and rap would be at the bottom. The only difficulty is that I don't know how to judge the quality of the music: is it based on beauty, or sophistication, or the expression of emotions, or what? Even more important than this, however, is the question whether tastes in music—or all of art, for that matter—can be disputed. How do I know that my taste for classical music is better than someone else's taste for pop?

5. I'm going to learn to appreciate music as much as I can.

I spent hours thinking about those five questions, but I finally gave up. [Deleted stuff.] (Incidentally, the piano pieces I'm playing are Beethoven's Pathétique sonata, Mozart's Fantasia in D-minor, Rachmaninoff's Prelude in C-sharp minor, and Chopin's Polonaise in A, Barcarolle, and the Fantasia-Impromptu.)

June 14

This summer I also plan to solve the problem of the self—specifically, whether such a thing exists. I'm going to read a biology textbook and a few other books about the subject; the combination of this and my six-week biology course at RWU ought to give me enough information so that I can form my own opinion.

If I can convince myself that there isn't a self, this might be one way to make myself talk more in school. After all, if humans are nothing more than bones and muscles and ligaments covered by skin, it would obviously be a lot easier not to care what people think of you. It would be like talking to a machine—except that the 'machine' can think. I know it doesn't make a whole lot of sense, but I'll figure it out this summer. If I decide that the theory is true, though, many complications will result. For instance, how will I be able to fall in love if I think that humans are nothing but machines? I'd be falling in love with a machine! Also, if I discovered that people don't have identities, as animals don't, how would I refer to people? I couldn't say 'Joe' or 'Christine'; I'd have to say, "Hello, all you cells. How are you doing today?" Maybe I could avoid this problem by telling myself that names are simply a convenient way of referring to trillions of cells; in other words, I'd be referring to the cells collectively. [Deleted discussion of a resolution.]

June 19

[This was a long entry describing my new job and various resolutions relating to it. Also my curiosity about what career I'd have (I was leaning towards biology). And I resolved to answer the questions 'Why is arrogance bad?' and 'How can I ensure that I'll never be arrogant?' Hilarious, like all of these entries.]

June 20

Forget about the egoism/altruism problem. I've been thinking about it for an hour, and I've decided that for the present I'll just assume I'd be happier if I were always generous and altruistic. It would be too complicated to read about the arguments for and against egoism, largely because an important argument against it is the idea that we're all interconnected—which is precisely one of the questions I have with regard to Buddhism. *Are we "interconnected"?*

So, I have to figure out whether I want to be an extremely generous person. That's my first task. Or rather, I have to rationally justify my inclination to answer that question affirmatively, and then I have to practice being generous—because it's good to have a mind rooted in generosity when you start doing

serious meditation, since it gives you more of an open mind (more “mindfulness”). In other words: first I’ll think about generosity and the interconnection of all beings; then I’ll think about lovingkindness, compassion and morality, and then I’ll start the meditating. (Incidentally, the way I’ll convince myself to be generous is by listing all the reasons I can think of to make people happy, and then going into the belief that we’re all connected somehow.) If I delve deeply into all these issues I’ll never get to the meditation part by the end of the summer, so I think I’ll only go into a little depth. [Etc.]

June 21

[...]

First of all, I should ask myself why I’m studying Buddhism in the first place. The main reason is that I want to eliminate as much suffering in my life as possible. One way to do so is to discover the truths of existence, such as the fact that we’re all interconnected. Discovering them eventually leads to decreasing the suffering in the lives of others. (For example, the theory of ‘interconnectedness’ is what motivates Buddhists to be generous.) As a result, it appears that the way to become happy indirectly leads to helping others become happy. This might sound a little selfish—in that making others happy is only an effect of wanting to make myself happy—but I’m also studying Buddhism because I want to be a better person. To summarize, eventually I’ll become happy by making others happy. If this still sounds a bit selfish, then so be it. I can’t make it sound any less selfish than that. [...]

June 28

For a few days after that entry I was totally obsessed with the self. I spent long hours every day wrestling with the notion of the self’s existence. I asked myself what people mean when they say “it is *my* mind”, or “*I* am the one who is ordering ice cream”; I asked Dad his opinion on various questions, and started reading a book of his called *Self-Knowledge and Self-Identity*. But a couple days ago I asked myself whether I really needed to discover the truth about the self in order to be happy, and in order to change my personality. I decided not. The question isn’t important enough to waste my whole summer on. Instead I’ll focus on more practical things.

August 28

The last month has been trying. But that’s an understatement. I was often in complete despair. Why? Because I didn’t know if there was any point to life. I didn’t even know if I existed, though at the time I worded the question differently (the rewording of which was actually the mistake that led to so many miserable, wasted hours). The question seems strange, but think about it: the self can’t be physical, because everything physical can be reduced to atoms and molecules that obviously, in themselves, can’t think. Even the brain can’t be ‘me’, the self, because the brain, of course, is composed of billions of cells [as the self is not]. Even if the theory that thoughts are created by chemicals and electricity and neurons isn’t true (which is possible, since the idea is inexplicable), I still don’t see how billions of cells could unify to create—to *be*—me. Maybe they can, but anyway, I quickly discarded it as an option. So I turned to the idea that the self is nonphysical. However, if the self is that which thinks—a theory that seems obvious, though I’m not so sure anymore—how can something nonphysical think? I suppose it’s possible that something nonphysical could be an *effect* (as thoughts are supposedly effects of neural processes)—but I’m not even sure of this. So it’s all very contradictory. I began to think there wasn’t a self at all. But since I was desperate to prove to myself that there was, I trudged on. [I’ve deleted a long description of what this trudging consisted of.] Using the knowledge I’d gained from the previous weeks (which was basically that it would take me years to figure all this out—if it were possible at all, which I’m no longer sure of), I decided I had

to find an answer that would have nothing to do with the complex, impossible ideas I'd been struggling with. It would have to be based on only the most obvious facts, the most simple questions. The simplest question, then, was 'Do I exist?' And the obvious answer was YES. How could I not exist? It's preposterously obvious. Its obviousness, though, wasn't enough to extinguish all doubts, so I asked myself again whether the possibility that 'I' am just thoughts and sense-perceptions upset me. I decided it didn't. *So what* if I'm simply the result of brain-processes? I still exist. I'm still conscious. *So what* if humans aren't "meaningful" creatures, in the strictest sense? We can still be happy, we can still enjoy life, we're still more aware of life than animals are. Why are we more aware? Because we can think, whereas animals can't. Sure, it's possible that *we* aren't the ones thinking—that we are mere thoughts, and therefore don't think—but at least I know that thoughts are produced somewhere along the line. (For now, I'll just assume that I am thinking, in hopes of making everything simpler. I still have doubts, but who cares? It's the most obvious solution I can think of.) Besides, right now I don't even care what we are, or what we're created by, as long as we exist. —As you can see, I still am lost when it comes to understanding the nature of the self, and I probably always will be, but at least I likely won't be tormented by the question ever again. [Ha!]

[Deleted entries.]

April 8

Sorry I haven't written in so long. [Don't be sorry. It was very considerate of you.] I've been thinking about Buddhism a lot lately, so I haven't had time. I've been slacking off, however, with regard to schoolwork, so you can imagine how surprised I was when I found out today that I'm the valedictorian of my class. It'd be nice to maintain this status, so I've decided never again to slack off. What's more, I'm going to actively seek out knowledge (about genetics, for instance) and I'm going to read much more than is required of me. I'll also read more novels, since I ought to enjoy this great stage of life as much as I can. Going to practice the piano as often as possible, though not the xylophone, since I'm not very fond of it. [...]

June 16

[Deleted stuff about my efforts to stop organizing my life around resolutions.] This past year was the most successful one in terms of being outgoing, mainly because of the pills I'm taking. I developed my social skills: for instance, teenagers have short attention spans, so it's wise not to dwell on one topic for too long if you don't want to seem stupid. Unfortunately I'm still not very assertive, since I find it hard to order people around and especially to swear at them. I don't like cursing in the presence of others (though I frequently curse when I'm alone), and I think this is one of the barriers to teenagers' taking me seriously. (I have no idea why.)

Here's a list of what I'll do this summer:

1. Be kind to my family.
2. Read novels, philosophy, history, biology, etc.
3. Play a vast amount of music. Chopin's pieces: Barcarolle, Nocturne in E-flat, Etude in A-flat, Etude in E, Berceuse, and maybe Valse Brillante. Beethoven's: the Pastoral sonata, the Pathétique and part of the Hammerklavier.
4. Talk a lot more and make more friends.
5. Think about various topics that have to do with improving my life.
6. Start exercising again.

August 17

My life has lasted an eternity, it seems. I feel like I'm a 60-year-old man, weary from hardships—from the tragicomic character of these past few years. I have seen happiness come and go like the feather floating in the wind in *Forrest Gump* so often that I hardly care anymore. This summer has been hard. For a time I was in despair; at other times I was certain I was finally recovering from adolescence. I don't even know what I want out of life anymore, aside from the clichéd idea of "happiness". I'm lost. No one will ever know how lost I am, and what a strange kind of "lost" it is. [...] I still have hope, though. I'll always have hope, no matter how much shit I'm forced to crawl through. But I've filed down the sharp edges of my definition of happiness, making it more dull, less glamorous, easier to accomplish. You may call it a form of defeat, but I call it experience. Acceptance.

August 18

I have reached the end. For three years I've been struggling to improve my life, with limited success; I've had enough. I can go on no further; this struggle is killing me. No one will ever know the depths my unhappiness has reached because of this struggle, which ironically was supposed to improve my life. The only option I have now is to forget nearly everything I've learned these past few years, and start anew. In this new beginning, however, I will not think about the fear of death, or the loss of the self, or the loss of arrogance, or the loss of fear, or the virtues of Buddhism, or anything that requires deep thought. I am sick of it; words can't describe how sick of it I am. [...]

Today I reread my journal. The last fifteen or so pages illustrated the depths to which my obsessive-compulsive thinking reached—and it is this that has caused me to become sick of the "struggle" more than anything else. So I'm not going to think about anything that requires deep concentration for the next several months. [...]

July 18, 1999

Hello, faithful reader. It's your old buddy Chris again. As you can see, I didn't write a single entry the entire school year. Never felt like it, I guess. But I'm happy to say I've gotten out of that rut. It's over. I've come out alive. I've experienced thousands of moments of depression, but I've lived through it. The human spirit can persevere if a naïve hope remains. Ha! Can it really be over? Can my obsession with self-change finally be over? [...]

I feel a peculiar equanimity—an equanimity which still is greatly attached to the world, but which has accepted most of my 'qualities.' As depressing as it sounds, I can truthfully say I don't care anymore. But that isn't to say I've lost my charming naïveté, or my irrepressible but cynical idealism. If anything, my idealism is stronger (though my naïveté has certainly diminished). The only aspect of my personality I still want to change is my introvertedness. But I know damn well I'll never lose the lack of self-confidence in social situations; the most I can hope for is that I'll learn to deal with it and forge on. Besides, I recognize that having *real* friends wouldn't solve all my problems—its novelty would vanish after several months. I would still continue to be bored often....

Speaking of which: the biggest problem at this point in my life is boredom. Too much emptiness. Not enough passion, enthusiasm, inspiration. I still love music, I enjoy reading—novels as well as philosophy—I play the piano, and in the past few months I've tried to write novels. But something is missing. There isn't really a purpose to my life. I'm wandering. Sometimes I read, sometimes I sit on Walley Street Beach for hours, sometimes I play the piano.... It's all random. There isn't a driving force like there used to be. For years I always had my "change" to think about during spare moments of boredom, but now....what's left? I rarely contemplate philosophy, for several reasons: I might become obsessed, and I don't care about vast areas of philosophy—such as ethics, metaphysics, and logic. Even Buddhism has lost

its hold on me. (I am by no means upset by that.) The only kind of philosophy I really care about is social philosophy.

Every day I spend hours on the cursed Internet (we just got it a week ago) talking to people in chat rooms. Oh, those meaningless, depressing chat rooms! Why do I feel the need to visit them? Rarely do I have interesting conversations. Already I'm sick of the Internet, yet I continue to spend time on it. Is it out of boredom, maybe? Of course.

July 19

I know my ambitions are unrealistic, but that hasn't extinguished the flame that has burned within me for I-don't-know-how-long. I am going to make a difference in the world; I am going to follow in the footsteps of Marx and lead humanity to salvation. [!] I am going to pick up where he left off.....wherever that is.

I know what you're thinking, so there's no point in my telling you. Maybe you're right. I don't know. I'll obviously have to adjust my plans in the face of disillusioning Reality, but I know I want to do something to alleviate the suffering of millions of people. Nothing else I can think of would give enough meaning to my life to satisfy me, so it comes down to this one noble ambition. One thing worries me, though: I might someday stop caring, since I don't have an excess of love for people 'in person'—and maybe not even in the abstract. [...] I just don't think it's in my nature ever to be truly content with what I have. I'm always searching for something else. Truth, change, redemption, "happiness"—there's always something just out of my reach. I've experienced this feeling too often to believe it's just an apparition. It's been the driving force behind four years of struggle against myself—against the very essence of who I am. That's how omnipresent it is.

July 20

It's strange that I've gone from being obsessed with happiness to not even thinking about it much. I still care, of course, and I still wish I were outgoing because it would make me happier, but happiness no longer seems to be my ultimate goal. My goal is to make an impact on the world. I think I'd sacrifice my own happiness if I knew it would help realize my ambition. But this doesn't mean I'm an unselfish person. I really don't have profound compassion for real people—only for the "concept" of people. [Not true.]

I think that one of the reasons I care more about helping humanity than about being happy is that I realize how illusory happiness is. It comes for a while and then leaves me in a haze of depression. As long as I can remember, I've wanted to "appreciate" happiness, but now I finally understand how impossible it is for me to "appreciate" anything. I can never live in the moment. My curse is that I'm constantly looking to the future, trying to accomplish something that will have an effect in the future.

It's hard to analyze my thoughts and feelings. Usually I don't know if I'm right in my conclusions, because...it's hard to tell what role the subconscious has in my thoughts. I try to take it into account when I examine them, but as you can understand it's always a shot in the dark. —I am composed of so many contradictions that rarely do I understand myself. For example, I'm arrogant behind the veneer of humility. (It's strange that I can be one thing on the surface and the opposite "deep down." My self-consciousness has split me into at least two (maybe three) very different people.)

July 21

I have to make a lasting contribution. One of the reasons I've given up on Buddhism is that it only affects *me*: if I became a Buddhist it would only affect *me*. I wouldn't be contributing anything to the world.

I suppose my obsession with having a legacy arises from my desire to know that after I die I won't be forgotten; that my accomplishments will live on for years, decades, centuries; that when I'm eighty years old I won't regret my life. And the only way I won't regret it is if I help give 'happiness' to a great number of people. 'Self-happiness' means more to others than it does to me; therefore I'll try to help them achieve it.

[...]

Every day I find myself stupefied by the depths that humanity can reach. I'm not talking about crime or violence; like most of us I've become virtually immune to any feeling of surprise at mankind's atrocities. I'm talking about something less extreme: maddening stupidity and ignorance. It surrounds us. The human race is saturated with it. The sad thing is that many people shake their heads at this thought when often they are the very ones who perpetrate the crime! So many stupid people think they are safe from the ravages of ignorance when in reality they are themselves its perfect manifestation! Thoreau thought that since most people daily go about their monotonous, pointless lives they must be 'courageous heroes' or some such. But the truth is that most of them are dim-witted buffoons, and this is what enables them to endure terrible monotony. The stupider one is, the less one cares.

Were it not for the equally fantastic achievements mankind exhibits, I would lose all hope for the future. Were it not for the likes of Karl Marx, Socrates and the Buddha, I believe I would despise humanity. It is these great men who are the redeemers; it is the reformers and the "wise" or "compassionate" who are the redeemers of humankind. Without reformers we would live in filth and misery; without wise men we would not recognize the possibility of Truth; without the compassionate we would not have an ideal to strive towards. And in between these categories are the titanic geniuses like Beethoven who add depth to mankind and make us proud to belong to it. The vast majority of us are simple-minded idiots. [...]

July 22

Earlier in the summer I tried to write a novel—several, actually, since I got bored with whatever I was working on—and although I abandoned my enterprise fairly quickly, I'd like to include a fragment of a story I began. It's just a lot of boring description, but I think the quality of the writing isn't awful:

The lonely house stood atop a lush hill on the Georgian coastline, overlooking a canvas stretched far beyond the horizon. The tall blades of grass danced in the dawn as the giant feathers above continued their pilgrimage inland, blown by great gusts of wind past the lonely house, toward civilization. A cliff continued where the hill lost its nerve; a jagged edge delineated the separation between the sympathetic curves of the hill and the merciless drop of the precipice, the bottom of which was licked by friendly waves. On the horizon could be seen rays of light peeking over the imperceptible slope of the Earth: a soft reddish-purple hue colored the sky, radiating in all directions from a single, not-yet visible source; a haze of golden air hovered around the edges of these radii and was reflected in the shimmering water below. The underbellies of passing clouds were illuminated by this vanguard of the sun: what was normally a shapely blob of off-white gases had become a crimson painting.

Standing conspicuously in the center of this unified whole was the lonely house. It was a small wooden building, 30 feet by 40 feet, rundown by decades of apathy. The sloped roof—shingled ages hence—had long ago lost its strength; it was now merely an eyesore visible to the passing clouds. Each bare spot remembered a particular storm, a gust of wind, a downpour of rain. The gutter along the edge was swamped with dirt, pebbles, twigs, shingles, feathers, chips of paint, excrement from careless seagulls. Two black shutters hung on each side of the house, bordering the windows opaque from filth collected over months and years; paint peeled in ugly chunks off the unsightly shutters, collecting on the ground below, only to be blown away by the wind. Surrounding the shutters was ten-year-old grayish-white paint, marred by dried rivulets of

rainwater defined by thin lines of dirt on the edges. These minuscule streams cut into the old paint, crept under the protruding lips of the dull wood, soaked into the pores, and contributed to the rotting of the lonely little house atop the hill that looked out onto the magnificence of the Atlantic Ocean.

The entrance to the house was on the east side. The paneled, red-and-white door had, along with the rest of the house, lost most of its color; all that remained were faded shades of grayish white and hints of a reddish hue in spots. If a visitor happened to open the door he would notice that the movement was accompanied by a high-pitched creak from the rusty hinges. A short hallway would lead him into a roomy living room, where a threadbare but comfortable couch lay across the northern wall; an antique rocking chair, intricately carved and surprisingly glossy, sat in a dusty corner facing the ocean; a dim lamp sat atop a small wooden desk on the right side of the couch; a cushioned chair lay hidden in the shadows of another corner facing the rocking chair; a stained, tattered rug full of colorful flowers intertwined—sun-bleached in the center and torn in two corners—covered the wooden planks that simultaneously served as a floor and a ceiling; the entire western half of the room was occupied by a century-old grand piano, the ivory keys of which had become filthy and chipped over the years. This instrument was the prized possession of the house: the jewel in the lives of all its past inhabitants.

[Deleted the rest.]

That's where I finished my story. Fascinating plot, isn't it?

I shouldn't have ended where I did, but I got bored. That's my biggest problem when it comes to accomplishing ambitious things: I don't. Surfing on a wave of inspiration that might last several days, I am discarded on the sand when the wave abruptly vanishes. And for quite a long time I am deathly bored with life.

[...]

August 7

I'm writing a list of the problems with which society is afflicted, so as to organize my ideas on how to change it.

Maybe you're thinking that this ambition of mine is supported by a crumbling foundation, a foundation of 'abstraction,' not real 'concrete.' Of course you may be right. But before you pass judgment, let me tell you that I *am* affected by stories of the woes of people. I just finished *A Tale of Two Cities*: at the end I cried a little (a very little) at the suffering and the courageous dignity of the seamstress and Sydney Carton as they walked to the guillotine. Granted, I *wanted* to cry, and that may be what allowed me to. Maybe I wouldn't have been able to show emotion if I hadn't *tried* to. Still, I was indeed affected by the sufferings of those people who were unjustly killed on the guillotine.

[...]

By the way, here's that list I mentioned:

The things wrong with society:

Bad health care in America.

Too much bureaucracy in American government.

Excessive amount of prejudice in the world.

Poor people throughout the world, though fewer in socialist countries than in capitalist ones.

Education isn't great in the U.S.—and much of the world.

Racism, etc.

Excessive amount of crime everywhere.

Lack of freedom in various countries.

Huge gaps between rich and poor.
 Politicians are influenced by money and the lust for power. (Human nature??)
 Lack of appreciation of good music and art.
 Extremely high population in the world...and growing fast.
 Technology rules: we can't control it very well.
 Precarious world economy.
 People everywhere are obsessed with material goods.
 Too many separate nations.
 Millions of people have meaningless, boring jobs.
 Many Americans don't vote in elections. (Too much apathy when it comes to politics.)
 Environment is in trouble.
 Sometimes not able to appreciate nature in capitalist countries, due to private property.
 Insensitivity of the media towards real human problems.
 Preeminence of business, and the worshiping of money as an end in itself.
 Ignorant, intolerant religions.
 Tendency of children to be mean towards one another. (Human nature?? Probably.)
 Deterioration of family values. (e.g. domestic violence, children taking drugs, etc.)
 Lack of appreciation of *life*.
 In general, not enough compassion in the world.
 Man is alienated from himself, from society, from nature, from work.

August 8

[...] I've just been reading about Karl Marx. What a great man! What a hero!—like a second, much less pacifistic Jesus. But seriously: he sacrificed himself, his 'happiness', for the cause of the workers whose miseries were amplified in himself. When I read about him I think that if I owe it to no one else, I owe it to Marx to spend my life working for the perfection of humanity. I don't think I'd be able to endure all the sufferings that he did, but anything short of these catastrophes would not deter me from my path.

Read this passage written by Karl Marx when he was seventeen years old, and tell me it isn't inspiring:

When we have chosen the vocation in which we can contribute most to humanity, burdens cannot bend us because they are only sacrifices for all. Then we experience no meager, limited, egotistic joy, but our happiness belongs to millions, our deeds live on quietly but eternally effective, and glowing tears of noble men will fall on our ashes.

I chose those lines as the conclusion of my valedictory. Good choice, don't you think?

August 9

I'm a little concerned as to *how* it is I'm going to change society. I mean, assuming I am eventually able to form definite goals, how will I achieve them? Make a lot of speeches? Form a small political party? Become a Congressman? Become the President? These options are clearly absurd, but what else is there? How can one start a revolution in the 20th or 21st century? I would like to change society so much that it could be characterized as a "revolution"—because anything short of this would be half-ass. I don't want to do something as conservative as eliminating poverty, for instance; I want to eliminate the chance of poverty *forever*, and at the same time eliminate the poverty of Americans' spiritual lives. I would like to come as close to Marx's ideal as possible. Though I know it would take longer than a single lifetime to accomplish this, I'd like to at least start the process.

[...]

August 17

Going to college in eight days. I've decided not to read anything about Marx for the next few months; I'm going to make friends, join clubs, go to concerts, etc. It's time I tried to live in the moment—and college is certainly the best time of life to do this. I'm not going to let myself be a loner in college and then regret it my whole life. I have to learn to *enjoy* myself; I have to end my obsession with *accomplishing* something permanent every day. My reading of Marxism is a manifestation of this obsession, so I'm going to keep away from it.

August 22

[...]

My main task now (other than college etc.) is to read Marxism. I've even started taking notes on everything I read, thus facilitating the information's absorption-into-the-brain, and at the same time giving myself access to brief summaries of the most important parts of the system.

September 5

I'm in college. I've had two classes so far. I've already read Freud's *Civilization and its Discontents* for one;—that's how different college is from high school. I've made quite a few friends, too. It's awesome. I'm not homesick at all, either. I'm loving life! I've gone to several parties—went to a so-called sex party last night, but it was incredibly stupid and disappointing—and after experiencing this form of social life I can honestly say it leaves a lot to be desired. Parties are insanely juvenile, the music is insanely loud, and in order to have a good time I'd have to be insanely drunk. I'm amazed that my fellow humans enjoy going to parties! It boggles the mind. But at least most of the students here are reasonably intelligent, so it isn't as one-sided as it was in high school. I've had interesting conversations with some friends, the topics of which generally involved philosophy, Marxism, or biology. My roommate is polite, clean, considerate...basically ideal.

I've met a cute girl named Rebecca Reynolds (from California); she lives down the hall from me. She loves philosophy, sociology, psychology, and creative writing; she runs every day and is on the cross-country team; her "heaven on earth" is snowboarding. She's beautiful, sweet, funny, intelligent, kind, and friendly. And she seems to be growing mildly attached to me.

September 7

Once again my manic-depressive symptoms have fought their way to the surface, albeit in a mild form. Often I feel the tattered remnants of my former omnipresent depression manifest themselves in 'diluted' ways, so I've grown used to it. But sometimes it happens so frequently that only the belief that I'll one day contribute to the making of a better society pulls me through the desert and deposits me in the oasis: the oasis of happiness—of inspiration—of anything other than maddening apathy. Were it not for my ambition, depression would strangle me, as it did only a few years ago. How well I remember those days of desperation! [...] I learned that friendship can't fulfill me, and pure introspection can't fulfill me, and music can't fulfill me, and ambition can't fulfill me; nothing can. I'll always be striving for something just beyond my reach. I may achieve it for brief periods of time (e.g., when I get married or have a child), but it will evaporate eventually and I'll be forced to continue my quest. Maybe this prediction sounds depressing

to you, but it shouldn't. I'm used to the feeling of incomplete happiness, and I've accepted the queer little 'dance' I must perform while slipping in and out of emptiness.

September 13

The freedom of college is unbelievable. The workload is fairly large—mostly reading—but I don't mind it. Most students complain hourly about the stress, but the thought of stress, or even a longing for less reading, hasn't even entered my head. I'm lovin' life, dude. I frequently still experience my "mellow", "depressed" moods, but these experiences seem almost like luxuries. I haven't been truly depressed for a long time; and the moods I just described are more introspections on life than bona fide states of depression.

November 3

I can't describe my state of mind. All I can say is that something is missing from my life—some fundamental 'rallying-point' that can give a purpose to my existence. I think that, most likely, the majority of people are also missing this same quality, but they don't know it. I have made several good friends, and I still don't feel "full." I haven't experienced deep depression for a long time, yet I still feel "empty." I have a better life now than I've *ever* had, but there is *something missing*. Of course I'll never find this "something"; the most I can hope for is that the periodic feeling of emptiness will magically evaporate through time. (What a pathetic "hope"!)

[A few deleted entries about my pining for love.]

December 7

Hello again. I've been reading a lot of psychoanalysis; I can testify that one of its theories is correct: the need for adolescents to identify with a 'hero'. This hero actually becomes part of the ego—the "idealized self" is, I believe, the right terminology. We try to live up to the standards that this hero imposes on us. Karl Marx has become my "idealized self", the part of 'me' I admire most, the image I try to live up to. I experience a sort of 'camaraderie' with him when I read about socialism. Whenever I'm discouraged, I think of Karl Marx's sacrifices and instantly regain confidence. It's a great feeling, this conviction (however stupid) that Marx and I are, in some sense, *one*. Will it last? Not permanently. But for a long time, I think my reverence will be essentially similar to a religious fanatic's love of God.

I'm going to make an ongoing list of most of the major books I've read. (This way I can refer to them later.)

NON-FICTION

Man and Society (vols. 1 and 2) by John Plamenatz

The Age of Extremes by Eric Hobsbawm

The Meeting of East and West by F.S.C Northrop

most of *Socialism, Capitalism, and Democracy* by Joseph Schumpeter

The Future of Socialism by C.A.R. Crosland

most of *Europe and the People Without History* by Eric Wolf

The Colonizer's Model of the World by J.M. Blaut

most of *To the Finland Station* by Edmund Wilson

Historical Capitalism by Immanuel Wallerstein

The Culture of Narcissism by Christopher Lasch

most of *The Protestant Ethic and the Spirit of Capitalism*
 excerpts from *Ideas and Opinions* by Albert Einstein
 excerpts from *Wealth of Nations*
Marx's Concept of Man by Eric Fromm
Social and Political Thought of Karl Marx by Shlomo Avineri
Marxism by George Lichtheim
Existentialism versus Marxism edited by George Novack
Marxist Economic Theory (vols. 1 and 2) by Ernest Mandel
Introduction to Marxist Economic Theory by Ernest Mandel
Contemporary Capitalism and Marxist Economics by Gouverneur (only half so far)
 excerpts from *Marx in the Mid-Twentieth Century* by Gajo Petrovic
 most of *Marxism and the Moral Point of View* by Kai Nielsen
Karl Marx by Saul K. Padover
The Communist Manifesto, Wage-Labor and Capital, Class Struggles in France, The Civil War in France,
 and excerpts from *The German Ideology*
 half of *A History of the Modern World* by R.R. Palmer
 most of *Childhood and Society* by Erik Erikson
 half of *Psychoanalytic Theories of the Human Condition* by Paul Marcus and Alan Rosenberg
Life Against Death by Norman O. Brown
Civilization and Its Discontents
The Golem by Harry Collins and Trevor Pinch (a stupid book)
Metaphysics by Richard Taylor (when I was 13 or 14)
Democratic Theory by C. B. MacPherson (the first half)
 most of *Walden*
The Republic
Thus Spake Zarathustra
Nietzsche: Philosopher, Psychologist, Antichrist by Walter Kaufmann
Leviathan (parts 1 and 2)
On Liberty by J. S. Mill
 half of *Color Consciousness* by Appiah and Gutman
Grounding for the Metaphysics of Morals by Kant
Seeking the Heart of Wisdom by Joseph Goldstein and Jack Kornfield
Lovingkindness.... (I forget the rest of the title and the author)
Confucian Ethics of the Axial Age by Heiner Roetz
Rethinking Feminist Ethics: Care, Trust, and Empathy by Daryl Koehn
In the Lap of the Buddha
The Tao Encounters the West by Chenyang Li
 excerpts from *Black Skin, White Masks* by Frantz Fanon
 half of *Principles of Microeconomics* by Stiglitz
Political Science: A Comparative Introduction by Hague, Harrop and Breslin
Nations & Governments by Thomas Magstadt

FICTION (most of which I've forgotten)
 half of *Doctor Faustus* by Thomas Mann
 half of *Lord Jim*
A Prayer for Owen Meany
The Andromeda Strain, Sphere, and Jurassic Park by Michael Crichton
The Brothers Karamazov
Crime and Punishment (when I was 13 or 14; I don't know how much I got out of it)
War and Peace (same age)
The Bluest Eye by Toni Morrison

Dawn by Elie Wiesel
A Tale of Two Cities
Sophie's Choice by William Styron
Anthem by Ayn Rand
Shogun by James Clavell (twice)
The Complete Works of Sherlock Holmes (three times in 4th and 5th grade)
Jane Eyre
Battlefield Earth by L. Ron Hubbard
The Moon is Down, The Pearl, and The Red Pony by Steinbeck
The Secret Garden by Frances Hodgson Burnett
To Kill a Mockingbird
The Stand, It, and Pet Semetery by Stephen King (forgive me; I was young)
Patriot Games, Without Remorse, The Sum of all Fears, Debt of Honor, and Executive Orders by Tom Clancy
Siddhartha
All Quiet on the Western Front
Ethan Frome by Edith Wharton
The Catcher in the Rye
Lost Horizon by James Hilton
King Lear, Twelfth Night, Hamlet (twice)
The Stranger
 innumerable little books like *A Wrinkle in Time, The Hobbit, Where the Red Fern Grows, A River Between, Fahrenheit 451*, as well as many short stories (*Maggie: A Girl of the Streets, An Experiment in Misery*, etc.)
Grendel
The Awakening by Kate Chopin
Yellow Raft in Blue Water
Snow Falling on Cedars
The Razor's Edge by Somerset Maugham
Looking Backward by Edward Bellamy
The Rise of Silas Lapham by William Dean Howells
The Marrow of Tradition by Charles W. Chesnutt
A Connecticut Yankee in King Arthur's Court by Mark Twain
Call It Sleep by Henry Roth
The Street by Ann Petry
Cane by Jean Toomer
In Our Time and A Farewell to Arms by Ernest Hemingway
Laughing Boy by Oliver LaFarge
McTeague by Frank Norris
The House of Mirth by Edith Wharton

I'll also keep a list of the major piano pieces I've played:

Barcarolle by Chopin
Fantasia-Improptu by Chopin
Nocturne in E-flat by Chopin
Nocturne in C-sharp minor (op. 27, no. 1) by Chopin
Raindrop Prelude by Chopin
Funeral March by Chopin
Aeolian Harp Etude by Chopin
Military Polonaise by Chopin

Fourth movement of F-minor sonata for clarinet and piano by Brahms
Opus 39, waltz no. 15 by Brahms
Claire de Lune by Debussy
First movement of the Appassionata Sonata by Beethoven
First and second movements (and most of the third) of the Pathetique Sonata by Beethoven
Für Elise
Rondo alla Turca by Mozart (and several others)
First movement of the Moonlight Sonata
Love Dream No. 3 by Liszt
Siciliano from Sonata no. 2 for Harpsichord and Flute by Bach
Rootbeer Rag by Billy Joel
The Entertainer and *Maple Leaf Rag* by Scott Joplin

December 15

It's frustrating to be superior to the majority of lunkheads in this world. I suppose I'm superior in many ways, but right now I'm thinking of only two: intellectually and revolutionarily (if that's a word). Capitalism means death to humanity, and I'm part of the tiny minority that understands this. My determination to destroy the system consumes me. *Every day* I think about it, I wait patiently for the time when I'll be able to begin my struggle. You have no idea how frustrating this *wait* is; you don't know how frustrating it is for me to live in the decadent, decrepit, dilapidated, decaying society of America! I'm ashamed of my country! [...]

December 17

Why do I have such trouble analyzing my feelings? I'm sure you've noticed the problem. For example, I know I want friends; there's no doubt about that. But on the other hand, what's so great about them (judging by the ones I have)? They often bring me nothing but grief. In the past six years I've gotten into the habit of examining every social situation for signs that I'm being ignored. Since *everyone* ignores me sometimes, I frequently (maybe unjustifiably) get pissed off.

I guess it's in my nature to be suspicious and jealous, even when there's little reason to be. On slight provocations—as when Lauren or Kaitlyn or whoever ignores me—I get sad, wonder if my personality is defective, if I seem annoying to my friends, if it's actually *their* fault because they're inconsiderate, etc. Then I try to picture myself in their eyes. Then I long for a girlfriend who really cares about me, whom I can say *anything* to. Then I turn on some Chopin. Then I sit down to write. Then I try to sound mildly entertaining to you, the reader. Then I think about socialism and wonder if friendship is really as important as I make it out to be. Then I simply stop thinking and listen to the music. And during this whole time there is a certain self-consciousness that threatens to turn it all into a joke, into a parody of self-pity and depression.

December 19

[...]

I'm attaching a couple of paragraphs from one of the papers I've written for a course, since they provide a possible explanation for my obsession with Karl Marx:

Object relations theory emphasizes the individual's relations with others as the most important force determining personality and the growth of the self. Melanie Klein probably exaggerated

the importance of objects and the transformations they undergo after the self has “internalized” them (e.g., her peculiar theory of the “good” breast and the “bad” breast seems too fanciful to be true), but it is certainly correct that people develop their values through their relations with others. Heinz Kohut postulated that the “idealized parental imago” (the idealized image of the parent) becomes transformed by the child’s relations with other adults into a permanent set of values, ideals, and “higher causes” (Marcus and Rosenberg, 216). This theory can, I believe, be adjusted to state the following: the child idolizes his parents during the first stages of life, and as he becomes older the realm of his “idealized selfobjects” broadens. By the time he has reached adolescence he no longer “idolizes” his parents as unconditionally as he once did; instead he latches onto the image of a hero. This “hero” represents most of the adolescent’s ideals, and—unconsciously or consciously—the adolescent’s behavior is affected by this hero-worship. The hero essentially becomes part of the adolescent’s self—the part of the self he loves most. Thus he gains self-esteem through this process of “internalization” (Marcus and Rosenberg, 223); his identity is reaffirmed and strengthened.

Most adolescents can attest to the truth of this theory, but I’ll provide a specific example. At about the age of sixteen I started reading books on Karl Marx, intrigued by his dedication to socialist revolution and the overthrow of capitalism. I did not only study his theories, however; I also read about his life. I wanted to know if he was worthy of the great respect I accorded him. Gradually I convinced myself that he was, and since then he (or rather his ideas) have become such a part of my life that it is clear that I have “incorporated” the image of this man into my self. He represents—he *is*—the part of my self that I love most.

Well? Do you think it makes sense? I think so. Karl Marx has become part of me; if somebody insults him, they sort of insult me as well.

At the same time, I’d like to think that an important reason for my determination to contribute to the overcoming of human “alienation” is that I genuinely care about it. I have probably been more alienated from my fellow humans (and thereby from myself, or at least the social part of myself) than most people I know. Since I know firsthand how devastating alienation can be, I have made it a goal to reduce “alienation” in the world. In other words, despite my frequent lack of sympathy for humanity, I don’t simply desire immortality; I want to help mankind. But enough of this hogwash.

December 21

What an idiot I am! I was just at the mall with Kaitlyn, and I bought two CD’s: Billy Joel’s *Kohuept* and the *Great Piano Concertos* of Mozart. Why the hell did I buy the Billy Joel album? What a freaking waste of money. But it’s awesome to listen to a rock ‘n’ roll album and then to hear Alfred Brendel play Mozart! Listening to *la musique classique* after suffering through our modern trash makes me feel pristine and purified. I do enjoy most Billy Joel, but his music is simplistic and stupid compared to Mozart’s. *All* modern music makes me ashamed to belong to my culture. Why has the quality of art diminished so much in the past 150 years?

By the way, I wrote an article on the history of modern music for a college magazine. Rereading it, I can see that it’s crap.

January 22

Back from my month-long break. A month long! After a week I was ready to return! But maybe it was a blessing in disguise: since I had nothing to do, I wrote an over-long screenplay about the life of Karl Marx. Spent three days writing an outline of it, and then ten days (twelve hours each day) writing the actual script. And, despite my usual excessive modesty, I must say that for a kid who doesn’t know a damn thing

about writing screenplays—I skimmed a couple of ‘how-to’ books before I sat down to write it—it isn’t bad. It’s a lot better than the majority of screenplays that are made into movies (e.g., *Mickey Blue Eyes*. What a piece of trash!). When it was finished I was *ecstatic*; I had finally proven to myself that I was capable of completing the projects I frequently attempt (such as novels). While writing it I was a machine. I got sick to death of the supposed mediocrity of the dialogue—on many occasions I lost all heart—but I *forced* myself to take no breaks. The simple act of completing the script in ten days was a triumph of the human spirit, a triumph of willpower.

One of the reasons I wrote it was to counteract the willful ignorance that pervades our society regarding communism and Karl Marx. I painted Marx in a fairly sympathetic light—but it was all true, of course—and I portrayed communism as mankind’s only possible salvation. Which is, again, the truth. I’m so sick of the asinine American philosophy of unbridled individualism, selfishness, a barren “freedom” at all costs, and contempt for any culture that’s different. The philosophy of choice for Americans is ignorance and apathy—and it’s one of my goals to change this. Hopefully the movie will start the process. Some other purposes of the script are as follows: to portray poverty and its effects on people; to glorify the human spirit; to examine the human condition (by portraying most of the emotions that humans experience, tracing an entire life, and probing into the causes of Marx’s more ‘peculiar’ actions—such as his adultery with Helene Demuth); to make people disgusted with the philosophy of capitalism; to retell the forgotten atrocities of the Paris Commune and the 1848 revolution in France; to explain the need for a utopia; to provide a sketch of the harsh lives of industrial workers; to ‘introduce’ the audience to classical music (of which the whole soundtrack will consist); to analyze Marx himself, to expose all his faults and strengths; and to write a love story (between Marx and his wife). Now all I have to do is....get a Wesleyan film professor to read it, convince an agent to represent me, and get the movie made.

I have declared war on society. One of us will win.

January 23

What can I write about? You, the reader, are still the only *truly loyal* friend I have—the only one I know I can rely on. Everyone else can be an object of suspicion, anger, jealousy, etc. Sometimes I wonder if Sartre was right when he said that hell is others. His reasoning was more philosophical and abstract, but I believe that my experiences have basically confirmed his idea. Nevertheless, the contradictions of human nature are such that we need other people no matter how much despair they bring us.

January 24

[...]

I’m listening to the second movement of Chopin’s 2nd Piano Concerto; the beauty of it is overwhelming. Life is divine at moments like this, when I’m alone with my thoughts and my music. I wish I could make you feel the way I do right now! Words just aren’t enough; only music is capable of coaxing tears out of one’s over-dry eyes, of washing away reality and substituting a breathtaking illusion in its place. Music is the greatest art form; even poetry pales in comparison.

January 25

Today I got an e-mail from the top Marxist sociologist in the world: Erik Wright. I had written him a letter about summer research opportunities; to my surprise, he actually said he’d be happy to meet with me once a week to discuss Marxism! He suggested I organize informal study groups with some of his students in Madison.

January 26

I'm temporarily forsaking Marxism: this semester I'm going to have a lot of work. Three of my classes are reading-intensive—the American Lit. has 14 required books—and one of them (Econ.) is sure to be difficult.

Literature is much easier to read than nonfiction. Spending half an hour reading about the history of capital is equivalent to spending five hours reading a decent novel. Given that I love literature, it's odd I don't read it more often. I suppose the most important reason is that reading it doesn't seem to accomplish anything. I enjoy it, but at the same time....I guess I feel uneasy because the moment will be gone soon, and the book will be a mere memory. Pleasure doesn't last; accomplishments do. —Once again we encounter what I think is the primary reason for my 'ambitions': my need for some kind of insurance against death, for "symbolic immortality". Pleasure doesn't interest me, because (unless it's physical pleasure) I can't always *recognize* it as pleasure. Intellectual pleasure is something of an oxymoron for me; emotional pleasure is, of course, easier to recognize.

I sent my grandparents a letter today; I'm trying to send them as many as possible before they die, mostly because I know how much pleasure it gives my grandfather. He's a good guy. When I was unwrapping presents after my graduation I hugged him....and he cried quietly. Rubbed his rough face against mine and hugged me. Afterwards, when he was recording me playing the Appassionata sonata, he again cried a little. He realizes he might die soon, and he's glad that he lived to see one of his grandsons become a 'success'. It's a grand feeling to know I've helped make him happy in his old age.

January 27

Edward Bellamy's novel *Looking Backward*—which I have to read for American Lit.—is quite interesting. Virtually the entire book consists of an imaginative description of a possible utopia.

The ironic thing about a 'utopia' is that I'm not sure it's really desirable. Humans *need* something to fight for; a utopia might become decadent and dissolve into corruption. Furthermore, there wouldn't be the kind of excitement that exists in today's world; people would resort to crime just for a sense of adventure.

These considerations, of course, are academic. A utopia will never exist.

Finished Bellamy's book. What an inspiring novel! It ain't great literature, but I recommend it to anyone capable of critical reflection on his society. The fact that I was listening to Chopin's "Fantasy on Polish Airs" metamorphosed my mundane intellectual delight into a hope that penetrated to the core of my being. How I love the ecstasies of exhilaration erupting in me as I dream of the future! They're tempered only by my frustration with the present.

(later) Went on a pleasant outing with Rebecca; when we came back I asked to read her essay for a course she had applied to. It described her job in a factory during the past summer: it was poignant and well-written. She's a unique girl: she willingly spent her summer working in a factory from 6:00 till 5:00 p.m., after which she went to an evening job as a secretary. Not many teenagers would do the factory thing out of sheer compassion for the plight of the workers. And this summer she's working with migrant farmers. It's hard to believe that her friends are the frivolous people she described in her e-mails; how could she tolerate people like that? She has faults, but she's a *goddess* compared to a boor like me! And I'm not saying that to be endearing; I mean it. I would never work in a factory out of compassion.

But think of what those people go through every day! One of her co-workers has a young wife and a child, but he's forced to get to work at 5:00 in the morning, leave at 5:00 pm, and then go to another job until 1:00 a.m. When he gets home he looks at his baby son for a little while and then goes to bed.

I'm listening to the second movement of Rachmaninoff's Second Piano Concerto; the tears are

flowing freely. Music, especially when combined with thoughts of the misfortunes of people like “Jay”, has that effect on me.

[Several entries deleted.]

February 8

Economics is quite complicated. I’m worried that my brain isn’t wired in the right way to absorb everything I read—or, indeed, to *understand* it. But with enough patience I think I can conquer this infernal “science”. After I’ve been struggling over a specific concept for some time, frustration begetting more frustration, it’s a great feeling when I finally understand it. At such times, for a moment I’m impressed by the logic of economics....but my admiration turns to revulsion when I remember that this very “logic,” abstract and impersonal, is what makes economics so hateful.

February 9

A plethora of questions is fermenting inside my head: Why am I so obsessed with revolution? Why is it so important to me that I would dedicate my life—that I would *sacrifice* my life—to the overthrow of capitalism? If I am so concerned about humanity, why am I such a cynical bastard who does nothing but criticize humanity? How did my obsession arise in the first place? To what lengths would I go in order to realize my “dreams”? Does the revolution matter more to me than life itself (my own and others’)? Is it not foolish to neglect, as I am doing, all the significant questions in life? (e.g., “What is justice?” “How can I be a moral person?” “Isn’t being a moral person more important than anything else?” “What is happiness?” “Is happiness an ultimate goal or is it a useless abstraction, a hindrance to the realization of a ‘meaningful’ life?”) Should I try to be a well-rounded person, or should I focus all my energies on the revolution? Is the glory of martyrdom the mirage that lures me to this imaginary oasis, wherein I sacrifice myself and my happiness for an abstract cause? Does the ‘revolution’ mean nothing more to me than an insurance against death? Do I care more about my ‘legacy’ than about my happiness? Why am I seemingly incapable of appreciating everyday pleasures? Is it because of their fleeting nature?—because of *death*? If the fear of death does govern my life so completely, am I not making a terrible mistake by submitting to it and not confronting it?

What priority should I give to the other aspects of my life? Should I make a mighty attempt to increase my circle of friends, or should I just submit to the inevitable? Is there something so irretrievably wrong with my personality that I repel my friends and destroy my chances at romance? Am I not making a fatal mistake in trying to model myself after Karl Marx? Should I rather try to be a compassionate, ‘understanding’ person? [...] Do I not cherish the absurd, simplistic notion of self-sacrifice?

These questions and others occupy all my spare time (of which I have none). Every day I read, read, read without confronting these questions....and it’s driving me crazy. I can’t retain my mental health for long and continue to neglect questions that relate to something so fundamental as my *identity*.

Lord! Is this another identity crisis? Is this simply a more severe continuation of the one that lasted four years? I’m nearing adulthood. This is the time of life when we harden into recognizable, unchangeable entities. Thus, I’m worried that this crisis is more significant than the one I experienced several years ago; its outcome will determine who I am for the rest of my life.

Should I do nothing about it and accept whatever inevitable conclusion it leads to? I’ve learned from experience that I can rarely influence the paths of my development. But there’s such a feeling of urgency and confusion that I can’t sit back in artificial apathy; I have to *do* something!

There’s nothing I can do, though. For now I’m going to immerse myself in my work and ignore the gnawing feeling of dulled panic that upsets my mental balance and makes me wish I lived in the sublime

apathy of a Donald Trump or a Jesse Helms.

Maybe you doubt the authenticity of this “identity crisis” because it seems abrupt, and derivative of my other ones. But it’s not the abruptness that surprises me; it’s the fact that it’s only just occurring *now*. Why did it take so long? I suppose the reason is that the perceived dissolving of my friendships is a good catalyst for this kind of crisis.

(several hours later) I guess I’ll stop isolating myself from everyone. I’ll just act ‘naturally’—the way I used to. And I can’t let myself think about my “identity crisis”, for two reasons: I’ll get obsessed, and these dilemmas usually work themselves out in the end.

February 12

Saturday night. I’m reading *A Connecticut Yankee in King Arthur’s Court*. I love this novel.

[...]

February 18

Listening to Brahms’ Intermezzo in A, a surprisingly luscious and melancholy piece that nourishes my bleak mood.

I just attended a concert by Odetta, the seventy-year-old folk/blues singer. She was excellent; I didn’t even mind much that I was alone. The only problem with blues is that a lot of it sounds the same, and the way she sang, well....after I had heard one piece I had heard them all. But it was good anyway.

February 20

For the next few days I’m going to take a break from my coursework. I’m sick of it. Instead I’m going to read *Marxism and the Moral Point of View*. I started it a few hours ago; it’s fairly interesting, but more importantly, it provides me with the therapeutic feeling that I’m doing something meaningful (as opposed to incessantly reading for my classes).

February 21

The book I was reading last night repeats itself over and over again; I’m through with it. In its stead I’m reading *Existentialism versus Marxism*.

(later) I love that book! Existentialism is more interesting than I thought. I always thought it was a ridiculous, overly intellectual philosophy that ultimately makes no sense (much like Hegelianism, which I’ll never understand), but I think there are actually merits to it. (Of course, it irritates me that existentialist thinkers have to write in incomprehensible language: e.g. “Man is a being who makes himself a lack of being in order that there might be being”. Huh?) Marxism is undoubtedly a superior philosophy....but the natural philosophy of dialectical materialism is bullshit.

Now that my interest in philosophy has been temporarily renewed I can watch with horror as the telltale signs of obsession begin to manifest themselves. After reading a paragraph I sit back and ponder what I’ve read, and it takes me several minutes to realize I’m getting nowhere with this “pondering”—so I return to the book. Thirty seconds later I take a break and think about what I’ve just read. After several minutes I force myself to return to the book. It never ends. The frustrating thing is that I never get anywhere; I just meditate myself into frustration.

In the past several weeks I've regained my ambition to construct a vast theory on which to base the future society. (Have I already told you this?) Marx recognized the need for socialism to have a "scientific" basis, and now that there are so many conflicting 'philosophies' in the air it's more necessary than ever. My goal is to understand the laws of history, of capitalism, of economics, and to base communism on philosophical-psychological-economic-sociological-historical theories. For instance, I want to delineate a coherent theory of morality.

The problem is that I have little faith in my ability to accomplish this.

February 22

I've decided to alternate between doing coursework one day and reading on my own the next. I think it's the only way I'll be able to have the motivation to do work for courses: every day that I spend reading for my classes I'll desperately try to get as much work as possible out of the way. I'm sick to death of my research job; one can easily get tired of comparing Confucianism and feminism. Confucianism is quite interesting, but I'd rather spend my time on Marxism.

(later) Ah, *je t'aime, le désespoir!* What would I do without you? Be happy? Ha! I don't need happiness! You are my only friend; you are the only one who understands me. You understand me better than I understand myself, *mon cheri*.

February 23

For the past five hours I've been reading *Existentialism versus Marxism*. This book is inspiring me to become a philosopher before I stomp out capitalism. The essay written by Sartre called "Marxism and Existentialism" has especially influenced me: despite my ignorance, it appears to be a brilliant critique of "contemporary" Marxism. But more importantly, I'm intrigued by Sartre's ambition to make Marxism a nearly universal philosophy with an "existential" base. He criticizes its dialectical materialism [which includes its philosophy of nature] and its theory of knowledge, but he thinks that an integration of Existentialism and Marxism would 'complete' the massive system. Of course, this all took place decades ago—and no integration ever occurred—but the point is that I'm now determined to devote years of research to the construction of a grand philosophy of human society that rejuvenates Marxism. I won't take anything for granted: I'll treat every aspect of Marxism as a hypothesis that has not yet been proven. Where the theory is lacking necessary elements I'll reform it.

Clearly if I intend to 'construct' (or verify) theories of morality, metaphysics, epistemology, history, economics, psychology, etc., I'll have to do an inordinate amount of research. I'll have to acquaint myself with all the major philosophies of history; for the next several years this will be my highest priority. I'll have to read boring analyses of class society, of primitive societies, of all the influential Asian civilizations and their philosophies.... Psychoanalysis will be an important part of my 'theory', too.

[...]

I realize perfectly well that all this is unrealistic and I'll never be able to carry it out, but you who are acquainted with my disgustingly irrational idealism know full well that no amount of reason will deter me from my ambition. Only if I lose my inspiration do I ever give up. And after a year my inspiration to help establish socialism has only grown in intensity, so maybe my new inspiration to base this socialism on a "universal" philosophy will last for a long time. [...]

Philosophy is so fascinating. It's bizarre that I was able to keep myself away from it for....at least a year. Marxism, of course, is a philosophy, but I've never thought of it as a *philosophy* in the sense that Hegelianism is, for instance. I saw it as nothing more than a theory of human society, not as a metaphysical-psychological-ethical-epistemological philosophy that attempts to solve almost all the problems of human existence. I suspect that it isn't, as a matter of fact, very adequate in these purely philosophical realms, but I won't know for sure until I do more reading.

February 24

After spending a few minutes reading economics, even Hegel is refreshing.

Change of topic: The feminist “philosopher” Mary Daly spoke at Wesleyan a few weeks ago. I didn’t go to the lecture, but I saw posters plastered around the campus advertising her latest book. Its title is *Quintessence...Realizing the Archaic Future: A Radical Elemental Feminist Manifesto*. Can you believe it’s possible for someone to take herself so seriously she’d choose that title for a book? Judging by this and other stories I’ve ever heard about the old hag, I’d say she’s a pretentious buffoon who postures as an intellectual. (On the other hand, it often seems as if one of the necessary criteria for being an intellectual is precisely this pretentiousness. That’s why I don’t want to be labeled an “intellectual.”)

Here’s a moral dilemma: Suppose I eventually become President (this is only hypothetical; I know it won’t happen). What if by some trick of fate it comes to pass that the only way for me to institute socialism/communism in this country is to kill every member of Congress? What would I do? Would I fulfill my revolutionary dreams and resort to murder, or would I refuse to kill anyone and relinquish my dreams? I suspect that if I were actually placed in the position I would refuse to kill them....but it’s an interesting question. And it’s bugging me.

February 25

It’s fascinating how much more *human* are artists and poets and musicians and composers and authors than economists. In economics humanity is reduced to a multitude of graphs. I would rather remain depressed than somehow convince myself to *like* economics. Economics is the negation of humanity; it is death.

(later) If it weren’t for music, my frequent bouts of depression would lack substance. They would lose their poetry, their elegance, their opulence. I listen to music at least six hours a day, often as I do nothing but sit in a chair and contemplate the luxury of existence and the splendor of sorrow. My mind is empty; thoughts neither come nor go; the music admits no room for them. While others piddle on their Playstations, I commune with my soul.

(later) I spent several hours tonight playing Chopin’s Nocturne in C# minor (op. 27), a masterful, distressingly moving piece. I haven’t played the piano seriously for several weeks, but now I plan to go to the Center for the Arts as often as possible. I love playing the piano; unlike reading, I *know* I enjoy it. It can be a surreal experience, an escape from reality. Tonight I trekked across campus in the miserable, sadness-scented rain because I couldn’t handle the ache of loneliness. The piano is a forum for my grievances. It listens to me, it understands me, as I pour out my emotions; it comforts me, reassures me; this piano, which has seen so much of life, which has encountered every emotion, has witnessed the confessions of countless sinners, caresses me with its wisdom. It is fazed by nothing. It is the one underlying continuity of life. It *becomes* me, it molds itself into the shape of *me*. The Piano asks nothing of me as I, in my self-absorption, take advantage of its patience.... Its sound is indescribable. One can say that violins sound ‘stringy’, that trumpets sound bright and metallic, that oboes sound nasal, that saxophones sound ‘jazzy’, that flutes sound airy and high-pitched and fluttery....but how do pianos sound? They’re ineffable. The sound of clarinets is difficult to describe also, but not nearly so much as that of the piano. *The Piano*: the greatest of all “luxuries” (precisely because it’s a necessity).

If I were a poet, my first composition would be an ode to despair; my second would be an ode to pianos.

February 26

Eventually I'll get out of this rut I'm in. I always do. It's lasted a fairly long time (about a month), but on the other hand...the longer it lasts, the closer I am to the day when it'll be over. [?] As I've said before, I'm somewhat of a romantic in that I don't even know if I *want* to be absolutely cured of my "manic-depression"—partly because that might involve losing my wonderful periods of inspiration, and partly because depression seems to get me closer to myself—but then again, I, uh, like it a lot when I'm not depressed. (Incidentally, the clinical version of pointless suicidal depression is obviously harmful and is never what I'm referring to.) I actually have the energy to *do* things when I'm not depressed.

A few minutes ago I visited my friends....and what do you think they were doing? Piddling on their Playstation. I returned to my room. Too many people in this sad world are shallow. [...]

"Oh, the arrogance!" I can hear the condemnations of the self-righteous preachers who worship their own mediocrity. "The hypocrite! The snob!" I laugh as I listen to the assaults from God's lackeys. "The naïve idealist! The ridiculous dreamer! The self-absorbed child! The deluded pseudo-intellectual!" Ha! I spit in your face, civilization! I am a nihilist; your taunts cannot affect me. I have built a barrier of bitterness around me. Do you think I still have a desire to change? Do you think I still want to be a perfect person who isn't able to accept his faults? I cherish my faults! Without my faults I would not have my strengths. "You like being a hypocrite? You like being an arrogant, self-absorbed intellectual? You like being unhappy?" Hypocrisy, arrogance, self-absorption, unhappiness....these words have lost all meaning for me. I am all of them and none of them at the same time. [...]

February 27

Finished *Existentialism versus Marxism*. After a long hiatus from philosophical problems my interest has again been piqued—and this time it will not evaporate in a shroud of murky, inconvenient "obsession". To give up philosophy solely because it carries me to the brink of despair is weak and foolish. Imagine if Beethoven had given up music because he thought it made him depressed! Granted, I'm not Beethoven, but the point is that no self-respecting person with an iota of willpower would relinquish a subject simply because it made him unhappy. (On the other hand, I suspect that it would require a great deal of "willpower" for me to *ignore* philosophy.)

There are so many unsolved problems of human existence! My goal is to do one of two things: either solve them, or convince myself it's impossible to solve them.

(later) [...] I've told you all this before, but I have to say it again. Loneliness is tearing a gaping hole in me. I would rather be unhappy over more profound things like philosophy, but I simply cannot escape the world of people.

And yet even friendship doesn't fulfill me. Love alone would fulfill me; a *girl* would fulfill me. Oh, the hopelessness of the situation is driving me insane!

At heart I'm a romantic, a poet who hasn't the slightest skill with words.

February 29

I finished the book *McTeague*; it didn't help my depression much. Curse loneliness. Curse my need to live in a peculiar mixture of pain and happiness.

One would think that with a simple exertion of willpower I could escape from this prison I've created for myself, but it's not that easy. I don't seem to have the energy to do it. If I could just make more friends I'd be cured (temporarily). But I think it's the nature of depression to feed off itself: the more depressed one gets, the more one feels hopeless, unable to break away from the compounded maze of depression, hemmed in on all sides by an impersonal force. Inertia becomes the guiding thread of life. My mind ceases to operate as I languish in my chair, listening to the collections of empty sounds that caress my darker side—that encourage it as it wallows in a pool of self-pity—that reassure it there's no escape from depression, that pain gives life meaning.

I've long forgotten what the justification is for this particular episode. Loneliness? Pshaw! I have friends; if I wanted to, I could resurrect my friendships and make new ones. So then what is it? Inertia. I can't break out of this annoyingly hopeless state of mind, so I revel in it while it lasts.

March 3

Schumann's piece "Scenes from Childhood" (op. 15/12) is wonderful to listen to when one is sad. It's almost as if he wrote it for me. Ahh....that first major chord after 30 seconds of hopelessness is Divinity. So beautiful, so wise, so comforting.... A flower in the kingdom of Death. A ray of hope clings to it as it vainly tries to fight the darkness. Alas! it loses the battle; we're plunged into despair once more. We can't protect ourselves from it; our only hope is to accept the inevitable, to acquiesce in melancholy. And...oh, the devastating ending.... We've lost the will even to *contemplate* our misery. There's nothing left to live for; death overcomes us before we've paid our last respects to life.

Maybe *that's* the meaning of the middle section. It isn't a vain struggle against the inevitable; it's Happiness out of Hopelessness. Awareness of our hopelessness brings a perverse, soothing embrace, that is happiness too meaningful to be contemplated. But in the end all that's left is our despair, no matter how much meaning it may give us. Despair is the only reality. Everything else is transient, mind-games, metaphysical bullshit. Despair is Life, Consciousness, Eternity, Being....Death. Nothingness. Nirvana. All else is an illusion.

However, Chopin's Nocturne in C-sharp minor, op. 27 No. 1, is the quintessence of anguish. No other piece of music captures the brilliance of suffering so perfectly. It contains all states of mind: sadness, loneliness, hopelessness, flashes of inspiration, happiness, determination, hope, rage, acquiescence, forgiveness, equanimity, nirvana.... This nocturne is life itself. In five minutes it sums up humanity's experience—all the contradictions of the human condition. Only a god could have composed such art.

March 5

Humanity is music. There is no truth; science is nothing more than a vulgar attempt to determine the vulgar causes of vulgar "observations"; philosophy is a vain attempt to discover meaning in a meaningless world; poetry is a heroic but futile effort to express the ineffable. Language is useless; it serves merely to disguise reality. It encourages us to analyze the world, and at the same time prevents us from understanding the world. Music alone communicates the inexpressible. Music is synonymous with meaning. Words belittle humanity; they sterilize the spirit, maim the mind. Put simply, they're very limiting. Yet at the same time they enable us to express our thoughts coherently. –Oh, I'm so sick of thought! Thought is oppression. At this moment I want nothing but to hold hands with Rebecca, or to kiss her, or to run my hands through her hair.

March 8

I went to a bagpipe performance with Rebecca. It was a long show, made even longer by the fact that a bagpipe was playing the whole time. I have nothing against bagpipes, but two hours of that incessant drone can get on pretty much anyone's nerves.

On the way there I lightly brought up the subject of the "thing" I'd had for her in the beginning of the year (and said it was over now). She seemed surprised, pretended she hadn't known about it, and asked why I hadn't told her. Etc. etc. In any event, I've given up. 'Romance' ain't gonna happen. Perhaps it's for the best. It *is* for the best. I'm not very disappointed, in fact. Rebecca's a good friend, but she wouldn't be a good girlfriend.

March 9

Today was a good day in the ‘friends’ department. First I played basketball with Kaitlyn, Lauren, and Jason. Then I went to the town with Rebecca; then had dinner with a bunch of friends. Later I “studied economics” with Kaitlyn and Jessie. It didn’t involve much studying, mostly just fun conversation. I was fairly amusing; they spent most of the time laughing wildly. It’s a good feeling to reflect on a day like this—a wholesome, pleasant feeling.

March 10

Vladimir Ashkenazy is amazing. When he plays Chopin, the upper registers of the piano...exude *droplets* of sound. There’s no other way to describe it. It’s as if the sound has turned into a smattering of gentle rain. (So I suppose this contradicts what I said about the ineffable quality of the piano’s sound—but it’s an exception.) I love listening to the water-lilies of music that emanate from Ashkenazy’s fingers.

March 26

Finally I’ve returned [from spring vacation]! For days I’ve been dying to write about my experience with Nietzsche. First I read *Nietzsche: Philosopher, Psychologist, Antichrist*, by Kaufmann, and then *Thus Spake Zarathustra*. I’m not certain I caught all the symbolism in the latter, but I did read it slowly enough to appreciate the general philosophy—as well as its beauty. It is surely the most artistically perfect philosophical work ever written.

Nietzsche’s philosophy is so profound it may take me years to fully understand it. As I read those two books I was overcome with adrenaline, inspiration, passion—you name it, I felt it. Nietzsche has opened up new worlds for me! He has convinced me to spend my life studying philosophy (without giving up my former plans). Nietzsche! His philosophy is deeper than anything I’ve ever read! I’m currently reading a book on feminist ethics; it’s shamelessly superficial compared to Nietzsche’s thought. Nietzsche was also passionate about music and literature; he was (I believe) a manic-depressive; and he seems to have been something of a misanthrope who had an intense desire to overcome himself and humanity.

[...]

Nietzsche! I think this man is going to take a place beside Marx as my second hero. Such a fascinating, depressed, lonely, music-loving genius: how can one *not* worship him? He stood for everything I ‘believe in’ or have experienced: he was deeply anti-racist; he was passionate about philosophy—he *lived* his thoughts; he frowned on the human species; one of his heroes was Beethoven; he was a lonely man who was either so happy that he cried tears of joy or so sad he wanted to take his life; he was profoundly anti-religious. My ideal is to become a combination of Marx and Nietzsche.

My friends are watching the Academy Awards. I watched a little of this spectacle, but I had to leave the room. There’s nothing else to do, but anything is better than witnessing the decadence that our culture has been reduced to. (The annual obsession with what these celebrities are *wearing*! God Almighty! It’s enough to make you want to put an axe through the TV when you see the sycophants interviewing those stick-thin girls weighted down with bloodthirsty, spirit-sapping jewelry.)

I was accepted into the College of Social Studies.

March 27 - “It is night: only now do all songs of lovers awaken. And my soul too is the song of a lover.”

I finally finished *The House of Mirth*. Quite a tragic novel. My former buoyancy of mood has vanished like the baseless fabric of a vision. Melancholy is exquisite beyond words. Sitting here, listening

to Mozart, writing, is my variation on the theme of nirvana. At last I can see with lucidity that sadness adds a certain texture, a wistfulness, to life that can be attained through no other channels. It is necessary to my well-being; it justifies me. The Buddhists prefer not to become “attached” to it, but I relish this escape from reality, from the monotony of day-to-day living.

Life would be unbearable without suffering.

March 28 - “Lately I looked into your eye, O Life! And I seemed to sink into the unfathomable.”

Have you ever heard Rimsky-Korsakov’s “Variations” from *Capriccio Espagnol*, op. 34? The opening of it is...extremely noble. Mere verbiage, this verbal sludge that’s printed on the page in front of you, could not do justice to the stirring simplicity and life-affirming loftiness of the first few bars. The french horn’s solo, with the strings in the background, is incredible. Nothing else matters as soon as those notes strike your eardrums; they encompass all experience.

March 29

I’m going to take ballroom dancing lessons in April.

Tonight: going to a restaurant with Rebecca and then a book reading.

One of the reasons I don’t like being in the company of more than four of my peers at once is that everyone feels a need to say something just for the sake of saying something. They don’t want to be left out of the conversation, so they’ll do anything for attention. Sometimes it’s simply responding to a statement; other times it’s blurting out random noises or songs or bad jokes. The more people enter a group, the lower the quality of the conversation becomes. Ultimately it’s reduced to an exchange of monosyllables, or their intellectual equivalent.

March 30

[...]

I finished *Laughing Boy*. Another depressing novel. Why did the professor choose so many tragic stories for us to read? They affect me terribly.

If one spends too much time with other people, one loses....music. One forgets the ineffable. Life becomes commonplace. No longer is life music; it is noise.

Classical music reminds me that there is more experience than can be expressed in words, that life would be meaningless without the inexpressible, that I’ll never know myself—and that it’s better this way. Music reminds me that despite what all the scientists say, there *is* magic in the world, in the self. I could not endure life without this magic.

If one spends too much time with others, one loses oneself.

April 2

The third movement of Beethoven’s Sonata No. 28 is exquisite. And the third movement of his Hammerklavier Sonata is one of the most moving artworks I’ve ever experienced.

Beethoven is a forbidding figure. He exemplifies the Lonely Man, the artistic genius who conquers life. Every emotion I’ve endured he experienced to the power of ten. I can’t even comprehend what it must have been like to be Beethoven.

I’m desperately bored right now. Curse boredom.

April 7 - "Life is a fountain of delight; but where the rabble also drinks, all wells are poisoned."

Mediocrity loves company. One simply has to spend a few days in the presence of other people to recognize that. The more contact I have with society, the more I believe that society corrupts us. We lose ourselves, get sidetracked, become mindless ants.

[Several deleted entries.]

April 11

I finally met with the film professor who read my screenplay. He was helpful. Basically his criticisms were that there's too much philosophy, too much talking, and it's too long. But he was impressed that a freshman had written it. He said I could turn it into a hundred-million-dollar epic. Apparently I have a good feel for "cinematic devices and dramatic scenes". His advice was to read screenplays and rent the movies for them, compare the lengths of their scenes to those of my scenes, eliminate any repetition in my script, etc.

April 18

I'm not going to my economics class at all for the rest of the summer; it's boring and I don't understand it. I'm not even going to read the textbook. In its stead I'm going to read volume two of Ernest Mandel's *Marxist Economic Theory*. This summer I'll probably research microeconomics so I'll be ready for the macroeconomics course in the fall.

I'm fascinated by the differences between Marxist economic theory and contemporary bourgeois economic theory. Many of their respective claims are completely contradictory; so who's right? How is it possible for economists to disagree so completely? Economics isn't like philosophy: you'd think it wouldn't be possible for people to interpret *statistics* so differently. Either the labor theory of value is wrong or it's right; either the theory of surplus value is wrong or it's right. After all this time there still isn't a consensus!
[...]

April 21

[...] Capitalism is sick, it's true. But no matter how many revolutions we have, humanity will never be redeemed. Its face is permanently disfigured.

(later) [...] This journal has become, to a certain extent, my escape from rationality. (I get enough rationality from the books I read.) No longer is it imperative that I fully understand myself; no longer do I have a frantic desire to be *correct* in everything I write—in all the little self-analyses I write. Am I "right" when I say that pop culture prevents the unfolding of your potential? Am I "right" when I say that humanity is in certain respects "akin to music"? These questions miss the point, I think. The important question is *'Is it possible to be "right" at all?'* What is truth? If logic fails to guide us to "truth", if reason and its companion, language, lead us astray, then how can it be said that "truth" is possible? How can it be said that truth is expressible in words? We invented words; thus we invented "truth". Thus there is no Truth.

Of course, we can draw conclusions from empirical observations. We can confidently assert that the Earth is (approximately) spherical. But, as I mentioned earlier, science is vulgar. Empirical observations are vulgar. They are not what I'm interested in; I'm interested in *people*—in their psychology, their patterns

of behavior—and in philosophy that directly or indirectly relates to people. (This is why I have never had as much interest in metaphysics as in ethics.) These are the subjects in which it seems difficult or impossible to arrive at “truth”.

[...]

I suppose this entry has gotten me embroiled in quite a few contradictions.

April 22 - “Overcome, you Higher Men, the petty virtues, the petty prudences, the sand-grain discretion, the ant-swarm inanity, miserable ease, the ‘happiness of the greatest number!’”

I finally finished *Marxist Economic Theory*. This book is monumental, a triumph. Ernest Mandel (who recently died) had a *complete* grasp on the subject; he was acquainted with seemingly every relevant book on Marxism. After reading him I get the impression that he is ahead of all other contemporary economists. I admit I don’t understand every facet of the labor theory of value, but he seems to have such a grasp on the subject that the people who criticize Marxist economics are almost certainly too shallow to understand it.

(later) I just finished Mandel’s *Introduction to Marxist Economic Theory*—a 75-page book that’s quite easy to read.

Speaking of Marxism...a few weeks ago I skimmed a couple of passages in a book written by some nondescript film critic. Apparently he was frustrated with his pointless life, so he decided to take a few courses at a college that was running a special program on “great books”. Two of these books were the *Communist Manifesto* and excerpts from *The German Ideology*. After beginning his chapter on Marx with a short preface, this film critic proceeded to heap criticisms on the *Communist Manifesto*—“the prose is killingly bad” (?), etc.—and basically make fun of the author. After several paragraphs of this he informed the reader that Marx’s *early* works, however, are still relevant. Contemporary culture is, according to this film critic, plagued by alienation and shallowness. Most jobs are very boring, professional athletes have become obsessed with money, etc. The film critic ended his exposition with his opinion that since Marx is no longer relevant for our *society*, he is all the more relevant for our *souls*.

I hope that if this diary is ever published, the film critic who wrote that book will read what I’m about to write. [There was some good vitriol here, but I’ve deleted it.]

April 23

I’ve decided to focus my intellectual energies, for the time being, on understanding the labor theory of value. I was going to continue researching Marx’s entire theory of capitalism, but since I can’t get my mind off the perplexities of the labor theory of value—and since this is, after all, one of the foundations of Marxist economics—I’ve abandoned my original plan.

I’d love to read Nietzsche instead of economics, but (1) because the latter is relevant to my summer research job and (2) because I am generally *incapable* of abandoning a subject before I’ve attained “closure” on it, I think I’ll wait until the end of the school year to return to my survey of Nietzsche (and philosophy in general).

How I love the crazy hedonism of the intellect!

[...]

April 27

I finished reading *The Street*. One of the most depressing novels I’ve ever read. Brutally, it plucked

the fruits of poverty and shoved them down my throat until I choked and tears were squeezed from my eyes.

Racism and poverty. Racism and poverty. Both perfected under capitalism.

If you are a champion of capitalism you're committing a crime against humanity. If you are one of the asses who still thinks capitalism and the alleviation of poverty are compatible....look at history! Look at the past two hundred years, you fucking ass. Half of the world still lives in poverty. Maybe 20% of the world's population is able to take full advantage of the wealth created by decadence. Everyone else is forced to live a virtual death-in-life.

According to some anthropologists, human prehistory was characterized by a remarkable harmony within individual communities. If this is true....what can explain it? Are Marxists right in maintaining that it was the origin of the social surplus product that inaugurated history proper—i.e., inaugurated the pain that mankind has not been able to escape for millennia? If so, then it's conceivable that man could be 'redeemed' by developing the productive forces to an extreme and thereby abolishing scarcity. So there is still a shred of hope.

April 28

If you're familiar with the works of Nietzsche and Marx you're aware that these two philosophers are largely incompatible. Nietzsche had nothing but disdain for socialism. So it seems contradictory for me to idolize both of them. Oh well. No amount of Nietzsche will make me renounce communism, and no amount of Marx will prevent me from taking Nietzsche more seriously than any other philosopher.

I love Franz Schubert! One can always rely on him for a pleasant/beautiful melody. Most of the composers of the classical period are similar in this regard. Listen to the melody in the middle section of Schubert's D. 946 No. 3; words can't describe it. I won't even try.

April 29

Modern "intellectuals" get on my nerves. Everything about them. Their pretentiousness, their irrelevance, their tendency to spend years studying minute areas of thought, their unfounded snobbishness, the way they stick together and promote each other. They've built their own irrelevant little world. It seems like they revolve around their own stereotype.

I have nothing against intellectuals *per se*. It's only because the name has developed such bad connotations that I would prefer not to be called an intellectual.

I've shortened my screenplay by fourteen pages! (Keep in mind that these pages are three times as long as those of the professional, correctly formatted screenplays.) And yet there's still too much dialogue. But how I love my screenplay! Not necessarily because it's good, but because it's *mine*. It's my baby. It's my first major piece of work.

May 3

Trying to get a full grasp on the labor theory of value is...more difficult than you'd think. Still, in the past few days I've made some headway. I'm reading excerpts from about fifteen books that criticize or clarify the concept. Meek's *Studies in the Labor Theory of Value* and Gouverneur's *Contemporary Capitalism and Marxist Economics* have been especially helpful.

May 4

I can be asinine sometimes. For Economics we're supposed to write a brief essay on whether globalization is bad, using some articles the teacher gave us to read and the lousy bourgeois theories she taught us this semester. So what did I do? I spent a few minutes skimming through this thirty-page packet of articles and then proceeded to write an essay the thesis of which was essentially that globalization is good because it develops the world's productive forces and thereby paves the way for socialism and the abolition of scarcity. I didn't have the patience to read the articles, so I didn't use them in my essay.

Here it is. (Incidentally, the whole thing is a regurgitation of parts of Mandel's *Marxist Economic Theory*.)

"Is it good or bad to allow free trade between international communities?" The question is absurd—or, at the very least, irrelevant. The gradual sharpening of free trade is *inevitable* under capitalism. One can attempt to halt it in the short run; but in the long run, the entire world will one day be part of a universal free trade zone. Is this globalization beneficial for capitalists? Does it make the world a richer place? Does it facilitate social, economic, and technological progress? To answer these questions I'll provide a brief history of imperialism, thus clarifying what the pros and cons of globalization historically have been.

In the 19th century, after the first Industrial Revolution had run its course, as trusts and cartels began to replace free competition, a surplus of capital appeared in Western Europe. Opportunities for investment were no longer as readily available as they had once been. To counteract this distressing development, capitalists invested heavily in less-industrialized countries like Australia and South Africa. The export of capital goods encouraged the export of consumer goods; capitalists, partly because of the low wages required to pay colonial workers and partly because these new markets were able to absorb the influx of capital, began to realize super-profits. The capitalists did not, however, *industrialize* these colonies (which would have given rise to competition between the imperialist powers and their colonies); they took advantage of them as a source of raw materials and as markets for their goods. In this way the world's productive forces increased, became more efficient, etc.—while at the same time the poorer nations suffered severe underdevelopment. After World War II had decimated most of the imperialist powers, their former colonies gained their independence and embarked on the road toward industrialization. Thus the first phase of "globalization"—i.e., imperialism proper—facilitated the development of the productive forces solely of the advanced Western nations. The second phase of globalization, which began after World War II, is currently contributing to the industrialization of both the advanced *and* the "backward" nations. Of course, exploitation continues—permanent exploitation is, in fact, one of the necessary conditions of capitalism (What is the *source* of capitalist profits, of *new value*, if not the surplus value extracted from workers?)—but all that matters is that the underdeveloped countries continue their industrialization.

This process will, of course, reduce profits for some corporations, necessitate greater unemployment in imperialist powers like the United States, periodically provoke an unfavorable balance of trade, but these are merely temporary side-effects from developing the *world's* productive forces (a goal that few deny is achieved most effectively through free trade).

Now we arrive at the crucial question: why is the "development of the world's productive forces" more important than the innumerable harmful side-effects which result from it?

First, it would be wise to keep in mind that capitalism is merely a particular stage of history; sooner or later it will die out. Now, despite what bourgeois economists assert in their apologies for capitalism, scarcity is not necessarily permanent. I concede that it *is* permanent under the anarchy of capitalist production, but as soon as democratic (not bureaucratic) economic planning is adopted, inefficiencies will become obsolete. Society's resources will be allocated *rationally*; development in "third world" countries will be planned; the wastes of excessive advertising, overlapping between industries, non-utilization of all the labor-power of a society, will vanish; inefficient enterprises will be shut down, their resources diverted to other sectors; defense

spending and the overwhelming wastes associated with it will be cut drastically. (The fact that the Soviet Union, which was an almost entirely agrarian society at the turn of the century, was able to industrialize so rapidly is a striking corroboration of the effectiveness of planning. Of course, in this case the planning was inefficient, brutal, and unnecessarily bureaucratic, and ultimately caused the collapse of the USSR. Planning would not, however, necessarily have these harmful side-effects in an advanced country like the U.S.) In short, scarcity will gradually wither away, thereby giving rise to the withering-away of money and even of commodities (since commodities, by their definition, must be bought and sold).

Incidentally, another reason why globalization is beneficial in the long-run is that it increases the likelihood of a recession/depression which occurs on the other side of the world spreading to America—thus possibly expediting the inevitable collapse of capitalism.

In conclusion, scarcity is the cause of quite a few of the evils of capitalism: this is why the development of the world's "productive forces"—facilitated through globalization—is to be encouraged. [...]

May 15

This summer is going to be better than any I've experienced. My goals are to get a firm grasp on the labor theory of value, to increase my understanding of Marxist economics in general, and to educate myself on the entire philosophy of Marxism. In addition, I'm going to read about 'Nietzscheanism' and conduct 'surveys' of aspects of philosophy that I find interesting (Existentialism, phenomenology, etc.). I can't wait!

(later) For the last eight hours I've been reading a book called *Karl Marx's Philosophy of Man*, by John Plamenatz. It's so refreshing to return to my roots (i.e., philosophy) after spending weeks focusing on economics!

May 16

Several hours ago I skimmed parts of Mary Daly's masterpiece *Quintessence: Realizing the Archaic Future...A Radical Elemental Feminist Manifesto*. You have to read this book!—if only to understand the buffoonery to which mankind is capable of descending. I won't elaborate on everything that is absurd about it (I'd be writing all night), but there are a few qualities I must point out. First, *every other sentence* contains a minimum of three capitalized words—such as (I do not exaggerate) Wild Women, Wise Women, Wily Women, Tactful Women, Daring Desperate Women, Dreadful Dreadless Women, Shrewd Women, Canny Women, Essential Women, Militant Women, Elemental Feminist Genius (seriously)—or clever wordplays like Dis-cover (get it?—she's 'uncovering' Truth). Christ! Every time she mentions the word 'discover' she has to capitalize it and place a hyphen in the middle! Her obsession with capitalizing words *severely* detracts from the quality of her work: it's so distracting! And another slight defect is that she seems to lust after Militant Women: her book is dripping with pathetically self-conscious militancy. [...] And she has a tendency to divide the world into two irreconcilable groups: Women and Men. Good and Evil. Mary Daly is, quite frankly, even more simple-minded than Ayn Rand. Lord! If I weren't woefully aware of humanity's silliness I would *swear* that her book was an attempt to parody herself or other militant feminists.

(3:00 a.m.) I spent the day reading that book by John Plamenatz. He's an impressive writer, a deep 'prober' into the complex doctrines of Marxism (though he fails to take account of the origin of the social surplus product as a cause of the division of labor and alienation). It occurs to me that Marx's conception of man as a self-creative being whose fundamental need is to affirm himself has a little in common with Nietzsche's will to power. They both give vaguely similar reasons for the human 'need' for religion. (Marx's concept of alienation is certainly different from anything Nietzsche had in mind, but it is similar

insofar as it can be interpreted as signifying a lack of power over oneself and one's relationships with others.) I'm too tired to think, though.

May 18

Five minutes ago I bade farewell to Rebecca. Tomorrow she's returning to California. I bought her an Irish music CD (she *loves* Irish music) as a farewell present—a token of my friendship-love.

This is a sad time of year. Not necessarily because I'm going to miss my friends—I'm not—but because my first year of college has come to an end. It has flown by; nothing remains but memories. What a cruel trick of fate to make my freshman year in *high school* last forever—when I loathed every minute of it—and my freshman year in college last a *week*, when (overall) I enjoyed it more than any other time of my life!

I learned much about myself this year. My destiny has, for better or for worse, essentially been sealed; my identity is nearing the stage of development in which it crystallizes into a hard, recognizable substance. [...]

June 8

I'm in Madison. The university is situated in quite a charming neighborhood next to a lake. The town seems so appealing that I've decided not to spend the entire summer cooped up in my room and instead to meet people, make friends, and enjoy the city. My research will be most important, of course, but it won't make a recluse out of me. I'm taking Zoloft again, too.

I spent the past week or so reading about Hegelianism (also a book called *Nietzsche and Psychoanalysis*, by Daniel Chapelle); I must admit that I had underestimated this superhumanly brilliant philosophy. There are certainly faults that may potentially cause it to crash to the ground (I haven't read enough to form an opinion on this), but it is so complex, inspiring, difficult, and ambitious that one can't help but bleed admiration for Hegel. It almost seems as though Hegel constructed the detailed outlines of this philosophy and Marx simply perfected it and greatly modified it—made it more consistent by assigning communism as “Spirit's” goal rather than 19th-century Prussia. I may be wrong, but that was my first impression.

June 10

[...] I suppose I should continue reading the book called *Karl Marx's Theory of History: a Defense* (by G. A. Cohen), but I'm not in the mood.

I'm going to provide another ‘ongoing’ list of works I've read since April.

excerpts from *Studies in the Labor Theory of Value* by Meek

Marx's Capital and Capitalism Today (half of volume one)

Karl Marx's Philosophy of Man by John Plamenatz

excerpts from approximately ten other books on the labor theory of value

Nietzsche and Psychoanalysis by Daniel Chapelle

“Phenomenology” in *The Encyclopedia of Philosophy*

Edmund Husserl: Philosopher of Infinite Tasks by Maurice Natanson

An Introduction to Hegel's Metaphysics by Ivan Soll

The Philosophy of Hegel: An Introduction and Re-examination by J. N. Findlay

Pragmatism by William James

Karl Marx's Theory of History: a Defense by G. A. Cohen

much of *History, Labour and Freedom* by Cohen
Essays on Marx's Theory of Value by I. I. Rubin
Existentialism by Patricia Sanborn
Beyond Good and Evil by Nietzsche
 half of *Reconstructing Marxism* by Wright, Levine and Sober
Marx and the Third World by Melotti
On the Genealogy of Morals by Nietzsche
 part of *Ethics* by Spinoza
 part of *A Study of Spinoza's Ethics* by Jonathan Bennett
History and Totality: Radical Historicism from Hegel to Foucault by John Grumley
Ego and Archetype by Edward F. Edinger
 part of *What Does the Ruling Class Do When it Rules?* by Göran Therborn
Sketch for a Theory of the Emotions by Sartre
The Ideology of Power and the Power of Ideology by Therborn
Elbow Room: the Varieties of Free Will Worth Wanting by Daniel Dennett
Ecce Homo by Nietzsche
 most of *Being Oneself: its Meaning and Worth* by mon père
 half of *Human, All Too Human* by Nietzsche
The Transcendence of the Ego by Sartre
The Tragic Finale by Wilfrid Desan
 half of *The Marxism of Jean-Paul Sartre* by Desan
The Coming of the French Revolution by Lefebvre
 most of *The Unbound Prometheus* by David Landes
 half of *Introduction to Contemporary Civilization in the West, vol. II*
The Second Treatise of Government and A Letter Concerning Toleration by Locke
 part of *The Making of the English Working Class* by E.P. Thompson
 most of *Changing Lives: Women in European History Since 1700* by Bonnie Smith
Discourse on the Origin of Inequality by Rousseau
Essay on the Origin of Languages by Rousseau
On the Social Contract by Rousseau
 part of *The Principles of Morals and Legislation* by Bentham
 most of *Macroeconomics* by Samuelson and Nordhaus
Revolutions of 1848 by Priscilla Robertson
 part of *The Decline and Fall of the British Aristocracy* by David Cannadine
Faust by Goethe
The Great War, 1914 - 1918 by Marc Ferro
The Russian Revolution by Sheila Fitzpatrick
 part of *The Russian Revolutionary Intelligentsia* by Philip Pomper
Imperialism: The Highest Stage of Capitalism by Lenin
Patterns in Prehistory by Robert Wenke
Philosophy of Right by Hegel
On the Jewish Question, Contribution to the Critique of Hegel's 'Philosophy of Right': Introduction, The German Ideology: Part 1, and parts of Economic and Philosophical Manuscripts by Marx
Socialism: Utopian and Scientific by Engels
Hitler and Nazi Germany: A History by Jackson Spielvogel
Survival in Auschwitz by Primo Levi
 part of *Hitler's Willing Executioners* by Daniel Goldhagen
 part of *Karl Marx's Theory of Ideas* by John Torrance
 half of *Wittgenstein: Philosophy, Postmodernism, Pedagogy* by Peters and Marshall
The Philosophy of Schopenhauer by Bryan Magee
 part of *The Division of Labor in Society* by Durkheim

half of *The Development of the Modern State* by Poggi
Wittgenstein: an Introduction by Joachim Schulte
The Metaphysics of the Tractatus by Carruthers
 half of *Individualism and the Japanese* by Yamazaki Masakazu
 parts of *Democracy in America* by de Tocqueville
Spinoza's Philosophy: An Outline by Errol E. Harris
A Brief History of Time by Stephen Hawking
 half of *The Dancing Wu-Li Masters* (several years ago)
A Source Book in Indian Philosophy ed. by Radhakrishnan and Moore
 part of *Communism, Fascism and Democracy* ed. by Carl Cohen
On the Fourfold Root of the Principle of Sufficient Reason by Schopenhauer
The World as Will and Representation (vol. 1)
 excerpts from various books on political theory
The Apology and the Symposium by Plato
 most of *A Kierkegaard Anthology* ed. by Robert Brentall
Principles of Human Knowledge by Berkeley
The Lives of the Great Composers by Arnold Schonberg
 various poems by John Keats
 part of *Theory of Color: Didactic Section* by Goethe
On the Advantage and Disadvantage of History for Life by Nietzsche
Proslogion by St. Anselm
The Russian Revolution and Leninism or Marxism? by Rosa Luxemburg
Prolegomena to Any Future Metaphysics by Kant
 most of *The Dream that Failed* by Walter Laqueur
 part of *Democracy in Capitalist Times* by John Dryzek
Dialogues Concerning Natural Religion by Hume
Love and Its Place in Nature by Jonathan Lear
 part of *Critique of Practical Reason* by Kant
 part of *Foundation Course in German* by Homberger and Ebelke
Vorsprung: An Introduction to the German Language by Lovik, Guy and Chavez
Das Kapital (vol. 1)
 economic writings by Ricardo, Say, Smith, Ohlin, Jevons, Pareto, Mill, Veblin, Hayek, Menger,
 Schumpeter, Keynes, Malthus, and numerous others
 half of *The Philosophy of Niels Bohr* by Henry Folse
The Odyssey
Don Quixote, Part 1
 several of *Plutarch's Lives*
On Friendship by Cicero
The Will to Believe by William James
Equus by Peter Schaffer (several years ago)
Philosophical Fragments by Kierkegaard
A Dialogue on Personal Identity and Immortality by John Perry
The Cenci by Percy Shelley
 part of *Reasons and Persons* by Derek Parfit
 much of *The Gay Science* by Nietzsche
Notes from the Underground by Dostoevsky
From the Gracchi to Nero by H. H. Scullard

June 12

Cohen's book is exceptional. Read it. Or at least read about Marxism in general. Trying to fully understand Marxism is a life-experience.

And now that I'm finally beginning to gain a thorough understanding of historical materialism, it is apparent that this doctrine is magnificent, an intellectual masterpiece. One of the great triumphs in the history of thought. I'm not yet convinced of its truth, but my first impression of it has overwhelmed me. Even the 'unconscious' motivation behind history that it discerns—development of the productive forces—is intelligible and plausible (more than I can say about Hegel's "self-consciousness of spirit"). [*This 'technologistic' interpretation of historical materialism is Cohen's, and it has flaws. But actually, now that I'm older, I have something like Chomsky's dismissive attitude towards attempts to ponderously theorize society. On the whole, critical intelligence is enough to get the job done.*]

June 13

One aspect of historical materialism that I'm having trouble fully grasping is precisely that which I called "intelligible and plausible" in my last entry: development of the productive forces as the propellant behind history. I think it makes sense if one looks at history as a whole, but since it has rarely been the conscious motivation behind the development of societies—excluding recent "communist" countries—how can it be said to be the basis of (or to explain) humanity's actions? It seems vaguely reminiscent of Hegel's "cunning of reason"—which I've always been skeptical of—in that we humans are merely the unwitting agents of an historical tendency we're unaware of.

On a different topic: I'm surprised that I haven't mentioned Offenbach's *Barcarole* (from "The Tales of Hoffman") in this journal. I'm sure you've heard the melody; it's a deliciously romantic tune. And the way the piece ends....it's as if you were listening to a dream, captured in a vision, which melts away with the reinstatement of reality. A wistful breeze blows by, rustling the leaves at your feet, and you're transported from the realm of music to the realm of nostalgia. Life itself is transformed into fantasy. Perfection.

June 16

I'm reading Rubin's *Essays on Marx's Theory of Value*, an illuminating, lucid exposition of basic Marxian economics. Rubin seems to be more of an expert than even Ernest Mandel was. (One of the profound injustices of Stalin's regime was that Rubin met his fate at the hands of that "man of steel".)

As I'm sure you know, another reason I so admire Marx is that he was not afraid to denounce his contemporaries. Unlike the prim and proper British (e.g., John Stuart Mill) or the reactionary German apologists (e.g., Hegel in his *Philosophy of Right*), Marx fought the Medusa of mediocrity mercilessly wherever it reared its grotesque head. He simply shoved a mirror in front of its face and it was cast into oblivion through a realization of its own repulsiveness. It is quite fun to read some of his comments on people (e.g., on Rudolf Schramm, "a rowdy, loud-mouthed and extremely confused little mannikin whose life-motto came from *Rameau's Nephew*: 'I would rather be an impudent windbag than nothing at all'", or on Gustav Struve: "At the very first glimpse of his leathery appearance, his protuberant eyes with their sly, stupid expression, the matt gleam on his bald pate and his half-Slav, half-Kalmuck features one cannot doubt that one is in the presence of an unusual man..."). His *Civil War in France* is the most passionate, eloquent condemnation of bourgeois civilization I've read.

June 18

In a chapter of Cohen's book *History, Labour and Freedom* he tries to refute the labor theory of value. The argument he provides is quite simple—so simple, in fact, that I was skeptical of it from the

beginning. It isn't easy to believe that Marx was capable of making the mistakes Cohen accuses him of. And sure enough, it turns out that I was probably right: Rubin, in a distinction between abstract labor and "material-technical" labor (the first creates value, the second doesn't, which is the principal source of confusion in Cohen's essay), refuted Cohen sixty years before Cohen thought he had refuted the labor theory of value. This theory hinges on so many subtleties and intricacies that even a capable intellectual loses his way!

Isn't it peculiar that people can be *absolutely positive* they're right, beyond any shadow of a doubt, and yet be wrong? That's happened to me many times; I find it disconcerting. Oh well. Something to think about.

June 19

Finally I finished Rubin's book. It took me a full five days. Even Findlay's book *The Philosophy of Hegel* was a shorter read. What a relief to escape the complexities of the labor theory of value! I can't explain to you how frustrating it is to force myself to trudge through the difficult passages in books on economics when I lack the knowledge that would enable me to absorb what I'm reading. The neural pathways in my brain simply weren't designed to admit free access to the subject of economics.

Change of topic: tonight I watched *Notting Hill* for the third time. I like romantic comedies. I always feel buoyant after watching them, no doubt because they enable me to escape into a fantasy world where all is sweetness, laughter and love.

June 21

I'm reading about Existentialism. According to Patricia Sanborn, some of the Existentialists (e.g., Marcel) thought that "self-realization"—becoming one with one's being—is possible only if one relinquishes the need for possession and becomes "creative" instead. In this way it is *possible* for the anguish of nonbeing to be overcome—for contemporary man's underlying frustration and lack of fulfillment to be surmounted. This belief clearly has some affinity with Nietzsche's (although Nietzsche had more in mind). But I'd suggest that creativity, the realization of one's potential, is not a sufficient condition to "become oneself"—or rather, to become one with one's being. (The first idea can be misleading, in that "becoming oneself" can mean precisely this realization of one's potential. I prefer the latter: "becoming one with one's being".) I am sufficiently aware of myself to know that if I accomplished every one of my goals I would still not have realized myself in the sense in which I'm interpreting some of the Existentialists. I would continue to experience frustration and anguish. Sartre doesn't even think this "realization" is possible, but I think that if one becomes a true Buddhist—enlightened in the most meaningful sense of the term—it is possible to conquer the anguish of nonbeing. Nietzsche characterized the Buddhist religion as one of "weariness", I believe, and he may have been right; but whether or not Buddhism signifies a weariness of life, it is plausible that Nietzsche's ideal, the *Übermensch*, can by its very definition not conquer nonbeing. It is continually striving. After enlightenment, Buddhists do not continually strive in the same emotional/driven manner in which the *Übermensch* does: they have overcome the "nonbeing" thought by Sartre to be an inseparable aspect of human existence, as the *Übermensch* has not. Buddhists may be wrong or deluded, for all I know, but I'm fairly certain that enlightenment gets one closer to oneself than simple, if profound, artistic or intellectual creation (unless this "creation" deals with precisely this spiritual aspect of philosophy). I would decidedly rather spend my life striving for a possibly unattainable goal than experience enlightenment and subsequently live in sublime, impenetrable happiness (perhaps because I'm deluded), but if one's ambition is to conquer the frustration of "nonbeing", then one should follow Buddhism (and its relatives) rather than Nietzsche. It even seems as though the Buddhists have somehow overcome the dualism between the self and the world, though I can't conceive how that's possible.

[...]

I've grown weary of reading summaries of the thoughts of great philosophers. 'Tis time to read the masters themselves.

(later) Another disgusting fact to corroborate my belief in the virgin idiocy of my fellow countrymen is that they see the collapse of the Soviet Union as a final refutation of Marx, the ultimate vindication of capitalism. They're too American to realize that the USSR's collapse is exactly what Marx would have predicted; in fact, he *did* predict it, though not in so many words. He knew that socialism would not succeed unless the revolution took place in a capitalist country—that Russia would revert to capitalism unless it triggered a socialist revolution in the Western nations. He knew that a “communist” revolution in Russia would lead to a dictatorship, the trampling of basic human “rights”, etc. Additionally, in the *mid-nineteenth century* he predicted globalization! He and Engels both predicted and explained the necessary reasons for World War I in the 1870s (loosely paraphrasing, ‘ten million men will die, Europe will be devastated...because of capitalism’s logic, imperialism, and international alliances that were made after the Franco-Prussian War...’). Marx recognized the potential strength of trade unions in the 1840s. He recognized that a depression as severe as the one that began in 1929 was, sooner or later, inevitable. In the 1850s he foresaw a great uprising in France—what came to be known as the Paris Commune. He predicted a revolution in China.

And “people” triumphantly assert that all of his predictions were proven wrong.

June 22

Why do you not wish to overcome the frustration of “ontological lack”?

Because I realize that the effort is futile.

But have not some Buddhists overcome it?

I don't know. Maybe they're deluding themselves.

“Maybe,” you say. You can't be sure until you experience the richness of that religion in full.

I'll never experience it. I tried.

You were young and stupid then.

So I was. But I'm older now, and I recognize that my nature precludes the possibility of enlightenment.

Then you're not only young and stupid, but weak.

How so?

You've sacrificed painful self-examination for a “miserable ease”. You're living in bad faith. You've forsaken yourself.

I've grown weary of introspection; it leads only to apathy and the knowledge of wasted time. I don't have the time to examine myself; more important things occupy me.

Like what?

Like concrete achievements. Like Marxism. Like the demise of capitalism.

Ha! There you go again with your self-deception! Does the destruction of capitalism really mean as much to you as you pretend, or is it not rather a brilliantly effective way to divert your attention from the subtle, ever-present frustration of life?

I suspect it's both.

Then why not confront the awareness of “meaninglessness” you insist is always at the back of your mind?

Because whenever I do, I accomplish nothing but the augmentation of my frustration.

So you've given up. You sincerely no longer desire absolute self-knowledge.

I recognize that such self-knowledge is impossible.

At the age of nineteen you recognize what takes others decades to recognize? Are you not rather deceiving yourself again?

I don't know. All I know is that those questions *have no answers*. The self is the greatest mystery,

and probably the only way to experience “enlightenment” without deluding oneself is to come to grips with this fact.

Stop trying to sound experienced and wise. The bottom line is that you’re afraid of confronting the emptiness that lies on the horizon of your consciousness. Be honest with yourself.

Okay. You’re right; I don’t deny it. But why confront this emptiness if nothing will come of it?

How do you know nothing will come of it? Sartre confronted this emptiness; look how much came of *his* confrontation.

But was he a happier man because of it?

Was he a happier man?! What’s that supposed to mean? I thought you were aware of the superficiality of happiness!

I am. But I can’t get past the feeling that such unending introspection would be a waste of time. Unhealthy unhappiness would result. I would not be able to overcome death.

Aha! Now we’re getting somewhere. So death is behind this whole charade?

—I think so. Since I realize the futility of attempting to find fulfillment in life, I plan to give humanity a reason to remember me after I’ve entered the void.

I don’t follow your logic. After you’re dead you won’t care an iota what humanity thinks of you. And if even the belief *during* your life that they’ll admire you after you’ve died doesn’t give you “fulfillment”, what’s the point of all this striving? What’s the point of fighting for the revolution?

The point is that *intellectually* I know how important it is to increase the world’s happiness. I don’t feel it with my whole being, but since whenever I do feel anything with my whole being the experience lasts only a few moments, this “intellectual” awareness is enough to make me content.

Make you content? Isn’t that—

I know, I know. Contentment is worthless. I don’t want contentment; I want.... Hell, how am I supposed to know what I want?

You’re not, unless you have the patience and courage to examine yourself.

Well, I guess I don’t.

Then you’re a coward who is living in bad faith.

But what *good* could possibly come of such “examination”?

How will you know until you try it yourself?

But—

Look. What is the goal of life? Self-fulfillment. “Self-affirmation”, as Marx might say. Self-fulfillment in the broadest sense of the term is clearly the meaning of life, as is intuitively and conceptually understandable. I don’t know what this “self-fulfillment” entails—that is for you to discover—but I recognize that all human striving ultimately boils down to it. [...] Mere “research” might help, but the last step must be taken by you. If you don’t want to be introspective for the sake of improving yourself—something I find hard to believe—then do it for the sake of improving humanity. And in the process you’ll come to know the deepest truths of existence: you’ll “fulfill” yourself. You’ll reach an alternative enlightenment. Because let’s face it: you do desire enlightenment, as much as you deny that. You enjoy “despair” only because it seems to carry you to the edge of enlightenment.

[...]

(later) It occurs to me that I’ve personally experienced much of what Sartre describes in his philosophy; I simply haven’t analyzed my experiences sufficiently to clarify them and their causes. If you read about his philosophy and then refer to some of the entries in this journal you’ll see what I mean. I can pinpoint exact instances in my life when I literally *felt* everything he analyzes.

June 23

Tonight I experienced the movie *A River Runs Through It*. It was exquisite. I could have cried at the end, when the old man was fishing alone in the river, haunted by the past, by time, by pure *being*. Trying to feel the perfection his brother had known in his moments of himself: those precious moments in which

he had conquered the ravages of time and existence. In which he had been *whole*. In which he had overcome *lack*.

If it were only possible to know oneself so deeply in every moment. In *every moment*. That would be enlightenment.

But, in the end, is enlightenment so desirable after all? Is it not rather an escape from the clutches of one manifestation of misery into the embrace of another? Is it not rather a flight from shallow emptiness into the great “river” of deep emptiness? Is it not an exquisite but *false* realization of man’s eternal will to godliness?

The most distressing aspect of the movie was its devastating portrayal of the truth that, when all is said and done, man is *alone*. We live our lives, find “soulmates”, have children, pass through old age and die—all the while unaware that we are *alone* to our very core. Every single one of us is living in his own little cell, into which not a soul is allowed entrance. And the queer thing is that this little cell is large enough to contain all existence—all striving, all sadness, all brilliance, even the infinite boundaries of being. [?] Is it not a perplexity?

And is it not a greater perplexity that people so rarely stop to reflect on so obvious a truth?

June 25

Ah, the joys of youth! The enthusiasm of innocence! How I love this time of life! Endless dreaming is my favorite preoccupation: it is the sole reason that my life has a fair amount of meaning.

I do not yet, of course, have the ability to think; but eventually this will change.

[...]

Let’s try a thought experiment, the outcome of which will hopefully be an incremental increase in our understanding of the human condition. Let’s reflect on what would happen if we peeled away our many layers of “being”—our emotions, our thoughts, our memories, our activity, our need to talk and think, our need to observe, our need to *do*. What would be left? What *could* be left? Pure existence, pure being. What would this “being” consist of? ‘Indifference’. Pure awareness. A lack of preoccupation with *anything*. A complete absence of recognition. Thus, “pure being” can be characterized as....*nothing*. To repeat: *being*, reduced to its essential ‘elements’, is *nothingness*. What does this mean? It means that the reason for man’s inability to find absolute fulfillment—the kind of fulfillment that is so profound it would make unnecessary any continued striving (perhaps “nirvana” is the word I’m searching for)—is simply that there is *nothing* to be fulfilled. No matter how wonderful, how perfect, we may feel at times....*we are not*. *We cannot be*. There will always be an inexpressible feeling of “lack” because we can never completely conquer our essence. We can try to escape it (witness humanity’s attempts to do so: Christianity, Buddhism, most other major religions, philosophy, art, absolute dedication to causes—e.g., Marxism—and most recently, capitalism’s perfected superficiality, its work ethic, and the fast-paced lives it breeds—a *necessary* consolation for the masses, now that they pay little more than lip-service to religion), but we’ll never succeed. Not even the enlightened ones have succeeded. They may feel completely at peace, like gods, but either this feeling is brought on by a Great Weariness or it’s a product of so many years of meditation that these Buddhists have *falsely* convinced themselves they have risen to the most perfect level of existence. Of course, they’ve overcome everyday concerns, they’ve reached the pinnacle of “equanimity”, but what they don’t understand is that it is *impossible* for them to reach the purest level of being. It is *impossible* to overcome oneself so completely; humans are constituted in such a way that they *need* all their more common bodily/intellectual/spiritual ‘functions’. Otherwise they would, quite literally, die. The Buddhists are certainly right that the only way to overcome suffering (or “nonbeing”) is to sink to this level of being, but it is simply not possible! Is Nietzsche’s “will to power” a proper way of interpreting humanity’s most basic, most unattainable need? I don’t know. I’m inclined to answer in the affirmative, but since the hour has grown late I’ll leave it to the reader to reflect upon.

All that nonsense was, of course, nothing more than a brief meditation on a topic about which I know very little. I was merely thinking “aloud”, as it were. And forgive me if some of it sounded

suspiciously like Sartre: I haven't read any of his longer works or much about his philosophy, so it's possible that I accidentally tripped over a few of the ideas he came upon half a century ago.

June 26

I've been reading for most of the day; I'm tired of it. Instead, I'll try some of my own independent thinking on issues related to Marxism.

First, Marx's explanation of revolution solely in terms of the fettering of the productive forces by the production relations is in need of a few psychological insights. I'm not as yet challenging the claim that full-scale revolutions take place only when the productive forces are unable to develop further; I'm saying only that *individuals* must be sufficiently motivated to risk their lives for a cause, and that this motivation doesn't consist of their desire to advance the productive forces.

So what incentive could possibly be strong enough? Let's first acknowledge that it's something they would not have to be conscious of: indeed, historically most revolutionaries have in fact not been aware of it. (Maybe this partially explains why it's been so powerful.) Especially in the case of communists, they have felt an *overwhelming* desire to dedicate their lives to a cause. "Desire" is not the word, however. Something has *compelled* them to become revolutionaries, to give up their individual identities, to sacrifice their lives, to *lose* themselves in a collective whole. Empirical research on the early Chinese communists testifies to that.

The psychoanalyst Robert Lifton has suggested that the need for "symbolic immortality" is an unconscious causal force on our actions (see some of my essays for the "Psychohistory" class). It has five manifestations: the desire to create lasting accomplishments; the desire to procreate; the need for religion; a certain kind of "communion" with nature; and what I'll call a "transcendence" of the particularity of existence. (I would add that the masses overcome death in the additional manner of incessantly keeping their minds occupied with trivialities.) What interests me especially is the fifth manifestation. Dedicated communist revolutionaries experience this transcendence in their absorption into the community. Their lives gain a profound meaning; petty concerns no longer plague them, death no longer preoccupies them. The most determined ones devote every aspect of their existence to the revolution. In addition, they intend to establish lasting achievements, thereby overcoming death twice (utilizing the first and fifth above manifestations). This analysis therefore suggests that awareness of death is the *prima causa* of revolutionary devotion. But let us probe deeper into the muck of the psyche.

We must consult the Buddhists in our search for enlightenment. What compels them to seek nirvana? Is it really nothing more than a deep-seated, unconscious fear of death that does so? I hardly think so. If humans were not mortal creatures, would they nevertheless feel the lack of meaning that would lead to the existence of religions? I think they would. After one hundred, one thousand, one million years of life, every person would seek a form of salvation in religion—would try to conquer the meaninglessness of reality, the gnawing feeling that something is missing. Maybe their need for "salvation" would be less urgent than it currently is, but it would be there all the same. Thus we seem to have arrived at the temporary conclusion that death is not the fundamental reason for Buddhism's existence; instead, an infinite, pervasive dissatisfaction, rooted in the nature of life itself (whether immortal or mortal), is what causes people to conjure up perfect states of being like nirvana and heaven. And communism.

What is the connection between religion and communism? They both involve the transcendence of the particularity of existence. Nirvana is in fact closest to this ideal, but in the modern age—with its technology, consumerism, science, and capitalism—religion has basically been discredited: communism, the more realistic, attainable version of heaven, has taken its place. But I've detected some flaws in my argument, so let's pursue a different course.

Why do I feel "meaningless" when I watch TV? Clearly it's not because TV is preventing me from reaching nirvana or overcoming the "particularity" of life, for by this logic I would feel meaningless right now. Which I don't. I think, rather, that I cannot tolerate the feeling of wasted time. Why not? Would this intolerance exist if I were immortal? Clearly not: I wouldn't care a whit about wasting time in this case.

Therefore my fear of wasting time has its origin in my consciousness of death, not in my need to experience nirvana.

Now we're getting somewhere. All five manifestations of "symbolic immortality" are in response to the fear of death. But the third and fifth ones also exist on another level: namely, on the level of the kind of frustration which is inherent in the nature of being (but which we're not always aware of). Both of these manifestations, in addition to consoling mortals *qua* mortals, also provide people with a way to "transcend the particularity of existence" (meaning the necessary characteristics of individuals, such as memory, pain, emotions, and separation from others)—i.e., to reach the level of pure being. (The sixth "manifestation" is also helpful insofar as it keeps people's minds off of their need for pure being.)

Let's sum up. There are two sources of irredeemable frustration for humans: death and an inability to attain "pure being". (I'll call the last six words of that sentence "nirvana-lack" for brevity.) The first exists only in mortals, the second in immortals as well. Thus the second is more fundamental. The fear of death, although a source of frustration in its own right, is frequently confused with "nirvana-lack", but since the overcoming of the latter would make unnecessary an overcoming of the former—while the converse is not true—"nirvana-lack" is the fundamental and necessary source of meaninglessness in life. (I.e., it ensures that there will always be a subtle lack of meaning.)

Okay. What does this have to do with revolutionaries? Quite simply, the two psychological drives just delineated are what influence individuals to become revolutionaries in the first place. "Whoever, at any time, has undertaken to build a new heaven has found the strength for it in his own hell." Whether they're conscious of it or not, there is a void in their lives. They're driven to fill it in various ways—perhaps they first look to philosophy and religion—but ultimately they decide that philosophy isn't compelling enough and religion just isn't realistic enough. (They're too saturated with modern ideology to convince themselves to believe in religion.) They need something that will "take their minds off of" meaninglessness—something that has a practical value, that can give a direction to their lives—and the most effective way to do this is to adopt a fantastic goal to strive towards. Communism is this goal. It is an achievement that, if realized, will ensure their immortality, and the struggle for it is a way to divert their attention from "nirvana-lack" (which, in the last analysis, is the basic cause behind all of life's frustrations). What of the fact that communism is by definition a (partial) overcoming of the separation between man and man? Is this merely a coincidence, or is it necessary that the revolutionaries' goal be this surmounting of the particularity and definiteness of life? Buddhists consciously strive for this state of being, but revolutionaries certainly don't have nirvana *in mind* as they fight their battles against capitalism. So the question is: are they really striving to *overcome* nirvana-lack? I suggest that, unconsciously, they are. Under capitalism individuality reaches its highest pinnacle; communist revolutionaries consciously want to reunite man with his fellow man. (Behold the dialectic.) What they don't realize is that this desire is in truth a "sublimation" of their more fundamental desire to reach pure being, which by its definition overcomes all separation between individuals (because there are no individuals). [...]

First, it would be useful to point out that most religions around the time of Buddhism and after arose partly to address the problem of nirvana-lack, but Buddhism seems to have been the least deluded in its diagnosis and suggested cures. Also, we should acknowledge that for almost every religion, its least corrupted form was achieved soon after it was founded. The religion's original ideals all generally deteriorated over time—or rather, the actual realization of these ideals occurred less frequently. (Christianity is the religion I have in mind, but insofar as religions become more widely accepted by the masses, they always deteriorate.) The religions were hardened into dogma, thereby losing touch with reality. And as the religions gradually conquered their respective countries, the ruling classes often took advantage of the lower classes' adherence to them: these religions became a means of prolonging the established order. Less were they a means of salvation; more were they an obligation imposed on everyone. Catholicism was used by apologists for feudalism; Protestantism was used by apologists for capitalism; Confucianism (albeit not a religion *per se*) was adopted by the Chinese state to justify its often repressive methods of maintaining order. (Since I have very little knowledge of Asian history I'm focusing on European history.) But because physical suffering and poverty were so widespread around the time of feudalism, a vague sense of "nirvana-lack" was not the greatest preoccupation of most people. [...]

June 28

The greatest characteristic of Nietzsche's writing is that it *compels* one to think. That's why it's taking me forever to finish *Beyond Good and Evil*: every two minutes I pause to reflect on what I've read.

For a long time I've been puzzled by what I now see is a relatively simple problem: why do people listen to modern music as often as they do? Especially the kids in my generation. They listen to rap and pop music almost as much as I listen to Chopin! I can't see how they can possibly *love* it as much as I love classical music, so what the hell drives them to spend most of their days with that incessant *boom boom* in the background? But I've finally found the answer (and an obvious one it is). There are three parts to it: least interesting, and most obvious, is that they grew up with it; they spent their tender years letting it penetrate them, and so they grew used to it. Related to this is the masses' need to fit in, to be part of a crowd, to be accepted, to conform; they're not self-confident and motivated enough to go their own way. (The reader realizes, of course, that few of them are *aware* of these reasons.) Third, it's the nature of late capitalism—its consumerism, superficiality, pop culture, etc.—to dissuade people from pondering life. There are simply too many distractions and temptations of the flesh. This is fine and dandy when people are with their friends or out in the open, but what about when they're alone? How can they avoid the pain of independent thinking when they're *alone*? Very easily: they can rely on their music. And I must admit, I can imagine how easy it would be to follow their example: all I would have to do is listen to their music as often as they do! The pressures of thinking would vanish. [...]

And so to all those "preachers of equality" who confidently assert that every type of music is as good as every other, I say: it is perfectly understandable for you to think so, because you've never experienced what it's like to be *me*. To be *different*.

(later) I don't know if you've ever noticed the phenomenon, but when one is reading a book one tends to unconsciously adopt the point of view of the writer. (That is, of course, unless one consciously tries to disagree with the writer.) Writing, as ridiculous as this sounds, is manipulation in disguise. The reader has no choice but to agree with the writer; the thoughts are, literally, being 'placed' into one's head. Right now, for example, whether or not you're aware of it, you're being compelled to absorb my opinions; your own opinions don't matter, only mine. And if, perchance, you're inclined to disagree with me, you have to pause and reflect on it. The process of reading is the process of being brainwashed; only after this process ends does one regain one's "independence" and "freedom to think" (insofar as such a thing exists).

As I experience *Beyond Good and Evil*, I wonder if Nietzsche's greatest mistake was to substitute an abstract ideal for reality. He praises the true philosophers, the "creators", the ones without pity, the "free spirits", and sees the rest of humanity as a means to attain this end. He sees scholars as a *means*. He sees slavery as a necessity and a good because it leads to the strengthening of the spirit. He despises socialism because he interprets it as the ultimate realization of "equality". (This in itself demonstrates his ignorance of the subject.) In fact, he doesn't think the masses have a reason to live, apart from their use as a foundation for great men to erect palaces upon.

Granted: the masses are nature's most unforgivable mistake. But they are *alive*! They each have *being*, a spirit, a mind, ambitions. I realize they're insignificant when contrasted with Beethoven, but that doesn't mean it's permissible for them to live in filth and misery. If *they're* not going to gain by suffering—well then, should we not abolish such pointless suffering? *Let* the masses live in shallow happiness; let the *philosophers* experience suffering: maybe the masses will grow ashamed and learn to emulate the philosophers. And even if they won't, at least they'll be living in their ideal state of happiness.

Sometimes it seems as if Nietzsche let his misanthropy (and misogyny) get the best of him. I have to be careful to learn from his mistakes.

June 29

In the collection Mom has made of my ‘achievements’ from every school year, there’s a book I wrote in the fifth grade. It was an assignment: we had to write and illustrate stories and then bind them into a book. Back then I was obsessed with insects. They were a preoccupation from toddler-hood into adolescence. I was especially fascinated by praying mantises (as I still am), and so the plot of my story revolved around a young praying mantis who was ostracized by his peers. He had no friends. He was a sad little mantid. All his attempts to find friends failed. But lo and behold!—the story had a happy ending! I’ve forgotten the exact mechanism by which it arrived at its inevitable dénouement, but the sad little bug finally overcame his shyness and made friends.

The most striking quality of the story I wrote, its most poignant, innocent, wonderful characteristic, is the unpretentiousness, the naïveté, with which I fashioned reality into a fantasy and subsequently gave it a happy ending. I can imagine myself writing the story: gayly drawing the pictures, sympathizing with the main character, feeling anger at the antagonists, experiencing the relief and satisfaction at the mantid’s final acceptance into society. Was I aware of the obvious parallel between the book and my life? I must have been. But that doesn’t matter. What is so heartwarming about the episode is my faith in the future, my certainty that everything would turn out right.

Change of topic: In aphorism 259 Nietzsche declares that life *is* the will to power. Exploitation is part of the *fundamental nature* of living things.

Let’s examine this. It is certainly in the nature of the human spirit to *incorporate* foreignness, to overcome it, to make it its own. Witness our need to humanize the world, to mold it in our image, to explain nature and to conquer it. Witness the harsh effect upon our ears when we listen to a new piece of music: it sounds unnatural, nonsensical, almost like a jumble of noise; only after we have come to recognize its ‘necessary’ structure do we learn to appreciate it. Witness our aversion to unnatural people, to unexpected situations, to embarrassment, to circumstances that get out of hand, that we can’t control or enjoy or interpret with a preordained formula. Even ‘daredevils’ have a fundamental need for security; even *they* desire power. In fact, that’s why they engage in their feats of ‘derring-do’ in the first place: they experience a rush of power and excitement. (Is the latter merely a sublimation of the former?)

[...]

Oh, this is absurd! It’s premature for me to engage in this pointless reflection; I’m not yet experienced enough.

I’d like to make one observation, however. If the will to power *is* life, if we are essentially depriving a person of his potential if we deny him the realization of his power, then how can slavery or exploitation be condoned? They deprive people of the realization of their will to power! Would Nietzsche retort that these institutions are necessary for the *society* to realize its will to power?—for the greatest members of the society to become truly outstanding and noble? If so, he is probably wrong. But even more importantly, I simply don’t see how it’s justified to let millions live in misery only so that a *handful* can rise to the top! Life itself—even without any will to power (however “impossible” that may be)—is, I believe, more valuable for its own sake (whatever that means) than Nietzsche thought.

But don’t take my word for it, reader! And don’t mistake your own unoriginality for altruism! Nietzsche may have been wrong, but he was *original*.

June 30

This morning Eric and I met with Erik Wright again, but this time there were three more students with us. One from Harvard, one from Wesleyan, and a girl from Oberlin. And guess what. The boy from Harvard is a pretentious prick who takes himself more seriously than is healthy. Surprise, surprise. [...]

Why do I dislike pretentious intellectuals? Is it partly because I envy them their ability to communicate well? No doubt that contributes to it, but there are more substantive reasons. At least the masses have the “good taste” not to try to appear more than they are!

And another thing: many intellectuals adopt the language and opinions of others and write them off as their own. Young adults are especially susceptible to this disease. A twenty-year old will read Nietzsche

and the next day spew Nietzsche's ideas as his own. At least I have the good taste to forewarn my conversation partner that what I'm about to say is an inept regurgitation of someone else's ideas.

July 4

I've never been able to understand why we're supposed to respect our elders. Is it because they've experienced the hardships of life? But this is in no way *meritorious*; such respect is analogous to respecting someone for living, which is absurd. Do they deserve respect because they're wise? But this is precisely the opposite of what they are.

In truth, the elderly are, usually, the quintessential dullards. What was once a mind has become a *hindrance*; what was once potential has deteriorated into *what might have been*; what was once interest has given way to apathy. They spend their days sleeping, bickering and filling out crossword puzzles, waiting patiently for death to release them. I hope I die before old age happens to me.

(later) Finished *The Genealogy of Morals*. The book is one of the high points of philosophical psychology. Reading it is a life experience; *please* take the time to read it.

July 5

If I have seemed mentally healthy lately it's only because I haven't let myself ponder deeply the philosophical dilemmas that assail me. One perplexity in particular, the relationship between the mind and the chemical processes in the brain, has caused some ongoing headaches. Not recently: several years ago. When I was thirteen I wrote a ludicrously short "essay" on the subject.¹

Despite my virginity in matters of the intellect, I'm reading Spinoza's *Ethics*.

July 6

It seems to me that in the opening pages of his book Spinoza has already made several blunders, one of which involves his second argument for the existence of God (whom he defines as "substance consisting of infinite attributes"). He says that "if there is no cause which hinders a thing from existing then it exists necessarily." Earlier he had stated that substances cause themselves because they have nothing in common with one another—and so cannot act upon each other—and, putting this argument to good use, he subsequently combines it with the aforementioned one by declaring that if God doesn't exist, the reason for His nonexistence must lie in His own nature (because one substance cannot have any effect on a completely different substance), which involves a contradiction. We are saying that God doesn't exist because something in His nature prevents Him from existing, which is tantamount to saying that He doesn't exist because He exists. Therefore He *must* exist. But this argument, as convincing as it may seem at first, can be used to prove the existence of *any* substance. One could say that an infinite number of substances exist because their nonexistence would necessitate that their own nature prevents them from existing (again, because they cannot be an effect of any other substance; see his earlier propositions, especially prop. 6)—so they must exist. But Spinoza believes that only one substance (namely, God) exists. Therefore his own argument can be used against him.

I may, of course, be wrong. But the point is that I don't find any of his arguments for the existence of an infinite substance very convincing. (As an example of the claims I made in the last paragraph, I'll quote his first demonstration for the existence of God, altering only the number of attributes: "If it be denied that a substance with 12 attributes exists, conceive, if it be possible, that it does not exist. Then it follows

¹ The question I attempted to answer was, "Is the mind physical or non-physical?" I decided that it's physical, since it wouldn't be able to communicate with the body if it were non-physical.

[Ax. 7] that its essence does not involve existence. But this [Prop. 7] is absurd. Therefore a substance with 12 attributes necessarily exists.” Of all the absurd philosophical arguments I’ve encountered, this one takes the cake.)

Immediately preceding Proposition XVIII Spinoza writes that “A thing which is the cause both of the essence and of the existence of any effect must differ from that effect both with regard to its essence and with regard to its existence.” Am I misunderstanding him, or does that statement contradict what he said earlier about a cause necessarily having something in common with its effect?

Proposition II (commentary): This is true only if *all* the attributes of separate substances are different, which is not necessarily the case. Substances can have some of the same attributes without the conception of one (substance) involving the conception of another.

Proposition V (commentary): Why should two substances not have even *one* of the same attributes? I can understand why they wouldn’t have the same *nature*, but this is because their nature is the sum of *all* their attributes. (I think I just rephrased my previous objection.)

Proposition VI: If my objections to props. 2 and 5 are valid, prop. 6 is false.

Proposition VII: Is this equivalent to saying that the substances that do exist *necessarily* exist, and that they are *necessarily* the only substances that exist? (I haven’t forgotten that Spinoza uses the term “substance” differently than most people.) But *why* are they the only substances that exist? As I pointed out above, according to one of Spinoza’s arguments an infinite number of substances should exist: they cause themselves, so it is only because of themselves that they wouldn’t exist. Which makes no sense. In any event, if prop. 6 is false, prop. 7 is false too.

Proposition VIII: If substances have only one attribute, then I agree that they are infinite. But why should all substances have one attribute? Substances with many attributes can be limited by other substances which perhaps have only one of the same attributes as the former. And if my criticism of prop. 7 is correct, note 1 is also invalid. (The ‘refutations’ of all these propositions entail, as you may well imagine, the refutations of many subsequent propositions. But I won’t make explicit these subsequent “refutations”.)

Proposition XIX: “Eternity pertains to the nature of substance.” Okay (ignoring my previous objections), but it isn’t *all* that pertains to the nature of substance. Attributes may be eternal (in the conventional sense of the term), but they don’t each necessarily express eternity. This deals a blow to Proposition XX as well, since the attributes would express existence only if they *expressed* eternity, not simply if they themselves *were* eternal (the implication being that the simple fact that God exists and the more complex fact of his essence aren’t one and the same thing). If Spinoza only means that you can’t have God’s existence without His essence (and vice versa), then my objection is worthless—but such a claim would, in any case, be little more than a truism (if we’re operating under the assumptions of previous propositions).

Proposition XXVI: This seems to open the can of worms dealing with free will and determinism. If God determines how we act, is there no such thing as free will? And what does it mean to say that God determines how we act? If Spinoza’s God isn’t precisely the same God of most of his contemporaries (which I don’t believe He is), *how* does He determine our actions?

Proposition XXIX: Again, what does it mean to say that “all things are determined from the necessity of the divine nature to exist and act in a certain manner”? Does it mean that our actions are, in the last analysis, not determined by us? That *everything* that happens is necessary? If so, what is the significance of thought? It is manifestly true that humans constantly debate between alternatives, so does Spinoza mean only that thought is part of the nature of God? This seems more likely—rendering my objections, once again, futile.

Proposition XXXIII—Note 2: “...God has not existed before His decrees, and never can exist without them.” This statement anticipates Hegel, does it not?

Proposition XXXIII—Note 2: I’m confused as to the nature of God’s intellect (and will, etc.). If God is everything, *what is* His intellect? (Sometimes—although rarely—it seems as if Spinoza doesn’t even believe that God *has* an intellect.) Supposedly He doesn’t have free will (because such a thing doesn’t exist), but His possession of an intellect would seem to require that He plans the nature of the world, etc. In short, if He has an intellect and no free will, what good is His intellect? In fact, what good is *our* intellect

if we have no free will? Is it *possible* to have an intellect if one has no free will? (I suppose it probably is.)
(Incidentally, I'm not recording *all* my criticisms.)

July 7

Part 2 of The Ethics: I'm a little confused as to what Spinoza means when he says, e.g., "the modes of an attribute have God for a cause". Isn't God *everything*? So shouldn't He Himself be the modes of an attribute? On the other hand, God causes Himself, so perhaps the previous sentence is precisely what Spinoza means. But then again, Spinoza occasionally declares that God is infinite and many modes of His attributes are finite, which certainly suggests that God is not the same thing as these "modes". Supposedly substance is prior by nature to its modes, but isn't it 'contained in' its modes?Actually, I've decided that there is no contradiction between an infinite God and His finite modes.

But how does a substance "cause" its modes? One would think that it needs an external stimulus to transform its infinite attributes into finite modes: *how* (and *why*) would God transform Himself?

In truth, these objections exist merely by virtue of my suspension of disbelief. For I have no idea how to conceptualize any of Spinoza's statements about God. *What does it mean* to say that He thinks? that He acts? that He causes? Are His thoughts just a collection of all of our thoughts? Is there another realm in which He *truly* exists? Sometimes I see connections between Hegel's Spirit and Spinoza's God, but I can't be sure if these "connections" are fanciful or if there is some truth to them.

In the note to prop. VII Spinoza refers to "the attribute of extension" and "the attribute of thought". Is each of these two incredibly broad categories an attribute? If so, what else can possibly be an attribute? Don't thought and "extension" cover everything? But I have been assured by Spinoza that God has infinite attributes. I wish he would give more examples of what he means by "attribute".

In short, either Spinoza's arguments are catastrophically inadequate or I am catastrophically stupid. (The latter seems a bit more likely.) Maybe he clarifies himself in the pages to come.

Proposition VII: This is not necessarily true. As Nietzsche can attest to, ideas often appear out of nowhere. This is precisely how he came across his idea of the eternal recurrence: out of nowhere it just *hit* him. It was not caused by another idea or by reflection on a physical object. This fact indicates that ideas are of a fundamentally different nature than "the modes of extension" (the nature of which presumably involves cause and effect, although some philosophers—including Nietzsche—might disagree), and this seems to refute Spinoza's belief that thoughts and bodies are different attributes of one substance.

Proposition XI—Corollary: This partially answers some of my questions.

Proposition XII: The knowledge of everything that happens in the body may necessarily exist in God, but that doesn't mean that it exists in the mind. Spinoza himself admits (in the corollary of prop. 11) that minds often perceive things inadequately; merely by extending this admission can we arrive at the fact (if I may be so bold) that minds *necessarily* perceive many things inadequately. For if they don't, then do they not have the same amount of knowledge as God? (Something is screwy here; this objection is far too obvious for Spinoza not to have understood it and tacitly answered it.) He also refers the reader to the note to prop. 7, but the claims in this note have not been proven to my satisfaction (see above, prop. 7). And besides, let's be realistic: it's simply not possible for minds to be aware of *everything* that happens in the body.

(Upon reading about Hegel and now Spinoza I've come to the conclusion that system-builders tend to get carried away by their own logic. They try to fit too much into their systems, and in so doing brutalize many concepts and blind themselves to inadequacies in their arguments.)

Proposition XIII: "If the body were not the object of the human mind...the ideas of the modifications of the body would not be in our mind. But (Ax. 4, pt. 2) we have ideas of the modifications of a body, therefore, the object of the idea constituting the human mind is a body..." This logic is not a little faulty.

Lemma III: Does Spinoza recognize the difficulties he gets involved in whenever he asserts that every action is the effect of an infinite chain of causes? For doesn't this statement lead to the absurd

conclusion that no actions are possible (since an infinite amount of time was necessary for them to occur)? On the other hand, this conclusion is arrived at even if one draws out the implications of astronomy: whether or not the Big Bang occurred, there must have always been matter in the universe (because matter can't suddenly appear out of nothingness)—which implies that the past was an eternity long, which seems to imply that time should never have arrived at the present moment. Everyone is aware of this monumental paradox, the inconceivability of which demonstrates the inadequacy of the human mind. I suppose Spinoza was cognizant of the difficulties inherent in his aforementioned conviction, but since he was also aware that both of the alternatives are equally illogical he elected for the one that is consistent with his philosophy. And I don't see any crime in this.

Returning to Lemma III....isn't it true that in order to move my leg, an initial chemical reaction sets off a process that culminates in the movement of my leg? Many conditions are necessary for this movement to occur—conditions which, let's assume for the moment, are the results of an infinite number of causes—but the actual movement originates with a single definite event that is not necessarily “caused” by other events. As I sit in my chair, reading, keeping my legs still, the motor-related neurons in the muscles of my leg are just patiently waiting for a command to be given them. They're not preparing for the movement of my leg, which movement they can foresee ahead of time; they're minding their own business, attending to other tasks. But suddenly an ‘initial’ chemical reaction occurs that orders them to get off their butts and do some work. What caused this chemical reaction? Certainly not an eternity of other events. I'm not an expert in biology, so I don't know the precise mechanism, but I do know that this ‘initial’ reaction is on a different ‘order’, as it were, than are all of the ‘conditions’ necessary for it to take place. It occurs *spontaneously*, whether or not a prerequisite of its occurrence is an eternal past. *[In this paragraph I put my finger on a mystery that scientists will quite possibly never solve: how can you ‘neurologically’ explain actions? What ‘causes’ an action, or a thought, or a decision? What causes the ‘initial’ neural impulse that leads to the action? How can it emerge from an indefinitely-extending-into-the-past chain of neural processes? It's very mysterious.]*

As I write my criticisms of Spinoza, I have the withering feeling that I'm misunderstanding him. And that I'm too dense to absorb what he's saying. Fortunately I have a father who is a professor of philosophy; if I'm desperately confused I can call him. (But it's a bummer he hasn't read Spinoza in decades.)

July 8

I feel sorry for myself: until yesterday I had never heard Tchaikovsky's *Marche slave* and *Capriccio italien*. The sublime brutality of much of the *Marche slave* would transform the most trivial irritation one was feeling into righteous rage at the world; the *Capriccio italien* is....well, just listen to it. It's fun. (I “submit” that Tchaikovsky loves grand endings.)

Proposition XVI—Corollary 2: This directly implies Kant's “thing-in-itself”, as does, indeed, much of what Spinoza says in the Appendix to the first part.

Proposition XVII—Corollary, Demonstration: Does this not imply that the mind is a passive ‘instrument’ of the body? Regarding the note, consistent with his separation of imagination and understanding, Spinoza essentially defines “error” as the lack of a true idea. It makes sense to speak of error only when discussing the understanding, not the imagination.

Proposition XVIII—Note: I agree that memory is often the concatenation of ideas directly related to “bodies”—and the sequence in which these bodies at one time affected the mind—but memory is also of ideas that are absolutely unrelated to anything physical. I can quite easily remember thoughts I had which were independent of the external world—which did not “involve the nature of things outside the human body”. This fact is so obvious that it makes me wonder, again, whether I'm interpreting Spinoza incorrectly. (Incidentally, the proposition itself is simply wrong.)

I've decided that before I read the rest of this book I'm going to skim through a brief summary of Spinozism. I'm sick of fumbling through the dark, tripping over myself, constantly wondering if I'm

hallucinating.

Several days ago a girl named Katie wrote a note on my ‘white board’ which said, “Thanks for always playing beautiful music. It makes me smile when I walk by.... P.S. Who’s your favorite composer? Do you like Rachmaninoff?” I wasn’t sure where this girl Katie lived, but I ventured a guess and wrote on her white board. Today she came to my room; we talked for awhile. She’s going to be a junior at “Eleanor Wesleyan” in Illinois. I found her quite friendly; tomorrow I’ll invite her to Wednesday night’s concert in front of the Capitol building.

(later) I saw *Pleasantville* for the second time. The movie isn’t perfect, but it makes a good case for communism.

Nietzsche thought that religion is a refuge for the weak, an outlet into which they can pour their resentment against the strong. To corroborate his conviction, let me quote part of a speech by one of the men who expelled Spinoza from the Congregation of Israel:

....Let him be cursed by the mouths of the Seven Angels who preside over the seven days of the week, and by the mouths of the angels who follow them and fight under their banners. Let him be cursed by the Four Angels who preside over the four seasons of the year, and by the mouths of all the angels who follow them and fight under their banners. Let him be cursed by the mouths of the seven principalities. Let him be cursed by the mouth of the prince of the Law, whose name is Crown and Seal. In a word, let him be cursed by the mouth of the strong, powerful, and dreadful God.

Let God never forgive him his sins. Let the wrath and indignation of the Lord surround him and smote forever on his head. Let all the curses contained in the book of the Law fall upon him. Let God blot him out of his book. Let God separate him to his own destruction from all the tribes of Israel, and give him for his lot all the curses contained in the Book of the Law....

And we warn you, that none may speak with him by word of mouth nor by writing, nor show any favor to him, nor be under one roof with him, nor come within four cubits of him, nor read any paper composed by him.

The religious are very admirable, are they not?

July 9

[Deleted stuff about my admiration of Marx.]

The commentary I’m reading on Spinoza (by Bennett) is much more than a “summary”. As *mon père* was good enough to warn me, this Bennett fellow is almost as difficult to read as Spinoza himself. But since I’ve already read eighty pages it’s too late for me to quit.

(later) I quit. Or at least I’m taking a break. I don’t like wasting time, and if I try to finish that book I’ll waste a week of a precious short summer. I’m also taking a break from Spinoza in general. Reading *History and Totality*.

One of the criticisms I’ve encountered of communism as the outcome of history is that it implies an eschatology, which is a completely inappropriate way of interpreting history. History has no goals; it is not teleological. The concrete emancipation of humanity is as absurd as the idea of the Second Coming.

First of all, we should clarify what “emancipation of humanity” means. It has nothing in common with a vision of the cessation of history; it is unrelated to morality [?]; it does not even imply the overcoming of struggle. It merely entails that the historical process *as we know it* will succumb to a historical process more under the control of humanity. “As we know it? How do we know it?”

If mankind had lived its entire history in a land of plenty, where every physical want was satisfied, where there was no use for private property, where our seemingly innate desire for social power was nonexistent, its process of development would have been vastly different. In fact, it would have had no process of development. There would have been no need for philosophy, which arose as a response to

“loss”;¹ there would have been no need for science of any kind, for there would have been no discrepancy between appearance and reality [?]; there would have been no social movements, for they could have served no purpose. Thus it is apparent that the lack of development of the productive forces, whether or not it was the driving force of history, was certainly the condition that made history necessary and inevitable.

Sorry, but I’m too tired to continue. I bid thee a good night.

July 10

Ass that I am, I didn’t take notes while I was reading the *Genealogy of Morals* and *Beyond Good and Evil*. Maybe I’ll reread them in a few weeks.

Another instance of my asininity is the fact that I read *The Future of Socialism*, authored by the worthless piece of practicality C. A. R. Crosland. The man was stupid enough to declare that in the 1950s Britain had transcended capitalism! You see, several British industries were nationalized back then, and the government was taking a more active role in social programs, which *obviously* means that capitalism no longer existed. “But how would Crosland have interpreted the de-nationalization of industries in the 1970s and 1980s? What was the significance of ‘Thatcherism’?” Well, isn’t it evident? After a brief period of what Crosland called “statism” Britain was plunged back into capitalism! Those volatile Britishers fluctuate between capitalism and statism every two decades.

Enough of that Croslandish silliness.

The 19th century was a period of such majesty and brilliance that I almost wish I’d lived in it. The decadence, misery and dashed hopes would have been nearly intolerable, but as far as I’m concerned it was the century that most realized human greatness. That’s why I immerse myself in its philosophy and art. One of my most ardent desires is to accumulate the erudition worthy of its great men, to supersede the academic particularity and pointlessness of contemporary intellectuals and return to the unbounded Victorian self-confidence of people like Marx, to commence a process that will result in an analogous age of glory but without the accompanying filth and decadence. I sincerely believe that humanity’s most splendid hour has yet to come.

Modern society cannot last. Something is going to burst—whether it’s in fifty or a hundred years—that will lead either to barbarism or to communism. It almost seems as though mankind is merely going through the motions, repressing a terrible anxiety that grows annually, waiting apprehensively for....*something*, which no one can foresee. Globalization, the worldwide democratic movement, the paradoxes of late capitalism, the increasing technicality and pessimism of what were once enclaves of greatness—philosophy, art, literature, politics—the cynicism that is now so fashionable everywhere, the universal lack of a vital *Weltanschauung*, the obsession with individualism (which would not exist were the individual not suffocated under the weight of inhuman institutions and massive bureaucracies): these tendencies must reach a pinnacle, must overcome themselves eventually. Nothing lasts, least of all phases of history. I tell you we are on the eve of the most revolutionary epoch ever to confront humanity with its promise.

(later) My mind is too restless for its own good. I haven’t read even half of Grumley’s book and already I’m impatient to move on to something else—even though it’s a good book. I don’t find it particularly difficult to read; I just have an itch to move beyond it. This is the case with *everything* I read: I have to exercise some self-discipline merely to finish the books. When I begin a new one I am excited and inspired; by the time I’ve read a hundred pages I’m desperate to move on to another one. On the other hand, whenever I indulge my impatience I feel weak and disappointed with myself. Thus I’m engaged in a constant battle between my mind’s restlessness and its conscience. I suspect that Marx experienced the same difficulty (which is why he rarely finished his projects).

¹ And, admittedly, fascination with life.

July 11

I must admit that I'm impressed by capitalism's power of endurance in the face of all odds. It has survived many a crisis that rightly should have destroyed it. But on the other hand, hindsight demonstrates to us the logic of its apparently significant lifespan: the heyday of feudalism lasted approximately....500 years?—whereas the heyday of capitalism has lasted only....200 years? Or less? It was to be expected that capitalism would prevail as long as it has.

The history of bourgeois society provides a striking confirmation of Marx's theory that social forms—and ultimately the mode of production—determine the general consciousness of society. People first revolted against capitalism because its logic hadn't yet been *absorbed* by them: it has always been in the countries where capitalism is still young that the masses are most intent on overthrowing it. The Russian revolution wouldn't have occurred if that country had already lived through several generations of capitalism; the European revolts of 1848 and the Paris Commune of 1871 broke out in countries where capitalism was not yet completely secure—and not in the most advanced capitalist countries, England and America. (There are, of course, also other reasons for this circumstance.) The Great Depression led to welfare-state capitalism (and fascism) rather than socialism in most Western nations because the consciousness of the masses had been sufficiently conditioned even then for many people to assume that capitalism was the natural organization of society. Movements like Existentialism were the last desperate attempts to overcome the dehumanization of bourgeois civilization, but they too succumbed to the growing rationalization of culture. Ultimately capitalism has determined the consciousness of the world to such an extent that most people now automatically accept it as inevitable and eternal. No longer are there revolutions: now there is only an increasing sense of individual and historical isolation, an increasing preoccupation with the movements of the world economy, an increasing lack of interest in questioning the foundations of society, an increasing and unnoticed poverty of meaning in life, an increasing acceptance of the dominance of vast impersonal institutions that no one comprehends, an increasing acquiescence to the stodgy ideal of "comfort"—to that most insipid ambition, the "American dream".... In fact, to be perfectly consistent with his own doctrines Marx would have had to foresee these developments.

The world as it currently is makes sense; it is rational in its irrationality. Its characteristics are all consistent with the general trends of history. Capitalism will last for several more generations: the above tendencies and the ones I mentioned in my last entry will continue to develop, will sharpen, will control the minds of the masses. Gradually they will become intolerable. The devastating logic of globalization will bear down on the destitute nations of the world as the loathsome qualities of capitalism's "culture" will make unendurable the conditions in the most advanced nations. At the end of this process of development, humanity, which hitherto was walking backwards toward the edge of a disastrously high precipice, will suddenly feel itself stepping onto air as the ground underneath gives way. It will flail its arms wildly; it will churn the atmosphere in desperation as it grasps for anything concrete; it will create such a commotion that all the *worms* sleeping in the dirt for so long will awaken and crawl to safety. And just as it plunges to its doom, screaming to the heavens that it doesn't want to die....*it will realize it can fly.*

(later) I have a deep urge to spend all my time reflecting on history and philosophy—and to write all of these thoughts in my journal—but I can't let myself engage in such an immature and useless exercise. I am so wanting in knowledge that such reflection would accomplish nothing. Nevertheless, it is frustrating: seemingly original ideas often occur to me, but I lack the ability to synthesize what few theories I've been exposed to and thus to draw out the implications of these ideas.

When I was twelve years old I had an IQ test (combined with a psychological test; Mom was concerned about my lack of friends). I forget what my IQ was, but I remember what percentile I was in for the two categories verbal/math and visual/spatial. Maybe you'll find this information interesting, because it's an objective confirmation of my own subjective self-evaluations. For the verbal/math category I was in the 99th percentile; for the visual/spatial category I was in the 45th percentile! What a difference! I guess that explains why I can never make sense of maps and get lost so easily (and why it is extremely difficult for me to picture in my mind people's faces: for example, I can't visualize Rebecca's).

(later) Georg Lukács seems quite an interesting and dynamic thinker. He went through many

philosophical stages—some optimistic and utopian, some very pessimistic—and several of his ideas are actually similar to some of my reflections in this journal. Specifically, his division of life into the two realms of “authentic” existence and “everyday” existence is comparable to my largely intuitive idea that we most realize ourselves when we’re alone, that it can be much more difficult to have a “meaningful” life in the company of others than in the company of oneself. I say we’re all fundamentally alone; he says authentic human communication is impossible. Language? Bah! Language is too universal and abstract to be personal. (This was an implication of my claim that language defeats humanity, “sterilizes the spirit”. I was too dim-witted to articulate it.) Music alone promises redemption. Lukács thought that art in general holds out this promise, but it’s my opinion that music alone can be the ultimate realization of true subjectivity. Of course, even music isn’t perfect: the listener can never experience the precise emotions that the artist felt as he composed his work. But the listener can, in choosing his own interpretation of the music, lose himself in its universality and thereby reach a form of “pure being”. Also, in certain individuals the conscious striving for nirvana clearly fulfills this same purpose, although the two manifestations are very distinct. (Lukács, of course, transcended this tragic view of life, as I have not yet done.)

Incidentally, it was stupid of me to characterize pure being as the final realization of “indifference”. But more importantly, I can’t decide if our fundamental desire is for nirvana or simply for the highest ‘fulfillment’ (?) of intersubjectivity—a fulfillment so complete that intersubjectivity itself becomes basically *one* subjectivity. I’m leaning toward the latter now. Of course, the frustrations of life would continue even if the latter were realized—and not if the former were—but perhaps these frustrations are of little moment. Perhaps the positive joy of individuals completely understanding and ‘loving’ one another is more precious even than nirvana, that realm in which individuality itself is negated.

How does romantic love fit into this scheme? And friendship? Are these relationships so desirable primarily because they partially overcome individual separation? And what is psychoanalysis’ relation to all this? Whenever I think I am making headway, psychoanalysis rears its ugly head, reminding me that in the end I must supplement philosophy with rigorous psychology in order to synthesize a *Weltanschauung*.

July 12

As an addendum to yesterday’s discussion of humans’ lack of mutual understanding, I’d like to point out (again) that what to me is the sheer obviousness of Marx’s claims about alienation in capitalist society reinforces the sense of isolation I feel from people. How can *everybody* not recognize the truth of Marxist condemnations of capitalism? The evidence is daily before our eyes, everywhere we go. How can businessmen, who are perpetually exposed to the odious operations of the economy, not feel the need to rebel against it? Is it *possible* to be so brainwashed? Don’t they have the gnawing feeling that something is missing from their lives?

Not even music, unfortunately, provides redemption from the vicious circle of seclusion. Music is *too* universal.¹ It’s too vague to be an accurate representation of specific subjective states. And it’s too powerful: it doesn’t merely communicate emotions; it *dictates* them. It controls them. Sadness becomes giddiness upon exposure to Mozart; joy becomes heartache upon hearing Chopin’s introspective masterpieces.

Returning to the adverse effects of capitalism upon independent thought, it occurs to me that even those who profess distaste for the system have often unwittingly succumbed to it. All the academic swindlers have retreated into their separate fields of study and thereby lost touch with Marx’s (and the 19th century’s) original, all-encompassing vision(s). Weberian sociologists, Marxist sociologists, feminist sociologists, neoclassical economists, Marxist economists, Freudian psychoanalysts, Jungian psychoanalysts, feminist psychoanalysts, existentialist psychoanalysts, analytical philosophers, analytical Marxists, logicians, Kantians, neo-Kantians, neo-Hegelians, neo-Marxists, neo-Freudians, neo-Existentialists, neo-Darwinians, neo-this, neo-that.... All these spheres have isolated themselves just as it

¹ In a different way than language.

has become most necessary for them to integrate themselves. *Why* have they done so? Is it because of the atomistic view of man that capitalism fosters? Is it only because society has become vastly complex?

What has happened to the proletariat? Were all those Marxists who saw this class as the potential realization of the totality of history simply wrong? [Yes, because that's meaningless verbiage.] Is socialism destined to be achieved by a gradual process rather than by a revolution? Above all, how much longer can capitalism last? Our culture is going nowhere. It is in such a state of disarray that I'm tempted to predict a "revolution" in the next forty years.

(later) Whether it is at all evident to the reader, my mind is in turmoil. I read all day long, take frequent breaks to absorb thoughts that occur to me, incessantly write in my journal to let off steam and eternalize ideas that strike me as potentially fruitful. I am engaged in a continuous, *devastating* struggle between my craving to write all day and my craving to read all day. I can't make sense of any of the dilemmas that persecute me from 10:30 a.m. till 2:00 a.m.; if I start to reflect on an idea I lose my train of thought; if I read ten pages of a book I become frantic to articulate the implications of what I've read; every waking hour I am mortified of wasting time. But most distressingly—questions abound! How can I make sense of the notion of historical progress? Is it possible to justify present suffering if it leads to a better future? What is the relation between the proletariat and philosophy? the proletariat and history? the proletariat and previous social classes? Can history be interpreted within the Marxian framework? If so, what is the relation between particular empirical conditions and the abstract whole? Is "historical totality" a fiction? And then there are all the philosophical-psychological obsessions that my reading of Nietzsche has provoked. The only circumstance that provides relief is when I'm in the company of others, incapable of pondering the questions of existence, unconsciously converted into a wholesomely superficial idiot. My mind has become my hell. And there's no escaping one's—hell.

(later) Tonight I went to a concert with Katie and three other people I didn't know well. Sure enough, I was fairly quiet the whole time. Why? Because I just didn't have an urge to say much. The combination of a lack of energy, a lack of confidence, and a lack of interest defeated whatever qualms I felt about keeping silent. It was frustrating: Katie, while she is perhaps a little too 'superficial' for my taste, is attractive and rather fun to be around.

The more I consider the problem, the more I believe that every individual's entrapment in his own subjective world is a major cause of life's miseries. We don't understand one another—or ourselves. This is the basis of hatred, anger, annoyance, contempt, over-generalizations: all the painful and divisive psychological forces in life. Experiences such as love, meaningful friendships, empathy, pity, and compassion would only be intensified if we radically understood one another. Why is this so? Is it little more than a coincidence or a vain hope that "good" experiences and "bad" experiences are separable along such a clearly demarcated line? Nothing of the sort. It is a consequence of two of the deepest realities of life: the undeniable truth of universal isolation, and the fact that objective values don't exist in the depths of being. The latter claim is substantiated by the discoveries of psychoanalysis, and it is recognized by everyone who is even vaguely aware of his own instincts and their eternal, tragic struggle against morality. The individual more or less internalizes society's values: in some cases his instincts are very powerful, in other cases he is able to repress them. Thus the common morality must be assimilated to a different nature in every person.

[...]

Anyway, to describe the other side of this process: it is relatively easy to forgive ourselves or not to pay much attention to our faults (or to reconcile ourselves to them). If we ever do fly into a self-induced rage or find ourselves contemptible, it is never the same as when others provoke these emotions in us. When others do so we often condemn them immediately, 'objectively' find them despicable or not worth our thoughts. It is impossible to have this same reaction to *our* faults: our relation to ourselves is far too subjective and necessary. We *are* ourselves; self-contempt is necessarily of a very different nature than 'other-contempt'. Furthermore, we believe we understand ourselves. We recognize that one incident was a temporary lapse in judgment, that another will never happen again, that a third was precipitated by forces outside our control. And while these are often considered rationalizations, they are usually closer to the truth than the simple piling of blame upon others is. *People can't deeply control themselves*. Their pre-

established natures have the final say in determining who they are, what they do. Eternal recurrence (in a sense different from Nietzsche's) is the greatest psychological force precisely because it is ultimately a synonym for *necessity*, which is the one overriding characteristic of life. Behind our apparent freedom is a vast realm of necessity: commonplace choices (like what to eat for dinner, whom to invite to a party, what topic to write an essay on) are probably free, but destinies and momentous decisions—and *personal characteristics*—are overwhelmingly not purely objective choices. And since freedom either exists as objectivity (rationality) or not at all (although it does exist in degrees), destinies etc. are not fundamentally free.

As regards ourselves, we are always partially aware of this. That is why it is so easy to forgive ourselves and so impossible to “hate” ourselves. (Recall the two manifestations of hate.) But in the case of other people, this scenario is inconceivable. How could it not be? We don't “experience” other people, so every aspect of our relationships with them is qualitatively different from every aspect of our relationship with ourselves. The divisive (painful) states of mind always arise through our seclusion from one another; the generally pleasurable—and *unifying*—states of mind are characterized by a greater understanding or forgiveness of each other. But the latter states of mind are often ‘fragile’ because of the weak emotional/subjective experience/understanding of the other and the weak intellectual appreciation of the fact of necessity (i.e., of the other's nature). Both of these are much more powerful when the object is oneself.

If we truly understood ourselves—not just in the way that is forced upon us, but as a result of rigorous self-examination and psychoanalysis—the remnants of ‘*rational*’ self-contempt would vanish at the same time that we became more aware of the other's nature as well. (All of these considerations have to be reconciled with the cursed chemical basis of the mind, which is the foundation of all ‘irrational’ states of being.) Nevertheless, the inevitable tragic conclusion is that radical understanding of others is not possible because we can never know precisely what their state of mind is [or *experience* it] at any given moment. Life is fragmentation.

Another concern: do people who consciously strive to overcome their “faults”—and ultimately succeed—deserve more respect than the average person (that is, if the implication that it's possible to partly overcome “necessity” and [psychological] “eternal recurrence” is true)? If so, does this not leave open the possibility of a ‘hierarchy of values’ the logical implication of which is the continuation of contempt and other destructive states of mind?

July 13

An obvious flaw in my above reasoning is that emotions are not subject to rational calculation (perhaps this is desirable)—which only confirms my conclusion that unless we can *feel* each other's states of mind we are destined to misunderstand and destroy one another. This is a beautiful illustration of the tragedy of the human condition.

But the one fact that continues to disturb me is that there are most assuredly people who *have* conquered harmful states of mind. Furthermore, I have the distinct feeling that it is permissible to criticize people and even to feel contempt for them based on their decisions and actions. [...] I refuse to sink into the quagmire of extreme relativism, in which it is impossible even to *move* without incessant pauses and struggles.

(later) I called Rebecca a minute ago, but she wasn't home. Upon hearing the sound of her girlish voice on the answering machine, my once-powerful attraction to her flamed up for a moment. Is it not fantastic that even the sound of a voice has the power to ignite my hormones? Not just any voice, though: hers. It is so adorable and innocent that I wish it were a physical object I could caress. I can only imagine it being a unique combination of velvet, silk, honey, and an infant's cheek.

The subconscious is a wonderful storyteller. It's capable of inventing fascinating sagas on the spur of the moment, while the miserable *conscious* mind is so aware of itself and so unoriginal that it has to plan everything beforehand. I don't know where the plot lines from my dreams come from! The successive

events just *happen*, like in movies. Now if only my subconscious would put its talent to good use. Specifically, I'd like to dream about meeting Karl Marx, asking him a slew of questions, and receiving illuminating answers. He would set all my doubts to rest. And we'd become good friends in the process. My subconscious could do all this, but it refuses.

What secrets does this mischievous subconscious hold from me? Why does it insist on concealing the keys to my identity? Does it think I'm too fragile to withstand a battering of its truths?

July 14

Perhaps (or rather, probably) one of the unconscious reasons for the supposed desirability of nirvana is that it is a return to the God-like mental state of infancy, but without any of the original negative aspects. If this is true, it is probable that real enlightenment is impossible: the infant's psychological state consists of a complete identification with the environment, and no one denies that such a state, once gone, is gone forever. (Behold the similarity with the Judeo-Christian doctrine of paradise, the fall, and the quest for redemption.) Once we have become self-conscious, we're doomed.

On the other hand, since infants are essentially unconscious, they're unaware of the "paradise" in which they live. And what is the point of living in a paradise if one isn't aware of it? Furthermore, if "paradise" is defined as it is by the mystics and the religious—namely, as nirvana—then it is *necessary* that one be unaware of it. Consciousness is simply impossible in this realm, because thinking is the process that precipitated (or coincided with) man's fall in the first place. What a mistake is man! He's heedless when he's in paradise, and he's fully conscious when he's not!

Perhaps you'll retort that the reason for calling paradise such is precisely that its inhabitants *are* unconscious. But I can't accept that. If I'm going to live in paradise, I'd like not to be oblivious. "But wait!" you cry out. "If infants are oblivious, and if you don't think paradise can exist unless one is *conscious* of it, then you've tacitly concluded it doesn't exist at all! There is no hope for men; not once in their lifetimes do they experience anything akin to nirvana." Precisely so! By my account, paradise would be nothing less than an eternal spiritual orgasm, which is inconceivable. In fact, paradise is *logically impossible*. Mankind never "fell" and will never be "redeemed"; infancy is just as barren of perfection as is adulthood.

But if our entire psyche is built upon chemical processes—if it is basically an *effect*—then shouldn't the primary object of analysis be the brain rather than the mind? In fact, isn't it conceivable that someone will someday invent a drug that psychologically enables us to return to infancy? The constraints are physical, not mental. Matter has primacy over mind. But I cannot *stand* this crude materialism! It is illogical, and it leaves many questions unanswered. (Believe me: the greatest philosophical dilemma is the relationship between consciousness and the body.)

I am very skeptical of books by psychoanalysts who attempt to see meaning in every mental process, every dream, every action. For example, in a book I'm reading, the author, referring to dreams about flying, says that "When one is off the ground the danger is that he may fall. Abrupt impact with reality, symbolized by the earth, may be dangerously jarring." Is this not a little hard to swallow? Maybe flying is the subject of so many dreams only because the queasy feeling it provokes in the pit of the stomach has some kind of resonance with the chemical processes in the brain. This example merely highlights my more general inability to comprehend how *nerves* can create *meaning*. Do they undergo reactions because of the "meaning" which seems to be the consequence of these reactions (an absurd notion), or is the meaning just a side-effect (another absurd notion), or is the meaning unrelated to the chemical processes (another absurd notion)? It certainly seems that in dreams the meaning may be a side-effect with hardly any significance whatsoever. But...forget about dreams! *Everything* pertaining to the mind is inexplicable!

Returning to a topic that I've already beaten to death: our lack of understanding of each other has an exceedingly adverse effect on our understanding of ourselves. To take an example, because of my ignorance as to what occurs in the minds of others, I can't decide if I'm a good thinker or a terrible thinker. My thoughts don't seem to flow; it requires a great effort to think deeply about anything, but is this true for everyone? Is it truer for most people?

July 15

Now and then I experience something too sublime for prose.

[Deleted a pathetic poem here.]

Okay, enough of that. It deteriorated into a parody after the first word.

What I had hoped to communicate eventually was that music sometimes seems to bring me close to the “spiritual orgasm” I referred to earlier. If I focus all of my energy on listening to a piece of music, *occasionally* I feel as though I’m on the verge of losing myself. But never do I succeed. The music never completely consumes me. Every day I try to penetrate to this deepest level of aesthetic appreciation, but it’s impossible! (Usually I follow the strategy of consciously “catching my throat”, which helps a little.) Do you remember the scene in *Indiana Jones and the Last Crusade* when Indiana is grasping for the Holy Grail and his fingertips are actually touching it? What he must have felt at that moment is what I feel when I *almost* have reached the spiritual peak for which I’m striving. The frustration is inexpressible. But I know it’s possible to climb to this peak, because it’s surely what drove the great composers to spend their lives writing music. Unfortunately, unless one has an artistic nature one is automatically shut out from this “paradise”.

But is this really the paradise I’d like to believe it is? Most composers were tortured, depressed, suicidal. Are these the symptoms of one who has experienced paradise? Maybe the question is absurd: these people were not always composing, and it was when they weren’t that they felt most depressed. (If you’d like to challenge this assertion, imagine the possessed state Beethoven was in when he composed the most breathtaking passages of the Ninth Symphony. Is it likely that despair was on his mind then? Is it not more likely that his mind was transported to a realm in which emotions don’t even exist?—in which the term “emotion” is far too inadequate to characterize the richness of the experience?) The composers relentlessly strove for a more perfect state precisely *because* they periodically experienced beauty in its ideal form. When one’s nature is not of this earth, the shock of reality is too great to endure. Mundane mental health is sacrificed for an occasional mingling with the gods.

Whether rare moments of aesthetic splendor can justifiably be considered the ultimate “paradise”, I have at last come to the conclusion that if this paradise exists at all it exists as loss-of-self. Commonplace thought, which presupposes a self and consciousness, is not compatible with my spiritual ideal. Only the kind of thinking that Nietzsche periodically engaged in—namely, the kind in which a person’s identity is forgotten and he is transformed into a vessel—doesn’t necessarily preclude the possibility of paradise. The lack-of-thought requirement is one of the reasons for my skepticism about art forms other than music: it seems that a master painter or sculptor (or, in most cases, a writer) could easily *think* as he created a masterpiece. Buddhist enlightenment allows thought as well. Even if Buddhists can teach themselves to accept unpleasant emotional states—these states still exist! Boredom, one of the worst, continues to exist. In fact, I would go so far as to say that it only occurs more *often* after enlightenment has been attained. But a composer in a state of rapture could not experience thought or even any emotions per se; it’s the nature of music to shut out thought. (Just as it’s the nature of deep thought to shut out music.)

In yesterday’s entry I said that paradise is logically impossible. Am I now contradicting myself by suggesting that the great composers and musicians experienced paradise? Well, aside from the fact that I change my opinions every day—so it wouldn’t matter even if I *were* contradicting myself—I was operating under the principles I put forward in that journal entry (regarding consciousness, infancy, etc.) when I made the rash declaration. So it is the principles I have altered: I now consider consciousness to be compatible with my ideal. Not typical consciousness, mind you; Beethoven-consciousness.

While we’re on this topic I suggest you listen to the fourth Bagatelle of Beethoven’s op. 126—not because it’s incredibly moving, but because it’s a relatively unknown piece that doesn’t deserve that cruel fate.

An unintended logical byproduct of this entry is a justification of my hatred of New Age and pop music: music, to deserve the name, should be able to engulf a person in flames of ecstasy. It should have

the power to stimulate loss-of-self. Have you ever heard of any New Age fluff that had this power? Have you ever (while sober) listened to rock music that made you think you had transcended the fragmentation of existence?

July 16

To summarize yesterday's conclusions, paradise exists only in rare moments that are necessarily transient. Humans are too attached to this world to remain distant from it for long. Music, philosophy Nietzsche-style, and very unique instances of religious splendor are the only experiences that allow for my definition of nirvana. In the last entry I said I was skeptical about the inclusion of religious experiences under the heading of nirvana, but I'll concede that during *moments* of "enlightenment" nirvana is attained. It never lasts as long as Buddhists say it does: the instant that one returns to Earth—that one becomes self-conscious again—paradise vanishes.

But what about sex? What about physical orgasm? Is that not paradise as well? If it is, it's a completely different kind of paradise—which seems to imply that it isn't paradise at all, because how plausible is it that two types of paradise exist? Fortunately, this problem can be solved fairly easily. Go have sex right now, and in the middle of orgasm reflect on your 'ontological' location.

.... Well, see what I mean? The experience can't be described as "nirvana" in any sense of the word. In truth, the mere fact that you were able to reflect on your situation *at all* during orgasm shows that you were completely self-conscious and thereby hadn't transcended any aspect of existence. Orgasm is physically pleasurable, but humans are above all creatures of subjectivity. We are creatures of the mind. Physical pleasure is little more than a distraction or a temporary release.

By the way, I've personally recognized that music can intensify experiences, so my inclusion of it under the heading "Potential Catalyst of Nirvana" is partly based on my own emotional ordeals. I have not, however, experienced the other two potential "catalysts"; in honoring them I am primarily relying on the testimony of Nietzsche, the testimony of the religious, and my own imagination.

(later) In eighth grade the ten students in my class each had to give a brief speech in front of the school on any topic they chose. I vividly remember the day in English class when it was time to announce what we planned to give our speeches on. The teacher successively asked each student what topic he had chosen; the exchange was something like the following:

"Jason? What's your speech going to be about?"

"Basketball."

"Nick? How 'bout you?"

"Scuba diving."

"Dan?"

"Basketball."

"Megan?"

"The history of airplanes."

"Jay?"

"Basketball."

"Gardiner?"

"Roger Clemens."

"Chris?"

"Uhh....well, I'm not....I was thinking about—well, I guess the meaning of life."

It was an embarrassing moment. But I gave the five-minute speech anyway. The strategy I followed was to examine specific opinions and refute each one until I arrived at *my* opinion—which was, of course, the only true one. I believe the last sentence of my presentation was, "In conclusion, the true meaning of life is helping others." Surprise, surprise. Apparently I didn't think much of the speech, for I promptly threw it away. Mom was none too pleased about that, and now that I look back on it I don't blame her. It would have been amusing to reread it five years later.

But enough of that. One of the reasons I find psychoanalysis impressive is that it is capable of attaching meaning to chemical processes in the brain—indeed, it has made progress in reconciling the mind with the brain. Psychoanalysts do, of course, tend to go overboard with their never-ending quest for meaning (as I stated above) but this doesn't necessarily invalidate psychoanalysis itself. Nevertheless, one of the obvious difficulties with this broad field is that it seems exceedingly tricky to judge one theory as better than another. What empirical evidence there is for one theory can be interpreted in a different way to confirm the hypotheses of a different theory. How do scholars overcome this predicament?

Although my 'research' with Erik Wright isn't as fascinating as I'd like, it has taught me to make explicit what has always been a rather intuitive suspicion of mine: the mere fact that we can interpret a process as having a definite purpose doesn't mean we can ignore the basic mechanism through which this process is enacted. And perhaps when we have done so we'll realize that the apparent purpose was either incorrect or was simply a byproduct of the process. For example, psychoanalysts are usually guilty of assigning a purpose to events in the subconscious without asking themselves what the precise *mechanism* is by which these events take place. They simply state, "The reason for this dream is to reduce this kind of tension." Well, *how* and *why*? Is the goal foreseen by the subconscious? Is the dream nothing more than an automatic reaction—a "letting off of steam", a mechanical release of pressure? "It doesn't matter. What matters is that the tension is resolved subsequent to the occurrence of the dream." Okay, but maybe it's not the dream itself that resolves the tension; maybe it's the chemical processes in the brain. And if this is so, wouldn't it be more worthwhile to focus research solely on the development of medicine rather than on the improvement of necessarily imperfect psychotherapy? For Christ's sake, aren't psychologists aware of the insuperable difficulties that the brain itself poses to psychological analyses? Until these dilemmas are confronted head-on, psychoanalysis is destined to remain a pseudo-science.

[...]

It's a pity I used not to record all my thoughts in this journal, for in the past year I've realized how easy it is to sound original nowadays. Authors of books like *History and Totality* pour lavish praise on scholars who articulate outlandishly obvious implications of statements that, e.g., Karl Marx made in his manuscripts. Erik Wright became famous because of his "contradictory class locations" idea—which surely should have been obvious to anyone who had engaged in a modicum of class analysis. For all I know, many of the ideas that have crossed my mind over the years have been "original" enough to get me recognition.

Speaking of ideas, it seems to me that if everybody recorded his thoughts and then published them (anonymously or not) the world would be a better place. People would understand each other more. That's one of the reasons why, maybe after I die—because I'm going to write it my entire life—I intend to publish this journal (although the most important reason, of course, is that I'm self-absorbed and vain).

I think it was a bit fatuous of me to write (on June 25th) that communism, religion, etc. are all attempts to evade meaninglessness in life. The explanation is surely a great deal more complex. (In fact, that entire passage was hogwash. "Pure being" isn't the highest good; spiritual ecstasy—paradise—is. Indeed, I think that Buddhists confuse the former with the latter: what they strive for is spiritual ecstasy, not pure being.)

In the book *Ego and Archetype* the author states that "[a] possible way of dealing with the loss of a religious projection is [as follows]. If when the individual is thrown back on himself through the loss of a projected religious value, he is able to confront the ultimate questions of life that are posed for him, he may be able to use this opportunity for a decisive development in consciousness. If he is able to work consciously and responsibly with the activation of the unconscious he may discover the lost value, the god-image, within the psyche.... The connection between ego and Self is now consciously realized. In this case the loss of a religious projection has served a salutary purpose: it has been the stimulus which leads to the development of an individuated personality." It's as if the man is describing me. What's more, all of it is true. *That* is why you religious ones should relinquish your fallacious faith in a god that controls you and instead begin to worship yourselves.

This very interesting book is forcing me to think more deeply about the psychological hypotheses I've put forward in the past few days. I've only read a hundred pages and already I'm confused. How does the relationship between the ego and the "Self"—understood as the psyche *in toto*—affect my interpretation

of nirvana? This fellow Edinger writes that the ego sometimes inflates itself (meaning that it ‘believes’ it has more power over the psyche than it really does; it is identified with the Self) and is sometimes alienated from the Self (which is the exact opposite of inflation). These are the two basic processes that cause almost all major psychological imbalances, but they are both necessary for the development of the individual. Ideally, the individual will eventually experience individuation, which is essentially a conscious recovering of the “original unconscious wholeness and oneness with life”. The split between unconsciousness and consciousness is overcome; a dialogue emerges between the two. The ego, of course, remains separate from the Self, but this is desirable. One “comes to realize that there is an autonomous inner directiveness, separate from the ego and often antagonistic to it.” “One is not master in his own house.” Notice the similarity with Nietzsche’s doctrine of eternal recurrence¹ and *amor fati*. The path of one’s life is necessary, not governed by chance. “Chance as a category of experience is a symptom of the alienated life.” The goal of psychological development is “to redeem by conscious realization the hidden self, hidden in unconscious identification with the ego”—which involves recognizing the Self’s disturbing but liberating power over us. (As I pointed out several entries ago, one of the implications of this power would seem to be moral relativism, which I find distasteful.)

I haven’t yet read the part of the book that deals with individuation in depth, but I can already see that despite its possible truth as the end-product of psychological development, it is not precisely the same state as my ideal. I can’t stress this enough: it is inherent in the nature of mundane consciousness for there to be *lack*. As long as we are self-conscious there will be something missing. And before we reach self-consciousness there is nothing we *can* miss. There is *nothing*. Only after we have attained self-consciousness and *subsequently lose it during fleeting moments of “perfection”* can we properly be said to have passed through the gates of the Garden of Eden. The tragedy is that only a tiny minority is born with a nature that allows for this transcendence. *I* certainly will never experience it.

Can this ‘transcendence’ be understood as the ego’s temporary identification with the Self (which effectively implies the disappearance of the ego)? I don’t know.

July 17

I apologize for my inability to explain my thoughts adequately. I’m too ‘abrupt’ a writer: I briefly record the skeletal structure of ideas and then move on to something else. (To be precise: I reflect on a thought until for a fraction of a second I have ‘experienced’ the thought intuitively, and only then can I with a good conscience think about something else.) In order for you to understand what I mean by terms like ‘paradise’ it is quite literally necessary for you to experience something like the states of mind I experience—which is unfortunate, and maybe impossible. Pure reason must always be supplemented with subjective experience to be more than...nothing. This is why it’s so hard for most of us to understand Nietzsche, and why it’s so easy to label him a megalomaniac.

If mental events are based on physical events in the brain, maybe nirvana can also be experienced by taking drugs that may or may not yet exist. Maybe this is why heroine, cocaine, etc. are so desirable. I’ve smoked marijuana twice, and although I never got “high” (but I *did* “inhale”) I know that this wouldn’t have corresponded to my spiritual ideal. The same is true for the one time I got drunk (after drinking approximately eight gin-and-tonics) and spent the weekend blowing chunks. But I’ve never taken the notoriously hard drugs; perhaps these enable one to experience a sort of Beethoven-consciousness (although I doubt it). I’m curious.

However, until I’m better equipped to confront the difficulties of the mind-body problem I’m going to focus on understanding just the mind. In fact, I’m going to pretend humans are pure mind. (It’s wise to reduce problems to their component parts.)

My relationship with music is perplexing. Why do I enjoy listening to it? Indeed, why do people in

¹ [My ‘psychological’ interpretation of ‘eternal recurrence’ was influenced by a book I’d read that ignored Nietzsche’s intentions and gave the doctrine a different meaning than it was supposed to have.]

general enjoy listening to it? Every society has its own style of music. Why is it such a universal need? I'd suggest that music is so ever-present because it's an excellent absorber of libido. By "libido" I don't mean sexual energy; I mean unconscious energy in general. By "excellent absorber" I don't mean that it's more powerful than other 'absorbers' of libido (in most cases sexual energy is more potent); I only mean that it's a very reliable absorber—as well as a powerful manifestation. (I call music a "manifestation" of libido insofar as it is composed. For the rest of us it merely 'absorbs' our libido. See below.) Music is reliable because in most cases it is an eminently stable outlet for emotions, whereas the emotions themselves (which are always manifestations, not only "absorbers", of libido) are by their nature unstable. Music is soothing, constant, caressing, flexible. (By "outlet for", "absorber of", and "manifestation of" I mean essentially the same thing, the main difference being that "manifestation of" implies a 'crystallized' form of libido—something we create or engage in voluntarily. If a professor loves his job, his professorship is a manifestation of, outlet for, and absorber of his libido. If he hates his job, it is merely an outlet for and absorber of his libido. These designations aren't *purely* arbitrary.)

[Blah blah, I've deleted more meaningless blather.]

Music has a unique position in the hierarchy of these manifestations: it is the only one of the three most intense that can readily be experienced by anyone. Religious enlightenment is the ultimate subjective experience: it is so personal that no amount of description can give a person an idea of its power. Nietzsche-philosophy, unlike enlightenment, involves the creation of something, which implies that anyone who can read can "know" this experience. But few can *feel* the experience, which is all that matters in our current discussion. Music, however, is a creation that is directly related to the emotions. It can intensify *any* emotion that someone feels; it can carry experience to another plane, so it is very popular. This other "plane" is weak in comparison with the plane reached by the rare people who have a nature that is especially touched by music, but it is comparatively pleasurable even for those who don't have an idea of music's true potential.

What is the relation between thought and libido? My guess is that thought is a particularly weak manifestation of libido [i.e., psychic energy], because in its most 'objective' forms it is much less intense than emotions.

On an unrelated topic, sometimes it's fun to listen to modern music if only because the lyrics are so pitiful. For example, there is a song entitled "I Touch Myself", the lyrics of which include the following: "I think of you; I want you to touch me. I feel you; I want you to touch me. I touch myself. I touch myself. I touch myself. I touch myself." A more recent and popular song includes the lyrics "I get knocked down, but I get up again. You're never going to keep me down. I get knocked down, but I get up again. You're never going to keep me down. [Repeat *ad infinitum*.]" And these are the more respectable examples.

July 18

So that you don't *completely* lose respect for me, I want to remind you that almost all my psychological meditations of the past few days have been basically original. What triggered yesterday's speculation on "libido" was the following sentence in *Ego and Archetype*: "Narcissus represents the alienated ego that cannot love, that cannot give interest and libido to life..." As I thought about the word 'libido' it suddenly hit me that music can be thought of as 'absorbing' our libidinal energy. The rest followed from there.

Because I currently don't have many friends, the strategy I follow to relax my mind is to alternate between books on different subjects. Thus, if I'm tired of reading a book on psychoanalysis I'll switch to a book on the Marxist theory of the state; if I get tired of this I'll read a book on Nietzscheanism; if this gives me a headache I'll reflect on psychological dilemmas; if I lose interest in this I'll read a few adventures of Sherlock Holmes. If I'm desperate I'll watch a movie.

[...]

An obvious question I haven't asked is: *why* is music so closely related to the emotions? What do emotions and sound have in common? The same isn't as true for sight and emotions, so there is clearly something in the nature of sound that makes it especially resonant in our unconscious. I suspect that this

phenomenon can be satisfactorily unraveled only by resorting to physical explanations.

I feel disgraceful due to my ignorance of Asian, African and South American history. This year I'm going to acquaint myself with the relevant literature.

(later) There are quite a few important questions that have yet to be answered within the framework of my nonsensical psychological opinions. First, loss-of-self has to be adequately defined. Second, what does it mean to say that it is desirable? Doesn't loss-of-self imply loss of knowledge about oneself? Should loss-of-self be 'acceptable' only after a certain amount of self-knowledge has been attained?

Since loss-of-self is incredibly rare and only lasts for fleeting moments, the latter questions are irrelevant. It is fully compatible with an extraordinary amount of self-knowledge and self-consciousness at all other times of life. "But what if it could last for an entire lifetime? Would it be desirable then?" Who cares? Such a scenario is impossible. It would necessitate a drastic alteration in the human condition.

July 19

(I may have already addressed the following topic.) Nietzsche raises an interesting question when he asks, "Why do humans pursue truth rather than falsehood? What is so valuable about truth?" His answer is admirable: humans unconsciously seek to create the world in their image, to humanize it. They seek power over it.

Nietzsche's definition of the superman, too, is noteworthy. It reconciles my idea of paradise with the seemingly innate urge of people to create. Unless I'm mistaken, an approximate definition of the *Übermensch* is 'the exceptionally passionate man who is able to channel his passions into a creative outlet'. As we've seen, it is only through a superhuman burst of passion that the self can be overcome—that a person can most realize himself. Unless this passion is channeled into a single outlet it will be too diffuse to accomplish the desired end. Thus we arrive at the *Übermensch*—

Except for one qualification: why must the passion be creative? Buddhist enlightenment-passion is not creative in Nietzsche's sense, but its product is loss-of-self. Nietzsche would not, of course, see any difficulty in this; his ideal has nothing to do with loss-of-self. But *my* ideal does. How can I reconcile my two partialities for a life devoted to artistic or philosophical creation and a life devoted to loss-of-self if the two don't necessarily coincide? I can't convince myself to adopt the latter wholeheartedly at the expense of the former. And yet I suspect that even an occasional experience of the latter would enable me to enjoy life as much as is possible within the parameters of normal consciousness. In fact...yes, I am an ass. There isn't the slightest inconsistency between the two lifestyles. It's perfectly plausible for one to engage in intellectual creation as often as possible and at the same time to strive for loss-of-self: creative passion *is* a way of momentarily integrating the ego with the Self (i.e., of losing oneself). The passion *need* not be creative, but it *can* be.

(By the way, Edinger opposes the integration of the Self with the ego because this supposedly is the unhealthy state of "inflation" which always leads to "alienation". But in my opinion there are two types of inflation: the unhealthy, commonplace one in which the Self continues to exist independently of the ego despite the ego's pretensions to the contrary, and the healthy one in which the ego truly *does* become the Self—or, what is the same thing, in which the ego disappears. This exists in the state of infancy, but its paradisiacal manifestation occurs only after consciousness has been attained and is subsequently 'lost' temporarily. In fact, the two are qualitatively different 'manifestations' of loss-of-self, but they occur within the same overall framework—viz., that of an identification of the ego with the Self. The primary differences are that the adult manifestation (1) is a liberation of the acquired wealth of the unconscious (that is, basically a liberation of the libido) and (2) is so 'exhilarating' that it can't be comprehended by ordinary mortals.)

[...]

Returning to the problem of self-consciousness, this very ambiguous concept has a few characteristics that must be delineated before paradise can be understood. First, underlying all self-consciousness is a taken-for-granted feeling of lack that escalates as self-consciousness sharpens—so much so that life can turn into a comedy, a charade. But even more importantly, true self-consciousness comes

with the realization that we are trapped in our own little worlds, that we're alone. Most of the time we're not completely aware of this very subtle absence of perfection, but that doesn't make it any less real. Second, there are 'levels' of self-consciousness. When I'm completely absorbed in a conversation I'm not really aware of myself at all, but the feeling of "lack" necessarily persists. When I'm alone and listening to music I'm almost always a little more aware of myself (although in a basically unreflective manner). When I'm in love I'm even more self-conscious, often reflecting on myself and how I appear in the eyes of my beloved. I'm *extremely* self-conscious when I'm 'introspecting' or when I'm bored. If emotions or interests or desires didn't exist, each of these successive stages would coincide with an increasing sense of almost imperceptible dissatisfaction. (These stages actually wouldn't exist, so just imagine to yourself levels of intensified self-consciousness.) But because emotions do exist and are always more powerful than simple, objective "awareness", the love stage is much more pleasurable than, e.g., the conversation stage (even though it may imply more self-consciousness). Unpleasant emotions like anger are certainly not very desirable, but they instill a different and less severe displeasure than does pure self-consciousness. This is evidenced by the fact that I—and probably you—would rather be angry than very bored, which state of mind coincides with a lack of all emotions, desires, etc. Or rather, severe boredom is equivalent to 'emptiness', which I suppose is an emotion. But it is a unique emotion in that it signifies a virtually complete lack of energy. As far as emotions go, it is the weakest manifestation of libido, and thus implies the most acute instance of self-awareness. But more importantly, it is the only *emotional* manifestation of self-consciousness: since self-consciousness is, in its deepest form, consciousness of lack and loneliness (because "lack" and loneliness are subjective characteristics of all human existence except for nirvana and infancy), and the emotion of emptiness is the outstanding realization of lack (moreover, of the same qualitative kind of lack involved in self-consciousness; I know because I've experienced it), this emotion is the most penetrating realization of the essentials of self-awareness. By "essentials" I mean loneliness, emptiness, apathy, absence of self-understanding, etc. Shame, guilt, and the rest of the unpleasant feelings directed toward the self are sometimes more unpleasant than boredom not because self-awareness is necessarily any sharper, but because self-awareness is supplemented with aversion-toward-self.

When people are temporarily free from emotions their self-consciousness is more 'objective' than otherwise, so it is not *painful*. The moment it becomes painful is the moment it becomes most acute: the devastating emotion of "emptiness"—or "nausea"?—enters upon the scene. So, carried to its logical conclusion, the deepest kind of self-consciousness becomes painful.

If this is true, is self-consciousness ever desirable? Yes, because it is only through pain that we reach pleasure. (As hackneyed as that sounds, I think it's true.) Furthermore, our pleasure is inevitably more profound if it emerges from such despair. We feel liberated. In addition, it is only through self-knowledge that we can discover our deepest spiritual needs and can begin to heal our 'wounds'.

Because humans (after infancy) are always conscious (when they're not asleep),¹ and consciousness always presupposes a kind of self-consciousness, even in paradise we are self-conscious. But it is the weakest kind of self-awareness that exists. Loneliness and pain vanish. This self-consciousness is even weaker than the aforementioned "conversation"-consciousness, in which practically our whole being can be oriented to the exchange. But nirvana is overwhelming not only because of the lack of self-awareness, but because it involves a transmutation of the person from a *subject* into a *vessel*. Nirvana is a flood from the unconscious. The ego ceases to exist as such. Enlightenment, a Nietzschean deluge of philosophy/literature, and music (when it's a torrent that seems to *burst* from the clouds in one's brain) all crush the barriers between ego and subconscious: they are the latter's liberation.

July 20

I should clarify the phrase "liberation of the unconscious": it is not an instantaneous liberation of the *content* of the unconscious (which, aside from being impossible, would drive a person insane); it is only

¹ I.e., when they're not unconscious—which is, of course, a ridiculous truism, but that doesn't affect my argument.

a liberation of the libido.

If my notion of nirvana is more than a fantasy, Handel experienced it when he composed the Hallelujah Chorus. His servant walked into the room and saw his master crying. In response to queries, Handel exclaimed, “I have seen God!” I can’t think of a better way to describe such an experience.

In Sartre’s book *Sketch for a Theory of the Emotions* he attempts (and, I think, fails) to refute the psychoanalytic theory of the subconscious. He claims that such a thing could not exist because it would be “logically inconsistent”: consciousness cannot be caused by something it’s completely unaware of. But as illogical as the idea of the subconscious may seem to Sartre, there is so much evidence for an unconscious that it *must* exist: repressed desires, memories, fantasies, instinctual forces, psychotic episodes, etc. Sartre’s entire philosophy is absurd.

An obvious question I haven’t answered is why there are only three manifestations of nirvana. Could not *any* manifestation of the libido potentially “liberate” the latter? One would think so, but I’ve never heard of, e.g., romantic love being that powerful. Nor anything else. Is there something in the nature of anger and other unpleasant emotions that precludes paradise from being manifested in their form? Yes: they are unpleasant and divisive. They presuppose a consciousness of individuality, whereas (1) the unifying emotions are the only ones that have a distinctly pleasurable feeling,¹ and (2) nirvana signifies the almost-complete absence of a “consciousness” of individuality. It is as close to the mental state of infancy as we can get: it is the least-noticeable non-reflective awareness of self that is possible. While divisive emotions often are compatible with a merely non-reflective awareness of self, they always imply an awareness of others, of the world (which is indeed what necessitates their non-reflective *self*-awareness). In short (this clarifies yesterday’s discussion as well), we are always explicitly conscious either of the world or of ourselves, and the awareness of one implies (different levels of) a non-reflective awareness of the other. Nirvana is, therefore, so overwhelming not because of the low degree of awareness but because of the flood of energy from the subconscious—from the “depths of being”.

[...]

Aha! I’ve discovered the reason for the low number of possible manifestations of nirvana! Even the unifying emotions—love, joy, compassion, empathy, etc.—presuppose a great degree of self-awareness. In fact, for them to “unify” at all there must necessarily be *a priori* consciousness of individuality. But we have seen that nirvana exists only when self-/other-awareness is at its ebb (because self-consciousness is a consciousness of lack, and there is no lack in nirvana), so emotions and normal states of mind forbid paradise. Love can never become so powerful that a person forgets he is a person, and if it could it would cease to be love and would become something higher, divine.

(later) I don’t think I should record any more psychological reflections in this journal. I feel like a charlatan, a hack, a pitiful excuse for a pseudo-phenomenological psychologist. Sometimes my ideas sound a bit original—inasmuch as *I* have never heard of anything quite like them—but originality isn’t an end in itself. (That’s why I dislike people who praise forms of contemporary music because they’re original. “John Cage is original, therefore he is admirable and brilliant.” That “therefore” is a non sequitur. John Cage wouldn’t have been worthy of licking Beethoven’s spit.)

If you knew what goes on behind the closed doors of the government you’d be cured of your lack of misanthropy. The lying, the bribing, the cowardice, the lack of principles, the naked self-interest, the complacency, the lust for power, the lack of compassion for the downtrodden, the inability to give a correct diagnosis/prognosis of society’s ills, the obsession over worthless details, the degeneracy of the bureaucracy, the sycophancy, the profound hypocrisy, the money-grubbing, the pandering to the masses, the predominance of *bureaucratic minds*, the total allegiance to big business, the arrogance, the disgusting politicking, the fixation on one’s “image”.... This is all made necessary by the nature of monopoly capitalism and consumerism, but as *individuals* could these politicians not shed their inhumanity? [...]

¹ I recognize the possible objections to this statement, but since they’re unimportant and based on ignorance I’m not going to answer them.

July 21

The problem with humans is that they almost always need an outlet into which they can pour their aggression. The phenomenon of professional wrestling seems to serve this purpose. My outlet is this journal, which is why so much of it consists of indictments against individuals or people in general. Do societies have a need to vent their pent-up aggression at least once or twice a century? I don't know if the idea makes much sense, but is there a way to prove it wrong?

Occasionally I think that my idea of paradise is wrong. If all it takes is a flash of self-consciousness to destroy it, isn't it too fragile to exist at all? But in rationally calculating the possibility of self-awareness in that realm I suspect we are doing nirvana a disservice. Such a flood of inspiration/energy cannot be comprehended—even by those who experience it. Nevertheless, I think we ought to concede that its Nietzschean manifestation is the most delicate because it involves thought, albeit thought born from the womb of the unconscious.

[...]

In fact, pride in general is ridiculous—as are all other supposedly “objective” assessments of oneself or others. How can we properly estimate the value of anyone if we don't know whether freedom is possible? That's the curse of (Chapelle's interpretation of) eternal recurrence. Perhaps both free will and determinism are incorrect. I think that the only plausible position is a combination of the two: we can make free choices within several determined realms. But who is making the choices? If our conscious decisions are often or always influenced by the subconscious, what influences the subconscious? The subconscious certainly isn't free—because by its definition it is unaware of itself and can't make decisions—so what is it determined by? Itself? If it's determined by itself it's the freest entity that exists. So is it determined by electrochemical processes? Perhaps, but what are these determined by? External stimuli and other electrochemical processes? Okay, so there is an infinite regress.

Let's try another tack. (That one was going nowhere.) Let's assume that not all of our decisions are determined by the subconscious (because this would effectively abolish freedom); some are purely objective, rational. But if this is so, it must be true only for the decisions that are of little consequence.

What I want to know is whether it's intellectually honest to have any values [and to 'blame' people for not abiding by them]. Can we condemn Mobutu for being a murderous, corrupt, power-hungry dictator who cared only about himself? Can we condemn him for building an airplane runway in his backyard and owning seventy Rolls-Royces while his people starved and his country fell into chaos? This was who he was; it was his nature. He didn't decide when he was fifteen years old that for the rest of his life he would be a vicious predator. Maybe he had no control over the atrocious acts he committed: he was incapable of thinking morally, his instincts were all-powerful.

This is bullshit. It's damned absurd and useless to engage in this kind of reflection when I have so little knowledge of human nature and freedom. But I can't help myself.

[...]

July 22

To be honest, I haven't yet appreciated the disastrous truth of individual isolation, partly because it's astonishingly easy to ignore the fact and partly because I don't take myself seriously enough to care. In addition, its terrible implications are somewhat mitigated by the knowledge that everyone shares this fate with me. We're all in the same boat.

I had planned to read some books on the philosophy of mind, but (1) not a single satisfactory book has been written on this subject, and (2) reading sucks. I hate reading.

Propositions regarding freedom:

A certain degree of freedom is necessary for moral responsibility to be a meaningful concept. Freedom is defined as objectivity (or rationality)—the ability to reason, to commit oneself to 'impartial' decisions, actions, etc. I am free inasmuch as I cause (or control) myself—or rather, control my actions,

thoughts, etc. (What this means is very debatable—perhaps unknowable; maybe the statement is meaningless—but a ‘variation’ on it is necessary for the existence of freedom.) Pure freedom, understood as “radical objectivity” in every area of life, is an empty concept and does not exist. The free being is necessarily aware of itself—reflectively or unreflectively, “non-thetically” or thetically—and is unfree insofar as it is not aware of itself or what ‘causes’ its actions. (Awareness of the causes of one’s actions is not a sufficient condition for freedom; one must, in the last analysis, *be* the cause.) The ego is the only aspect of the “Self” that is aware of itself; thus it is the only aspect that is potentially free. The ego is often unaware of the parameters (and the causes thereof) in which it is forced to make decisions, and it is unfree to this extent. It is also unfree to the extent that it is aware of its causes but doesn’t have control over them.

(I apologize for the muddled sentences and lack of argumentation; the preceding was all based on intuition, not logical thought. It’s hard to translate obscure “intuition” into logically crisp statements.)

The implications of the foregoing are obvious (animals aren’t free, etc.), but I’d like to articulate one in particular: Beethoven, Nietzsche and others of their kind, when awash in the flood from their unconscious, left the kingdom of heaven as soon as they were free to reflect on a note or a word (because if they’re free they’re aware, and if they’re aware they’ve become human again, so to speak). This is why I think enlightenment is more powerful than the other two manifestations; it does not specifically involve creation, so there is no reflecting to be done. In addition—and this is key—the *explicit goal* of enlightenment is to overcome individuality, and it is individuality that must be overcome in any case for ‘paradise’ to be reached. The Buddhists consciously orient their ego to allow for this possibility, thereby (gradually) disabling its defenses and allowing for a fuller surge of energy from the unconscious. I would go so far as to say that enlightenment is the most perfect paradise even though the other two manifestations do certainly cross the threshold beyond self-consciousness.

I haven’t read *Being and Nothingness*, but I know Sartre argued that it is part of human nature to be *completely free*. This is true inasmuch as we always feel subjectively free, but *objectively* we are not. Our complete subjective freedom is precisely why it’s so difficult to accept that we are objectively determined. This is so obvious that I wonder if I’m misunderstanding Sartre.

(later) What does the phrase “surge of energy from the unconscious” mean? What is to be understood by “energy”? These questions are, unfortunately, the least of my problems: I’m beginning to doubt every psychological hypothesis I’ve put forward in the past few days. I spent the last several hours reading parts of *Brain and Psyche: the Biology of the Unconscious*, and it occurred to me that any attempt to discover the nature of the mind starting from its non-physical aspects is doomed to failure. Everything related to the mind is anchored in the brain, and unless we take into account this primacy of matter we’re fools.

To hell with psychology! It’s driving me insane! I need a break from it and everything remotely connected with it. I’m going to finish reading the book by William James and then return to my study of phenomenology.

July 23

There’s something about the “1812 Overture” that bothers me. I think it’s the cannons: they’re obnoxious. In the middle of the most exciting part one has to cover one’s ears so as not to be startled by the cannon-booms. Furthermore, the entire piece carries the signature of machinery, of the modern age. This is true for all pieces that attempt to incorporate modern sounds (whistles, sandpaper-scraping, etc.) into the texture of the music. Johann Strauss is sometimes guilty of this unpardonable sin.

Unless I’m mistaken, Kant dodged the issue of free will by declaring that even if we aren’t free we have to act under the assumption that we are, so it’s a moot point. In order to be agents we must have free will, so if free will is believed to be incorrect we’ll be incapable of and will have no right to meaningful action. The problem with this argument is that we already know that under many circumstances we are almost completely determined; merely by extension, this can be altered to state that “under all circumstances we are almost completely determined”. Of course, “almost” is an ambiguous term that I

won't attempt to clarify now—because I can't.

Besides, whether it would imply the cessation of our ability to act, the almost-total absence of free will would certainly have momentous consequences for moral responsibility. It makes no sense to discard the problem as a waste of time.

Here's a conundrum I've hinted at previously: if thought takes place in the brain, what causes the neural processes associated with a particular thought to be set in motion? The thought starts somewhere—so how does it start? What causes the very first electrochemical event associated with it? Indeed, what causes the first such event associated with *any* given conscious activity?

I have the withering feeling that we humans are victims of the greatest hoax of all time. Winson thinks that underneath our consciousness and 'above' our unconscious is something called the "preconscious", which consists of a continuous process of neural interactions dealing with potential fragments of thoughts. I would add the following: whenever a relevant connection is made—and a thought is created—it instantly rises to our consciousness and becomes a link in an ongoing chain of ideas. When we make choices the relevant neurons establish connections with each other through electricity and chemical reactions; sometimes certain relevant neurons are left out of the process for whatever reason, thereby preventing us from being aware of possible alternatives or additional considerations. An alternative is chosen through this mechanism (somehow) and electrical charges are sent to the relevant bodily organs if their movement is required. (This theory seems to answer the questions in the last paragraph, namely by hypothesizing that initial chemical reactions aren't necessary.) "We" don't have any control over "ourselves" at all because "we" don't even exist. The connections between neurons determine what "our" thoughts are, and the neurons don't control themselves; they merely follow their duty to send impulses to each other. "We" are just a bundle of sensory information, ideas brought to "consciousness" solely by existing—which comes about when sufficient neural connections are made to constitute an "idea"—and memories stored up. True, we can't comprehend how 'meaning' has its origin in chemical processes, but then again we can't comprehend how time could have existed for an eternity and yet have arrived at this moment.

This is the quandary I confronted four summers ago. I decided then that even if such a mechanism is true, it is irrelevant because *something*—whether ideas, bundles of sensory information, etc.—exists no matter what. "We" exist even if we can be reduced to neurons—even if we are just an effect. But the implications of it are overwhelming. We would have no control over our thoughts; pills could give us meaningful happiness; higher culture and all things spiritual would be superfluous, indirect ways of achieving a goal more effectively realized simply by inserting chemicals into one's body. How I detest materialism! But how can it be avoided?

One day scientists will invent a pill for attaining nirvana. And when that day comes....humanity will die.

[...]

July 25

[...]

The dilemma of reconciling psychology and biology is a pseudo-problem: they can be reconciled without any effort at all. One simply must remember that the functioning of neurons as a collectivity creates a self. Even if the psyche is completely determined by neural processes, it is an indisputable fact that these processes as a whole form the 'subjective' psyche. If ideas are effected by neurons; if personalities originate with these neural processes; if one's unconscious, one's identity, one's emotions are determined by the brain—psychology and biology have obviously been reconciled already! How was I stupid enough to overlook this? (*Did* I overlook it?) It is fruitful to analyze psyches (as opposed to physical processes) precisely because the psyche is the end-product of the processes: it is, so to speak, their reason for being.

Whether it would be more practical to research the processes rather than the psyche itself is, of course, another matter; and in fact I am sure that it is in the nature of mental illnesses—indeed, it is in the nature of the entire Self—to be more influenced by drugs than by pure ‘therapy’. But since selves do exist, and since they are the ‘deliberate’ result of the brain, it is always necessary to research the psyche itself in order to understand people and their actions. In short: we do exist in the most meaningful sense of the term (you have no idea how relieved that makes me), but we might be impotent in the face of our neurons.

On the other hand, the insoluble ‘flip-side’ of the reconciliation dilemma remains: how can chemicals be in any way related to concepts and meaning?

Unfortunately, the problem of “reconciliation” wasn’t my prime obsession; the degrading quality of materialism was, and I still haven’t come close to overcoming this. Above all, I wish to restore dignity to humanity. (By “dignity” I don’t mean the elimination of vulgar instincts; I mean the discrediting of the theory that we are nothing but effects of physical processes—that we are incapable of controlling our actions.) Science, despite its respectable quest for truth and its beneficial practical effects, will not be content till it has completely degraded humanity to the level of electrical impulses.

(later) *Hoowah!* I feel like God now that I’ve decided I undoubtedly exist! I don’t even care if I’m merely an effect—because *I exist!* Loneliness has vanished!

This is the conclusion I arrived at four years ago, isn’t it? Well, ‘eternal recurrence’ decides our fate.

July 26

I hope you don’t think I’m being hypocritical by condemning the spinelessness of modern critics of society—that I, the shy little boy, would be incapable of practicing what I preach if I had the opportunity. When I was editor of the high school newspaper I may have written articles of poor quality, but they certainly didn’t lack a degree of boldness. One article was spent ridiculing lovers of rap and other contemporary music (of whom there were *many* in my school); in another article I ridiculed the school committee and the teachers who supported ‘heterogeneous grouping’ in classes; in two more I ridiculed all the teachers—including my guidance counselor, whom I liked personally—who criticized one issue of our paper for being too “controversial”; in another article I ridiculed the school’s requirement of physical education; in another (excessively corny and long one) I actually made fun of all the punks who settled their disagreements by fighting and advised them instead to ‘talk about their differences’ (!). The year-and-a-half in which I was the editor (and an excellent art teacher the faculty advisor) was the *Husky Herald*’s golden age: almost every issue provoked controversy among the student body and the teachers. Entire class periods were spent discussing the articles; even the illiterate students were seen looking at the paper; people came up to me and either voiced their appreciation or vented their anger; one time students ‘threatened’ me, although the threats weren’t very serious. The staff criticized me for being a dictator, but as soon as I’d graduated, the *Husky Herald* sank into disrepair and eventual oblivion. My main goal during my tenure was to effect as much controversy as possible: this hope was always on my mind, and it was the one factor that made our newspaper fairly interesting and substantive.

[...]

(later) My relationship with philosophy is a perfect example of the transmutation of sexual energy into spiritual energy. It’s so acute that this “transmutation” is practically a conscious decision on my part. If I spend a few minutes walking on State Street at night, passing good-looking young couples every thirty seconds, staring at gorgeous girls, I eventually am forced to rush back to my room to study Marxism. The heartache is sublimated into intense intellectual activity.

It seems as though in almost every intellectual endeavor of mine—including self-analysis—I find examples of dialectical movements. Especially in history. History is one long chain of dialectics.

July 27

Last night I read some passages on Nietzsche in a book called *Existentialist Revolt*, and all of a sudden I realized that *The Birth of Tragedy* [which I hadn't read] rests on the distinction between the 'plastic arts'—sculpture, painting and the like—and music. Nietzsche even characterized music as the negation of individuality, etc. In fact, my term "Beethoven-consciousness" has nearly the same meaning as Nietzsche's "Dionysian rapture". How was I dim-witted enough not to see these similarities between Nietzsche's ideas and my own? 'Tis a mystery.

Incidentally, it's obvious that by "eternal recurrence" Nietzsche had something different in mind than my interpretation of it. But since his idea is wrong, my idea (or Daniel Chapelle's) is all that's left.

[...]

I've almost definitely decided that humans have no free will. We are such complex organisms that "free will" seems ridiculous and, indeed, almost meaningless. But the complete negation of free will forbids the possibility of moral responsibility. How can the paradoxes implied by a lack of moral responsibility be surmounted? I don't think they can. The only solution is to somehow rescue the notion of moral responsibility from complete disintegration.

I can't understand why seemingly intelligent people insist on identifying communism with absolute equality. Communism is the *opposite* of absolute equality in all the meaningful senses of the term: diversity will be the guiding law of communism. It is rather capitalism that suffers from extreme, odious [commodified, depersonalized] "equality".

[...]

July 28

I think (I *know*) it's wrong to say that language is necessary for thought. All of us daily engage in thought-processes that have no affinity with language. They are simply 'intuitive'. I don't even think language is necessary for us to gain this capacity in the first place. Once our brains have developed beyond a certain point in early childhood we're automatically capable of this "intuitive" form of thinking. Even the most primitive humans were.

I suspect that the paradoxical notion of 'controlling oneself' is meaningless—just a product of language's trickeries. There is no "I" in the usual sense; *I* am a melange of thoughts, memories, etc. that combine to create an identity, a shared sense of self. I do exist, but I am not a single thing that can control itself. *[(20 minutes later) See below. I've changed my opinions since I wrote this paragraph.]*

An even greater trick of language is the tacit assumption that I am an object of myself. "I control myself"—generally this sentence-form involves two distinguishable entities. But when the self is the object of analysis—ah, *that's* when the rules of language and logic lose their cogency.

....Anyway, I've decided that what we are is pure Being. That isn't just what is underneath our more important qualities; that is our *essence*. We are not our bodies, our characteristics, our thoughts, our actions, our "identity"; we are not even all of these combined. No; we are the ineffable. We are not pure indifference or pure nothingness; we are pure [conscious] existence. Our qualities are supplements. Supposing it were physically possible, we would continue to exist in our essentials even if all the "trappings of existence" were discarded. That's why on June 25th I made the false assertion that a 'return' to this state would be paradise. 'Twould not! It would, to be sure, be the ultimate realization of our *essentials*—of that which *everyone necessarily has in common* (pure awareness, etc.)—but not of ourselves as we really empirically exist. In order for the latter to be fully realized we need to experience *active, positive ecstasy*—the highest affirmation of the fusion of all our emotions—because real, concrete existence implies emotions. Since we have experienced the power of emotions, a return to the state of Being would not be the highest paradise. Indeed, we would still be self-conscious, although in a drastically different way than we are now. And even if it were possible for self-consciousness to be cancelled, this "paradise" would not include the *positive* joy experienced by those rare individuals who know what it means to be God (or rather, Dionysus).

So why is it impossible for us to control ourselves? "The very notion of control is foreign to our

nature.” Exactly. And why is that? “Because all we are is existence [you mean consciousness?]. Control has nothing to do with our essence.” And what does? “Well, nothing. Except for existence, being, awareness.”

(Digression: I think Sartre defined human subjectivity as Being-for-itself. Did he have in mind the same thing I do? Something close to it, at least.)

We experience thoughts, emotions, and physical sensations, but they are not us. They contribute to our sense of identity and define our empirical, subjective existence, but they have nothing to do with our essence. We all share exactly the same essence even though we’re isolated from each other and ‘have’ different qualities. It is because of these different qualities that it would be such an eye-opening, joyful thing to *experience* one another as we experience ourselves.

So we don’t have any control over ourselves because we can’t be controlled; we just *are*. After we originally become conscious we never change, but the characteristics of our consciousness certainly do change. What we experience obviously changes all the time, but we as pure awareness are constant [unchanging] until death. Therefore *we* (the essential “self”, although a completely different self than the ‘normal’, ‘observable’ kind; see below) logically cannot be the cause of any changes in ‘our nature’ (our personality, thoughts, etc.)—that is, because (the essential, not empirical) *we* are constant and our characteristics are not. When I think or engage in any other activity, I am experiencing something which in itself is foreign to who I am. Not even the sum of my characteristics is who I am; it is merely how I in my human, corporeal, existential form manifest ‘myself’. I am ineffable and thus have no characteristics and cannot even be understood conceptually. I do not think or feel emotions directly. I *experience* thought: thought *happens* to me, emotions *happen* to me. We all are, in a sense, purely passive recipients of anything we experience or are aware of, because awareness (which we are) is necessarily passive. Grammatical confusions notwithstanding, I am merely *aware* of thoughts, etc.

Now that I have tried to explain what our essential selves—what *we*—consist of, I must point out that the common use of the term implies something very different. It represents ‘our’ characters in their totality—our memories, thoughts, personalities, repressed desires, etc. In fact, what constitutes the stuff of life, of ourselves, is awareness (which cannot be reduced to anything else), but because of our bodies (especially our brains) our entire psyche necessarily exists and has its own identity. We interpret our psyche as what we in fact are because (1) awareness constantly permeates aspects of the psyche that have been, for whatever reason, chemically ‘predetermined’ as accessible to this consciousness, and (2) our spiritual isolation from others necessitates that the characteristics we experience are interpreted as *our* characteristics. Awareness lacks substance, but the qualities it is aware of *give* it substance—*constitute* its substance. These qualities are seen as *us* because over time we have gotten used to experiencing them directly and because we would otherwise consist of basically nothing. Awareness is a vacuum. We are awareness, so what ‘fills’ us....is seen as us.

“But it sure seems like we’re capable of controlling our thoughts!” Appearances can be deceptive. That we’re aware of our thoughts doesn’t mean we control them. “Who controls them?” No one. They just happen when the relevant neurons connect with one another and thereby create a link in the thought-process. (It requires a minimum amount of imagination to think of possible explanations for the origins of thoughts that arise “out of the blue” and other unusual phenomena.) I say “think” not because *you* are controlling the thinking, but because stimuli from the senses enter the brain and initiate conscious thought-processes—so the word “think” activates your neurons in certain ways that lead from one thought to the next. You, who are pure awareness, are aware of these thoughts and so think that they are your products. You become identified with them because the “*real*” you is....empty, passive.¹

July 29

For the life of me, I can’t understand why girls are attracted to guys. I’ve sometimes envisioned

¹ “Passive” only in a sense that can be understood intuitively, not conceptually.

myself as a girl in order to imagine what they find appealing in the opposite sex, but I've gotten nowhere. Guys are hairy, flabby, smelly, uncouth, arrogant, insensitive, and dumb overall. Girls, on the other hand, are (often) smooth, fresh, clean, pleasant-smelling, thin, sexy, sensitive, achingly lovely. Guys are not sexy; they're presumptuous and cocky, especially when they think they're sexy. I haven't often asked girls why they like guys: such a question would make me feel moronic. But I'd love to know the answer!

Regarding yesterday's entry, a possible counter-argument is that if we "become" what we are aware of, then rightly we should "become" *anything* we are aware of: music, telephones, etc. But I can twist this argument around into one that supports my claims. Infants, whose characters have not developed, *are* everything they're aware of. They are their mother's breasts, they are the environment; they do not distinguish between themselves and the world. It is only when the physical needs that they are directly aware of have been frustrated again and again that they begin to develop a distinct identity which eventually becomes who they are. So it's not *wrong* to say that we are what constitutes our identities, because this is in fact what we are most immediately conscious of. The empirical 'I' is not the *fundamental* 'self', but for the fundamental self to exist *as it is*—as 'consciousness' or 'awareness', and nothing else—is indeed logically and physically impossible. (Just because we can 'intuit' what the self consists of doesn't mean that the self in its pure form is possible.) So 'my' identity fills the vacuum of the self and becomes it; therefore it is permissible to talk about 'my' characteristics.

In short, my theory solves the problem of the self by reducing it to one thing—consciousness, awareness, or 'being'—and at the same time describing how the self is also a hodgepodge of personal characteristics. [See the entry of May 2024.]

July 30

There isn't one thing that controls us and our thoughts. Different parts of ourselves control other parts: our emotions often influence our thoughts, our conscience sometimes influences our actions, etc. It's misleading, to say the least, to think that "we" control all of this, because (in common parlance) we *are* all of this. And as I've said, the reason it seems peculiar (when reflecting philosophically) to say that we are all of our characteristics is that the 'true' self is merely awareness.

Another possible confusion arises when people say that "he is more aware of himself than others are of themselves". Clearly what is meant here is that the conscious part of the person—what from now on I'll call the 'reduced self' as opposed to the 'inflated self'—is very aware of his own qualities; the reduced self (consciousness) is very 'aware' of the qualities that constitute the inflated self. It's not as if the former is equivalent to the latter—which is the tacit assumption that creates all the confusion about the self in the first place. (A basic rule of thumb for delineating the boundaries of the reduced self is to ask "If this (whatever it is—thoughts, etc.) existed by itself, would I necessarily exist too?") The only thing of which it can rightly be said that I would exist if *it* existed is consciousness. Not particular thoughts, emotions, or sensations; just pure consciousness.)

"But the conscious part of the person can't be what you mean by the 'true self' because everyone has a different consciousness than everyone else." Yes, but the simple fact of their consciousness is identical. What qualities are grafted onto it are part of the inflated self; their awareness itself is the reduced self, and this we all have in common.

"How can we tell which self people are referring to when they say 'he is angry', 'he is aware of this', 'he did that'?" They're always referring to the inflated self. They may be emphasizing the "reduced self" aspect of the inflated self,¹ but they certainly nonetheless have in mind the person as a whole. In any event, who cares? The question is irrelevant.

Now we should address the problem of free will. If the respective parts of the inflated self influence each other, but neither the reduced self nor the inflated self as a whole has any control, is it possible that

¹ The latter includes the former, but only as the necessary, taken-for-granted foundation upon which a person's identity—the inflated self proper—is constructed.

we have free will?*Je ne sais pas*. But even if the two selves are just effects of processes in the brain it's *conceivable* that the inflated self has free will.

Of course, we have to ask ourselves what "free will" means. A person's will is not separate from the rest of him; his will cannot be set aside in the same manner as emotions or thoughts can. In fact, one's will—assuming for the moment that it exists—is necessarily a component of every conscious activity that one desires: it is my will that I write these words, that I feel this rage, that I conquer this pain, that I experience these doubts. To be sure, sometimes the will is actually an effect of, e.g., an emotion that is so powerful it drags the will along with it. So in this sense the will is not in control. But when *is* the will in control?

First we should clarify further what the will is. Is it desire? Certainly when we feel desires it is our will that they be satisfied, but then the will is not these desires themselves. "So the will is just a more fundamental desire. We desire that our desires be satisfied—and since we don't desire to desire that our desires be satisfied, the will is not caught in an infinite regress. It is simply *the* fundamental desire: that our wishes be fulfilled." But not everything we do is a "wish". "You know what I mean! Our will is part of everything we *want* to do. It's not our will, for example, to be depressed, but that's because we don't *want* to be depressed." Okay, as long as you're not saying that our will has *control* over our wishes, I think I agree with you. Our will is the part of our wishes—whether or not they are interpreted as explicit "wishes"—that craves their fulfillment. Thus the will is not in control if we experience something we don't consider 'good' or 'pleasurable'. (These terms are so relative that they can actually signify 'suffering'—although if it's suffering we enjoy, it's not *true* suffering. Which is precisely why it is seen as desirable.) But I don't even think it makes sense to say that the will is *ever* "in control", because it is always just the implication of desires—viz., that their presence implies a need for satisfaction—that come and go without any input from something called the will.

"What about objective reason? Isn't that free when it's not excessively influenced by emotions or....anything else?" What does "excessively influenced" mean? That it's incapable of coming to a decision through purely rational means? "Yes." Then reason is never free, because it's never purely rational. There is always some kind of a subjective, 'partial' component to it that we sometimes aren't even aware of.

So basically, the will is never free, reason is never free, and *we* are never free? It seems that way, but I'm not yet sure. (Another question: what's the relation between the will and reason?)

I have a confession to make: as long as I can remember I have been an atheist. Never once did I seriously wonder if *maybe there is a God*. Even when I was nine years old. I can recall going to Sunday school each week, disliking every minute of it, drawing worthless pictures that were pinned on the bulletin board, listening to stories from the Bible that I found absurd or didn't even take seriously enough to judge as "absurd". (I simply don't remember thinking about them at all.) God was always an artifact of people's imaginations, less real than Santa Claus; and when I was old enough to reflect on my need for meaning in life I didn't once consider the Big White Guy in the Sky as the solution to my problems.

Lately I've been exceedingly impressed by the effect that weather has on one's disposition. If the day is sunny, healthy, fresh, breezy, I'm *invariably* in a stellar mood. If I live in a dreary clime (such as has been my fate at Wesleyan), I am at most glad that I'm not stuck outside; I lack energy and my sole ambition is to sleep the entire day. Nietzsche goes so far as to say that "men with *esprit*" must live in warm, dry climates if they're going to exploit their genius. This is probably an exaggeration, but there is usually a grain of truth in Nietzsche's convictions.

July 31

"Scholars spend all of their energies on saying Yes and No, on criticism of what others have thought—they themselves no longer think.

"The instinct of self-defense has become worn-out in them; otherwise they would resist books. The scholar—a decadent." Verily, these are more than half-truths.

Several months ago I made the comment that there are two of me, but I had trouble clarifying what

I meant by this. As it turns out, that statement was just an intuitive (and backward) comprehension of my theory of the two selves: the ‘real’ me is consciousness; the me that I love is a combination of my identity and my consciousness (i.e., my inflated self).

For those of us who will never have the good fortune to experience nirvana, how can life be redeemed? We unknowingly experience such ever-present lack—loneliness, fear of death, fear of introspection, boredom, meaninglessness in general—that one wonders if communism is perhaps a bit superfluous: until we’ve dealt with the fundamental ontological questions, what’s the use of striving for a grand future? I don’t have the faintest idea how to redeem life. This has been the one burning issue in every age, and we *still* haven’t ferreted out of our psyches an acceptable solution. Maybe there is no solution—but there certainly are approximations. What does it mean to fulfill oneself? Are these two words the “undecipherable hieroglyphic” that links reality and redemption?

Clearly they are. He who experiences ‘nirvana’ realizes himself by obliterating the ego (thus temporarily ending the repression of the “Self”), by overcoming that most insidious of afflictions, self-consciousness, by harvesting the rich nourishment buried in the unconscious, by becoming God—by giving birth to the world! But is self-consciousness really an illness? Certainly not if illnesses are seen as unnecessary. Perhaps it is an illness “in the sense in which pregnancy is an illness”: it is sometimes unpleasant, sometimes beautiful, sometimes excruciating, but is ultimately only a means to an end (in this case, *Self*-realization). “Self-knowledge is not good in itself?! Thou art a traitor to thy cause! Wert thou not once attracted to the idea of genuine self-knowledge?” Verily, I was! And I am yet! You misunderstand me if you think I wouldn’t sacrifice my “happiness” for the sake of self-knowledge. But mere self-consciousness: that is another matter. We are always self-conscious; we are rarely self-knowledgeable.

“But isn’t self-knowledge just an acute form of self-consciousness?” No, and insofar as I’ve hitherto tacitly assumed it was I’ve been mistaken. “Puff Daddy” is self-conscious inasmuch as he can be called a man; Nietzsche was self-aware inasmuch as he could be called a *higher* man. It is a prerequisite for realizing ourselves (when we’re self-conscious and not in the kingdom of Dionysian rapture) that we be self-aware. Thus Beethoven (who was surely not very self-knowledgeable) did not fulfill his humanity when he was self-conscious—only when he was Dionysus humanized; Nietzsche, on the other hand (in his later years), perhaps fulfilled his humanity even when he was self-conscious.

“Damn you! Stop confusing me and say what you mean!” In short: there are two ways for people to fulfill themselves. The privileged ones can experience “Dionysian rapture” for fleeting moments, but its very ephemerality breeds dissatisfaction. They necessarily become self-conscious once again and therefore feel all the more impotent and dead. But all is not lost! If people have learned to disentangle the Gordian knot of the psyche to the extent that consciousness is no longer a threat but rather a *liberation*, a joy, an extravagant offering of thanks to oneself and one’s forbears for the simple fact of one’s being—to this extent will they fulfill themselves even amidst the muck of mundane existence. Nietzsche would say that if they could, with utmost knowledge of its implications, accept eternal recurrence, then they would thereby transcend the boundaries of the merely human. It isn’t necessary to believe that eternal recurrence is true (which it isn’t) in order for this to be an effective formula, because above all it is meant to induce a specific state of mind—namely, *amor fati*. But what I find objectionable is that *amor fati* is at best a *reluctant* Yes to life [...]. “Loving” fate: how is such a thing possible? Nietzsche went so far as to say that we must *love* the bloodbath that is history—although he quite obviously found this thought nauseating. “Fate”—this word encompasses everything. We must *love* the Holocaust; we must *love* Stalinism. Such thoughts are beyond revolting, they are beyond unholy: they are *dishonest*. This has always been the reason for my qualms regarding Buddhism; we are dishonest to ourselves if we think that we love one phenomenon to the same extent as another, if we quell hatred and contempt for the sake of a shallow love. I cannot see how Nietzsche avoids the same trap (or the similar one of mere intellectual, detached appreciation of “necessity”), and so I cannot accept his way out of life’s pains. There must be another way, or *homo sapiens* is destined to eternal unrest.

[...]

August 1

Nietzsche believes we must say Yes to suffering. We must *love* suffering. But there's a problem with this: if we love it....it's not suffering. The moment we begin to relish despair, it ceases to be "despair" properly so-called. It becomes useful, or good, or meaningful—but no longer is it the same kind of suffering it was. Even if the emotion itself remains basically the same, our *state of mind* has changed; we have come to accept it. We have *conquered* the harmful state of mind; we have run away from pain. I realize, of course, that we may continue to experience *emotional* pain, but the very fact that we no longer shy away from it indicates that there has been a subtle alteration in our mental state—that we have shied away from a lack of meaning, that we have been unable to accept *all* of life. If we see pain as meaningful or necessary, then it's quite all right! It's meaningful! We can learn from it, it's significant, perhaps it facilitates insights into our condition. Or it undergoes a very subtle transition to a kind of masochistic pleasure. Either way, it is no longer the pain it once was. Our need to love it is precisely a symptom of our *inability* to love it.

Amor fati is impossible because it is not part of human nature to feel "amor" for "fati", when "fati" involves genuine suffering. Thus we must accept that mental pain—not emotional pain, which can be 'translated' into masochistic pleasure or can simply be accepted and is therefore no longer painful—is not compatible with the good life. Maybe it is necessary as a kind of prerequisite, but it is never *part* of the good life. (I'll continue these reflections later.)

On another topic, *Human, All Too Human* has rekindled my interest in the nature of truth. Specifically, must truth be logical, or can it be intuitive and ineffable?

Before I answer that, I'd like to point out that questioning the existence of objective truth seems misguided. [...] Even people who assert that there is no such thing as absolute [i.e., objective] truth are tacitly assuming that there is! "It is a truth....that there are no truths!" What an absurd notion! "Nike made over a billion dollars last year." That sentence is either absolutely false or it's absolutely true. In either case there is an absolute truth. [...]

August 2

Hallelujah! Today I received the formatted version of my script in the mail; it cost \$218. The first thing I did upon receiving it was make a copy and send it to the one agency that has indicated an interest. The script isn't as long as I had expected it would be—it's only 169 pages—but I suspect even this is a tad on the lengthy side.

I used not to enjoy the process of philosophizing. I wanted to find answers, and that was the only reason I thought about philosophy at all. But *finally* I am beginning to appreciate the journey rather than the destination: I delight in contemplating the quandaries of human existence, even if they do sometimes drive me to despair and I do still have as a goal the acquisition of "truth".

Whenever I've said "socialism" in this journal, I've meant communism.

Ideology is an interesting subject. I haven't read much about it yet, but I'm inclined to agree with Therborn that the term doesn't necessarily signify false consciousness, as Marx would have it. It's not as if all ideologies are *wrong* just because they're ideologies. But it *is* false consciousness in the sense that ideologies have nothing in common with the scientific method, which is generally the most accepted way of arriving at truth. Ideologies do not arise because groups of brilliant men get together, sort through various theories, objectively decide that, e.g., democracy is the best method of governing people, and then publish their findings; ideologies arise and collapse with the rise and fall of social structures. They don't exist because they're "true"; they exist because each specific one is conducive to the functioning of a specific part of society—or is a response to changes in the social structure, an alteration in the general consciousness of society on the basis of an alteration in the social, objective 'being' which is in turn determined by the development of the....mode of production? Perhaps the mode of production "overdetermines" ideologies, but does not directly influence *all* of them—only the ones that are directly related to the functioning of the economy (like the mendacious bourgeois obsession with individualism, freedom, private enterprise, the

inviolable sanctity of private property, blah blah).

My friend, I am in one of those luscious evanescent moods—encouraged not a little by Schubert’s Impromptus Nos. 1 and 2, D. 935. I don’t feel like thinking about ideology; I feel like....kissing a girl. I feel like telling her I love her. I feel like pouring my soul into a blender, watching as she does the same, and scrambling the two together so that there is no longer *mine* or *hers*. I feel like a poet. How wonderful ’twould be to be a poet! But when all is said and done, I just want to fall in love.

What I enjoy thinking about more than anything else is the opposition between things spiritual and things material. I can’t understand the origin of the “spirit” from crude molecules and cells. Individual neurons are nothing—but when billions of them get together, the *self* is produced! They’re all frantically working every instant to perpetuate *me*! It’s not at all unusual for me to spend a couple of minutes just laughing with joy at the thought of life. It truly is quite flattering that trillions of astronomically complex cells devote their entire existence to me. I feel special, and very grateful. I only wish there were something I could do in return. If cells were thinking beings I would give them advice about their relationships, or about tactics and strategies when fighting bacteria; we would all share our wisdom with one another; we would be one big, happy family. Whenever they fought amongst themselves I would willingly act as the mediator to help them sort through their differences.

Why are critics of society currently so keen to yield to the propaganda about capitalism’s strength and permanence and the failure of socialism? Are they so myopic as to *believe* this propaganda? Are they really not perceptive enough to recognize that our society is preparing for a massive upheaval, that our culture is suffering from a deep spiritual malaise which can only be cured by that miraculous tonic called “communism”?

August 3

I’ve decided that it’s wisest to read one or two books on a subject like ideology or truth as a sort of introduction, and then to venture into uncharted waters without the further help of pseudo-navigators. In other words, thinkers shouldn’t first get very acquainted with the thoughts of others, because it tends to diminish the possibility of their own originality: they get hung up on these other ideas and aren’t able to add much to the discipline that is of interest. I, for example, have read Therborn’s book, and now intend to do some independent thinking on ideology without more help from academics.

I wouldn’t consider the academic disciplines “ideologies”; they’re too precise, oriented toward the ‘discovery’ of truth. While they are very much influenced by the society in which they come to maturity, they’re ‘qualitatively’ different than the popular beliefs (rituals, and so on) that grab the attention of the masses. But if fields like professional psychology, sociology, the natural sciences, and economics are not ideologies, how should this term be defined? Furthermore, Marx undoubtedly considered bourgeois economics an ideology, and insofar as it serves as an apology for capitalism I’m inclined to agree with him. What this implies is that I’m wrong about academic fields not being ideologies. Erik Olin Wright has suggested that we distinguish between practices that form subjectivities and those that form knowledge; the former are ideological, the latter are scientific. But bourgeois economics certainly attempts to form knowledge—while creating ‘subjectivities’ at the same time. Should the subjectivities be distinguished from the economics *per se*, even though the latter clearly operates within the framework of capitalism and indeed serves to justify it? Both of the alternatives seem rather inadequate: each of them leads to complications and contradictions.

Tomorrow I’m meeting Erik; I’ll ask him to clarify these problems, and then I’ll get back to you.

It was foolish of me to declare that all truths are absolute [or objective]. What was I thinking? If humans create truth, what is the standard by which it can be measured? In fact....that’s a pretty little problem in itself. Is there no such thing as absolute truth? Is it not even an absolute truth that the earth currently has an elliptical shape? Such a statement is absurd, for I can think of many things that are ‘absolutely true’ at this moment. (For instance, it is a fact that I am thinking right now; it is a fact that George Bush is giving his acceptance speech tonight; it is a fact that I am ashamed of my miserable script.) Humans, in a sense,

create truth, but only in such a way that it agrees with reality. But what does that mean? How can we be sure if, e.g., quantum mechanics agrees with reality? We can't. When we're trying to explain nature, how can we be sure of anything? But I think we can be sure (or certainly *surer*) of simpler facts like the ones listed above. So what's the difference between the two? It's not that the first deal with humans and the second with nature; many theories about societies are difficult or impossible to prove. Besides, what does it mean to "prove" something? Countless scientific hypotheses have been "proven" only to be falsified later. Even the most accepted theories are necessarily held in a degree of doubt. I don't even know where to begin in discovering the nature of truth!

The last two or three decades have been the Dark Ages of capitalist culture. And you know what follows the Dark Ages: a Renaissance. (Once again, the mischievous Dialectic makes its presence felt.)

August 4

Is untruth sometimes favorable to life? Certainly, insofar as knowledge of truth would make us aware of the indefensibility of many of our 'actions'. Our evaluations of others and ourselves, for example, are usually untrue or based on ignorance (as Nietzsche points out). If we had complete knowledge of human nature we might even discover that evaluations per se are untrue. But Nietzsche goes too far when he says that because of this, truth is hostile to life. The search for truth is, in fact, the only way of arriving at knowledge of what will enable us to conquer deep distress and the like; and while it may show us that our present motives (to take Nietzsche's example, honor) are superficial and ultimately 'false', it will in so doing guide us to more meaningful happiness. If it turns out that truth is very depressing—that Sartre's theories regarding bad faith, relations with others, etc. are true—we will simply organize our lives so that these truths become acceptable and maybe helpful; we'll find ways to accommodate them. (Sometimes the only solution will be to ignore them at all times except when they will have a beneficial effect.) It is my opinion that every psychological truth, however unpleasant at first, eventually enriches our lives merely by forcing us to take account of it.

I'm going to keep a running commentary on *Human, All Too Human*.

[...]

Anyway, keeping in mind that we are not as sure of anything else as we are that we exist, we can tacitly assume that each of our successive discoveries is a deeper penetration of the "truth". Quantum mechanics is truer than the belief that we can observe nature without affecting it. The latter was at one time thought to be true, and because there is no absolute [objective] standard for truth, it in fact *was* 'true'. But with hindsight we are able to recognize that it...wasn't true? This sounds suspiciously like pragmatism, the American philosophy bereft of...truth. If we can declare that some beliefs are truer than others, how can there not be an absolute standard for truth? There *is* an absolute standard: whatever agrees with reality is true. But since reality is 'humanized' we can't be sure if what we see as true is *really* true. There are too many variables. There is no "truth"—or rather, there is no way to be sure of truth; there is only *truer*. Every judgment made by people is necessarily no more than an approximation of the truth, even if they happen to hit upon this "truth" itself. But that statement presupposes that there are absolute truths—a faulty assumption, since if there are no truths apart from those 'created' by humans how can there be absolute truths waiting to be discovered? Perhaps there actually are absolute truths in nature, and it is up to humans to translate them into language. Maybe this is the link between nature, truth, and humanity. In a world without humans there would be no truth per se—because truth as such requires language; it needs to be communicated, it needs concepts—but there is the *potential* for truth. All that's required are concepts which represent actual structures in nature for the truth to be 'realized'. But even if this is true, how will we know when we've hit upon the truth? We'll still be condemned to *approximations* of the truth, because (as I said before) there are too many variables in a humanized world.

This is giving me a headache and I'm getting nowhere. Let's move on to the nineteenth aphorism.

Aphorism 19: "Our feelings of space and time are false, for if they are tested rigorously, they lead to logical contradictions." This implies that nature can, without exception, be expressed logically, which is

not the case. This is indeed the reason it's difficult to accept that truth is nothing more than things translated into concepts [or propositions]: space and time are not susceptible to rational explanation, and if concepts are blatantly inadequate here, maybe they're (less blatantly) inadequate everywhere (in nature).

It is not only impossible to know if our ideas are true; the question itself is meaningless. In nature there is no truth. Our feelings about space and time are not absolutely true or false; they are simply 'humanistic' interpretations of that part of nature which is revealed to us. They can only be true or false within the boundaries of sense-perception and concepts. "Is it true that the earth is elliptically shaped?" It is true in a humanized world [i.e., the world we experience], but to say it is in the 'natural' [not-experienced-by-the-human-mind] world is meaningless. "Yes, because there are no concepts in that world. But if humans entered the scene they would just translate physical facts into concepts and would thereby arrive at truth. Even *absolute* truth, in most cases (the notable exceptions being a few unanswerable questions regarding space and time), could be arrived at." Stop bothering me.

Aphorism 29: Nietzsche is assuming that truth must be logical, but is such an assumption after all so self-evident? I don't think so. Not until we have defined truth can we decide whether it is necessarily logical. And if it is—if "error" has given rise to art and religion, which I am skeptical of—then perhaps truth *is* harmful to life. But truth can always be ignored.

Aphorism 31: The illogical certainly is necessary for life, but again—is the illogical necessarily untrue?

August 5

Morality is a sham. We are deemed moral or immoral on the basis of our actions—when what matter most are our *motives*. (This is Nietzsche's opinion too.) It's so easy to refute morality on its own terms!—and when we attack it on two fronts, well then, it has no hope. It's completely impractical because we can never be sure of a person's motives for committing a moral act or refraining from an immoral act; it doesn't take account of human nature, in that (1) often (or always?) people are not free to control themselves, and (2) there is no such thing as good and evil in the psyche—these superficial judgments are imposed on it; hypocrisy is considered bad, but we are all hypocrites; [...].

Aphorisms 57 - 60, 63, 65, 68, and so on: What Nietzsche says is absolutely true.

I'm sick of wondering about truth; it's time to solve the problem once and for all. Birds have hollow wings for two main reasons: genes and other cell-related mechanisms (evolution, etc.), and the fact that hollow wings make flight possible. The latter is the reason that random variations in genes eventually resulted in an entire category of animals possessing hollow wings. The birds that weren't able to adapt to the new hollow wings condition became extinct. The foregoing are the *true* reasons for hollow wings; if humans were not alive to express these reasons, they would exist nonetheless. They wouldn't be made explicit, but making something explicit presupposes that it's implicit *before* it has been made explicit. Of course, maybe in the future we'll make some discoveries that refute the theory of evolution (highly improbable), thereby rendering our current interpretations of nature (articulations of its causes and mechanisms) incorrect, but this is beside the point. The mere fact that we can never be 100% sure of anything in nature doesn't mean that there are no real reasons (i.e., independent of humans' interpretations) for anything. Because we are separate from nature we cannot be *positive* that our interpretations of it are correct—just as because we are separate from each other we cannot be positive of each other's states of mind. In fact, the only thing we *can* be positive of in nature is that we exist—precisely because we experience this part of nature; it is the only thing that is as much us as it is nature. Everything else relies on sensory-input, subjective reason, intelligence, etc.—all of which are more nature than they are us; we are not as directly aware of them as we are that we exist (or rather, they exist only through input that we are not directly aware of, which is effectively the same). Furthermore, my conclusion (viz., that our interpretations of nature's "reasons" are potentially absolute truths—although we'll never have any way of being sure if a particular one is in fact one of the absolute truths) is supported when we recognize that *it is an absolute [or objective] truth that we exist*. "We exist" is an absolute truth—but "we exist" involves

concepts! The obvious implication is that concepts can express absolute truths (i.e., nature in its authentic ways of being, undistorted through the use of human reason); in other words, human reason doesn't necessarily distort realities. I say "realities" rather than "reality" because in certain cases it does distort them; for example, it 'distorts' the origin of the universe. No matter which way we interpret the universe's origin, reason throws the possibility out. This is not because reason is *always* inadequate when describing nature, but because infinity is one of the few concepts not subject to rational comprehension. Therefore there are certain absolute truths about nature that are simply incapable of being understood; but how idiotic to conclude from this that *all* "truths" about nature are incapable of being expressed!—or even that there just *are no* truths about nature!

[...]

If we 'bracket' the possibility that nature doesn't exist, that our senses completely deceive us—which is so unrealistic that it can hardly be considered a possibility at all—we will significantly narrow the range of possible untruth. If, furthermore, we abandon much of what is left of the irrational spirit of skepticism, it will be easier to accept that a great many objective truths about nature are already known by us. It isn't as though all of humanity's scientific endeavors since the dawn of history have been for naught; it isn't as if nature is such a mystery that discoveries simply are out of the question. We are, for example, so sure the earth is shaped elliptically that it would be foolish to assert otherwise solely on the basis of "skepticism". On the basis of science, fine; but not on the basis of a vague philosophy most people can't even understand. When past ages believed that the sun orbited the earth, this was for them an objective truth. Just because they were sure of it and we are now sure of the opposite doesn't mean that all truth is relative—that there is no such thing as *objective* truth. Indeed, as I have pointed out elsewhere,¹ it is virtually impossible to operate unless under the assumption that there *are* objective truths, and that we in fact are aware of a good many of them (even if they can't be decisively proven beyond a shadow of a doubt). Humans do indeed create truths, inasmuch as truths cannot be made explicit without the help of rational beings, but it is a mistake to assume that this implies that anything which is useful to humans is a truth, or that there are no boundaries within which truths must exist.

If a statement agrees with reality, it is a truth. There is not a realm of pre-established truths, but there is a realm—namely, nature or reality—that exists independently of humans, is objective (despite its continual state of flux), and therefore determines which propositions—which are nothing more nor less than expressions of nature in thought—are true and which aren't.

To give due credit to pragmatism, it must be acknowledged that most of what people find useful in the long run is considered by them to be true. Most people consider Darwinism to be useful and Creationism to be a useless heap of intellectual refuse that makes a mockery of—Creationists. But criminey! This isn't a criterion for *real* truth; it shouldn't even be considered a criterion for determining what people *think* is true! I can think of quite a few lies that are useful in the long run and yet are known by many to be lies. The "cash-value" of truth?! What the...? Isn't it wonderful when philosophers incorporate terms from capitalism into their philosophical theories?

Anyway, to respond to another objection, "in a world without humans there are no numbers. There are no isolated entities, there are no separate causes and effects, and so on." Yes, but just by saying so you're tacitly conceding that there are absolute [i.e., objective] truths. And besides, since you're clearly a skeptic, how can you be *sure* there are no distinguishable causes and effects? In fact, there almost certainly *are* causes and effects, but they are just so complex, numerous, and subtle that it is rather arbitrary to separate them into great big happenings like a sound being caused by my hand striking a table. There probably *are* atoms in nature independently of humans. In fact, there almost certainly are, because the method that scientists use to test their hypotheses is finding out whether they work! The atom bomb worked, so those physicists must have gotten *something* right.

Now that we've settled the pseudo-problem of the existence of objective truth, it is necessary to ask how 'reasons' can be used to explain the workings of the mind. Emotions exist because of chemical

¹ Cf. my massive treatise entitled *A Massive Treatise on Every Philosophical Problem Ever Conceived Since the Dawn of Thought*, soon to be published by....Bantam Books.

processes in the brain, but don't they also exist because they serve a distinct purpose for the self as a whole? (In other words, don't they have a functional explanation?) How can this purpose be discovered? It is certainly permissible to use functional explanations in nature, for this is precisely what Darwinism does. And furthermore, it is almost certain that functional explanation as such is a valid way of articulating absolute truths (which, as *absolute* truths, 'exist' even in a de-humanized world). [No, only causal explanations are genuinely explanatory.]

I'm going to interrupt myself now. A few days ago I sent Dad a copy of some of my reflections on the self. A little while ago I called him to discuss what I had written: he said he was skeptical that (1) there can be two selves, and that (2) the most fundamental self is pure consciousness—because we are always conscious *of* something. But I am fully aware of that. My point was that what we are conscious of is never *us*, unless we are conscious of consciousness itself. Of course, we are always self-conscious in a way, but generally unreflectively. (And usually we are only conscious of our actions, emotions, thoughts, characteristics; not of consciousness itself.) Unfortunately, it occurs to me that if we are conscious of consciousness, then this consciousness in turn has to be conscious of something else. I suspect that the way out of this dilemma involves Sartre's notion of unreflective consciousness, but I won't be sure until tomorrow morning when I can go to the library and read the beginning of the translator's introduction to *Being and Nothingness*.

August 6

As I read the translator's introduction, it occurs to me that my earlier theory about the self was....hogwash. It wasn't precise enough. It didn't take account of all the different types of consciousness. Phenomenological descriptions of the self are insanely difficult to undertake and even to understand; consequently, I'm taking a break from them. They're a waste of time for one so inexperienced as I.

I think Sartre is wrong that humans can't become both Being in-itself and for-itself. Can't [my interpretation of] nirvana be interpreted in this way, albeit with a few qualifications that don't amount to much? Indeed, this has been one of the reasons (although with different terminology) that I have all along said that nirvana is so perfect.

(later) I've discovered the difficulty involved in my former 'theory' of the self: there was an obvious tension between the statements that consciousness is the 'true' self and that consciousness needs to be of something that then becomes the self that consciousness is conscious of. But all I meant was that consciousness is what unites all our various qualities, actions, states, etc., and that even if all our characteristics were the opposite of what they really are, *we* would still exist. We would just have different characteristics. Consciousness, according to my earlier belief, *is* the self; memory and the like merely intensify our feeling of self-identity, of continuity. The reason we consider "the *I*" and "the *me*" (to quote Sartre) as objects, as things that can be reflected on, is that the psycho-physical *me* (and the *I*, which I think Sartre is correct in describing as an infinite contraction of the *me*) is obviously not the same thing as consciousness. The *me* is the self that exists in consciousness as the *I*, and neither *is* consciousness—so consciousness can separate them from itself.

But the point is that if we reflect on this process, it will take the form of "I am separating consciousness from myself. I am reflecting on consciousness." "Consciousness" is in this instance passive, it is an object; it is unreflective consciousness. The *I* is "reflecting" on it; the *I* has become reflective consciousness. The *I* is reflective consciousness. *I am reflective consciousness*. If I want to reflect on this reflective consciousness, I will be transformed into reflective consciousness of the third degree. (But I don't have to become this third reflective consciousness in order to be aware of myself; reflective consciousness is, by its nature, aware of itself even while reflecting on the reflected consciousness. (In other words, there is no infinite regress.))¹ If it seems like there is an *I* behind all of these consciousnesses, this is because (1) we are confusing the *I* with the constant, corporeal *me* that has real qualities and isn't as evanescent as

¹ This is borrowed from Sartre.

specific consciousnesses, and (2) it is reflective consciousness itself which posits this *I* behind unreflective consciousness—precisely because reflective consciousness *is* this *I*. It involuntarily, by its mere existence, posits the *I* behind the reflected consciousness. And now that I think about it, the *me* is quite clearly not precisely the same thing as the *I* (as I said it was above); it is sometimes an object of the *I* (i.e., of reflective consciousness). But since it is less subjective and ephemeral, it continues to exist even when I am not thinking about it. This salvages the useful theory of the unconscious, because the latter is part of the *me*. It is an objective existent that has nothing to do with the *I*. (It does, of course, *affect* the *I*.)

So where does this leave us? I am reflective consciousness. When there is no reflective consciousness, I don't, strictly speaking, exist—but the *me* does. The *me* is the objective manifestation of the self (the always-existing unity of states and qualities); the *I* is the subjective manifestation. (When existing, it too is a (subjective) unity of states, qualities, and actions.) The *me* has all the characteristics; it is similar to what I called the “inflated” self.I've decided that although we needn't have in mind the psycho-physical *me* when referring to the *I* (and therefore the two terms don't necessarily signify the same thing; not even different aspects of the same thing), often we do tend to conflate the two. Thus, when we're reflecting on ourselves and when we refer to others we conflate the *I* and *me*. We say, “I get angry very often. Anger is one of my most predominant qualities.” Anger obviously can't be a quality of the *I*, but it is the *I* that is declaring that it gets angry very often. The way out of this dilemma is to recognize that the *I* is in fact usually an “infinitely contracted” version of the *me*, and thus assumes the qualities of the latter. (The only times it isn't is when it is reflecting on the separation between the psycho-physical *me* and itself, and when unreflective consciousness is our ‘mode of being’ (in which case the *I* doesn't even exist, so it *can't* be the same thing as the *me*.) So long as we're reflecting on consciousness, or we're simply aware of our consciousness even though we're reflecting on something else, the *I*—the true self, the one that gives life to the notion of self-consciousness, the active, reflective self that knows it is aware of things—exists. The objective self (which is subjectivized when it becomes the content of the *I*) always exists, although we're not always aware of it. Pure unreflective consciousness belongs more to the objective self (the *me*) than to the *I*, but with the onset of reflective consciousness it too is incorporated into the subjective self that we become aware of.

[...]

August 7

Now that I've finished reading *The Transcendence of the Ego*, it's become apparent that Sartre basically stole my idea of the ego as reflective consciousness¹ (actually, there are many rather noticeable differences between his ideas and mine): “The ego is an object apprehended, but also an object *constituted*, by reflective consciousness.” (It was foolish of me to say that I *am* reflective consciousness, because the ego is, while present only when reflective consciousness has posited it, most assuredly more than reflective consciousness in and of itself. The *I* itself (considered separately from the ego) may be little more than reflective consciousness, but the ego *in toto* evidently includes one's objective being, one's various qualities, in addition to reflective consciousness. It ‘unifies’ qualities, states, and actions, and reflective consciousness in itself does not do this.)

Regarding my use of the term “I” (or “transcendental I”), perhaps it would have made more sense just to say “ego”. But on the other hand, I wanted to distinguish between reflective consciousness per se (independent of any qualities etc. that might belong to ‘me’) and the objective self. Like Sartre, I would interpret the ego as being a synthesis of the *I* and the *me*—as being the purely subjective, “transcendental” self with the ‘content’ of (or symbolic of) the objective self (the content, that is, that consciousness is aware of, which doesn't include the unconscious). Incidentally, Sartre refers to the “*I*-concept”, an example of which is when someone asks me what I am doing and I answer, while completely absorbed in my task, “I'm typing on the computer.” The ego doesn't exist; the *I* doesn't exist; all that exists is the *me*, which ‘I’ am

¹ I recorded all those reflections above before I had reached the part of his book that says the same thing.

not aware of. Thus it is the *me* that is being referred to in the statement above.

(Another note on the term “transcendental I”: by “transcendental” I mean a ‘mode of being’ without any concrete qualities, completely unempirical—in the usual sense of the term ‘empirical’.)

I’m not sure what all these considerations have to do with discovering a plausible way to overcome the sorrows of life, but there’s always a chance they’ll lead to some important insights.

The reflections on truth I recorded several days ago were, as you may have guessed, only concerned with certain truths about nature, not with those regarding psychology and more subjective disciplines. I’m worried that much ‘truth’ in, for example, phenomenological psychology is necessarily erected on the crumbling foundation of subjective interpretation.

Returning to my meditations on the self, I can’t decide if the *I*, when existing completely alone (without the ego)—admittedly a very rare occurrence—*is* reflective consciousness or is something more. Maybe the *I* never exists unless simultaneously with the ego, in which case it might be only another name for the latter. But doesn’t it seem as though in our reflections on, for example, a thought we had one minute ago, we can be self-conscious without really being *fully* aware of ourselves? If so, then this self-consciousness is only reflective consciousness aware of itself.

In any event, what matters more than these nitpicky details is that the ego doesn’t exist unless reflective consciousness posits it. The objective self—the unity of qualities and states, the *me*—exists even when we’re not aware of it. Neither the ego nor the objective self can rightly be considered a subject; they are both (to borrow another idea from Sartre) passive ‘creations’ of consciousness—reflective and unreflective, respectively. But this doesn’t mean that consciousness is absolutely free.

God damn phenomenology. At 2:00 a.m. it’s not a fun activity. And it seems to me that most of my thoughts are useless, inasmuch as Sartre says nearly the same thing in a (slightly) more lucid way.

August 8

Ecce Homo is a superlative piece of writing. Incidentally, much of what Nietzsche says about Germans applies to Americans as well; for example, referring to Americans, I could say, “...one never fathoms their depths; they don’t have any, that is all. They aren’t even shallow.” The Germans in the nineteenth century were, while disgraceful in many ways, certainly deeper than modern Americans. “What is called ‘deep’ in Germany is precisely this instinctive uncleanliness in relation to oneself...” Well, at least Germans thought *something* was deep. The concept of ‘deep’ is so foreign to Americans that it’s used as the butt of jokes. There is no “deep” or “shallow” in the culture of American capitalism; there is just...*nothing*. There is just *routine*, and *commercialism*.

Returning to Sartre, it seems to me that his assertion of the fundamentally impersonal character of consciousness is not very original. Men have, at the very least, *intuitively* recognized the fact for millennia. What else is the Buddhist nirvana but a realization of this impersonality? I myself recognized it (in a distorted way) on June 25th.

That’s what’s so ironic about modernity: despite the fact that, after humanity’s long history, there is really nothing new under the sun, the most trivial declarations are nowadays worshipped as original! Hell, Luckács was even praised by John Grumley for recognizing that authentic human communication is impossible! ’Tis absurd!—this mundane world in which such an unremarkable declaration is admired as tragic and profound: ’tis absurd!

[...]

So are we wrong at the moment that we confidently assert beliefs we discover to be false later on? Yes. Objective truths might not be articulated, but they exist as a kind of ‘potential’ all the same. (And there are many that *have* been articulated by us but which we can’t be completely sure of because we must always concede the possibility that our information is inadequate. (I.e., we can never know when it is *not* inadequate.))

You’ll probably think the following is indefensible (because of America’s obsession with political correctness and the like), but you’re wrong: generally it is possible to, roughly speaking, gauge a person’s

intelligence by looking at his features. In fact, my friend Dick Goldberg has convinced me it's often possible to sketch someone's *personality* just by looking at his face and appearance. "No! No! That's tantamount to stereotyping! You're pre-judging—" Shut up. If you can show me a single truly intelligent person with the features of, say, a Steve Forbes (who has the visage of a mutilated infant), I'll be surprised. And if you can show me a simpleton on the level of Steve Forbes who has the features of a Karl Marx, I'll be shocked. If you keep in mind this general rule-of-thumb you'll save yourself from many inconveniences and futile endeavors.

I don't know if the debate between those who say that all acts are essentially egoistic and those who don't is still going on, but I'm going to contribute to it anyway. In my opinion, the altruistic actions that we undertake without reflection, as a sort of instinctive reaction, are always of two kinds: either they are merely conditioned impulses or they are genuine, in-the-moment responses to the pain of the other. They are unreflective consciousnesses, not even true 'acts'—and actions cannot be truly egoistic unless we, who don't even really exist in the state of unreflective consciousness, are aware of them and consciously decide to 'proceed with' them because we know they will put an end to whatever pain we are feeling as a result of the other's pain. Of course, the objective self exists in the state of unreflective consciousness, but the objective self is not the ego. It is never more than an object (although it does 'involuntarily' influence our actions). And it's not as though the unconscious registers our pain and calculates for us the actions necessary to alleviate it. The unconscious doesn't work that way. It can't reflect; if anything, it controls only our spontaneous consciousnesses. And that is precisely what exists in this situation—a spontaneous consciousness. I see a homeless girl; compassion and pity overwhelm me, maybe even without any real awareness on my part; I invite her up to my apartment and give her some food; tender joy at her happiness and gratitude take the place of pity; she leaves, and I feel satisfied. Where in this illustration is there egoism? I manifestly did not give her the food because I wished to rid myself of pity or because I wanted to feel good about myself; I gave it to her because 'I' experienced a spontaneous consciousness of compassion/pity, the logical result of which was the offering of food.

Of course, unless I am aware of myself at one time during the process (which I surely am), giving her the food is not an altruistic *act* either. It is merely the result of an 'altruistic' spontaneous consciousness.

The case is different with reflective consciousness.¹ When reflection is at its peak—when I look at the girl, debate between the alternatives of walking away and offering her food, glance at my watch to see if I have time, ask myself why I care about helping her in the first place, and if it occurs to me even for an instant that a possible reason is the likely resultant inflation of pride—there is a good chance that the act is at least partially egoistic. Even if I convince myself that the reason I want to offer her food is entirely that she looks so miserable, I am possibly deceiving myself: it is possible that the act is in fact entirely egoistic. I don't know if the unconscious is behind every self-deception—i.e., if it somehow withholds from us the information that our act is egoistic and at the same time gets us to believe that the act is altruistic—but I do know that self-deception occurs frequently. (This example, of course, leads directly into the issue of free will.)

If I feel that it's my *duty* to help her—and that's the only reason I do so—is the act egoistic? When reflecting on the act after it is finished, it is easy to think that my real reason for doing it was to avoid the guilt that would result if I hadn't done it, but I'm inclined to believe rather that it is generally a kind of conditioned response to help someone if we think it our duty. I see a crying girl, I don't feel overwhelmed by sympathy, but I ask her what's the matter anyway. I see it as my duty; it is a 'conditioned' response. It's quite possible that I wouldn't have felt guilty even if I had ignored her, but I nevertheless chose to help her. Clearly there is no "egoistic" or "altruistic" here. I was taught that there is such a thing as duty, I was taught to act on a sense of duty, so I did. That's all there is to it.

Enough of this. Have I told you yet that this has been the best summer of my life? It's rather significant that even though I haven't had a single friend up here I have *thoroughly loved* my stay in Madison—because of the minor headway I've made in certain areas of philosophy (and because I've finally proven to myself that I *can* be a somewhat original thinker). Never have I experienced a happier time of

¹ Many a reader will consider these and similar passages verbose rubbish. But many a reader is wrong.

life. In fact, my very rare moods of acute loneliness or vast confusion are the icing on the cake! I am truly grateful for those painful episodes; they add the perfect amount of depth to an otherwise sickeningly saccharine existence. It's not good for one to be *too* content, and that is currently a very real risk for me.

As I gaze into the future I see nothing but excitement, thrills, triumphs, and a few necessary frustrations or sorrows. Praise the Lawd! I can't wait for my sophomore year to begin. This year, as I've mentioned once, I'm going to survey human history from its dawn to its dusk.

This passage from *Human, All Too Human* is precious: "A god who conceives children with a mortal woman; a wise man who calls upon us to work no more, to judge no more, but to heed the signs of the imminent apocalypse; a justice that accepts the innocent man as a proxy sacrifice; someone who has his disciples drink his blood; prayers for miraculous interventions; sins against a god, atoned for by a god; fear of the afterlife, to which death is the gate; the figure of the cross as a symbol, in a time that no longer knows the purpose and shame of the cross—how horribly all this wafts over us, as from the grave of the ancient past! Are we to believe that such things are still believed?"

A thousand years from now people will look upon this age as the most confused in history.

While we're on this topic I'd like to propose an analogue of contemporary culture: a 'broken record'. A record of Black Sabbath, the needle caught on one groove, skipping continuously. "Fuck the worl—fuck the worl—fuck the worl—fuck the worl—" Thus: every year a new pop star/rapper becomes the darling of the public, only to disappear from its (unreflective!) consciousness ten months later. Thus: every holiday a new toy becomes an object of infatuation, a fetish, for all children and their parents. Thus: every election year politicians attack each other, destroy each other, to experience another two years of power, while the rest of us become more and more sick of the charade, lose more and more interest in its puppets, and become more and more apathetic about its outcome. Thus: every six months there occurs an earth-shaking merger between This Big Corporation and That Big Corporation. Thus: unbeknownst to us, technology and all things impersonal patiently consolidate their totalitarian rule and plan the destruction of humanity.

But this broken record does allow for one element that adds a bit of interest and variety to the sad lyrics drumming on our ears: it becomes scratchier with every revolution of the turntable. Thus: each year the cycles of capitalism become a little more forced, more self-conscious, more predictable, less exciting. Its culture is drowned out under the hissing of white noise. Nothingness, that poisonous worm in the heart of Being, eats away the soul of mankind. And we know what follows the duality of Being/Nothing in the dialectic: *Becoming*.

August 9

Perhaps it was foolish of me yesterday to say that there is a chance the altruistic 'act' was in that case not really an act—that it was just the result of a spontaneous consciousness. In such a long-drawn-out example (seeing the girl, inviting her to the apartment, giving her food, etc.) it's absurd to say that the entire process is a spontaneous consciousness. But rage is often a spontaneous consciousness, and certain actions we commit as a result of this rage—such as smashing the desk—can not really be considered "acts" in the fullest sense, can they? (If you're going to insist they can, at least concede that they're of a very different nature than those that are a 'result of' reflective consciousness.) If it's true that the ego doesn't fully exist in the state of unreflective unconsciousness, how can the ego be responsible for its actions? How can it be free?

This is all very peculiar. The fact of the matter is that there is not really a clear demarcation between reflective and unreflective consciousness; there are different levels of each. There isn't a 'leap' from one to the other: the change is so subtle it's almost imperceptible in many cases. Furthermore, what practical difference does reflective consciousness usually make? If it's defined as that state in which consciousness is aware of the ego, then it's perfectly conceivable that unreflective consciousness (unawareness of self) is compatible with the utmost reflection on possible alternatives or even on deep thought. Maybe it's even more compatible with this than reflective consciousness! Nietzsche surely wasn't reflectively [self-

conscious when he wrote many passages in *Zarathustra*—and probably this was in fact the reason for his ability to think so deeply. When I’m in a state of passion I might be reflectively conscious and yet be unable to control my actions; when I’m unreflectively conscious I am very possibly absorbed in debating between alternative courses of action (and thus am more free than I was in reflective consciousness!). “Then it’s the objective self that was free.” The objective self can’t be free. “Then it’s consciousness that was free.” Consciousness isn’t the ego.

The truth is that all of these categories of being are forced and false. [*Yes!*] I’m inclined to think it’s useless even to reflect on this crap.

Another thing: what does Sartre mean when he says that nothing can act on consciousness? If this were true then consciousness would probably be entirely free—but it’s utterly false! *Everything* acts on consciousness: the unconscious (the existence of which he would admittedly deny), the environment, the passions—which determine what consciousness ‘we’ experience—neurochemicals, etc. Consciousness as an abstract entity is indeed ‘free’ or ‘independent’, in a way, because it is by its nature ‘isolated’ or ‘insulated’ from everything else—but what a truism! Besides, this doesn’t mean that its ‘manifestations’ aren’t often absolutely determined by the environment. Isn’t spontaneous consciousness determined by forces over which it has no control? “But it is intentional, and thus it is free.” It has an implied intention, yes. But this intention is only a kind of instinctive (impulsive) reaction to stimuli. For something to be free, it has to have control. Or will this be denied too? If so, we’re talking about two completely different kinds of freedom. By “freedom” I mean the ability to control one’s actions—in whatever way that is understood. Sartre says consciousness is always free. Fine! I’ll grant him that, because I know he understands by “freedom” something so abstract it’s utterly useless and inapplicable to concrete reality. I am talking about freedom of the *ego*, not freedom of consciousness—whatever the latter is supposed to mean.

Another thing: Sartre thinks the ego is an *object* of reflective consciousness. (I neglected to appreciate this in my recent entries.) But I think that while the ego fully exists only in the state of reflective consciousness, it is not merely an object of this reflective consciousness. It is itself a *part* of this consciousness. I am an object of myself. Fine. I am reflecting on myself. Thus in one sense Sartre is right that I am an object. But I am also a ‘subject’. I am this reflective consciousness reflecting on the qualities of my “objective self” (my identity, etc.). To be more exact: I am this reflective consciousness *and* this objective self subjectivized (together they constitute the ego)—and therefore I can ‘separate’ reflective consciousness from myself because I am more than it. Therefore I agree that the *me* part of the ego—when it has become subjectivized, become aware of itself (or rather, become part of the *I* which is now aware of it)—is an object of the *I*. But the *I* is not an object! The *I* is reflective consciousness. And the ego *in toto* cannot be considered solely an object either, because included in it is the *I*.

Sartre seems to recognize something along these lines when he says that *we* are free. But what little I’ve read of *Being and Nothingness* has concentrated almost exclusively on the free character of consciousness as such—but consciousness is not the ego! His earlier views in *The Transcendence of the Ego* necessitate that not even the *I* exists in all consciousness; thus the *I* itself—forget about the whole ego!—is unfree. If it doesn’t *choose* to disappear and reappear (or, what is the same thing, if reflective consciousness doesn’t choose to disappear and reappear), then it’s not entirely free. There’s no way around it. The *I* (1) sometimes doesn’t exist, and (2) has no control over *when* it exists. To be consistent with his own views he’d therefore have to concede that we are not completely free. Who cares about consciousness as such? Consciousness is not us; it’s a somewhat ‘abstract’ thing which can have only an abstract, almost theoretical, freedom—so I consider it irrelevant to the core of the debate over free will.

Returning to my earlier observations, I’ve decided that it in fact isn’t at all possible that the *I* doesn’t exist when there is a chance we are free. We must be reflectively conscious to be free. But, to you alert readers, I’m not contradicting myself! Above I was foolishly assuming that reflective consciousness necessitates *complete* awareness of the ego, but it doesn’t. It only necessitates awareness of itself, which it is by its very nature. Thus if I am reflecting on alternatives, the *I*—not the ego—necessarily exists, and that is a necessary condition of freedom (because the *I* is, as I said before, the heart of the ego, its most active aspect). To repeat: whenever the *I* doesn’t exist (you won’t be aware of this occurrence because ‘you’ won’t really exist), there is no freedom. If we’re reading a book and we suddenly *decide* to sit up (and don’t do

so ‘unconsciously’), the *I* ‘imperceptibly’ comes into being—as does reflective consciousness. “Reflective consciousness? We’re not reflecting on the ego or former states of mind, so it can’t be called reflective consciousness.” Who cares? What’s in a name? Call it a qualitatively different form of self-consciousness, if you wish.

In fact, that’s a good idea. Let’s slightly alter the definition of reflective consciousness so as to mean awareness of the *ego*. Awareness of the *I* we can call self-consciousness (consciousness conscious of itself), and “non-thetic” self-consciousness will refer to the level of self-consciousness in which we really have no idea of our existence.

Aha! I finally understand why I defined the ‘true’, ‘reduced’ self as pure consciousness rather than emphasizing the self-conscious aspect: I am so often aware of the *I* [*i.e.*, *very self-conscious*] that I stupidly assumed this kind of awareness to be necessary as part of the ‘human condition’. So I did in fact have in mind the *I* when I talked about the reduced self. Furthermore, by the inflated self independent of the reduced self I understood the objective *me*, and by the fusion of the two I understood what Sartre calls the ego (although I foolishly continued to call it the inflated self, and the former the inflated self *proper*). ‘The reduced self is essentially subsumed under the inflated self’: in other words, the *I* (r.s.) absorbs or subjectifies the *me* (i.s.), resulting in the birth of the ego. “We are awareness”: ‘we’ are the *I*. If you refer to the entries in which I discuss my earlier theory of the self you’ll realize that almost everything I say is, with slight modifications and a substitution of Sartre’s terms, the skeleton of Sartre’s own theory. Ha! Think of that! I *knew* I was onto something when I wrote those incomprehensible passages. But I don’t blame Dad for rejecting my theory: I communicated it terribly.

Anyway, I’m inclined to think that when we are aware of reality—when we fully exist [in our full self-consciousness]—we can be held accountable for our actions. We may not be completely free, but we’re nonetheless aware of our actions. The belief that since we can’t know what it’s like to be the Other we can’t justifiably impose standards on him is wrong. Based on a great deal of testimony and evidence over the ages, we can in fact approximate what it’s like to be the Other: namely, it is like being us. Unless a person has some kind of severe mental disorder, he can be held morally responsible. But there have to be degrees of moral responsibility. If I fully appreciate the pain someone will feel by an act of mine but I go ahead with the act anyway, then (other things being equal) I am more ‘guilty’ than he who is simply incapable of imagining what the other’s pain will be and thus commits the harmful act.

You should reflect on those opinions (as I’m going to do), because I have no idea if they’re at all defensible. (Incidentally, they seem similar to Dennett’s.)

On an unrelated topic, I find it disappointing that it would be a waste of time and space to record hundreds of Nietzsche’s aphorisms in this journal: many of them are brilliant and witty. For example:

“People who think their daily lives too empty and monotonous easily become religious: this is understandable and forgivable; however, they have no right to demand religiosity from those whose daily life does not pass in emptiness and monotony.”

“There is not enough love and kindness in the world to permit us to give any of it away to imaginary beings.”

“The poet presents his thoughts in splendor, on the wagon of rhythm--usually because they cannot go on foot.”

“If spouses did not live together, good marriages would be more frequent.”

“He who is modest with people shows his arrogance all the more with things (the city, state, society, epoch, or mankind). That is his revenge.”

“We like to be out in nature so much because it has no opinion about us.”

“We belong to a time in which culture is in danger of being destroyed by the means of culture.”
More true now than ever.

“Error has turned animals into men; might truth be capable of turning man into an animal again?”

“He who strays from tradition becomes a sacrifice to the extraordinary; he who remains in tradition is its slave. Destruction follows in any case.”

“That something is irrational is no argument against its existence, but rather a condition for it.”

“Fathers have much to do to make amends for the fact that they have sons.”

“Christianity came into existence in order to lighten the heart; but now it has to burden the heart first, in order to be able to lighten it afterward. Consequently it will perish.”

“‘Forgive us our virtues’--thus one should pray to men.”

“Whoever thinks more deeply knows that he is always wrong, whatever his acts and judgments.”

“The demand to be loved is the greatest kind of arrogance.”

“Sometimes we remain true to a cause because its opponents will not stop being insipid.”

“One must suffer of the fate of music as of an open wound.” If that was true in the nineteenth century—how much truer must it be at the start of the twenty-first!

Returning to pseudo-phenomenology: all those years of obsession with personal change prepared me for engaging in the phenomenological psychology of the past month. That time of life was more painful than you’ll ever know (unless your psyche suffers from a wretched need to ‘intuit’ *everything*), but it was useful. I created for myself a *character* in high school.

It’s so gratifying nearly to understand the nature of the self at long last! What has plagued other men for a lifetime I will put behind me before I reach legal adulthood!¹

The pleasures of the mind are infinitely more perfect than the pleasures of the body. That is *my* maxim.

August 10

Today I received an e-mail that contained the course-reading for next year. Unfortunately the sheer amount of it (close to a thousand pages per week, so I’ve been told) precludes the possibility of my reading anything else. Furthermore, the CSS students are required to write one or two papers each week—and the professor of my history tutorial sets up so many guidelines for the essays that creative freedom is thrown out the window. For instance, we can’t use the following words in our essays: really, actually, fact, truth, reality, obviously, feel, believe, say, mean, important, interesting, significant. The thesis of each paper has to be “genuinely controversial”. We can’t repeat words or use contractions. The title must be short and memorable. The second paragraph must address “test case 1”. The third paragraph must revolve around the counterargument to test case 1. The fourth paragraph must include test case 2 (followed by a response to the counterargument), and the sixth paragraph must include test case 3 (with the counterargument). As one might imagine, the introduction and conclusion also have strict guidelines. We have to write the essays in the style of a turn-of-the-century scholar. Each essay must be between 5 and 6 pages. We cannot write in the first person. Passive verbs are forbidden. Each essay must have 25 footnotes, and we have to circle ten words we’ve never used before. We have to identify three logical fallacies of an author and engage in at least three textual analyses, which must include such items as “symbolism, internal logic of passage, language, tone, style, bias, and link to thesis”. We also are required to include a map at the end of our essay and find some way to relate it to the subject we’ve written about.

The danger of attending prestigious colleges or graduate schools is that one is bred to become a mindless academic who spends his life following the rules; i.e., one becomes bureaucratically minded (the worst thing that can happen to an intelligent person). The intellect is raped. (Oh no! I used a passive verb!)

Even if we concede that not all actions are egoistic, it is not a foregone conclusion that Nietzsche’s contempt for the selfless ideal is unjustified. He didn’t mean that we shouldn’t be perfectly kind and considerate in our actions with people; he didn’t mean that we should only help the homeless girl if it inflates our ego! He was more concerned with selflessness as a way of life, as an *ideal*. Kindness and generosity don’t coincide with the kind of selflessness Nietzsche had in mind.

“Become who you are!” In other words, don’t get lost in neighbor-love and thereby take the easy way out of suffering and realizing the potential you’re not even aware of. [...]

The implication of all this is that we often are not conscious of “lack”. Of course, many of us are never *explicitly* conscious of lack even when, in a given moment, we’re fully self-conscious, but since

¹ Yeah, right.

“lack” is part of the nature of self-consciousness it is always present when we are [fully] aware of ourselves; we just aren’t perceptive enough to articulate it. We would instantly recognize the tremendous feeling of perfection if somehow it were possible to experience the negation of lack while self-conscious. (Such a ‘possibility’ can’t even be imagined, unfortunately.) The difficulty is that even if it’s true we aren’t always conscious of lack, it seems that there must ‘objectively’ *be* lack all the time (except possibly when we experience Dionysian rapture). Doesn’t it? Maybe I’m wrong. Maybe humans, while not in any kind of paradise during those states of self-unawareness, are nonetheless more ‘content’ (even when furious) than when they’re self-conscious. But that’s certainly crap, because I can be in despair and *not* be [wholly] conscious of myself at the same time, or I can be in love and *be* conscious of myself at the same time.

Aha! I’ve just had a stunning breakthrough! This is all gibberish! That revelation seems to be the virtually predetermined outcome when I draw thoughts to their logical conclusions. And guess what I do whenever I crash into the reef of logical absurdity. In order to guard against the probability of mindless obsession and philosophical despair I cease to engage in any kind of deep reflection and instead listen to music. The muse of music! What worth would my existence have without you? There would be no escape, no possibility of redemption, no *personality* and *substance* and *color* in life! All would be bland and meaningless, in vain. [...]

In any event, I’ve almost had enough of using phenomenology to arrive at truth. I miss good old-fashioned Marxism, a philosophy *tangible* and *understandable*. Reading a thousand pages a week on history and social theory will be a relief after the intellectual exertions of this summer.

August 14

At this moment Bill Clinton is preparing to recite his speech at the Democratic Convention. Here are the phrases he’ll use: “we have put people first”, “Al Gore has helped lead this country into the 21st century”, “there are fewer poor people now than eight years ago”, “Al Gore is the only man who can prepare America for the 21st century”, “I have talked to thousands of single mothers over the last eight years, and they have thanked me...[etc. etc.], but there is still work to be done; we cannot tolerate this and that, we cannot endure that and this, we must work for this, that, and that...”, “we have cut welfare rolls in half”.... How gratifying it would be if a terrorist nuked the whole convention! No more of those Democratic scallywags to smear the political left with the stains of hypocrisy.

And what is this about cutting welfare rolls in half? Is it the purpose of welfare to cast the needy onto the streets because—it looks bad for the politicians? “The welfare rolls have been cut in half!” “Three cheers for Bill Clinton! He’s forced those lazy welfare bums to get jobs!” But here is where that great desert of willful ignorance reaches its most barren spot; here is where blindness becomes an occupation; here is where humanity, in all its triumphant barbarity, loses hope for redemption: while these *politicians* are tooting their horns about the brilliant success of welfare reform, the impoverished are daily being thrown off welfare in the *thousands*—whether they have jobs or not! “Time’s up. You’ve had your chance. The Bureaucracy can’t sustain all these masses of poor.” The Bureaucracy. The Bureaucracy is the god we all unwittingly pay allegiance to; it is our religion, our life-blood, our *mind*.

For the past few days I’ve been concerned about how to justify my writing this diary. This problem has obsessed me. *Why* am I writing it? Is it because I want to be remembered after I die? Because I think I’m a unique person? Because I want a record for myself when I’ve grown old and feeble? Because I’m vain and think this journal will honor me in the eyes of my contemporaries? Would I like to be worshipped as Lenin was by the Soviet Union?

No, I wouldn’t. Such a useless prostration of the people, a kind of secular religion that degrades them to the status of mindless subjects, is out of the question in true communism. If you think that by writing this journal I’m underhandedly attempting to create such a god out of myself, you’re quite mistaken.

Nevertheless, it would be nice to be admired or even venerated. *Why*, though? What good could that possibly do? It certainly wouldn’t make *me* happier. I suspect it’s just a manifestation of the irrational human need for immortality. [No; for recognition.] As I’ve said before, that is the primary purpose of this

diary—although that more general purpose and the former unfortunately conflict, insofar as the immortalizing of my personal flaws does me no favors. Therefore it appears that any kind of immortality matters more to me than being revered.

On the other hand, I surely wouldn't like to be remembered as a jerk. I want to prepare for my death; I want to ensure that people won't forget me or judge me too harshly. Call this cowardly and disgraceful; the fact is that we all desire it, although some of us are too self-blind to be aware of this.

[...]

Several days ago, when I didn't have my computer to write on, I jotted down some notes regarding consciousness. Here they are:

When the I doesn't [fully] exist we can't control consciousness or our actions, but this doesn't mean they don't have a kind of direction or purpose to them. The moment consciousness attempts to control itself is the moment the I (the self) comes into existence. At that moment we can control our thoughts, consciously direct our attention to something else, etc. Consciousness, which we are (in a particular form), cannot control actions, but the brain can—and since the brain is intimately connected with consciousness, our actions can be 'compatible' with the purposes of the conscious mind.

Consciousness can't be controlled by anything else, and to that extent it is free. But it is certainly influenced by the environment and kept within a more or less enormous realm by genes, etc. If someone will say that since consciousness is essentially an effect of neural processes it can't be free, I have two responses. First, if by freedom we understand control over oneself, then I agree that consciousness isn't free when it can't control itself (see the second point). But if freedom implies only a lack of absolute external constraint, then consciousness is always partially free. (These are in fact two kinds of freedom that should always be distinguished.) "But it's constrained by the neurons!" Maybe the neurons produce it, sure; but how do you know the neurons are completely constrained (i.e., 'determined' or controlled) by anything else? Besides, there are always other alternatives, different routes, that can be taken by consciousness; we debate before arriving at decisions. Of course, if somehow we could travel back in time and debate over the decision again—while keeping all the conditions exactly the same—we would go through the identical thought-processes and arrive at the identical decision. But what does this prove? Certainly not "necessity". It's not as though we are just going through the motions in deciding, or that our decision is predetermined. In any event, merely by 'watching' yourself reflect on anything you can see that consciousness is free (in both senses—but such is the case only when you're watching yourself. See below. There's possibly only freedom in the second, lesser sense if you're not watching yourself.) In short, even in the moments when we're not aware of ourselves there isn't an absolute constraint on the routes that consciousness follows (i.e., there isn't a single necessary route), but this doesn't mean that consciousness¹ has control over itself in the state of self-unawareness.

This brings us to the second point. When we are fully aware of consciousness we have control over it—

This is all wrong. We hardly ever control our thoughts, because there are levels of self-consciousness and it is only in the highest levels that it can be possible to 'control' them. (And even *that's* probably wrong!)

Enough of this. After reflecting on my thoughts I've come to the conclusion that Sartre is very likely right about his theory of non-thetic self-consciousness (viz., that it exists). I can't give reasons for my new belief because it relies on pure intuition; in order to test its validity one must observe one's states of mind.

¹ Or the neural processes; both terms mean the same thing in this context—if neurons do in fact produce consciousness.

August 16

Another singular problem is the nature of time. A few weeks ago I wrote that the origin of time and the universe is an unsolvable question, not susceptible to conceptual understanding. Still, it is very absorbing. [...]

On the other hand, I can't come to any conclusions until I read more of Sartre. (I've only read the two abovementioned works and excerpts from *Being and Nothingness*.) Therefore I must compel my impatient and juvenile mind to tolerate reading another book: *The Tragic Finale*, by Wilfrid Desan. It's a summary of *Being and Nothingness*.

Before I bid farewell for the rest of the day, I'd like to emphasize again that in my opinion Sartre is either engaging in a flagrant contradiction or is abandoning his (or perhaps primarily *my*, if I'm misinterpreting him) very useful distinctions between the me, the I, and consciousness as such, which were present in *The Transcendence of the Ego* and are absent in *Being and Nothingness*. Absolute freedom, bad faith, the impossibility of sincerity—all of Sartre's notions rely on the conflation of the ego with consciousness (or rather, the complete ignoring of the ego). It is impersonal consciousness *independent of the self* that is free, that cannot be sincere, that is in bad faith—precisely because this consciousness itself has no personal characteristics. But the ego certainly does! The ego is not impersonal consciousness—and neither is the active, conscious part of the ego, the I—and so none of the three foregoing terms can apply to it. They are meaningless. I can be sincere simply by knowing myself to a sufficient extent that I recognize my fundamental characteristics and act on that knowledge. I can, of course, *try* to be outgoing or obsessed with movies or a completely virtuous person—and for a time I may succeed—but eventually I'll fall back into my old habits *because I have very little control over who I am*. I of all people should know this truth! I tried for four years to change my identity, and the only time I was even mildly successful was when I took a pill! This in itself demonstrates consciousness' lack of control over a vast range of very significant elements of oneself. The reason for our tendency to ignore what Sartre considers our absolute freedom isn't a vague consciousness that the alternative is anguish; it's simply that the I [self-consciousness] identifies itself with the me, and the me [the psyche, etc.] is not totally free. If it will be said that the I could choose not to identify itself with the me, I will say only that such a conscious decision would be futile. The moment the I decided it had complete freedom and would lead a different life from then on, it would be thrown back onto the massiveness of the me.

I don't mean to suggest that personal change is impossible; I mean only that its great difficulty implies the defeat or irrelevance of Sartre's notion of absolute freedom. Furthermore, although it is true that I am not, e.g., a heterosexual inasmuch as I am self-consciousness, it is not true that the me is not a heterosexual—or that we are mistaken when we think the ego is a heterosexual. This may signify the tragedy of human existence—viz., that consciousness is what it is not and is not what it is—but it doesn't signify anything like bad faith. Moreover, as I mentioned once before, it doesn't mean that “massive identity of oneself with one-self” is *always* impossible; such an identity is the nature of Dionysian rapture. Consciousness then is basically identified with the unconscious, with the objective self (although I admit that this psycho-physical *me* cannot be considered an object in the same sense that external things are objects), and this is so because the unconscious ‘takes over’ consciousness while at the same time allowing the latter to remain in existence. There are no longer values, goals, objects, or ego; there is only a magnificent union of oneself with oneself, of oneself with the world. “Ripeness is all.” The moment is all. Are we still non-thetically self-conscious in this moment? I can't say for sure. I am inclined to say no—because if we are, consciousness necessarily continues to ‘look upon’ the self as an object—but since I'm still a bit skeptical about the theory of non-thetic consciousness I won't confidently assert my opinion for at least a few more days.

August 17

I was an archfiend to suggest that I might vote for George W. Bush in the coming elections. The

truth is that I haven't yet decided what strategy is best to prepare for socialism/communism—the revolutionary or the evolutionary. If the revolutionary were best I *might* want the Republicans to ruin our country as much as possible; if the evolutionary were best I would favor the Democrats with my heart and soul. But since I have no idea, it would be folly *par excellence* to vote for George Bush. Quite aside from the question of the ends justifying the means—which can even be *considered* only when revolutionaries are sure of the practical value of each alternative and its probable outcome—I would be perpetually stung by my conscience if I knowingly contributed to the disintegration of millions of people's lives. Besides, the Democrats could never have so much power that there's a chance they could forestall the deterioration of our society. Such a thought is absurd and un-Marxist. Moreover, free trade and the abolition of tariffs, etc.—which I am, as you know, in favor of—will not necessarily be pursued with greater fervor by the Republicans than by the Democrats. Clinton, for example, has unwittingly helped us revolutionaries by passing NAFTA and fighting for the induction of China into the WTO.

August 18

The concept of a psycho-physical “me” is rather ambiguous. The body is clearly part of it, but shouldn't we distinguish between the body and the psyche? What *is* the psycho-physical me? Is it the body, unreflective consciousness, and the unconscious? What is the unconscious? What is the ego? Must the latter include an awareness of the body? Consciousness certainly ‘inhabits’ the body, at the very least; sensation is consciousness, right? The ego is not a substance; it is only a kind of awareness. Is the me a “substance”? Is it an ‘object’ of consciousness? Is the me a sort of idea that exists even if we're not aware of it? **[These questions—and a lot of the preceding entries—give some indication of how futile it ultimately is to try to work out a phenomenological ‘system’ of consciousness and the self. In the end, all this Sartrean stuff devolves into masturbatory nonsense.]**

August 19

At long last I've finished reading *The Tragic Self*. Although Sartre's philosophy is in some respects innovative, it is also a failure almost on a par with Hegelianism. The whole thing crashes to the ground once it is recognized that there is no such thing as absolute freedom, that consciousness has a physical/chemical basis in the brain, and that if the For-itself is as empty as Sartre believes then it is necessarily passive rather than active. Nevertheless, it certainly seems as though consciousness is in fact empty and yet, in a sense, undertakes such gargantuan feats as constructing the universe [by being aware of it]. I suppose if consciousness is merely an effect—if neurons do all the work and consciousness is only the result—then the problem isn't inexplicable; but it continues to be rather illogical.

So I'm going to study social theory. I still think there's a good deal I could contribute to phenomenological psychology and the like, but there's also a lot I could contribute to Marxism and other theories of history. So I've started reading *The Marxism of Jean-Paul Sartre*.

August 21

Underneath my placid exterior, my half-humorous, self-deprecating, self-aggrandizing writings, my unassuming, nearly wispy social presence, my self-doubts and my self-confidence, my trivialities and my profundities—underneath all these contradictory traits is an ocean of passion. How often am I drowned in it! How often do I exclaim—lost in the depths of my rage and despondency—“Is there not a bed below this sea?” Alas! there is not. I am condemned to eternal unrest. I am a prisoner of my own ephemerality, my own nothingness! Behold, reader, the most devastating truth of all: *nothingness*. Beneath one's unruffled

appearance are one's strengths; beneath one's strengths are one's weaknesses; beneath one's weaknesses are one's passions; and beneath one's passions is *nothing*. Where is "one"? Have we forgotten it? Have we overlooked it? On the contrary: we have passed through it. There is no substance to be designated "I". And yet, *I am*. Who would deny it? Who would deny my fanatical need to love? Still, it is not *I* who yearns for love; it is....consciousness. It is love itself that yearns for love.

How mawkish that sounds (when misinterpreted)! You see, reader, I too can be sweetly sentimental if I so desire. With practice, I too could gush extravagant rivers of prose worthy of young Werther. *Quelle folie!* He who is a good writer is pronounced passionate, despite daily proof that humanity is, above all, a fickle thing. Passion is a flood one moment, a trickle the next. And it is little appreciated that "passion" is not much more than a singular blend of confusion, impatience and distress unless it is *articulated* or supplemented with art. One moment I am a sad person who is vaguely aware of a pain in his chest; the next moment—that is, upon poeticizing my passion—I am transformed into the embodiment of anguish. My ardor is crystallized, immortalized and reified, while I am left behind in its wake. Subsequently I can be judged passionate, and although this judgment probably contains a kernel of truth it is misleading: my so-called passion is never equivalent to its 'objectification' on the written page. Beethoven's passion cannot be equated with his music, for the latter is merely an *expression*, an effect. It results from his genius, not primarily from something called "passion"—which is nothing more than an impetus. Judge for yourself the truth of what I am saying: the next time you feel an unquenchable thirst engulf you, listen to Debussy's "Clair de lune". You'll notice that your thirst grows to epic proportions at the same time that it changes into eloquence and climbs to the pinnacle of beauty. The next time you feel angry, listen to the first movement of Beethoven's Fifth Symphony. You'll realize that passion is nothing if not completed by art. Why is this so? Because art reifies, "crystallizes" passion. Artists seem so ardent only because it is they who create these objectifications. If you'll insist that many surely are abnormally passionate, my response is that they *feed* their passion with their creations, that they become fixated on what are admittedly the most important questions of life, and in so doing milk their obsessions for all they're worth. What others are too shallow to dwell on for more than two minutes at a time, many artists *constrain* themselves to dwell on because they enjoy pain. It may drive them to suicide, but they enjoy it nonetheless. They *need* it, because it is coextensive with meaning. It's not as though artists are anything like martyrs who despise their passion but cannot escape it—who live in misery, who sacrifice themselves for their art.

If the label "passionate" refers not to subjective experience but to behavior, then I concede that great artists are passionate. Their behavior indicates obsessions, but I still think that what they *feel* is not really qualitatively different from anything ordinary people feel (although it may be intensified).

Incidentally, despite the apparent incompatibility between the first paragraph of this entry and the second, if the reader interprets the former correctly it can be seen as consistent with the latter. Furthermore, for what it's worth, I'm not sure that my opinions on the artistic nature are at all accurate. I'm not even sure if they are in fact my 'real' opinions!

Briefly returning to the topic of 'reified passion': if I wanted to write this diary in the style of a sentimental but brilliant artist who on some level wished to glorify himself, I don't think the task would be an impossible one. With a tasteful amount of poetry I could make this diary elegant and maybe even a little musical. But such extravagance is appropriate only in published works, and even then can get rather heavy-handed at times. Besides, no matter how impassioned I sometimes feel, a shadow of self-consciousness, a slight suspicion that I'm putting on a show for myself, dilutes my would-be fervency and makes me incapable of *absolutely* glorifying my 'distresses' in this diary for fear that doing so would be an imposture.

(later) Blah, blah, blah. I don't think my reflections on the 'artistic nature' were very perceptive. Many of them directly contradicted my long ruminations on "Dionysian rapture"—not to mention the truth that since I can't experience what Beethoven *et al* experienced, I can't justifiably come to any conclusions about the nature of the passion they endured. Perhaps their 'anguish' was in fact many times more overwhelming than the emotions ordinary people experience. I'm skeptical with respect to the vast majority of artists (even "great" ones), but skepticism isn't certainty.

At any rate, what matter these considerations? What matters philosophy or even psychology when one remembers that events like the Holocaust occurred? All things profound shrivel to the status of

irrelevance when confronted with the Holocaust. The Ninth Symphony is the squeak of a mouse. (To be fair, I should say that from *one* angle it is only a squeak, but from another it is more monumental and all-encompassing than the Holocaust times one hundred.)

[...]

August 26

Professional philosophers can go to the devil. Only those who are *not* professionals are *maybe* worthy of being called philosophers. All the rest are irrelevant, not irreverent enough—and not ambitious enough. Irreverence is the motto of all true philosophers, particularly the colorful, good-natured ones (for example, me).

August 27

Tomorrow I'll return to Wesleyan. On the whole I'm excited—but I'll miss *choosing* the books I want to read. But that isn't so bad: I've spent the past few days ignoring all thoughts about phenomenology, existentialism, even Marxism, to the point that I'm now nearly drained of intellectual curiosity. I.e., I'm ready for college!

September 1

I've written my first paper and read quite a few books. To quote a girl who was a sophomore in CSS last year, "CSS is as bad as everything you've heard and worse." I'm usually not one to complain (?!), but I have to agree with her: the workload is extraordinary.

There isn't much else to tell you. For some reason I feel much more mature and 'accepting' of my situation than I was last year; it even seems likely that despite my wretched social life I'll (almost) never again be as committed to improving it as I have been in the past. I don't give a rat's ass anymore. I haven't even tried to contact Rebecca yet. Apathy isn't a very appealing emotion, but it seems more realistic than all the others.

September 4

A few hours ago I attended a CSS party. This is how I would describe it: juvenile, artificial, shameful. That's my formula for all "parties". They shorten humanity by a head; they reduce it to a state of imbecility. I drank some vodka, hoping to overcome my social inhibitions with the help of a little drunkenness, but the taste was too rancid for me to take more than a few quick gulps.

Maybe I'm being judgmental, 'dogmatic', raising my own personal idiosyncrasies to a universal standard that I expect everyone to adhere to, but I can't help thinking that people who engage in these weird rituals are acting falsely. I get the impression that they take themselves too seriously. Not to feel a twinge of self-consciousness, of 'shame', in those situations seems beyond belief. You who have experienced parties know what I mean: rap music blasting in the background, forty kids squeezed into a space that could comfortably fit ten, all of them drinking, most of them drunk, half of them moving their bodies about in absurd ways, all of them screaming at each other just to be heard, conversations revolving around the beneficial effects of various hard drugs.... The only conclusion I can arrive at is that mankind is too depressing to think about.

September 5

I've met a lovely freshman (named Juliana) who lives in my hall. She's similar to Rebecca in many ways: quiet, intelligent, interested in the social sciences, hails from California, is very easygoing, etc. But her exceptional quality is her artistic talent: it is, to say the least, on a par with Picasso's.

September 6

College is nauseating. I am infinitely more motivated to learn and read when I'm *not* in school than when I am; I accomplish more when I don't have to maneuver under the burden of useless responsibilities like writing essays of which I don't believe a single word. Honoré de Balzac hit the nail squarely on the head when he opined, "School is brutalizing." It is impossible for me to read books with the object of *learning* when I don't even have time to read all of them. I'm forced to skim through potentially engrossing books on the French Revolution solely because a professor is dictating to me what I must read, when I must read, and what I must do with what I read. 'Who cares about learning? I have to write a paper!' And most of the books we're assigned are so monumentally dull that they leave me feeling bleak and dead—and, of course, I don't retain any of their fascinating statistics or economic theories. I'm skimming too quickly even to remember what I've read in the last paragraph.

Aside from the fact that college prevents me from learning, it is also nauseating inasmuch as it causes me to experience 'emptiness' approximately eight times a day. Often I'm not sure *why* it does, but it is vaguely an effect of my living in the midst of my peers. (If you're still having trouble understanding what I mean by "emptiness"—what Sartre calls "nausea"—perhaps this will clarify it a bit: if a person frequently experienced nausea who didn't fear death as much as I do or have as many ambitions as I have, he would sooner or later commit suicide. It is the state of mind most conducive to thinking about ending one's life, because it signifies a complete lack of interest in life. It is *hatred of life*.)

College certainly isn't *all* bad, but overall I believe I would (1) be more mentally healthy and (2) learn more about what interests me, if I dropped out. Because I generally have an excess of self-discipline when it comes to reading, I could teach myself economics, history, philosophy, science, and so on.

How often I have dreamed about dropping out of college (and high school)! What a pity our society attaches a stigma to the dropout.

September 9

Maybe I was a bit hasty when I said I could learn more were I not in college. It isn't true. In fact, I can 'reverse' this statement if I spend 90% of my time this year with my nose buried in the books I've been assigned. The biggest problem with this strategy is that I'll be forced to neglect my social life, but....as I do not *have* a social life, this dilemma matters little.

September 17

Not a great deal has happened. I must have the blandest life of any student at Wesleyan: generally nine hours of each day I spend reading. No matter. It's my own damn fault I don't have more friends.

Last night I went to a performance by two world-famous Indian musicians—one a violinist, one a tabla-player. It was without a doubt the most spectacular concert I've ever attended: both performers were superhumanly talented.

Lately I haven't recorded my dreams, but this doesn't reflect any lack of wealth in the material.

Three nights ago, for example, I dreamt that Adolf Hitler and I were together in a room on the second floor of my house. He was in the shape of a large tarantula which, I believe, continually attempted to bite me; I tried to kill him by stomping on him. Occasionally I succeeded (whereupon I created a sticky smudge of black tarantula-goo), but he reappeared almost instantly in another spot. All this time we were arguing with one another—about what, I know not.

September 20

Last night I read Rousseau's *Essay on the Origin of Language*, and I am somewhat ashamed to admit that I didn't get much out of it. I found a lot of it irrelevant or boring. But in class today the professor explained it in such a way that I felt *inspired*. Rousseau's opinions on music were uncannily similar to those I recorded several months ago in this journal—about music's being the only authentic human communication, the one mode of expression that partially overcomes the dichotomy between self and other. I remain skeptical that that's true, but its implications are spectacular. If I had enough time, I'd spend weeks thinking about it.

That's what I loathe most about college: it prevents me from meditating on philosophy. The reason I didn't arrive earlier at any of the theories I conjured up this summer is that there wasn't enough *time* last year to think about philosophy! College brutalizes me into being a sterile academician.

Incidentally, when I say I'm an elitist I'm referring to the sense in which Matthew Arnold, Rousseau, and maybe Nietzsche were elitists. I have nothing but contempt for any other sort of 'elitism'.

September 24

It occurs to me that, aside from my love of music, I'm not a very cultured person. Hence I've undertaken a perusal of *Faust*. This task will take quite a while, since I intend to study thoroughly the philosophical and literary themes in Goethe's great work, but...the longer it takes to read, the more opportunities I'll have for a respite from the drudgery of college.

I've read scores of novels in my life; rarely have I read poems or dramas. So I'm going to try to keep reading Classical and Romantic poetry. *Culture* is my salvation. Music may be its loftiest expression, but literature is not as formless; it provides a necessary counterbalance to the loose structure of Dionysian art.

September 25

I *guarantee* you that under communism such symptoms of decadence as rap, heavy metal, punk rock, and economics would wither away.¹

I've only read a few pages of *Faust*, but I can see that it's a great drama. I encounter at least three 'new' words on every page, and since I am recording them and their definitions in a notebook—and am jotting down relevant philosophical observations—and am reading every scene aloud, with the dramatic expression of an unexperienced wannabe actor alone in his room—and am reading commentaries on the play—you can well understand why it'll take me awhile to finish the poem.

But even more awe-inspiring than all the great cultural monuments of history is...history itself. The sheer magnitude of events like World Wars I and II—which the old world *needed* in order for the remnants of feudalism to be swept aside, to prepare mankind for the unfettered reign of capitalism and "democracy"—such monuments to the triumph of an extra-personal historical logic are as overwhelming as death.

¹ And I'm not just arbitrarily including this in my definition of communism.

October 3

Sometime this year I plan to perform Chopin's Scherzo no. 2 (in B-flat minor) in one of Wesleyan's concerts. That masterpiece will bring the house down.

(later) George Bush was resoundingly defeated in the presidential debate tonight. All in all, he made a fool of himself.

The more I read about history, the more convinced I am that 'individual' initiative is more important in determining the course of history than Marxists have traditionally assumed. For example, socialism might have triumphed on an international scale but for the decisions of four or five European leaders in 1918. Humanity might have experienced an apocalypse in the 1940s had Hitler diverted sufficient funds to his programs researching the possibilities of nuclear warfare. So much depends on the idiosyncrasies of individual wills!

October 6

Any country that could produce Jeremy Bentham is composed of arch-philistines. Any country that could produce Joe McCarthy is composed of collective mindlessness.

October 10

[...]

Life *cannot* be an "end in itself". It is a means to possible ends. It is too common, too purposeless, too unremarkable. *Animals* certainly aren't ends in themselves, since they aren't even self-conscious. Maybe *humans* are, simply because they have the potential to 'realize themselves'. (Can self-consciousness really be considered a criterion for this 'end in itself' label? If so, only because it implies that one can realize oneself.) But I'm not sure most people have much to realize.

Something is very wrong with these reflections. Maybe I'm starting from erroneous assumptions. Maybe my 'project' of 'justifying life' is too artificial to yield other than nonsensical conclusions.

October 15

I'm reading Hegel's *Philosophy of Right*. It's quite a difficult text; I've read only 80 pages in two days (partly because I'm also reading the Remarks, the Additions, and the Translator's Notes).

One reaches a point when undergraduate education becomes an embarrassment. What are we students supposed to 'get out of' Hegel if we spend only two days on him and then move on to Marx? I'll have to read numerous books on Hegelianism *outside* of my courses if I want to gain more than a passing understanding of brief segments of one text. This weekend I read *Patterns in Prehistory* to learn about the origins of society.

October 17

I seem to have matured a little since last year, for I've been careful not to include in recent entries complaints about my social life. No more griping. However, you'd probably appreciate at least a minimum of information, so: although I eat many of my meals alone, I am not completely without friends.

Unfortunately I have as yet made no progress in the romance department.¹

Am I as frustrated as I was last year? No. For one thing, I'm absorbed in my schoolwork; for another, I've learned to repress whatever frustration I do experience.

October 18

Finished the *Philosophy of Right*.

A major source of my skepticism regarding the philosophical enterprise is that philosophers are so often *wrong*. They feel *absolutely convinced* that they have hit upon the truth, but other people invariably demonstrate that they haven't. How can this eternal uncertainty be overcome?

[...]

October 19

We humans are playing into nature's hands by obsessing over sex. Sex, that supremely animal act, is nature asserting its dominance over us. I'm tempted to treat it as a purely optional, entirely unimportant part of life—something I should engage in rarely or never—if only to give nature the shaft.² (I'm even tempted to prevent myself from falling in love, in order to assert my complete autonomy.)

It's difficult for me to come to terms with the baser aspects of life, the animal functions like sex, urination and defecation. Indeed, every reminder of our materialistic origins (such as the biological sciences in general)³ I find repulsive, disillusioning, and contradictory. The dualism between the 'spiritual' and animal aspects of life is so complete that I'm convinced it's one of the major sources of unhappiness (unconscious or otherwise).

Don't you find it maddening that throughout history nature has successfully tricked us into believing that we're autonomous—even as love and sex have so obviously dominated us? Procreation, procreation, procreation, the continuation of life! That's nature's one concern! Can anything be more humbling than to know that such a mundane, pointless force unconsciously controls us through love and sex?

October 21

Listen to the middle section of Chopin's Funeral March and you'll know how I feel right now. I sincerely, fervently, intensely, ardently, passionately wish I had a girlfriend to whom I could communicate my melancholy. Love and melancholy: what an exquisite combination! The perfect recipe for an overflowing of tears. As it is, I can do nothing but stare at a cheap poster of Edvard Munch's painting *The Scream*.

October 22

Today I read four sections of the *Economic and Philosophical Manuscripts*. Certain passages, particularly in the sections 'Alienated Labor' and 'Private Property and Communism', seem to contain potential starting points for resolving the many philosophical problems that are plaguing me. Of course, they're no more than starting points, for the creation of a *Weltanschauung* is a complex task, but—anyhow,

¹ This seems to be a recurring theme.

² Pun intended.

³ Which I also, however, find fascinating.

I've come to admire Marx even more after reading these manuscripts. He was only 26 when he wrote them.

October 25

I've decided to drink more often from now on. The sensation is indescribably liberating and fun. In fact, *everything* about it is indescribable—or paradoxical: I am utterly aware of myself and my actions, yet I don't *care* about them; I can see people with perfect clarity, yet my vision (my depth-perception?) is somehow deficient; I can think clearly, yet my thoughts are somehow 'superficial', just a show.

October 28

I spent the last few hours reading a twenty-page-long section of Marx's *Economic and Philosophical Manuscripts* entitled "Critique of the Hegelian Dialectic and Philosophy as a Whole". It was difficult, but once one is acquainted with the Hegelian terminology, *nothing* is impossible. Strange as this may sound, Marx was even more brilliant than I'd thought. By the age of twenty-five he had grasped the essence of Hegel's philosophy, followed it through its tortuous intricacies, and refuted its basic premises in the space of twenty pages. Moreover, he unwittingly provided an excellent introduction to and summary of Hegelianism. *Furthermore*, I've become amenable to Marx's idea that labor is the objectification of man's essence.

Also, those twenty pages are directly related to the phenomenology of the self and the definition of man—two problems with which, as you know, I was obsessed during the summer. Marx disagrees with Hegel's identification of man with self-consciousness, and insofar as man *in toto* is certainly a great deal more complex than mere self-consciousness I agree with him; but I still think that the most *essential* part of man is self-consciousness. Man's self is self-consciousness.

Unfortunately, although I understood what I was reading as I read it, I've relapsed into my characteristic muddledness. Even so, I'm clear-headed enough to see that there remain problems with Marx's account of humanity and especially his belief that individuals can fully realize themselves only in communism.

October 29

It's gratifying to me that many intellectuals continue to write books obsessing over interpretations of specific *sentences* that Marx wrote: Marxology, though it may in some respects be a superfluous academic discipline, is a reassuring indication that not *everyone* is an ignoramus. I see it as a kind of respectful acknowledgement on the part of academicians that Marx was *profound*—profound enough to merit an entire field devoted to interpreting him.

[...]

The following piece of writing is a paper I wrote for my philosophy course, related to Marx as well as phenomenology.

In his *Economic and Philosophical Manuscripts*, Karl Marx posits a theory of alienation that is to be one of the guiding threads in his later studies. Contrary to Hegel, who conceives of alienation as a kind of abstract estrangement from self-consciousness, Marx insists on the objective character of man and his 'essential powers'—his senses, his labor, etc. Once the latter have ceased to be alienated from their social essence, man himself will no longer be alienated: he will be perfectly happy. Marx's insistence on man's objectivity is valuable, for Hegel excessively stresses man's subjectivity—but Marx advances too far in this direction by denying the critical importance of self-consciousness as man's essence. This essay will (1) examine the principal aspects of Marx's theory,

(2) oppose a different theory of alienation to his severely ‘objective’ one, and (3) analyze the consequences of this new hypothesis on Marx’s theory of history.

The profundity of Karl Marx’s conception of communism has not often been appreciated. Philistines often ridicule his prediction of a world full of entirely developed human beings—without understanding what it is they are ridiculing. They ignore the historical context, in this case by forgetting that Marx developed his theories in the wake of Hegelianism. Hegel conceived of man as self-consciousness, as an abstract awareness which undergoes various objectifications—‘alienations’ in Hegel’s terminology—in the process of achieving unity with itself. Thus, man first looks upon nature as external from him and a threat; eventually he recognizes that his own consciousness produces this nature, that nature is self-consciousness objectified, that ‘he’ (self-consciousness) is ‘his’ own object; he comes to be at home in his “other-being as such”. Marx criticizes this primacy of abstraction, of the Idea: self-consciousness does not posit the world, and it cannot be one with the world. Hegel’s project of unifying the subject and object is unrealizable, for (1) it is his own premise that self-consciousness is alienated when there is objectivity, and thus (2) self-consciousness can never be at home in its “other-being as such”. For example, Marx argues that because Hegel recognizes that religion is alienated self-consciousness, it is necessarily only when religion is “annihilated and superseded” that true self-consciousness can be achieved. Yet Hegel insists on retaining religion as a kind of ‘symbol’ or representation of self-consciousness. In actuality, he is forced to do this—to dishonestly acknowledge the objectivity of religion—just as he forced to dishonestly acknowledge the objectivity of everything in nature (i.e., its independence from self-consciousness). Marx sums this up in the following paragraph from “Critique of the Hegelian Dialectic and Philosophy as a Whole” (1844):

In Hegel, therefore, the negation of the negation [e.g., the retaining of religion solely because of the ‘rational kernel’ inherent in it] is not the confirmation of the true essence [of man], effected precisely through negation of the pseudo-essence. With him the negation of the negation is the confirmation of the pseudo-essence, or of the self-estranged essence in its denial; or it is the denial of this pseudo-essence as an objective being dwelling outside man and independent of him, and its transformation into the subject.¹

Hence Marx recognized the necessity, if we are to ‘realize’ ourselves, of insisting that man’s essence is not simply self-consciousness; man is an objective being who does not alienate himself merely by objectifying himself or his self-consciousness. Only when man’s ‘essential powers’ are hindered or stunted—and thus come to dominate him in their effects, as does labor under capitalism—is he estranged from his essence as a species-being. Now it is apparent why Marx demanded the complete development of all our essential powers under communism: people are objective beings, so to fulfill themselves they must realize their objective essential powers (the senses, emotions, etc.). Hegel strove for a similar goal, but because he conceived of people as self-consciousness he remained in the realm of the abstract.

It is at this point that Marx begins to sound rather utopian. It may be true that humans need the ‘other’ in order to attain self-consciousness (which is what distinguishes them from animals), and hence that they are in one sense “species-beings”. Indeed, it may be true that people must live in a community to develop their objective essential powers. However, there is no escaping the fact that, despite the great importance of “objective powers” and our species-being, humans are fundamentally self-consciousness. Even if there existed a man who had ‘perfected’ his senses, his passions, his intellect, he might very well remain unhappy and feel alienated from himself. Admittedly, alienation is for Marx an objective condition that we might not even be aware of, but awareness of it—i.e., its transformation into a subjective state of mind, a ‘feeling’—surely intensifies the alienation, makes it personal. Hence, unless one’s consciousness is affected, all

¹ Robert C. Tucker ed., *The Marx-Engels Reader* (New York: W.W. Norton & Company, 1978), p. 119.

personal development is, in a sense, for naught (in eliminating alienation).

The complete absence of any kind of alienation is synonymous with perfect happiness. However, such a state of mind—although not impossible (see below)—is extraordinarily difficult to attain, for self-consciousness entails what existentialists might call ‘ontological lack’. As long as we are self-conscious, we are Faustian creatures who are ‘aware’ (although sometimes not explicitly) of a hole in the core of our being, an ineffable nothingness at the center of the self. This is an ‘objective’ condition that is coextensive with self-consciousness; it is a more meaningful alienation from oneself than anything Marx had in mind, precisely because it implies that there is no such thing as ‘oneself’—as a kind of substance that has the potential to be realized. ‘I’ do not exist, for I am self-consciousness (my objective qualities such as the senses are not logically essential to my being, although they empirically are insofar as they cause me to come into existence) and self-consciousness is a hole. In short, Hegel recognized that we are essentially self-consciousness, but he failed to recognize what this implies; Marx recognized that we have objective qualities that can be realized independently of self-consciousness, but he failed to recognize that self-consciousness is, so to speak, our essence.

However, it is possible to overcome self-consciousness, to ‘effectively’ become one with the world. Indeed, this is our state of being as infants. For the majority of people, once they have ‘fallen’ from this ‘paradise’ of infancy they remain fallen; but the truly exceptional humans have learned to be ‘redeemed’. The moment of enlightenment which Buddhists experience is actually this overcoming of self-consciousness; this is precisely why it is impossible for them to communicate it to the rest of us. They achieve perfect happiness in that one moment, whether it lasts for five minutes or an hour.

But what does “enlightenment” really consist of? How is it possible to conquer self-consciousness? The answer to this question is apparent after reading Nietzsche’s lengthy analysis in *Ecce Homo* of what he experienced while writing *Thus Spoke Zarathustra*:

If one had the slightest residue of superstition left in one’s system, one could hardly reject altogether the idea that one is merely incarnation, merely mouthpiece, merely a medium of overpowering forces....A rapture whose tremendous tension occasionally discharges itself in a flood of tears....a depth of happiness in which even what is most painful and gloomy does not seem something opposite but rather conditioned, provoked, a necessary color in such a superabundance of light... Everything happens involuntarily in the highest degree but as in a gale of a feeling of freedom, of absoluteness, of power, of divinity...¹

Nietzsche had no control over his thoughts during this experience; he had lost self-consciousness. [Um, okay... That’s stupid.] Hence his thoughts could only have come from his unconscious—from that which we have no control over. The thoughts and passions he experienced in those moments of divinity were simply a deluge from his unconscious, a flood so powerful that it drowned self-consciousness. Buddhist enlightenment is, similarly, a liberation of the ‘repressed’ contents of the unconscious: the psyche *in toto* is unified, alienation is overcome. If this is how we are to define the only true surmounting of alienation, the great classical composers (particularly Beethoven and Mozart) experienced it as well: their music was a ‘flood’ from their unconscious.

The foregoing ‘theory’ of alienation is very different from Marx’s, but it is more consistent with the psychological and empirical facts. Capitalism alienates us from our objective powers, our abilities, our labor, etc., but there is a still deeper undercurrent of alienation that cannot be overcome even in communism: the psychological alienation from the unconscious and the psyche as a whole implied in self-consciousness. Likewise, exceptional people can overcome this deeper alienation regardless of the society they live in, but they cannot overcome Marx’s form of alienation except in communism.

¹ Walter Kaufmann ed., *Friedrich Nietzsche* (New York: Random House, 1969), p. 300.

This revision of Marx is unrelated to his theory of history, which is concerned primarily with production and its effects on society. Humans must eat before they do anything else; originally it is when they engage in the act of production that they become aware of the other, and hence become social; this leads to the formation of consciousness and ideology. Once the society has become productive enough to create a surplus (through agriculture), classes come into being, and this starts the historical process. Because the satisfaction of needs begets new needs, the forces of production always remain the prime mover of history, the factor which ensures that mankind will progress and which indeed “overdetermines” the general course of mankind’s progression. This is all relatively self-evident, and it testifies to the prejudice and stupidity of the bourgeoisie that they continue to ignore it or criticize it so as to continue their unrelenting charade of chasing profit. What is not so self-evident is that it is only when the productive forces are fettered by the production relations that revolutions break out, or that the dictatorship of the proletariat will be the inevitable form of the next revolution. These two theories of Marxism—both of which can be phrased using the dangerous word inevitable—are symptomatic of a general trend in the later Marx to deny the importance of individuals, to reduce everything to historical laws. Individuals are a combination of objectivity and subjectivity (which is an implied conclusion of the previous discussion on alienation), and it is the latter which ensures that they can influence the outcome of history and its “laws”.

To conclude, the early Marx recognizes, contrary to Hegel, that man is not mere self-consciousness; he has essential, objective powers which can be realized independently of self-consciousness. Marx does not, however, assign enough significance to the role of self-consciousness in man, and consequently his theory of alienation is superficial. Self-consciousness itself must be conquered in order to eliminate the most fundamental alienation—alienation from self—and communism as a form of society is too objective and impersonal to facilitate this triumph over self-consciousness. These criticisms only indirectly affect Marx’s theory of history, and only inasmuch as they emphasize the importance of subjectivity and individual initiative in determining the specific directions that history takes. Moreover, they do not lessen the desirability of communism as the culmination of history, for the vanquishing of objective alienation is far better than the vanquishing of no alienation.

October 31

Most intelligent people are currently asking, “Why do so many Americans support George Bush?” The answer is simple. Americans see themselves reflected in Georgie; they can relate to him. They see Gore as arrogant, and arrogance is politically incorrect because it is incompatible with a belief in equality—and so Americans interpret Gore’s condescension as a personal affront. They feel sympathy for Bush, so they’re going to elect him president.

It’s a bad sign when the herd identifies with its leaders. [Ugh, stop with the Nietzscheanism.]

(later) I’ve read only a third of Torrance’s book, but I’m taking a break from it. I’ve been focusing too much on Marxism lately; I should read about other philosophies. Like postmodernism.

I’ve decided that the focus of my senior thesis isn’t going to be my theory of history; it’s going to be the philosophical and psychological framework for my later studies. Specifically, I want to develop a theory of truth (or adapt one from already existing theories), epistemology, psychology in general (although primarily psychoanalysis, and its relation to biology etc.), metaphysics (if possible), language, and other secondary issues.

(later) I’m reading about Wittgenstein’s philosophy. What a pity I didn’t read more philosophy when I was in high school, instead of wasting my time trying to “change” myself! Four years down the drain! Gone forever. And my childhood—what happened to that idyllic phase of life? 25% of my life is already over. *Never again* will I be the exuberant, innocent boy who overflowed with personality and joy. [...]

Time is depressing.

November 1

The book on Wittgenstein is boring, so I'm reading *The Philosophy of Schopenhauer*. I should skip this introduction to his philosophy and instead plunge right into *The World as Will and Representation*, but Wesleyan doesn't seem to have any decent copies of the latter.

November 3

I'm twenty years old. Whoop-dee-doo.

November 5

On Friday night (November 3rd) I went to a CSS party. Had eight or nine shots of rum in less than an hour; then I walked to another party. I talked to as many people as I could during the hour or two in which I could still stand up, and at 3:00 I vomited into the bushes several times. I then proceeded to sit on some steps away from everyone and bawl for perhaps an hour—but not out of self-pity. Out of self-hatred. [...] Somehow I managed to return to the dorm, undress, throw up in the bathroom, and fall asleep instantaneously (at 5:00). I woke up later in the morning, noticed there was a bit of vomit on the floor next to my bed, inferred that I had thrown up in my sleep, and proceeded to throw up violently into a toilet. For the entire day I alternated between light sleep and the most overwhelming bouts of vomiting I have ever experienced. Whenever I drank a cup of water I vomited it out ten minutes later. [...] I even apologized profusely to my body!—for causing it to undergo so much pain and at the same time to 'correct' my unbelievable stupidity. I didn't sleep much during the night, but at 10:00 a.m. I could finally eat without getting sick.

Never have I been as violently sick as I was this weekend. I was literally shaking *almost uncontrollably* at times. I was transported to a realm in which nausea is the only law of existence, in which there is no time, no space, and one's thoughts are only thoughts of nausea. It didn't help that I was unable to vomit 'naturally', so I had to stick my finger into the back of my throat—not a pleasant feeling—to provoke the convulsions that generally resulted in mere dry heaves. On the whole I think I vomited (fruitfully) at least thirty or forty times. The scary thing is that apparently I threw up *while partly unconscious*: I must have leaned over, ejected a few bits of food, and fallen asleep again. I could have choked!

How could I have been stupid enough to drink so much in such a short period of time? Nobody else was doing this binge drinking. Did I think the shots were too small to have much of an effect? Was I thinking *at all*?

Still, I'm glad it happened (and not only because of the lesson it taught me). I was so sick I couldn't distinguish between my nausea and a perverse form of mysticism. At times I felt as if I'd penetrated to the deepest truths of life. I recognized that humans are fundamentally *animals*, and that self-consciousness—the distinguishing mark of humanity—is just superimposed onto an animal existence. Self-consciousness and even *life* are so delicate that they're *inessential*. This realization (together with my nausea) was so depressing that I was thankful there were no lethal weapons in my room to tempt me. I wouldn't have used them, but the thought occurred to me quite a few times.

I think I've gained a certain humility from the experience. As I wallowed in self-hatred/self-pity I felt sure that I had been repressing this mild self-contempt my entire life, and that I had needed this sublime bout of drunkenness to release my unconscious from its repression and thereby make me a more mentally healthy person. For at this moment I do feel more mentally balanced—more at peace with myself—than I have in a long time.

But self-hatred is far too strong a term. More accurately, I think I recognize that I am and will remain unable to cope with certain aspects of modern life, with many of its responsibilities and mechanical necessities. I definitely can't cope with them alone, without a wife or a close friend or my parents. I'm too irresponsible, absentminded and dreamy not to go insane from battling mundane reality alone. I'm too childlike. [...]

Ahh, but I am *indescribably* glad to be alive and healthy! This will wear off soon, but the legacy of Friday night will remain: I have been brought a little closer to myself through the greatest physical hardship of my life.

(later) I'd like never to get drunk again. I hate the animal aspects of existence. Yesterday this hatred, which had previously been unsure of itself, was shocked into a prolonged existence precisely because I reverted to a nearly animal state of being. Drugs and alcohol, which appeal to our subhuman qualities, always provoke the temporary death of who I am ideally, so I intend to shun them for the rest of my life. And if I could I would repress my knowledge of the excremental function and the material basis of life¹—just as Jonathan Swift wanted to do. (“Oh, Caelia, Caelia, Caelia *shits!*”) How can I fall in love with someone who shits?

November 8

I just found out that Bush is going to be the next president. I'm mystified that half of the country was dumb enough to vote for him, but when all is said and done, these little shifts of power from one party to another will hardly affect the future revolutionary movement at all. Capitalism is irrevocably heading toward its own destruction. What matters a decade here or a decade there?

(later) Praise the Lawd! I bought a screenwriting program, edited my screenplay, and now I've printed it! I cut it down from 169 pages to 121. Tomorrow I'll mail it to the only agent who's interested. And tonight I'll scour the internet for agents I haven't contacted.

I feel so free right now! I feel divine! My life is ideal! Just think: *for the rest of the night* I can do whatever I want! *For the rest of my life* I can do whatever I want! What has caused this surge of adrenaline? The knowledge that...*I am alive*. My life is under my own control. I am one of the most privileged people on Earth, certainly one of the most fortunate. I am ambitious in the best sense of the word: my goal is nothing less than perfection. I am living in the most exciting era of human history. I recognize to a wonderful extent that I am *a part of history*, that history is one long continuous process, that by my mere existence I am directly related to Aristotle. Philosophy and music are my passions: I am a disciple of the mind. Every day I experience more of life, and my fascination increases.

(later) One of the main reasons for my envy of boys who've had sex with girls is that the latter have blatantly exposed their animal aspects to the former. Nothing can be more intimate than allowing another to experience one's animal nature, for in a perverse way it is the *soul*. Nothing is more truly human—and hence *separate* from everyone else, *private*—than the animal aspects of being. Eventually I'll have to conquer my distaste for them; the only way this can happen is by working them into an all-encompassing philosophy.

November 9

Here's a conundrum: why is it I who exist rather than someone else? What connection is there between *this self-consciousness*² and the neurons that are related to it? Why do they produce this self-consciousness and not another? And how can there be different self-consciousnesses? My question isn't concerned with the relationship between cells and self-consciousness in general; only with this particular

¹ No, that would be cowardly.

² Or perhaps I should say existence, for in a way there would be no existence at all if I didn't exist. But this is a truism.

combination of cells and *me*. The question is unresolvable, I suspect, for in order to answer it we must first understand the connection between neurons and self-consciousness *in general*.

The book on Schopenhauer is excellent.

Isn't it strange that at my age I'm more of a genuine philosopher than most professional ones? "What is a genuine philosopher?" you ask. Here's what Schopenhauer thought:

[Schopenhauer] came to feel that the most important difference between academic philosophers and real ones was that the former encountered and acquired their philosophical problems conceptually, by study, and the latter existentially, by involuntary reflection on their existence and experience. For the former, philosophy is entirely a verbal activity, a matter of reading and writing, of talking and listening: for the latter, the most important parts of it are rooted in non-verbal being and living, and have something profoundly in common with creative art. For the former, philosophy is an illuminating interest and an enjoyable, serious pursuit: for the latter, it is inseparable from life itself, and may be a matter of life and death. The former might make good teachers, but only the latter are likely to make original contributions to the subject.... Philosophy as an academic subject comes to be the means whereby [professors] are provided with a living for themselves and their families, a post in a respected social institution, a professional reputation, prestige, a pension, even administrative authority and power over subordinates.... 'For a being who thinks, it is a precarious position to stand on one those numberless spheres freely floating in boundless space, without knowing whence or whither, and to be only one of innumerable similar beings that throng, press, and toil, restlessly and rapidly arising and passing away in beginningless and endless time.' To see this as a vast riddle pressing on the human mind for solution is something that happens occasionally, in glimpses, to most people. But a few are bewitched and engrossed by it. Among these are some of the great artists, great philosophers, great religious thinkers—and these comprise, in Schopenhauer's assessment, 'the noblest portion of mankind in every age and in every country.'

Without hesitation I can say that I'll always be bewitched by the great questions. I would sacrifice 'happiness', wealth, love, honors, health, family, a home, only to pursue and gain insights into the fundamental problems of existence. Life never ceases to amaze me, particularly as I grow older.

It's because of this unquenchable thirst for "wisdom" that I have grave doubts about whether I'll attend graduate school. College is bad enough, but graduate school...?

God damn college! It's nothing but busywork!

November 11

I finished that book. Schopenhauer's philosophy sounds monumental, brilliant, as well as astonishingly similar to Buddhist thought—and to certain of the thoughts I reached this summer, particularly with regard to music and the like. I'm nearly convinced that Schopenhauer, in many respects, reached the truths of existence. [Ugh. Luckily, like Nietzsche, I eventually saw the truth about Schopenhauer.]

My next task is to read Wittgenstein's *Tractatus Logico-Philosophicus* and Max Black's 400-page commentary on it. Then I'll read a book by some guy named Kwant on Merleau-Ponty's philosophy. After that I'll familiarize myself with the overarching themes of postmodernism, and then I'll probably read a book on Nietzsche's philosophy of nature. I imagine that from there I'll return to Schopenhauer, but this time to the man himself: his masterpiece *The World as Will and Representation*. After reading this I'll inquire more seriously into transcendental idealism, which at the moment seems to me an eminently sensible philosophy, but which I want to be *sure* is true before engaging in other philosophical undertakings.

The more I acquaint myself with philosophy, the more muddled yet exhilarated I become. Sometimes it's an intolerable feeling: for brief moments I perceive what must be the true nature of reality

according to transcendental idealism, and before the insight vanishes it nearly crushes me.

November 13

I've read forty pages of Black's commentary, but most of what he talks about I'm not sufficiently acquainted with to....understand. So I'm not going to read the *Tractatus* yet; instead, I'm skimming through a book called *Wittgenstein: An Introduction*, and then I'm going to read one called *The Metaphysics of the Tractatus*.

November 15

The opening of Tchaikovsky's First Piano Concerto is more overwhelming than anything I have ever heard. Life would be pointless without it.

Sometimes I wonder if the desire to live in the moment is based on a confusion, viz. that we can't *not* live in the moment. It sounds trivial and stupid, but it has paradoxical implications. For when we're eighty years old we'll be living in the moment in the same way we are at the age of twenty—when it seems to us that our life hasn't really *happened*. If it weren't for my memory, high school wouldn't have happened. I might as well have just been born and then transported to this moment, for this moment is all that has ever really existed. We might as well just skip over all of life and arrive at the moment before our death, for this is essentially what happens anyway. Past and future, somehow, don't exist—never have and never will. We travel through life and arrive at the moment before our death, but in a weird way it is all a dream, for the instant after anything has occurred....it hasn't occurred. It has become a dream, a figment of our imagination recorded in something called "memory". For time, insofar as it exists at all, is not 'linear'; it does not 'travel'; all that exists or has existed is the present.

If you understand what I'm trying to say you'll realize, with Wittgenstein, that mysticism is the only solution to philosophical dilemmas. But not even mysticism is a *true* solution. Consequently, we philosophers are cursed; we are a painful reminder of the tragedy of the human condition.

Nothing is more humbling than the following two truths: Mankind is *irrelevant*, and *consequently*, the universe is irrelevant.

(later) There is something inherently sad and poignant about masturbation.

November 17

This journal is a one-dimensional portrait of me. I am not *alive* in it; it's only my thoughts that are recorded, and generally these come across as far gloomier than I actually feel. Indeed, I often wonder if my 'truer' self is the good-natured one present in nearly everything I do outside my journal or the disagreeable one portrayed in the latter. There seems to be a vast difference between the two. I suppose it's in the nature of writing to crystallize one's states of being, make them seem hard and permanent, even if they're purely momentary phenomena that are transcended as soon as they've been recorded. For such is invariably what happens right after I've written 'unpleasant' thoughts (such as advocating the demise of the masses): I cease to take them seriously and instead treat them only as intriguing relics of a foreign state of mind. Actually, I rarely take them seriously even as I write them; they just sound so depressing (and, occasionally, evil) that I laugh at them.

Nonetheless, I never intentionally mislead you; I just exaggerate. It's foolish and reflects poorly on me, but it's fun!

So I suppose that my good-natured self is the truer me. But this doesn't mean I don't experience occasional episodes of depression, or that I don't often feel some manifestation of disgust for people. Similarly, a major reason for my love of certain music is that it encourages my excessive good nature to

forsake me for a while, to leave me in peace with my “inner being”.

(later) To clarify why my sentiments in this journal appear harsh even though they generally feel light-hearted: it is because *language is crude*. Language lies. It can *never* convey the subtlety of inner states of mind, as I’ve often reiterated. Thus, merely that my thoughts sometimes *read* as if they were written by a serial killer doesn’t mean I have much in common with people of that caliber.

November 18

Today I’m going home for Thanksgiving break.

November 26

I’m back. While I was at home I (1) began studying German; (2) started reading two books about Indian philosophy (see above book list); (3) read Kwant’s book on Merleau-Ponty for fifteen minutes and then stopped permanently, due to Kwant’s childish writing; and (4) interested myself in physics—specifically, quantum mechanics and general relativity, which have profound philosophical implications.

On that note, I’ve realized that two-and-a-half years is not nearly enough time for me to work out the foundations of my future philosophy. Hence, once again, I have no idea what to write my thesis on.

I’m starting to notice more often that *every day* life essentially reintroduces itself to me. It’s not as though I’ve returned to a state of childlike bliss, but I’m eternally fascinated with reality and the “truths” behind it all. This is a main reason that I still have a healthy outlook on life despite my inability to find a girlfriend (and friends in general).

German, by the way, is a fun language. And very expressive.

November 27

I’d intended to read an anthology of Kierkegaard’s works, but since my interest in cosmological and metaphysical themes has been reawakened I’m going to keep reading Indian philosophy and *The World as Will and Representation*.

November 28

The strategy I’m following with regard to my academic work is to spend a day or two each week writing and reading for my classes;¹ the rest of the time I read philosophy.

(later) I’ve decided to read Schopenhauer’s *On the Fourfold Root of the Principle of Sufficient Reason* before I tackle *Die Welt als Wille und Vorstellung*.

November 30

America’s economic sanctions on Iraq and Cuba are, to put it mildly, evil. How can Clinton and Albright endure the knowledge that because of them, millions of people are suffering? They have the power to end the sanctions, so their inaction is actually the worst form of action. [Um, it wasn’t “inaction.”] They’re wretched hypocrites (as are most Democrats).

As I listen to Franz Schubert’s impromptu, it occurs to me that one of the greatest tragedies in the

¹ Of course, I’m reading fewer than half the books I’m supposed to.

history of music was the ludicrously early death of that man (at 31).

December 3

Those philosophers, among them Nietzsche and Wittgenstein (?), who proclaimed the end of metaphysics were I think unjustified in doing so. It seems impossible to end speculation about the nature of the world, just as it seems impossible for there *not to be* a ‘true’ nature of the world.

December 6

When I read *Faust* I feel *clean*. I feel elevated far above myself, cleansed of everything ordinary. This state of mind is similar to that when I listen to some of Mozart’s pieces¹—but not to many of Beethoven’s more famous ones. That may sound odd, but Beethoven (and much other Romantic music, excepting some of Chopin’s) affects me in a ‘deeper’, less light-hearted, less ‘pristine’, less *classical*, more emotional and/or introspective way. Maybe the distinction I’m making between composers is unfounded, but the distinction between the two states of mind certainly isn’t.

Anyway, my point is that *Faust* is magnificent. Nevertheless, I’ve always hated analyzing every sentence of a poem for its possible symbolism. And I often get the feeling that trying to enjoy “the moment” by reading poetry is futile, for the moment never lasts. Moreover, when this misgiving gets in the way of whatever enjoyment I might nevertheless be experiencing, it causes me to enjoy the activity even *less*. I’m too damned obsessed with accomplishing things. (Indeed, am I reading Goethe’s drama only because I want to be cultured? Is it only to increase my self-esteem?)

December 10

The “Classical Walpurgis Night” in *Faust* is rather difficult to understand. If it weren’t for the commentaries I’ve read I’d have no idea what any of it means. One day, after I’ve acquainted myself with the majority of world literature, I’ll reread the play.

December 15

Fascists were brain-dead. Read the following quotations:

There do not exist things important and things unimportant. There is only duty.

Mussolini is always right.

The supreme gifts of synthesis, intuition, revelation, are denied to us; they belong rightly to the hero and to none other. And if there is no hero in a country, darkness is upon the land.

To be a Fascist is, of all things, the most difficult in the world.

Fascism may finally furnish man with the long-sought solution of the riddle of life.

Discipline is the sunshine of armies. It prepares and illuminates the victories.

¹ Parts of *The Magic Flute*, for example.

One thing must be dear to you above all: the life of the Duce.

The Fascist State is a will to power and to government—

—and Fascism is a will to stupidity.¹

December 19

Today I bought a CD called “The Best of Boccherini”. I’ve never heard of the man, but he’s a genius! [Um, no.] He composed during the Rococo period; hence his music is even more lighthearted than Mozart’s. It’s splendid.

In an hour I’m going home for a month. Kaitlyn is leaving Wesleyan today forever; she’s spending the rest of her college years at Barnard. She doesn’t like the social situation here.

January 22

I’m back. Christmas vacation was, on the whole, more enjoyable this year than last. [...]

During the vacation I read some philosophy. I would have read more had I not burned myself out by the last week. The following are some notes I took.

The truly great don’t need to rely on ‘objective’, material suffering to realize themselves; they have their subjective suffering. Hence communism, the abolition of material suffering, facilitates the emergence of greatness by getting rid of useless distractions. (I.e., Nietzsche was wrong.)

Basis of the dialectic?!? Fundamental law of the psyche? of nature?

Is there a specific reason, rooted in the nature of humanity, for the overwhelming presence of *dualities* rather than ‘trialities’ (etc.) in philosophy? Original division in our nature?

Constant reading: incredibly *easy*. An escape from the pain of thinking.

To gaze upon mankind as a whole, in its relation to the universe—to see it through the cold, time-conquering light of reason—is to understand the folly of mankind most profoundly.

If we ‘create’ the world [as according to philosophical idealism], how can there be parts of phenomena we’re not aware of? For example, in Schopenhauer’s philosophy how can internal organs exist if we’re not directly aware of them? His answer: they don’t. (?)

Sartre’s “bad faith” derivative of Kierkegaard (*Either/Or*).

Why are depressed intellectuals sometimes the most good-natured people? Goethe, Nietzsche, Mozart, Berlioz, Kierkegaard, me.... Because these people are always childlike, and fickleness characterizes children?

“Too good to be true”: a depressing saying because it’s so matter-of-fact.

Berkeley p. 71: precursor of Schopenhauer.

My destiny is to pull together the threads of all previous thinkers....

Santa = miniature God. Exact parallel.

Music is not an emotion. It is not the content of emotions. It merely has a more direct relation to emotions than words do.

Music is the only art that’s *alive*. This is why it has such emotional power. It isn’t the “content” of our states of mind (as S. thinks). Drama is alive and it, too, affects us emotionally.

Why would the will-in-itself strive for higher objectifications?

Imagine the poets (et al) writing their poems: you realize their meaning better.

¹ Nazism and Fascism are, strictly speaking, not the same.

I've finally 'discovered' poetry! This art form induces a very *subtle* state of mind, which is why I haven't found it particularly edifying until now.

Mankind has reached maturity—and *therefore* it has now regressed, dishonestly, to immaturity. A fake immaturity.

Entropy vs. dialectic (viz., striving to become something higher). They seem incompatible. Maybe they can be reconciled by applying entropy solely to individual beings, and the dialectic (in biology) to general categories.

Schopenhauer thinks that people can *permanently* remain in a state of non-individuality—complete “freedom of the will” (which he defines differently than I do). See his ethics and his postulated abolition of the will-to-live. Absurd.

Contradiction: I want to understand as much as I possibly can, yet I want a great deal to remain an eternal mystery to me.

Writing for a potential public is always unhealthy. It breeds dishonesty and pathetic ‘self-consciousness’. But in my self-deprecation I am never just putting on a show for the reader.

I also read some of Goethe's *Theory of Color* this past month, but I lost interest. And I read part of Aristotle's *Metaphysics* and Fichte's *Science of Knowledge*, but since the first is very dry and the second is obscure, I gave up. For now. One day I'll read them.

Now I'm reading Kant's *Prolegomena to Any Future Metaphysics*, which a philosophy professor is going to discuss with me (as part of my work-study job!).

I've come to the conclusion that Mozart was the greatest, most natural composer in history. Had he lived longer I'm sure he would have outshone Beethoven. He died at thirty-six, Beethoven at fifty-seven, and yet the two are essentially on a par in many people's minds. Imagine what Mozart would have given us in twenty more years! Furthermore, I'm convinced that he was the only person who could have composed music in *any style* after studying it: impressionism, romanticism, ragtime, expressionism, atonality. Some of his pieces are astonishingly modern. The Fugue in C minor for Two Pianos, KV 426, is more dissonant than most *contemporary* listeners could tolerate! Some of the passages in the Larghetto and Allegro in E flat for Two Pianos, KV deest, are very Chopinesque.

January 25

[...] On the other hand, lately I've been reading passages in philosophical works that would suggest I'm not just a sham. Referring to Schopenhauer and Wagner, Brian Magee says the following:

Both of these supreme liberators were also dominators, men of ferocious and tireless will; both were polymaths, with a need to know everything and be right about everything; both were erotic to an uncommon degree, and yet each was his own man who, with respect to his creative work, never made a significant compromise once he had found his feet; each was the centre of his world, yet had a deep-rooted feeling of isolation; and although each had that engulfing zest which others found so exciting, each was deeply pessimistic in his view of ultimate reality; and in spite of that, each was unshakeably convinced of his own unique greatness in his chosen field.

Except for perhaps the last statement (and the first eight words), this is virtually a description of me. In another passage Magee praises Wagner for writing the following when he was “only” twenty-one: “The essence of dramatic art does not consist in the specific subject or point of view, but in this: that the inner kernel of all human life and action, the Idea, be brought to show.” What's so great about that? It's vague and derivative. I wrote many more profound psychological and philosophical observations when I was 19.

I don't want to seem self-congratulatory. My main point is that there may be a unique side to my nature, but if so, there is also a profoundly ordinary side to every great man. Wagner tried to cultivate, on the whole, his peculiar greatness—and at the same time dishonestly drew attention to it whenever he could.

I'll do the former but not the latter, for I'm honest with myself.

January 27

God bless Paxil. Already I'm noticing a change in my attitude toward social interaction. I feel buoyant and natural.

Today I read *On the Advantage and Disadvantage of History for Life*, which is quite an inspiring little pamphlet. It raises a question I'd begun to neglect, namely, what is the value of truth? Must it be pursued at all costs, even when harmful to life? Grasping truth is a realization of the will to power, and because Nietzsche interprets the will to power as life itself, is the duality between being and knowing too artificial to be of importance? Is knowing just as adequate an expression of life as is being (or willing)? I certainly don't think so. Passionate intellectual/artistic creation, however, reconciles the two. Indeed, isn't this the reason that Nietzsche chose the *Übermensch* as his ideal?—that it reconciles truth and life, knowledge and being? Nevertheless, it would seem that there's a bit more *life* in it than *truth*, *willing* than *knowledge*. Maybe Nietzsche finds it beneficial solely because it is an expression of *one* truth—but the *highest* truth, viz. that the will to power is life and the *Übermensch* is the highest manifestation of the will to power. [...] [*This Nietzschean stuff just devolves into meaninglessness, as you can see.*]

January 28

The *Proslogion* is a joke. It's funny to read St. Anselm's desperate attempts to reconcile the contradictions of reality with his belief in God. It's also rather pitiful. He expends an incredible amount of energy contorting words in every possible way simply to rationalize God's actions and His contradictory manifestations. This book is a compelling example of Nietzschean psychology.

The ontological proof, incidentally, if it "proves" anything at all, doesn't prove the existence of a *personal God*—only of an absolute reality (a "One"). I think Anselm confuses the two. He addresses this absolute reality as if it has a personality. Why call it God if it is actually the One that is everything and in everything? The name only propagates misunderstanding.

Mom called me a minute ago. She's excited about my probable study-abroad in Salzburg this fall—in addition to my two-month stay (June-July) in Freiburg—and I must admit that her exuberance is infectious. I'm thrilled. From the beginning of August to the middle of September I'm going to roam Europe, soak myself in its effulgence, live off the land and spend my nights in youth hostels—and visit Greece, Italy, France, Austria, Sweden, Switzerland, Spain, Norway....

January 29

Notes on *Prolegomena to Any Future Metaphysics*:

Metaphysical cognition necessarily consists of synthetic a priori judgments, according to its own definition. Schopenhauer completely contradicts this; I'm inclined to think he's right. Analytic judgments essentially make explicit what is in the definition of a concept; synthetic judgments add something to a concept ("All bodies are extended" versus "Some bodies are heavy"). All analytic judgments are a priori, even if their material is empirical. Their common principle is the principle of contradiction, for this is implicit in all definitions. Mathematical propositions are synthetic a priori, for they are *necessary* and they proceed not from concepts but through the *construction* of concepts. They "go beyond the concept to that which is contained in the intuition corresponding to it." I'm not sure I agree with this, but it's important in Kant's system: it enables him to ask, instead of *Is synthetic a priori cognition possible?*, the question *How is it possible?* The answer to this question will illuminate how metaphysical cognition is possible.

January 30

Kant. “How is it possible that when I am given one concept I can go beyond it and connect another one to it that is not contained in it, and can indeed do so as though the latter *necessarily* belonged to the former?” In other words, how are synthetic a priori cognitions possible? In the sphere of pure mathematics, cognitions are based on intuition. But how can there be an intuition of an object before the object is present to the understanding (i.e., a priori)? The only way is if the intuition “contains nothing else except the form of sensibility, which in me as subject precedes the actual impressions through which I am affected by objects.” Mathematics is based on the intuition of space and time. All of what Kant says here is said and proven more comprehensibly by Schopenhauer. Kant himself proves it by appealing to the apodictic certainty of mathematical propositions, which implies that they cannot be based on empirical intuitions, and by arguing that if space and time inhered in objects themselves rather than in us, we would not be able to intuit them (space and time) a priori.

Okay! Let us proceed to the second part of the main transcendental question! How is pure natural science possible? By “pure natural science” Kant means the a priori certainty of the necessity of causation, the permanence of substance, etc. Judgments of experience are “empirical judgments insofar as they have objective validity”; judgments of perception are “empirical judgments that are only subjectively valid.” An example of the latter: “If the sun shines on the stone, it becomes warm.” An example of the former: “The sun warms the stone.” Every judgment starts out as a judgment of perception. Objective validity is a consequence of the operation of the concepts of the understanding: when judgments are subsumed under one or more of these a priori concepts they become objectively valid.

Section 22 is a useful summary of these (and more) ideas.

A pure natural science is possible because when all of the aforementioned concepts and judgments and principles (cause, substance, existence, necessity, axioms of intuition, anticipations of perception, etc.) are arranged logically they form exactly the kind of system that is necessary for science.

February 1

Last night I slipped violently on a patch of ice. My feet gave way, my hands shot out in front of me, and I almost fell flat on my face. As it was, I suffered some painful scrapes. But the first thought that entered my head, even as I was still falling, was, “I hope nobody sees me.” I would have felt embarrassed and ashamed. Is that not remarkable? What does it say about me?

[...]

I’ve grown weary of philosophy. I’ve grown weary of reading. I’ve grown weary of being weary. I want to experience *life*. I need to escape from my wretched intellect. And I need sex more than anyone has needed sex in history.

I’m sure I’ve mentioned this in the past, but I am the most absentminded person one could ever aspire not to be. I’m the kind of person who accidentally almost brushes his teeth with a pen, who nearly tries to drink a yogurt. Sometimes I place a book on a tidy desk, forget where I’ve put it twenty seconds later, and search the desk without finding it. Half an hour later I’ll notice that it was in the center of the desk all along. If Schopenhauer is right that the genius is utterly absorbed in himself and looks upon the world with a purely objective interest, well then...

February 2

People who think they see in the Russian, Chinese, Cuban, Vietnamese, and other revolutions of the Third World a refutation of Marxism are wrong. These revolutions were never Marxist, except perhaps for certain aspects of the Russian. They were, in the end, ways for poor countries to compete with capitalist

nations (i.e., enter the modern world) without adopting capitalism. Marxist language was adopted because it was convenient and it articulated their hatred of the West. Communism was never the goal of these revolutions; strong nation-states were the goal. The only historical fact that forces Marxists to revise orthodox Marxism is that a true communist revolution never happened in the West—although it came within an inch of happening in Germany. Marx didn't foresee social democracy and the welfare state. This doesn't reflect poorly on him or Marxism, for all philosophical and social theories must be revised as history progresses.

The leaders of the German Social-Democratic party after World War I were despicable cowards and pseudo-revolutionaries who could have made Germany socialist had they wanted to—and then Italy might have followed, which could have sparked a French revolution. Had this happened the future of Russian “communism” would have been very different and less brutal; all of Europe's socialist nations would have cooperated with each other and with Russia, and socialism might still exist today. No Vietnam or Korean War would have occurred. World War II wouldn't have happened, for Hitler wouldn't have had a chance to rise to power, and the Cold War wouldn't have happened either (because a socialist Europe wouldn't have been able to remain an enemy of a capitalist United States for very long). Indeed, the United States itself probably would have adopted elements of socialism during the 1920s and 1930s, in which case no Great Depression would have devastated the world.

The twentieth century could have been the greatest success story of history if the German revolutionaries had fulfilled their mission after World War I! A few pitiful individuals influenced history to this extent! Who can blame Marx for not foreseeing the likes of Eduard Bernstein? *[These two paragraphs are pure fantasy.]*

(later) Have you ever wondered what it would be like to rape a girl? Would you feel a surge of power? Would you be able to go through with it? Would you melt with compassion and feel such self-hatred that you would end your own life?

If you're the father of a teenage daughter, have you ever been curious to see her naked? Do you feel attracted to her, even *slightly*? Do you lust after her young friends?

Surely you've wondered what it would be like to kill someone. What feelings would pulse through your veins? Exhilaration? Horror? Would a single shot from a gun ruin your life?

These and similar thoughts sometimes plague me. How fragile is sanity? What monstrous world lurks beneath appearances? What is the truth: sanity or insanity? Which is reality? Should I attempt to experience insanity if it will permanently alter my perception of the world?

I'd like to go insane for a day. Indeed, I can almost imagine myself in some alternate universe killing people solely for the intellectual curiosity of it.¹ Maybe through a sheer force of will I could shut off the visceral disgust I would feel during the act. I would kill them, and then I would carve up their bodies in a kind of sadomasochistic orgy. It would be a rebellion against my inability to attain absolute meaning in life, against my inability to reach that pure realm of the spirit for which ecstasy is an inadequate term. Moreover, it would force my specious sanity to flee itself. There is undoubtedly a masochistic side to me, and brutal murder is its logical fulfillment. Perhaps I would even kill a friend in this quest to reach a perfect equanimity—in this self-overcoming rebellion against life. Underneath all our experiences is the continuous death of the moment and of these experiences themselves, and murder is simply a way to confront and amplify this necessary ontological lack. It is, paradoxically, an affirmation of life, in that it affirms and accepts the mastery-over-oneself of the aforementioned most overwhelming law of human existence. In other words, it is a miserable succumbing-to-life, but at the same time it is a triumph over life, for one affirms and *chooses* masochistic/sadistic ontological lack and despair rather than the alternative of contemptible and ignorant “contentment”, which is nothing but a weak, comical flight from this ontological despair. Hence serial killing can be a triumph of the will. Of course, I eventually would kill myself as well: I wouldn't be able to tolerate the contradiction between my conscience and my acts.

Enough of these unpleasant reflections. I feel as though I'm losing my innocence and my love of life by engaging in them.

¹ This has nothing to do with Raskolnikov, and he didn't inspire these questions. I've been aware of them for years.

February 3

Kant's individual sentences are sometimes excruciating, but on the whole I don't find it difficult to grasp his main ideas. Nevertheless, I don't have the time or the energy to summarize the details of the twelve judgments, the twelve categories, and the four universal principles of natural science, except to say that each category corresponds to its respective judgment, and that each of the four triads of these judgments/categories corresponds to one of the four universal principles. [...]

February 6

I, with Schopenhauer, believe it is completely appropriate that people are as obsessed with sex as they are. Indeed, I'm surprised they're not even *more* obsessed. Sex is at once the defeat of our most human qualities and their triumph. It is an infinite degradation of humanity and an infinite *affirmation* of it. In one basely biological and sublimely spiritual act it unites the sundry complexities of human nature. There is nothing like it; the profundity of philosophy pales in comparison.

February 7

Anselm's God reminds me of Kant's thing-in-itself, which reminds me of Schopenhauer's Will, which reminds me of the One in Indian philosophy, which reminds me of Spinoza's God, which reminds me of Hegel's Spirit, which reminds me of Fichte's Self....

February 8

Ich bin loving life at this moment, partly because je suis listening to the overture of Rossini's "The Italian in Algier". I wrote my government paper in two-and-a-half hours, I'm making friends left and right, next year I'm going to Europe, tonight I'm watching *Silence of the Lambs*, and my life is practically perfect. I can't even remember the last time I was really depressed.

(later) The problem with me is that I'm too complex to understand. Sometimes I think I experience emotions more strongly than other people, and sometimes I think I experience them much *less* strongly. But the truth is, I believe, neither of these. I am much more 'spontaneously' intellectual than emotional, but when I concentrate on my emotions and amplify them through my intellect, they can become overpowering. Thus I might say that, for example, if I fell in love with a girl I could tolerate not seeing her for a week or two, but if I deeply contemplated her beauty and perfection I would probably be consumed by a desire to touch her. Except in the case of anger, I think my emotions have to be filtered through my intellect in order to acquire the sense of urgency that characterizes them in other people.

I've realized something: I treasure music partly because it enables me to experience emotions more fully than I do otherwise. It is, in a way, an escape from the barren world of the intellect. Maybe it elevates me to the emotional level of the average person and then pushes me beyond.¹

February 11

¹ But generally it doesn't cause me to experience genuine emotions when I otherwise wouldn't. Rather, it prolongs them, intensifies them, or simply caresses an emotionless state of mind I might be experiencing. On the other hand, it's hard to delineate the boundaries between a true emotion and an emotion-like state of mind.

Friedrich von Hayek, that pathetic cocktease of an intellectual, was so proud of himself for predicting the fall of the Soviet Union ever since the 1930s.¹ “I told them so! I told them so! But they didn’t listen to me!” What an ass.

This is how I know communism is right: the masses think it’s wrong.

Why do I often not pursue Truth? Because it’s the only way I can pursue life.

Why do I think I’m superior? Because I know I’m inferior.

At this moment the back of my computer does not exist.

What am I? The absence of myself.

As I write these words, thousands of people are dying.

Music is the greatest art because it exists only in our imagination.

What is self-consciousness? Consciousness of nothing & unconsciousness of something.

Why is there hatred? Because there is no One.

Why is Indian philosophy wrong? Because there is hatred.

Ayn Rand’s greatest gift to the world was in putting down her pen for the last time.

How do I know egoism is wrong? Because most people are egoistic.

Why are there Republicans? Because there is egoism.

Why are there Democrats? Because there is ignorance.

The music of each era characterizes that era’s attitude toward life. (The same applies to individuals.)

How do I know that both materialism and idealism are wrong? Because the controversy persists.

Why am I so absent-minded? Because I am too aware of myself.

Why is there love? Because there is ignorance.

What is science? The death of the soul. [Double meaning.]

Aphorisms, even when mediocre, are fun to write. They’re easy, they’re a convenient way to sound original, they’re a stimulant to further thought, they’re an effective way to highlight contradictions in concepts, they can be poetic.... Why have I not written any until now? I suppose I thought I didn’t have such a lambent wit. (Cue laughter.)

¹ He missed the mark by only fifty years.

February 12

Why do I want to write novels and became a master painter and write poetry and fall in love a hundred times and travel around the world and learn everything my mind can absorb and attempt to rival Goethe's greatness? Why do I so desire to experience life if I am aware of how fleeting experiences are? I'm genuinely puzzled. If, for the sake of argument, no one would ever know about my adventures, I would nonetheless want to experience them—which leads me to believe I would crave them only for the sake of enjoying life. But would I obsess over philosophy or write novels if posterity wouldn't be able to derive the benefits from my doing so (or if I wouldn't get any recognition)? This question is more difficult. Why try to accomplish things if these accomplishments won't last beyond my lifetime? Would Goethe have done so?¹ I don't know, but I'm almost certain I would. If intellectual creation is one of the most perfect ways of living a rewarding life, then I believe I would create only to fulfill myself. I would not spend my life contemplating the One or trying to reach perfect equanimity; this would dilute my zest for living. I would live as Goethe lived, periodically philosophizing and periodically *willing*, alternating between the extremes, observing and creating.

Since my achievements fortunately will be transmitted to future generations, I can say with certainty that not only *would* I live as I have described, but: I *will* thus live.

Individualism has become a cultural obsession because the individual no longer exists.

The masses are able to deny greatness because they instinctively recognize it.

Conservatives hate Fascism because it makes them look bad.

What is the one thing for which society's desire increases as it is sated? The entirety of capitalist commodities.

Contemporary individualism is wrong because it defeats itself.

Mankind will destroy itself one day. How do I know? The twentieth century tells me so.

And then what will happen? The cycle will begin anew....

In a sense, no number of Holocausts can be as tragic as this final thought: One individual is rolling on his rocking chair, listening to Chopin's *Berceuse*, sighing. All around is silence. The individual looks at his watch. "It's time," he whispers. He places a pill onto his tongue, washes it down with a gulp of water, and stares straight ahead. A painting of a bygone era hangs on his wall: a superhighway is cluttered with automobiles, and in the distance are the faces of four American presidents carved into a cliff, smiling down upon the world in benevolent wisdom. The *Berceuse* ends. The individual dies. And music dies with him.

February 13

Faith in oneself.— Few people have faith in themselves. Of these few, some are endowed with it as with a useful blindness or a partial eclipse of their spirit (what would they behold if they could see to the bottom of themselves!), while the rest have to acquire it. Everything good, fine, or great they do is first of all an argument against the skeptic inside them. They have to convince or persuade *him*, and that almost requires genius. These are the great self-dissatisfied people.

¹ I propose that the famous expression be changed from "What would Jesus do?" to "What would Goethe do?"

Am I one of the deluded ones or the self-dissatisfied ones? Certainly I am engaged in an eternal battle against my own awareness of my intellectual inadequacies, but I also have a kernel of faith in myself. This faith is less natural than my “skepticism”. It is based on objectifications of my thoughts, whereas my *lack* of faith in myself is an immediate consequence of my own self-consciousness. Yet there is, on the other hand, a fundamental hope or faith that never dies, which too is a consequence of my self-consciousness. It is the deluded aspect of me. The more accessible and immediate skepticism is the self-dissatisfied part of me, and not even genius will conquer it. I will always be dissatisfied with myself; this is what will necessitate the Faustianity¹ of my existence.

I can't get enough of Nietzsche:

The secret for harvesting from existence the greatest fruitfulness and the greatest enjoyment is—to live dangerously! Build your cities on the slopes of Vesuvius! Send your ships into uncharted seas! Live at war with your peers and yourselves! Be robbers and conquerors as long as you cannot be rulers and possessors, you seekers of knowledge! Soon the age will be past when you could be content to live hidden in forests like shy deer. At long last the search for knowledge will reach out for its due; it will want to rule and possess, and you with it!

(later) I saw the Vagina Monologues. The actresses had such talent and courage that I couldn't help but *bleed* admiration for them. There was such *poetry* in their voices that I felt nothing written by Nietzsche could compare with them. And the simple profundity of the interviews staged by the girls, their exquisite candor, the plaintive moans of the rape victim, the heart-rending self-confidence of the old woman: it was all an artistic whole.

After listening to such art I would almost like to become an aesthete, an eroticist, rather than a philosopher. Life lies in the vagina; death in philosophy. The vernal meadows of youth in the vagina; the broken twigs of wisdom in philosophy.

And now....sadness lies in Chris....

But sadness accomplishes nothing; we must press onward. The concepts of the understanding have no other use than to make experience possible, so we cannot use them to explain objects in themselves. The antinomies of pure reason arise from applying these concepts to the noumena. Thus, determinism applies to appearances, but freedom, which is the absence of causality, applies to things in themselves. Hence we are free even though our psyche is empirically determined by necessity. This doctrine is rather obscure; I'll ask my professor to clarify it.

Incidentally, if the word “God” weren't used in ontological proofs for His existence, I and most other atheists would agree with the claims of these proofs. I'm skeptical that they actually *prove* anything, but I agree that there is something-greater-than-which-nothing-can-be-thought, namely the true nature of the world. Maybe it's will, maybe it's pure energy—but it must be there all the same.

February 14

A bunch of random crappy “poems”:

the firefly
winks at me
and is gone

the breath
of the sacred night—
swiftly am i cleansed

¹ Faustianity would be a truer religion than Christianity.

the musical note
carelessly brushes my cheek
and I unfold

across the hall
a brutish boy and sickly girl
commingle their souls

i ask myself Why
—and the Empty answers

why does she
not look my way
and we embrace

what empty confidence
i can hear
in the squawk of the crow

what keen despair
is there
in the sick silence

i laugh out loudly
at the miserable joke
as others do the same

the clitoris
is a bundle of nerves
that houses the soul

screeching laughter
far off in the distance;
girls travel in flocks

snowflakes moisten my hair
—nature's substitute for chopin

a furious car screams
as an eagle soars above;
somewhere someone is impatient

sweat on the keyboard—
a person has lived here;
frigid rain outside

twinkling street lamp
glistening
in a bottomless pit

hello
 hello
goodbye forever

two hills rise and fall
 as the verdant earth breathes
 —my inspiration

Haiku are startlingly fun to write. As poems they can be very effective, but only if the reader is in a wistful mood. Otherwise they seem silly and pretentious. One should listen to the *Berceuse* as one reads haiku.

Lately I haven't wanted to read literature; I've wanted only to create it. But what good is such creation? Humanity has plenty of literature already. It doesn't need more mediocre poems!

February 16

Extroverted people are popular because they're a distraction.

Capitalism has lasted longer than expected because people *need to be stunted* more than Marx understood.

God used to be the projection of our will to power. Now the System is. Conclusion: the masses have never had faith in themselves.

Why capitalism? Autonomy is scary.

Why capitalism? Chimpanzees are our nearest relatives.

I am the last humanist.

(later) I talked with Rebecca on the phone for half an hour; it was fun. (She has the voice of a young Aphrodite!) Generally I hate phones, but they do make me feel 'freer' than usual. Tomorrow we're watching a movie at the theater in town. Hopefully this friendship will last my whole lifetime.

I love girls. Nearly everything about them. Romantically, of course, I am rather obsessed with them, but even on less sexual levels I find them fun and sweet and sensitive and lovely to be around.

February 18

Most people have a hidden interest in philosophy. Sometimes I talk to them about metaphysics, and as soon as I explain the insoluble problems involved in both realism and idealism, these "ordinary" people become very engaged and propose solutions that I then argue against. For brief moments their eyes light up and they shake their heads in befuddlement. [...]

Philosophy! How easy it is to engage in this activity! The only requirement for such an inclination is that one never leaves childhood. One merely continues to ask the big questions without getting sidetracked by boring practical pursuits. I often think it's more of an accomplishment to move *beyond* philosophy than to obsess over it—for this obsession is so *easy*—but I suppose that for most people the opposite is the true challenge. And yet I can't understand how *that* could be a challenge!

February 20

Das Kapital's most entertaining passages are its most vicious. Referring to the ancient Greek thinkers, Marx writes the following:

Oh those heathens! They understood nothing of political economy and Christianity, as the learned Bastiat discovered, and before him the still wiser MacCulloch. They did not, for example, comprehend that machinery is the surest means of lengthening the working day. They may perhaps have excused the slavery of one person as a means to the full human development of another. But they lacked the specifically Christian qualities which would have enabled them to preach the slavery of the masses in order that a few crude and half-educated parvenus might become 'eminent spinners', 'extensive sausage-makers' and 'influential shoe-black dealers'.

Intellectual giants like Marx will always be necessary, if only to illuminate the shallowness of everyone else.

The following is a short essay I wrote for my Philosophy of Religion course.

In the *Proslogion* St. Anselm postulates as the decisive criterion of truth a moment of illumination in the mind of the seeker. He borrows this analogy from Plato, who, in the *Republic*, uses as an example of this illumination our intuitive certainty that the angles of a triangle must equal 180 degrees. Nothing could be more certain. We cannot really *argue* for this truth, except insofar as it is necessary to define our terms correctly; we just *know* that a triangle has 180 degrees. This is the sense in which Anselm believes that everyone must know the existence of God once he understands what it entails. This paper will argue that the metaphor of illumination is useful, but that it is not appropriate for determining whether God exists.

The question is, does this so-called illumination really provide a measure of truth? The majority of accepted truths—such as natural selection as the mechanism of evolution, or the Big Bang as the origin of the universe—do not have the distinctive quality of *necessity*, which is what arithmetic, for example, has. Indeed, not even our own existence is as necessary as the equation $2 + 2 = 4$, for it is certainly conceivable that we might not have existed, whereas it is inconceivable that at one time $2 + 2$ did not equal 4. This equation is an eternal truth, in that it *could not be any other way*. My own existence is not a truth of this caliber.

So what is the difference between the two kinds of truths? Kant would say that the necessary kind is *a priori*, and the unnecessary kind *a posteriori*. The first is, on the one hand, either part of a thing's definition or implied in the definition, or, on the other hand, is necessary as a result of our direct intuitions of space and time. Mathematics is a consequence of the latter reason. The second type of truth is based merely on experience. Thus, it is true that trees exist, but since I can only arrive at this statement after having seen the trees myself, they are not as necessary as arithmetic. I can conceive of a world in which they do not exist, just as I can conceive of a world in which I do not exist. Hence it is only *a priori* truths that are illuminating in the sense that Anselm means.

Anselm's argument for God is, fortunately for him, *a priori*, and so his ontological proof has passed the first test. But the existence of a thing, which is what he is proving, has been shown to be an *a posteriori* claim—so how can God's existence be *necessary*?

God is and is in everything, but he cannot be reduced to anything. He is the reason for the world's existence. In this sense He can be compared to Schopenhauer's will, Kant's thing-in-itself, the One in Indian philosophy, and perhaps Fichte's Self. However, it is probable that neither Schopenhauer nor Kant would say that their distinctive concepts are necessary in the sense in which geometrical equations are. They are, indeed, necessary as *a posteriori* foundations for existence, but it is easily conceivable that there is no necessity for existence to exist. Such a thought is essentially no different than the thought of one's own non-existence, for if one did not exist, there

would literally *be no existence* for one. As Kant stated, it is impossible for existence to be involved in a thing's definition, and in all cases except mathematics, it is only the *definition* of a thing which is *a priori* necessary. Hence God may be necessary if the world is to exist, for Anselm includes Him in the definition of the world, but since there is no reason that the world necessarily exists, there is no reason why God necessarily exists. In other words, Anselm is wrong: understanding God's existence is not equivalent to experiencing an illumination similar to the kind involved in geometrical reasoning.

Given that the world exists, however, it is quite appropriate for Anselm to assert the existence of a God, provided that he does not invest this God with attributes (which he does). This God is none other than the ground of reality, and it is indeed certain that reality must have a ground. This is an instance of a fundamental principle of logic, namely the principle of sufficient reason, which declares that there must be some kind of a reason (or a cause) for everything. Hence Anselm's God, divested of his goodness, justice, mercy, and all other attributes that rightfully apply only to humans and an anthropomorphic God, is equivalent to the thing-in-itself, the One, or the will-in-itself. They are all different names for the cause and the essence of the universe, and since this essence is outside of our experience, concepts cannot apply to it.

In conclusion, the metaphor of illumination is indeed very useful as a criterion for *a priori* truths, but it is inappropriate when applied to anything *a posteriori*. All existence, even that of God, is included in the latter category. Hence God, like the universe, is completely unnecessary, but insofar as the universe exists He exists as well.

I would *love* to read Aeschylus for the next few weeks, but I don't have time. I have to do work for two philosophy courses, a music class, an intense economics class, my work-study job, a "comprehensive exam" study group,¹ and I have to learn German.

I'd like to become fluent in French, German, Italian, and Latin.

February 22

Tonight during dinner I sat next to a lovely girl who was eating alone. As it turned out, she's the type of person who adores punk rock. Need I say more? Our conversation didn't have much momentum.

The more one adheres to the masses, the less one adheres to oneself.

Why? asked the young boy. Because! answered God. The young boy grinned, and God was heard no more.

Artists who have no genius hope they will at least be called "original". They crave attention, and thus, like the charlatan John Cage, refute their own ostensible artistry.

There are two rules to which scientists should pay heed: (1) gather all the evidence and (2) know that this is impossible.

An appropriate motto for science: "I defer to philosophy."

An appropriate motto for philosophy: "Ye fools, enter here."

An appropriate motto for fools: "We exist not." [Double meaning.]

¹ At the end of the year we CSS sophomores have a series of exams whose scores are our grades for the entire academic year.

Kant postulated a transcendental ego because our own nothingness is too scary to be true.

Is there objective truth? Damned if I know—what that question means.

It is very easy to judge someone. It is very difficult to do so and not be a hypocrite.

(later) For some reason it is usually only through considerations involving friendship or love that I can induce a sort of passion in myself. During high school this was definitely true, as can be seen from my diary. Although I doubtless exaggerated my melancholy at times, I genuinely was quite an unhappy person much of the time—primarily because of loneliness. Similarly, last year I was often lonely, and it was this that incited me to write all those repetitive and boring pages of lamentation. This year I have not felt nearly such a surfeit of loneliness as in the past, and so my journal has grown rather cerebral, in spite of the passages signifying a revolt against this blandness. I am, of course, as alone as ever, but this no longer carries with it so much regret.¹

Nevertheless, a few minutes ago, as I was thinking about Rebecca and my friendship-love for her, I regressed to that saturnine state of yearning I once knew so well. I was surprised. Had I felt this emotion as often last year as my journal suggests? No wonder I wrote like such a bore! This emotion would obsess anyone who was at all sensitive, particularly if music raised it to the level that it sometimes achieved in me. How had I forgotten this state of mind?

Friendships are not worth much if friends do not periodically remind one another how much they need each other. I was very aware of this last year, but I seem to have slid into a miserable ease as I became more philosophical. Soon I'll have to reassure Rebecca of her own importance in my life; otherwise I'll begin to feel corrupt.

February 24

The more concerts and performances I see, the more impressed I am by people's talents. It is truly astounding. Dancers and singers in particular have my admiration. However, I believe that nearly all of us could reach an impressive level in an art if we cultivated our latent talents—which I think most of us have—at an early age. Many of us have the potential to be semi-universal human beings, and it testifies to the inhumanity of our society that so few ever attain this level. Pop culture is a virus. I want a new classicism, a modern ancient Greece and a postmodern Enlightenment. I want a “community of equals who are different” (a famous definition of democracy). I want a reincarnation of all the highlights of human history in a single century. I want a new golden age such as the world has never seen, and so protracted that it will end only with the end of our species.

Here's a question that has bothered me for a long time: to what extent are humans determined by the environment in which they mature, and to what extent do they have permanent characteristics that cannot be altered by altering the form of a society or changing the conditions in which they grow up? Nurture vs. nature. In many respects the Greeks were similar to people today, and yet it must be partially true that the form of a society determines human nature. [No; human *behavior*.] But to what *extent* is it true? If we operate on psychoanalytic principles, I suspect that the basic human “drives” remain eternally the same, but their more appropriate sublimations vary between historical epochs. Thus the love instinct manifested itself differently among the Greeks that it did among 12th-century Europeans. If the United States in the twentieth century has approached or surpassed the openness with which Athenians generally discussed love and sex, it is primarily because ancient Athens was a kind of mass society (with a direct democracy), and the United States is a *pure* mass society. (There are many obvious considerations that establish this correlation between mass society and sexual liberation.) [...]

¹ On the other hand, last year I often enjoyed being alone.

Anyway, similarities between an early and a late society do not invalidate historical materialism.

February 25

I've discovered the reason for music's ability to tap our emotions: sound is an extremely personal mode of communication. We become used to inferring people's emotions by listening to such things as quiverings in their voice or confidence in their manner of speaking, and so an art whose sole object is to manipulate and enhance these subtle 'vocal' modulations through various media achieves a closer relation to the emotions than do other arts. Music exploits our acquired sensitivity to sound as a particularly effective method of expressing ourselves; this sensitivity comes from years of listening to and conversing with people. Neither sight nor smell nor taste nor touch are born from the womb of the emotions, as sound is.

February 26

Life requires too much blind faith in the future.

I'm very confused and not exceptionally happy at this time of my life. Few of my beliefs have a firm foundation, especially not the philosophical ones. I have a compulsion to be *sure* that I'm right in whatever I believe, but currently I don't know if I'm right about anything.

An epiphany completely unrelated to this just hit me: the reason I was obsessed for five years with making hundreds of impractical resolutions to change myself is that this was the only way to make myself feel inspired. It was how I kept an interest in life, for every time I made a resolution I felt gloriously happy and inspired. I always relapsed into reality, but this only led to new explosions of inspiration.

But now existence is tiring me. Rarely do I feel the kind of stimulation I once did. Nothing the world can offer will slake my boundless ambition. Eternal life itself would be infinitely inadequate.

What is greatness? How should one define this term? Psychologically, how large is the difference between Goethe and the masses? It is almost surely very small, and probably most people could make it smaller if they would only cultivate themselves. [Well, it would help if they were as incredibly privileged as Goethe was.]

February 27

The drive toward various types of unity is an excellent candidate for the title "Most Universal Force in Existence." It seems to be everywhere. In fact, I think that "entropy"—the hypothesis of which I've always found a little unscientific—can itself be interpreted as a perverse way of returning to an original state of unity. If so, the dialectic and entropy can probably be reconciled by hypothesizing that the two are merely different ways of reaching the same essential goal. The goal of the dialectic is always a higher synthesis, and the goal of entropy is unification on a 'lower' or 'earlier' (more primitive) level. This leaves hundreds of questions unanswered, but it's a stimulus toward further thought.

My ambition is to write a complete history of existence, from the dawn of the universe to the present day. But it will not only be a history; it will provide an *explanation* of everything that can be explained. This multi-volume work will occupy much of my life, for I'll have to become an expert in most areas of thought, but I don't think it's an impossible task. It is, of course, more ambitious than anything anyone has ever attempted, but I see its implausibility rather as an argument *for* it than *against*.

(later) I've always been puzzled as to why Goethe and Nietzsche so insist that giving form to one's passions—indeed, to every aspect of one's life—is a supremely important part of living, but I suppose the answer is simple: for Goethe, it is a microcosmic realization of nature's achieving Order out of Chaos; and for both Nietzsche and Goethe it signifies that a person has power over his passions. But I still don't know why they see this as more important than overcoming time by letting the passions exert their full force in a

single divine moment.¹ There would not be “form” in such a moment, but who cares? A concern with form seems comparatively trivial.

February 28

I’m getting my second wind. Finally I’m going to buckle down and study German. I’m going to read the textbook every day.

I’m also going to read books on quantum mechanics.

Change of topic: Whenever I think about human history I grow very weary for mankind. I actually identify with my species at such moments; I sympathize with it. My historical sense is far more pronounced than is normal, and it’s partly this that fuels my ambition; or, more exactly, I have a passion to tie up the loose ends of intellectual and ‘real’ history so as to bring ‘order’ into the ‘chaos’ that is humanity. Had mankind a single Hegelian Spirit, it would have committed suicide long ago out of sheer weariness. It is this weariness that I want to counteract by *ordering* our existence, by facilitating a universal *understanding* of it and thus by giving mankind *control* over itself. The theoretical aspect of this is my proposed history of existence; the practical aspect is the establishment of communism. The latter is much the more urgent of the two, but the former is the more specifically personal—and hence is more important to *me*, though certainly not more *important* to me.

March 2

Tonight I ate dinner with Rebecca at a classy restaurant. Once again we talked about our lack of enthusiasm for life.² Rebecca is truly a wonderful person. As a friend, I love her deeply. Few things in life give me more pleasure than listening to her talk about herself, though I imagine she’s oblivious to her effect on me. She is the human equivalent of sunshine—in both positive and negative ways. Think of every quality that sunshine possesses, and then transfer those qualities to Rebecca,³ and you’ll paint for yourself a fairly accurate portrait of her.

March 5

The value of any human activity consists only in the extent to which it cultivates us and is an objectification of our higher powers. What this means, I haven’t decided.

...It means that we should strive for whatever embodies our specifically human qualities. Borrowing from Jonathan Lear, humans are distinguished from the rest of nature by their self-consciousness, which implies that only they can individuate themselves. This individuation consists in autonomy, and this autonomy consists in accepting and understanding oneself and one’s unconscious drives.

Now, borrowing from the Greeks, every part of nature has a function or a quality that distinguishes it from the rest of nature. If an individual being successfully fulfills its allotted ‘function’ or ‘distinguishing quality (-ies)’, it is an excellent instance of its kind. The human species is the only kind of being that is self-conscious and has the capacity for abstract thought and, hence, individuation.⁴ Thus the person who individuates himself more completely than others is a more perfect specimen of humankind than anyone

¹ This moment could, of course, last as long as an hour, for time would not really exist.

² Our conversations are never as gloomy as I make them sound.

³ And apply the qualities of the earth as it relates to sunshine to me.

⁴ Moreover, these are the most distinctive marks of mankind. This can be argued against (see the next paragraph), but it’s true.

else.

I've thought of another quality that can be seen as distinctively human. Every living creature creates something, whether it be offspring or piles of dirt. But people are the only beings who can create in a qualitatively different manner, i.e., which is not merely instinctual. Whereas nature operates through necessity, humans operate through freedom. Hence those people who most adequately objectify or use their intellects (their higher powers) are more perfect than the rest of us.

The first and second distinctively human qualities can be reconciled by recognizing that the second is derivative of the first. The more individuated a person is, the greater will his intellectual creations be. If that solution seems contrived, I'm willing to rely on this one: creation is not as necessarily human as is individuation because the former hypothesis rests on a possibly invalid application of a universal natural 'law' to humanity, while the latter rests on a genuine contrast between humans and every other known species. In any case, the point is that however one looks at the issue, intellectual creation is derivative of or not as important as individuation.

March 6

Often it's difficult for me to concentrate. I can't think deeply unless there are no distractions *anywhere*.

Speaking of thinking, I'd like to paraphrase Nietzsche by suggesting that my writing is rather 'dense'. Whereas when one is reading most other philosophers—such as Kant, Schopenhauer and Kierkegaard—it is necessary to condense their sentences to get directly at the thoughts behind them, one must *unpack* my sentences in order to absorb them. No doubt you have more than once concluded that my thoughts have at times been empty, but this conclusion is, ironically, based on the fact that my thoughts have been so *full* of content. They have more often than not been the results of immediate intuitions so inaccessible to conceptual thought that I have simply written an ambiguous sentence and moved on. My phenomenological discussions about the self are difficult to read not because they are empty, but because in order to understand them one must experience the intuitions I experienced.

I'm reading a book called *The Philosophy of Niels Bohr*.

March 7

I am so fascinated by people that my infatuation borders on extreme love.¹

The opening movement of Mozart's symphony *Jupiter* is Dionysian in its rapture. It is a naïve, heroic glorification of life more overwhelming in its innocence than anything Beethoven composed. I love Mozart as my second self. I adore his music, his life, his personality, his gleefulness, his innocence, his flaws. His memory is the ideal toward which we can strive but will never reach, a single point of light in the squalid darkness of history.

The second movement reminds me of Raphael's painting "The Ecstasy of St. Cecilia": it is a translation of the language of God. Nietzsche loses his appeal as I bask in the superabundant light of this music.

(later) If it weren't for her love of jocks and alcohol, Jenny Williams would be a perfect girl. Whenever I make her laugh I feel as if I've done my part to make the world a better place.

March 8

¹ It also borders occasionally on animosity.

The qualm I have with Nietzsche is that he bases his estimates of people on intuition. At one time in his life he reveres Socrates, at another time his criticisms of him are vitriolic. Nietzsche reaches into the unconscious and comes out with myriad theories of the motivations behind people's actions, trying to determine if people are acting out of *ressentiment* or if they are in fact genuinely passionate, but in the end all he has to show are suggestive intuitions—vitriolic insults based on suggestive intuitions. Who's to say if they're right? How is it possible to determine if there's substance behind Nietzsche's claims? This is an inadequacy of psychology in general, and it is why psychoanalysis in particular will never rise above the level of a pseudo-science.

March 9

I bought Rebecca a CD called "James Galway and the Chieftains in Ireland".

What I love about Irish music is that it's magnificently unpretentious.

Sometimes I wonder what the point is of experiencing all that life can offer. People have had the same experiences millions of times throughout history. Why should I feel that my life is worth anything? If we were really aware of the exquisite *repetition* that is the guiding law of history and of life, we would lose our interest in living. If we were aware of every truth about the unconscious mind we would be permanently disillusioned with ourselves, and would realize that nature has all along been playing a hoax on us. It is death to embrace this truth, and it is cowardice to flee it. Hence, what is the value of truth? Would I prefer to live a happy but cowardly life or a miserable but *truthful* life?

On the other hand, I suspect that I would be able to accept life even after uncovering its secrets. I wouldn't feel miserable; I'd feel sublime.

(later) I went to a party. I must admit it's understandable why people enjoy dancing to rap music in a crowded, hot room: it's invigorating. I do not, of course, feel comfortable dancing, but I don't begrudge others their zest for it.

In *Ecce Homo* Nietzsche recommends which climates are most beneficial for one's spiritual health. Many philosophers would ridicule his preoccupation with nutrition and climate, but I take his advice seriously. I know that weather partly determines my moods and hence my productivity.

I think that the main reason for my love of Nietzsche is that he articulates who I am. He enables me to be myself; he reinforces my self-esteem. This may seem a vain pleasure, but it's truly a felicitous inspiration in that it helps me give a direction to my moods.

March 24

Well, gentle reader, I have returned from spring vacation. While I was away I read *The Odyssey*,¹ several parts of *Plutarch's Lives*,² Cicero's essay *On Friendship*, half of *Don Quixote*, parts of *Shogun*, and some of *The Philosophy of Niels Bohr*. [...]

I'm still reading *Don Quixote*, one of the most delightful novels ever written. However, I find it even more intriguing as a corroboration of my idea that self-consciousness is (almost) necessarily degrading to the extent of being a comedy. Don Quixote represents the modern age, the age that has grown so aware of itself that anything it does is subject to ridicule. If people try to be 'sincere'....they either can't, because they're too aware of themselves, or, if they can, they're behind the times and are laughed at by everyone else. Don Quixote tries to be sincere, but since repetition is one of the laws of history he can only repeat what others have done in a clumsily self-conscious way, and so we laugh at him. Nowadays, everyone who is intelligent is aware of himself to the extent that he is a parody of himself, just as this capitalist era is a parody of itself.

¹ It was an excellent translation by some guy whose initials are A. L.

² Themistocles, Pericles, Demosthenes, Caesar and Antony.

How can we ever move beyond this embarrassing self-consciousness? The only way is to become self-conscious of this self-consciousness, i.e. to ‘negate’ it by transcending it. Mankind will have to become aware that the former arrogant kind of self-awareness is itself an imposture, a charade, and that indeed *life* is a charade: only then will we understand ourselves enough to surpass ourselves and accept life as it is and must be. Truth is the one thing that is not presumptuous, and so our presumptions will wither away once we have realized truth. Moreover, since truth is compatible only with radical self-consciousness, communism¹ is most compatible with truth. This is why communism must be based on a universal and *true* theoretical framework.

Incidentally, I wonder if ‘self-consciousness’, or consciousness of one’s separation from the characters, is a defining characteristic of comedies, and if non-individuality² is the defining characteristic of tragedy.

Quantum mechanics is a perfect corroboration of Schopenhauerian transcendental idealism. Atomic physics is, first of all, not directly accessible conceptually, for the concepts we apply to it are mutually inconsistent when used as *the* characteristics of an independently existing reality. Secondly, concepts such as “energy” and “electron” are all but empty,³ which further suggests that the subject of quantum mechanics is the thing-in-itself. Thirdly, consistent with Schopenhauer’s method, we can only arrive at the characteristics of this thing-in-itself by theorizing rather than observing. Fourthly, none of our most important notions, particularly space, time, and causality, apply to the subatomic realm in any way we can intuitively understand. Fifthly, Bohr contends that we, the observers, essentially construct the subatomic reality by observing it, which is precisely what Schopenhauer believes.

General relativity is another gateway to the thing-in-itself.

After reading *Shogun* it has occurred to me that my ideal recreation would be to write a series of perfectly accurate historical novels, for (1) I wouldn’t have to worry about inventing plots, since I would use real historical characters; and (2) it would be a good way to sneakily educate the public. They would read art, learn about history, and enjoy themselves at the same time! Besides, I’ve always wanted to write novels. This way I could avoid the basic hassles of novel-writing and yet have a good deal of creative freedom (which would, however, be limited by the necessity of being historically accurate).

How much do you think names contribute to identities? If I didn’t have a name I would probably have a less secure identity.

(later) My life has lately been too ‘easy’. There is hardly any suffering in it, and so I have not been productive. I associate deep philosophy with despair, but I have not felt any despair for a long time; thus, I have apparently not deeply philosophized lately. I think the last time was during the summer.

I generally have a conscience only when guilt is mixed with shame—wherefore I usually have a conscience only in the presence of others, for it is the Other who creates shame.

March 25

It seems to me that truth can exist only as a system. Objective reality is the measure of truth, which even Kierkegaard tacitly admits (otherwise his position is nonsensical), and objective reality—in any sensible way one understands that term—must be consistent with itself and with nothing else. It must exist as an entirety, as a whole ‘system’ over and above fleeting states of mind that bear little or no relation to each other. Again, Kierkegaard himself admits this, for he states that truth is “subjectivity”—which encompasses all mutually ‘contradictory’ subjectivities. Reality, whether it be understood as subjectivity, as nature, or as God, is always sufficiently abstract to be a self-consistent and self-enclosed whole. In the realm of thought, only an all-encompassing system can claim to be as self-enclosed as objective reality. Isolated positions such as Kierkegaard’s presuppose thousands of ‘externalities’; but only by including

¹ Which signifies mankind’s ultimate awareness of and control over itself.

² I.e., identifying utterly with the characters.

³ In this respect they’re similar to Schopenhauer’s “will” (which does, however, have some content).

these externalities within the system itself¹ can we hope to arrive at the complete truth (for reality has no externalities, and reality is the measure of truth). We can never attain through philosophy the kind of pure totality that is the world, but we can at least ‘symbolically’ understand it and its general outlines.

Notice I wrote above “*the* complete truth”. As much as William James would disagree with me, it is certain that there is *one* ‘truest’ system waiting to be created. No doubt several philosophical systems can all be true as far as they go, but at least potentially there must be a philosophy that encompasses so much of reality that it is impossible to find one more all-embracing (i.e., more true). Although self-consciousness is, in one respect, logically subject to the possibility of an infinite regress²—and the sharpest self-consciousness is a prerequisite for understanding the highest truths—this does not imply that there are infinite *systems*, each more universal than its predecessors. Each level of this type of self-consciousness is a purely subjective, practically imaginary state with no real significance, so it has nothing in common with an objectively true system that can by its nature incorporate into itself the fact of this infinite regress.

Of course, science will never cease making new discoveries, but this doesn’t mean that another system has to be erected after each discovery. If the system is sufficiently abstract, like Schopenhauer’s, these discoveries can simply be incorporated into it to make it more thorough.

Moreover, for the reasons given by Schopenhauer, a philosophical system must be logical and consistent, even if the thing-in-itself is illogical or unconceptualizable. A philosophy must be based on conclusions, and conclusions must be based on logic, for logic is based on the principle of sufficient reason (and a few others), which is in turn grounded in the way that reality manifests itself to us (through causes and effects, etc.).

March 26

I’m worried I might become a dilettante.

(later) Ethics has never really interested me. As far as I’m concerned, nothing is intrinsically good, so there is no “right” way to act. There are *good* ways to act, but these always presuppose subjective moral values. Who’s to say I’m “right” in my moral beliefs? How is it possible to be morally “right”? Only if there is a commonly agreed-upon set of values ought we to judge other people’s actions.

So what’s important is to find the *best* set of values, not the *correct* set. But I don’t know how to do this.

March 28

I’m tired. So *boundlessly* tired.... And I’m only twenty years old.

The Adagietto-Adagio from Georges Bizet’s “L’Arlésienne” Suite 1 is a valuable insight into the nature of God.

March 29

Most twentieth-century philosophy is inferior to earlier philosophy because it *narrows* one’s outlook instead of *broadening* it. Schopenhauer encourages me to lasso the moon and pull myself into the stratosphere; Robert Brandom encourages me to huddle in a corner and regret my own existence.

(later) I’m reading Wittgenstein’s *Philosophical Investigations*.

¹ As Schopenhauer did, for example, with his explanation of the acceptability of presupposing the principle of sufficient reason.

² I’m referring to statements like the following: I am aware that I am writing; I am aware that I am aware that I am writing; I am aware that I am aware that I am aware that I am writing; etc.

March 30

Here I am again. Lonely, overworked and bored, as usual. Drowning in a sea of music, as usual. Vainly yearning for ecstasy, as usual.

All this has become too commonplace to merit consideration.

§2. The fact that Augustine's description of how certain words stand for objects or have 'meanings' is incorrect as an account of the entirety of language doesn't mean that not all words have a meaning 'behind' them. The difference between the two kinds of words—those which stand for concrete objects and those which are more esoteric—is merely that the meanings of the second kind are intuitions¹ (immediate intentions (or intensions?)) rather than actual physical objects. In the sentence "the cat is black", the three letters that together are "the" have an ineffable intention 'behind them' in consciousness that makes sense out of them. This intention can be expressed by saying, "'The' signifies that there is a particular, definite object which is being referred to", and this statement more or less articulates the intuition behind the word "the" because in such esoteric cases² our intuitions are originally³ formed by 'internalizing' the wordy definition (or rather the use of the word, determined by observing its function in the context of other words) as an immediate intuition or intention.

§6. Presumably Wittgenstein is arguing that words don't have definite meanings when they are taken out of context or when the way in which we use them is ignored. To establish this he constructs an analogy between words and brake-levers: the latter are "nothing or anything" when separated from the rest of their mechanism, and so are words. I pray to God I'm misinterpreting him, for this argument is pitiful. It is of course true that we don't quite know how brake-levers interact with the entire mechanism when they are isolated from it, but it is precisely the *intention* that we apply to them which enables us to call them brake-levers when they are separated from the system. Similarly, we may not be entirely sure how individual words 'interact' or 'fit in' with others when they are taken in isolation, but they manifestly do continue to have meanings nonetheless. In any case, I'm a little suspicious of comparing language to locomotives.

§10. I don't see the point of the last two sentences of this section.

§14. "...Would anything be gained by this assimilation of expressions?" Yes: we have learned the purpose of tools. Likewise, we learn the peculiar advantage of words when we recognize that each has a meaning in consciousness.

§18. Even if we concede that W.'s example *is* a complete language—which implies that in a complete language words don't have to have an "immediate intention" that *attaches to them* in consciousness—my argument remains untouched. A language is not *fully developed*⁴ until it has reached the point at which its words have an immediate significance to a person. It may be *complete*, i.e., it may sufficiently serve its purpose (viz., to facilitate communication), in a very minor sphere of influence when its sounds don't have the immediate significance that our sounds do for us, but of course it has not reached a full level of development. It is only the latter that I am concerned with at the moment.

§19. When I call out "Slab!" I am not actually thinking "Bring me a slab!"; rather, I am merely *intending*, without the use of words, that you bring it to me. I am 'wanting' and 'expecting' it. When I say the entire sentence "Bring me a slab" I am indeed intuiting slightly different intentions than I did when I said simply "Slab!", but all in all they amount to the same thing. I say "Slab!" and I *anticipate* that I will be brought a slab;⁵ I say "Bring me a slab" and I am aware of all the components in the situation that the

¹ These intuitions can in turn be expressed as definitions, although the latter are of course not the intuitions themselves.

² I.e., when the intention is so tied up with the word itself, and would not exist in its precise form unless the word itself existed.

³ During the process of learning words.

⁴ Yes, I am making a distinction between a complete language and a fully developed one.

⁵ Anticipation itself is the primary intention here.

former condensed sentence implied. In other words, “Bring me a slab” unfolds the various intentions that were (in a different form) latent in “Slab!”.

§20. “Doesn’t the fact that sentences have the same sense consist in their having the same *use*?” Not really; rather, their having the same use *indicates* that they have *basically* the same sense. The sense is in consciousness, not in use (although the two are, admittedly, intertwined).¹

§21. It seems to me that the difficulties addressed in this and similar sections can be solved by recognizing that what the subject *intends* determines (or *is*) the meaning of a word. Thus, the sentences “the son is bright” and “the sun is bright” sound exactly the same but are based on entirely distinct intentions [or intensions] in the mind of the subject—and hence it is the subject’s consciousness that determines their use and their sense. What is so difficult about this thesis? It seems almost so obvious as to be a truism.

April 1

Chapter 1 of *Das Kapital* contains many phenomenological descriptions as brilliant as those of Sartre.

April 3

§23. “The *speaking* of language is part of an activity, or of a form of life.” Duh. So? This doesn’t contradict my thesis.

§27. Of course we are not *aware* of meanings ‘behind’ words when we use them in sentences. But when we speak there is obviously nonetheless an intuition in consciousness. How else could we know the meanings of words? How could we understand commands or questions if consciousness did not *intuit the intentions* that invest statements with meaning? In the vast majority of cases this intention can’t be readily separated from the words themselves, but it should nonetheless be clear that words *themselves* are nothing but arbitrary sounds or symbols until an “intuition” makes them meaningful. Besides, very often we manifestly *are privately* aware of intentions without thinking or saying a single word. We intuit condensed versions of potentially very long sentences—versions that bypass all words—in the space of half a second. Evidently, then, we also intuit something that cannot really be conceptualized when we’re *speaking*. Although words may not always refer to images or objects or even concrete meanings, they do always ‘refer to’ intentions in consciousness. [That’s a misleading and silly way of saying it.]

§33, etc. I’m not sure what Wittgenstein is driving at.

I read Plutarch’s *Life of Alexander the Great* yesterday. It wasn’t as well-written as his *Life of Caesar*.

April 8

Why does everyone except [some] academics dislike atonal music? Because it’s based on a faulty aesthetic. Why else would tonal music have endured for so many centuries, *never* yielding its dominant territory—even during the twentieth century—other than because it is consistent in some fundamental way with (1) how our brain organizes perceptions of sound, and/or with (2) the principles of physics? Indeed, I think this “fundamental way” is obvious: it is in our nature to humanize all aspects of experience, to organize them and control them, which implies that a certain amount of predictability in music is essential. Random noises are not music because they are not organized along any clear basis. (The need for predictability in music has actually reached its culmination in the most popular twentieth-century trends,

¹ One way to tell them apart is that the use can be observed by another party, whereas consciousness cannot. It is consciousness that invests the use with meaning.

like rock ‘n’ roll.) Atonality is capable of appealing even to a tiny minority of academics only because these people have subtly rearranged their innate artistic sense by surrounding themselves with atonality and thus making it ‘predictable’, or at least less nonsensical than it is to the rest of us.

[Deleted entries.]

April 14

Nietzsche:

Some day, in a stronger age than this decaying, self-doubting present, he must yet come to us, the *redeeming* man of great love and contempt, the creative spirit whose compelling strength will not let him rest in any aloofness or any beyond, whose isolation is misunderstood by the people as if it were a flight *from* reality—while it is only his absorption, immersion, penetration *into* reality, so that, when he one day emerges again into the light, he may bring home the *redemption* of this reality: its redemption from the curse that the hitherto reigning ideal has laid upon it. This man of the future, who will redeem us not only from the hitherto reigning ideal but also from that which was bound to grow out of it, the great nausea, the will to nothingness, nihilism; this bell-stroke of noon and of the great decision that liberates the will again and restores its goal to the earth and his hope to man; this Antichrist and antinihilist; this victor over God and nothingness—*he must come one day.*—

As you’ve probably inferred from my quoting this passage in such an intensely personal document as my journal, I am the most deluded person in history.

April 16

§40. The meaning of a word is not what ‘corresponds’ to it but what the ‘intention’ is behind it.

§43. I agree with Wittgenstein’s definition of ‘meaning’, for a word’s use in the language is essentially synonymous with what the person’s consciousness is of that word. [*Well, no, we’re often not explicitly conscious of all the shades of meaning of a word.*] (I still don’t understand why W. thinks it’s so important to minimize the role of consciousness in language.)

Incidentally, the proposition “The king of France is bald” is neither true nor false if there is no king of France. A sentence’s [I meant *proposition*’s] truth-value is always determined by the predicate’s truth-value, by the truth of what is being asserted, not by the referential or non-referential character of the subject. If we say it is false we are obliged to say, “Because the king of France is not bald”, not “Because there is no king of France”. If the latter were an acceptable way of explaining the sentence’s falsity, we would actually be asserting the falsity of the phrase “the king of France”, which cannot rightly be declared false or true because it is not a proposition. If someone disagrees with me, then I retort that he is actually judging the proposition “The king of France *exists*”—and is thus judging the predicate, not the subject.

However, the proposition is not nonsensical, either. It has a meaning; it has sense, for consciousness can understand what it is supposed to be asserting. I’m tempted to say that meaningless propositions can’t exist, for if they don’t make sense they aren’t really propositions. “The king is a dirt” does, I admit, have a predicate and a subject, but the predicate itself is actually meaningless. “Is a dirt” is an incorrect way to say, “is a piece of dirt”.

So how can a meaningful proposition be neither true nor false? Very easily. Meaning is logically intertwined with *intention*, or consciousness; truth and falsity are logically intertwined with an objective *reference*, or *reality*. In my consciousness or “intention” I understand what a king of France is. Objectively,

however, there is no such entity, so the statement is untrue because there is no referent, the existence of which is a *presupposition*—not the criterion—of truth. The “criterion” of truth—the *meat* of the sentence, the part that is being judged—is the predicate. Hence the proposition is not false either, for the predicate is not false. It is simply lacking an objectively real referent.

[I was pleased to learn years later that P. F. Strawson agreed with me in his famous paper “On Referring” (1950). In fact, my objection to Russell’s theory of descriptions was basically the same as Strawson’s, as stated in this excerpt from a Stanford Encyclopedia of Philosophy article: “[Strawson’s] fundamental objection to Russell’s theory is that it is simply obvious to him as a sensitive and self-reflective user of language that the use of the word ‘the’ does not conform to the theory. Whatever puzzles there may be about language and reference, their solution cannot require us to deny such obvious facts.” It’s always refreshing to come across philosophers who understand the importance of intuition!]

April 17

[See the May 2024 entry. In all these early thoughts of mine on the self, I was groping towards ideas similar to what I say there.] Consciousness is intrinsically peculiar. Suppose I die and my brain is immediately transplanted to another body. All my memories and character traits will live on in this new body, so the person will presumably have the same ‘identity’ as me. But will the *consciousness* that was me continue to exist, or will ‘I’ be a completely different person with the memories of the *original* me? If the self-consciousness that is I dies with my body, I will die as well, even though my ‘identity’ (my personality, memories and other psychological traits) will continue to exist in another body.

I suppose this isn’t such a great problem after all. The possibility that *I* might not exist even though my memories might is illogical, but thought-experiments often are. This just proves the inadequacy of our conceptual equipment. It also shows that memory is not a sufficient condition of identity.¹

But how would it even be possible for the new person to know if his consciousness were the same as mine?² He would have to rely on his memory, which would indicate that he does indeed have the same consciousness. But the problem is, consciousness exists only in the moment. There’s no way to be *sure* if it is one long continuation.

Then again, the only reason I think I am the same person as I was twenty minutes ago is that I have memories.

¹ See below. Incidentally, this discussion owes a little to a book I recently read.

² *[From 2008.—* Such ‘knowledge’ is meaningless! It’s meaningless to say that one consciousness is the same as another, and that someone ‘knows’ two consciousnesses are the same. But, on the other hand, that means it’s meaningless to say that this consciousness that is writing this sentence right now—or, in other words, I, me, Chris, this self right now—is the same consciousness (or self) as ‘it’ was an hour ago, or a year ago, or ten years ago. If it’s meaningless to say that one consciousness, or self, is the ‘same’ as another, then it’s meaningless to talk about self-continuity, i.e. continuity between, for instance, Chris Wright yesterday and Chris Wright today. For the temporal distance implies that we’re talking about two different consciousnesses (between which there is supposedly continuity)—two different consciousnesses that are, however, somehow the ‘same,’ because they are both “Chris Wright.” All these paradoxes lead directly into the paradoxes and agonies of my senior thesis.]

[Written later than the paragraph above... I should correct what I wrote in that footnote. It isn’t always meaningless to say that two consciousnesses or two selves are the same; that is precisely what you’re saying when, for example, you look at a picture of yourself when you were 10 and say it’s hard to believe you’re the kid in that picture. You’re saying that in some sense that self is the same as this one. But what makes them the same? That’s the question. But really there are two questions: what do you mean, and how can one ‘test’ your claim that these two selves are the same? I agonized over this in my thesis, trying to find a non-question-begging answer to both questions. As I recall, I finally decided that there is no such answer—and therefore that, after all, it isn’t wholly meaningful to assert an identity between two ‘selves,’ or between two temporal ‘stages’ of the same person, or whatever. This conclusion is very disturbing if you think about it, since it half-dissolves the notion of self-continuity, but it’s also consistent with Buddhism and other profound philosophies, as well as with my own insistence that there is no such thing as the ‘self’ as we ordinarily understand it.]

What's confusing me is that if a person somehow had the *exact* memory I had in a situation, so that he would be seeing the situation from my eyes, he would nonetheless remain a different person than I and have a different consciousness that I cannot access. Maybe this is taking the thought-experiment too far. The only way for him to have the same memory as I (and for it to have really happened) is to *be* me in that moment, which implies that for a moment he does cease to have his own distinct consciousness.

So is memory a sufficient condition of identity? If we answer yes, we get entangled in the problem of real and unreal memories. I may remember being Julius Caesar, but "really" I was not him. Some people would try to avoid this difficulty by adding the caveat that memory must be "caused in the right way" for it to be a sufficient criterion of personal identity. But this opinion is boring and too similar to professional philosophy for me to accept it.

(later) Tonight I wrote Rebecca a long email in a fit of despondency. I include it in my journal only because it is intended as an affirmation of our friendship as well as a happy acceptance of my inability to "separate" myself from her. [I've deleted it.] ...Are you embarrassed by the sentimentality exuding from every sentence? I am too, but what's done is done. I'm tired of hiding behind conventions.

April 18

I plead insanity for having written that email. Last night I had a mild version of every conceivable illness—fever, stomachache, headache, earache, chills, runny nose, back pains—so my judgment was warped. Also, I was listening to "Kathy's Song" and "Ave Maria" as I wrote it, thereby murdering my critical faculties.

(later) It's intriguing that people never articulate the obvious truth that the self is located directly behind the eyes. It almost seems as though consciousness is intimately *associated* with the eyes—much more so than with any other sense, even touch.

I am, unfortunately, not the Nietzschean ideal of the free spirit. I'm too sentimental, too obsessed with truth, too fond of my emotions, not refined enough, too prone to comparing myself with great men. I have too great a need to esteem myself.

Whence arises this need? —Faith in myself is the only way for me to have faith in life. I can't rely on anyone else, certainly not Rebecca. Also, I'm so aware of myself, so constantly reminded of my own silliness and *mendacity*, that without a certain inherent arrogance supplemented with frequent self-flattery—which, ironically, contributes much to my self-deception—life would be intolerable.

April 20

The Fifth Act of *The Cenci* is a masterpiece if ever there was one. I cried, for a moment, at the very end. To live in a world in which such suffering is commonplace—! To be as a pawn in the hands of fate! To be impotent, when pain is the regnant passion, when misery every moment enjoys a recrudescence—! Life can be affirmed only in ignorance.

[...]

(later) The fact that there are no absolute [objective] values, that life has no meaning or purpose, doesn't necessarily commit us to nihilism. I don't see why Nietzsche was for a long time so bothered by the death of God. We simply must create our *own* values, as he realized. We base these values on certain fundamental facts about nature or humanity, on certain "truths". It is this foundation that justifies us in criticizing people who do not adhere to our new value-system.

Of course, the problem remains that there is no way for us to know when we have discovered these "truths". *This* problem, rather than the fact of no absolute values, is what seems insurmountable.

Kierkegaard thinks that even in the case of "forced" beliefs (necessary or obvious truths) there is a final element of human agency. No matter how many irrefutable demonstrations are made for the truth of a proposition, in the end everyone makes a "leap" in choosing to accept it or reject it. Hence humans are

completely free, such that no one can be obligated to believe a truth or accept a morality that is based on a truth. But I disagree with him. I think he (1) overestimates the role of agency and (2) too eagerly dismisses the human ‘obligation’ to guide one’s life according to absolute truths (supposing they exist).

But why should there be this obligation? If there are no values, there can’t be an *a priori* obligation to adhere to any kind of truth. If our freedom is what we’re most directly conscious of (after our existence)—if consciousness is necessarily ‘free’ in some way—then maybe Kierkegaard is right that freedom is the basic fact of our existence. If so, how can certain lifestyles be considered “better”, truer, more admirable than others? And even if they can, what does it matter? If there is no fundamental *true* reason why they should be followed, moral relativism is the consequence. All values must then be as good as all others. For we can’t in good conscience criticize a moral system unless we assume that (1) morality should and can be founded on truth, and (2) our own value system is truer or better than the other. But these criteria don’t hold if nothing is seen as truer than freedom.

On the other hand, if an ethic is based on the fact of freedom and nothing else (if such is possible), perhaps it can be seen as the “truest” ethic. But this is no reason for people to adopt it, since there is no reason to abide by truth. So the most one can do is say, “Hey guys! Come over here! I’ve discovered the only true hierarchy of values! Don’t you want to know what it is?” And they’ll say with justification—“Shove it up your arse, Jean-Paul! We’ve got our own values! Who needs yours? Ours are easier.” And then poor Jean-Paul can only look downcast as he ponders his own anguish. “Ha! Look at Jeanny-boy! He wishes he had more freedom to come over here and pummel us! He’s feeling forlorn!” “One day, you— you idiots, I’ll show you! I have faith!” “Look at that, Pierre! One eye is staring at you while the other glares at *me!*” “Yeah, ’cause my eye has more freedom than yours!”

It’s past my bedtime: that’s my excuse.

April 22

I like R. J. Hollingdale’s interpretation of Nietzsche’s thought. In his 1969 edition of *Thus Spoke Zarathustra*, published by Penguin Books, the fourth section of his introduction concisely articulates a profound philosophy that reminds me of Kierkegaard’s. Answers to my questions of yesterday are hinted at. But I remain skeptical.

April 23

It is impossible to ‘transcend’ metaphysics. There is—there *must be*—an essence of reality. The difficulty is in reconciling metaphysical truth with the fact that “all-too-human” psychological forces determine what is the Truth to us.

“Why must there be an essence of reality?” you ask. I admit I can’t give a satisfactory reason. Indeed, now that I reflect upon it I begin to have doubts.

April 25

I spent all of yesterday writing the beginnings of two novels. The first was meant to be a parody of the history of the human race; I finished the prologue. After a few hours I lost my inspiration, so I began a story that was to be in the form of a journal. It was to chronicle a young man’s overcoming of nihilistic despair; included in it would have been numerous reflections on philosophy, on society, and on relationships. But I lost my inspiration, again. I realized that my literary talents haven’t matured enough to permit me to write books. Instead, I’ll continue to read great literature as a means of cultivating my latent talents.

(later) Nietzsche believes that all truth is relative....except for the will to power! And except for the truth that all truth is relative! This is the inconsistency that all relativistic philosophies fall into. I wonder how they resolve it.

I know that all philosophical claims are made from a particular perspective, but this doesn't refute the belief that a 'true' or 'truest' perspective exists. We simply must take into account every philosophical/scientific position that exists, must attempt to nullify our own biases—which is surely possible, for I do it often when evaluating philosophies—and then decide 'objectively' what is most true.

[...]

April 29

Dad turned 60, so I went home this weekend for his party.

I'm reading *Notes from the Underground*. Three words describe it: profound, profound, profound. Already it is one of my favorite books. I can relate to it like few others, particularly in regard to my annoying self-consciousness. It corroborates what I've always insisted on: the more one is aware of oneself, the more one is a parody of oneself. There are two major differences (thus far) between the main character and me: (1) I am so aware of the presumptuousness of every state of mind—including self-awareness—that I usually find life more a comedy than a tragicomedy; (2) since I don't know whether 'sincerity' is more real than 'parody', at times I am able to give the benefit of the doubt to sincerity. Thus, I sometimes allow myself to wallow in sadness even though I have a suspicion it's a form of self-deception. Put more felicitously, I suspect that extreme self-awareness is so presumptuous and arrogant that it too is a deception—so I can transcend it and choose whether to feel sad or to feel self-superior. Of course, even if I feel self-superior I still look down upon my perceived superiority—i.e., I feel self-superior to the second degree. I could potentially feel superior to the third and fourth degrees, but usually before the process reaches this point all my senses of superiority have bled into each other and thence into feelings of hilarity and doubt, until eventually I am conscious of nothing else but the Great Doubt. This is barely a temporal process, for it takes place within three seconds. At its culmination I just laugh and "transcend" the cause of my original sadness; I move on with my life, postponing philosophy until another day.

But that's very simplified and not entirely correct.

May 9

The firebombing of Dresden [and many other cities!] during World War II is more unforgivable than Roosevelt's persecution of Japanese. It was one of the most atrocious crimes against humanity committed this century. Roosevelt, Churchill, and the other decision-makers deserve to burn in hellfire forever.

(later) Chris is bitter. Again. [...]

So as an escape from reality I'm writing the following paper for a philosophy course.

Friedrich Nietzsche puts forward an original theory of the reason for mankind's universal attraction to religion. He thinks that, since the will to power is so fundamental to life as to be its *essence*, humans have a need to either (1) dominate themselves, (2) dominate other people, or (3) be dominated by various external forces. Religion is largely a manifestation of the first and third needs. Ascetics, a minority, consciously control themselves, whereas the vast majority of people rely on a God to force them to control themselves. These people are too weak to dominate themselves *knowingly*, without fear and with pride; in order to repress their own passions (which they are frightened by), they require the stimulus of an omnipotent authority who has the power to punish them for eternity. Hence their self-domination is based on self-hatred, self-delusion, and fear. This theory, however, as appealing as it may be to atheists, is not entirely correct. This paper

will argue that a true account of religion must be based on a recognition of the intrinsic characteristics of consciousness; it can then, perhaps, be supplemented with considerations like the foregoing.

The reason we have to examine the role of consciousness in beliefs about God is that consciousness (or rather, ‘self-consciousness’) is the essence of humanity; it is the ‘self’, about which philosophers have argued for centuries. It is, indeed, what primarily distinguishes people from animals. Hence a digression into the phenomenology of consciousness is necessary in order to understand the true basis of religion.

First we must recognize that time is inherently a subjective phenomenon. It does not exist objectively, independently of humans, as something we encounter upon coming into the world. Many considerations establish this: for example, Einstein’s general theory of relativity. Time, Einstein showed, is not linear; it is curved. This suggests that in a world without humans (or sentient beings) there is actually no such thing as time [as we perceive it], just as there is probably no space in the way we perceive it. Our perceptions impose a form on the environment. When theoretical necessities (like relativity and quantum mechanics) come into conflict with the way we interpret the world, it becomes apparent that the ‘thing in itself’ must be radically different from our preconceived ideas. In any case, there is another fact that demonstrates the unreality of time: during sleep, time ceases to exist. It is possible, of course, to retort that it merely ceases to exist *for us*—that we are simply unaware of it, that objectively it does exist—but this objection is non-falsifiable and hence meaningless. The only world we know is the one we are conscious of; it is wrong to extrapolate from this world that our perceptions of it are just as true in a world we are *unconscious* of. No doubt there is time and space and perceptions *for other people* when we are unconscious, but this does not imply that ‘objectively’ there is time. Objectively there is *something*, probably, but it is impossible to know what this ‘something’ is. Moreover, it is absurd, in light of Einstein’s discoveries, to think that this ‘something’ is the linear time we are aware of.

The immediate present moment is the only aspect of time that has ever existed. The past, for example, has never existed except in our imaginations, and the future never ‘exists’ either. Hence the present (the moment) is eternal, even though it must also be defined as infinitesimal if we have in mind the common linear view of time. This implies that, inasmuch as time exists, it is always and only the moment.

If the moment does not exist independently of consciousness, it must be posited by this consciousness. But does consciousness exist ‘behind’ the moment, as it were? If the present moment is continually arising into and passing out of existence, such that the aggregate is essentially one *perpetual* moment, clearly consciousness must itself arise and pass away with the moment. After all, it is not outside of time. This inseparability of time and consciousness yields a further insight: the two are not only inseparable, but identical. Taken in abstraction they are never seen as the same thing, but this is because memory—which is itself only an abstraction—necessitates that we *fabricate* the concept of linear time. We abstract from the moment when we define time, even though the moment is the only part of time that really exists. Indeed, even when people define the *moment* they confuse themselves by presupposing the linearity of time, which (as we have argued) is an artificial but necessary device invented by consciousness to make sense of existence. True definitions must be phenomenological when esoteric items like time are being defined, and in order to be phenomenological they must take account only of what is present in the *moment*—which typical definitions in dictionaries don’t.

There remains a hitch in our argument: how can there be such a thing as memory if time is not in some way linear? [...]

There is a dialectical contradiction between the perpetual and the fleeting character of the moment. Unfortunately, this contradiction is never resolved. Its product is what existentialists have called “ontological lack”. This is what necessitates the ever-present but often unnoticed¹ sense of

¹ Because it’s subtle and we’ve gotten used to it.

frustration in life. There are, of course, *many* sources of frustration in life, but underneath them all is this ontological lack, this contradiction between the permanence and the transience (or nothingness) of consciousness.¹

Nearly all religions have as their ideal a timeless state of being. In Buddhism, for example, it is nirvana; in Christianity it is God and Heaven. This harmony between the ideal of timelessness and the source of “ontological lack” as time is hardly a coincidence: it suggests that the need for religion arises from the contradiction between eternity and the moment. The religious look to their ideals as ways to escape from this contradiction.

Nietzsche’s explanation of religion as the result of the will to power is therefore wrong or inadequate. It ignores the importance of the intrinsic features of consciousness in providing an impetus toward religion. Perhaps Nietzsche would retort that he could simply rephrase his theory to state that people want to attain *power over consciousness* (and time) itself, so they postulate God. However, this too seems inadequate, in that it is, again, non-falsifiable. A theory which relies on the sentence “But they just want to attain power over it” as a response to any objection is a theory that says nothing. Nevertheless, since there are differences between all religions, the hypothesis of the will to power can be used to account for dissimilarities. Thus, it is quite possible that the introduction to this paper (which is a summary of Nietzsche’s views) refines and enriches our own theory of religion by forcing us to recognize that there are *many* reasons for the importance of religion in people’s lives.

It petered out in the end.

May 12

Comps have started, yippee. I wrote two papers yesterday; tomorrow I’ll have to write two more. And so on for the next week.

I wasted this year. I’m the biggest ass on the face of our wonderful planet. I made so few friends I might as well have lived in a vacuum. Today I asked a girl in CSS if I’m seen as aloof; she said yes. I’m aloof! The very thought is noxious, absolutely contrary to who I really am. Anyhow, this summer and next year will be a fresh start.

May 14

Last night was the first all-nighter of my life. At 5:30 a small group of us walked to Foss Hill and watched the sunrise and read poetry. I read Keats’ “Ode on a Grecian Urn”.

What’s the relation between consciousness and self-consciousness? How similar are they? Are the higher animals conscious in much the same way we are when we’re not explicitly self-conscious?

I haven’t nearly finished reading *Das Kapital* yet. I’ll finish the first volume in the summer.

May 19

Notes from the Underground, which I’ve finished, is a depressing story. But it’s high art. –But it’s so depressing! And it’s so true! We’re cowards or simpletons if we don’t confront its truth. That’s why it seems as though life can be ‘affirmed’ only in ignorance.

Maybe human nature could, in a sense, change under communism. Maybe it wouldn’t be *necessary*

¹ To the journal-reader: all these statements are grossly oversimplified. But you can see that I’ve supplemented last summer’s analyses with reasons for the ‘lack’ necessary in self-consciousness.

to confront these qualities of people, for they would cease to exist. On the other hand, it is by such a confrontation that we can (perhaps) achieve greatness.

Why do we want to achieve greatness? Because of vanity. Why do we want to probe so deeply into our own psyches? Because of...the compulsion toward greatness? And thus because of vanity?

Does vanity, or simply the need for self-respect, govern my life? If so, what's the harm in that? It does, however, disappoint me. Why? Because it diminishes my self-respect! Why should it do this? Why should vanity or self-love be seen as a contemptible motive? Because its satisfaction is not determined by a person's intrinsic worth? What is one's intrinsic worth? [...] So we arrive at where we started: vanity or self-flattery governs our lives.

It's frustrating to ponder the psyche.

May 22

I'm happy. This year ended on a wonderful note. In spite of comps, these last few weeks have probably been the most enjoyable all year.

I had my oral examination today. The prof told me my history paper was marvelous, one of the "better ones I've read over the years". Good. I spent a long time writing it.

Tomorrow I'm going home. On June 4th I'm going to Germany. I won't have my computer with me for the summer or the first semester of next year, so I'll have to keep a 'written' journal.

June 3

Guten Tag. On the morrow I depart for Germany. *Ich bin gespannt auf meine Reise*. To prepare for my sight-seeing activities I read a book entitled *The Renaissance: Six Essays*. Each essay describes a particular aspect of it: economics, politics, art, religion, etc. I'll read similar books in Germany.

I also read *Macbeth* and I've started Mill's *System of Logic*. I have yet to finish *Philosophical Investigations*.

[...]

I'm so intellectual I don't know who I am.

June 4

I'm somewhere over the Atlantic Ocean. At last! Freedom! The next few months will be the adventure of a lifetime.

When I read Berkeley several months ago I made the following notes:

"Ideas are images in the mind. Abstract ideas can't exist. We can abstract from determinate qualities, but the idea that remains must still be of a particular object. Words signify any particular thing in a certain 'category' (e.g. book), but they are not ideas. - Names do not always stand for ideas. - Unperceived qualities can't exist. - Will, soul, spirit are not ideas. We can't understand or picture them in the way we do everything else. (Schopenhauer) - Ideas have no causal power; only Spirit (will) does."

Oscar Wilde once said, "I bring my journal with me when I travel. One should always have something outrageous to read on the train." It's good advice. Hence I intend to make this diary even more outrageous than it's been. No doubt its provocativeness will be mitigated by its self-consciousness, but one can't help that. In any case, all I ever do in this journal is try on 'masks'. None of them is the 'real' me, for I don't know who the real me is. Maybe there *isn't* a real me. -Actually, that seems unlikely. My objective self—indeed, my ego *in toto*—*must* have certain definite characteristics. It *does*. The difficulty is that one never *feels* these characteristics; i.e., they aren't 'compelling' in the way that emotions are. We know when

we're angry (usually), but it's harder to know if we're angry people overall. This is because thoughts (as opposed to emotions) are not *urgent*, and they are much the most common state of being. We can think or write *anything*, whether it be grotesque or sublime, and yet these thoughts may be completely foreign to the overall nature of our objective self. The reason for *this* rests on my distinction between the objective self and the I. The latter, you recall, has no qualities except negative ones (and freedom). It is the absence of anything substantive: thus it can, in a sense, be whatever it wants. That is, it can have whatever *thoughts* it wants, for thoughts too are not substantial in the way feelings are. (Feelings belong more to the objective self.)

Since I (seem to) have fewer emotions than most people, I'm less in touch with the 'concrete' part of myself. Thus I'm more unsure of my identity than others are.

I'm too tired to pursue these thoughts.

June 6

I arrived in Freiburg yesterday. The 'dorm' in which I and all the other students are living is excellent: my room is spacious and has its own bathroom. Even a refrigerator!

First class today. They stuck me in Grundstufe 1, but I'm going to change that: it's far too elementary to be of any use.

Believe it or not, there's a picture of Clara Schumann on the hundred-mark bill. On the back is a picture of a piano.

June 7

I met a twenty-year-old Indian girl, whose first language is English. We became friends instantly: our personalities are incredibly compatible. We went on a two-hour-long tour of Freiburg together; by the evening we had become *close* friends (I think)! We've already agreed to take a trip to Berlin. This girl, whose name I forget, is exceedingly intelligent and has a near-perfect personality. She's even cute/adorable! Her only flaw is her body's lack of curves. There's a distinct possibility I'll fall in love with her one day. (She laughed at everything I said! How can I *not* fall in love with her?!)

June 12

I'm depressed. I'll tell you why later.

I'm ecstatic! I'll tell you why now: I asked Sangeetha (the Indian) to dinner tomorrow night, and she accepted.

I should also tell you that yesterday and today we spent the entire afternoon together. We toured Freiburg and climbed a hill whose summit serves as a place from which to view the vista of the countryside. The two of us sat together for hours, isolated from humanity, relishing our existence. We spent most of the evening discussing romance. I had an urge to kiss her more than once.

Today it became apparent she's interested in me romantically. She dropped many hints—"Are you a sloppy kisser?" "Are you a good hugger?" "What's the weirdest place you'd like to have sex?"—but I was too much of a coward to make any moves. As we walked home I felt abject, like a failure.

A few minutes ago she came to my room—and *finally* I got the nerve to ask her to dinner. When she accepted she *must* have known I had romantic designs. [...]

The more I see of this girl, the more I like her. Her personality is so exquisite that it overcompensates for whatever slight flaws I see in her looks. (Actually, she's beautiful.)

I feel reborn! Haven't felt this happy for a long time. At last a desirable girl really likes me! I don't

know *why* she does—there are many better-looking, ‘bigger’, wittier guys out there—but I’m not about to dissuade her.

June 13

I think I’m cursed. Sangeetha is already seeing someone. I’d known this before, but she had complained about him so much that I’d assumed he was out of the picture. Actually, another, possibly more important, factor in her decision was that our relationship would last only two months. She’s told me multiple times she’s not the kind of person who has flings. She never has and never will. Indeed, she told me she hasn’t even had sex with her boyfriend after more than a year! She’s waiting for a “really special” person.

Anyway—to start from the beginning—I finally asked her today to clarify our relationship. Told her I’d intended tonight’s dinner to be a “date”. Her answer was that she too was confused, but that because of the abovementioned reasons it couldn’t be more than a friendship. I made some observations to the contrary, but they didn’t change her mind. She did, however, in complete sincerity say she’d date me “in a shot” under better circumstances. Also said I’d probably find another girl in this course....and I told her not to try to comfort me, to which her response was that she was trying to comfort herself.

For half an hour we thus talked or sat in silence on the riverbank. I spent most of the time fighting back tears. I wanted to embrace her and bawl, but I do have pride.

Dinner was at a lovely restaurant outside in a platz, under a sympathetic old tree. She told me she was afraid she was making the mistake of her life.

Several hours ago (it’s 1:00 a.m.) she came to my room. We talked about philosophy—mysticism, Marxism, science—as well as ‘light’ topics. ’Twas thoroughly enjoyable.

Thus I’m quite happy to remain her friend. I’m thrilled, actually. Supposedly she doesn’t have as much in common with anyone as she does with me, and she’s never made a friend so quickly. Neither have I.

I don’t even feel *incredibly* bad about this romantic failure, for it was due to circumstances beyond my control. I acted as any intelligent adult would have, and so did she.

Sangeetha is the only person I’ve known whom I like *exactly* the way she is.

June 14

I told her that last statement today, after she’d regaled me with complaints about her boyfriend. –I wish I had the patience to record our conversations: they’re lively and intimate.

They’ve stimulated me into fascination with Indian mysticism. Never again will I ignore it. It may be a truer way of interpreting the world than through rationality and logic. There’s no reason everything must be susceptible to rational explanation; there’s every reason that parts of reality are *mystical*. [?? You’re a confused idiot.] Yet I haven’t the faintest idea what the relation between the two should be.

Apparently there’s a temple in India (in Pune) where people can have their futures and pasts read to them off of (copies of) leaves that an ancient sage wrote on. According to Sangeetha, the writings on these leaves are always correct; they’ve been tested thousands of times. She has accompanied several of her friends when they visited the place and listened to the readings given them. So she knows what she’s talking about.

As Sangeetha exposes me to ‘non-rational’ philosophies, I expose her to rational ones: Marxism, Schopenhauer, my own thoughts, etc. Sometimes we argue for hours about the respective virtues and vices of rationalism and irrationalism. Kant versus mysticism. West meets East. Once again, I’m expanding my horizons.

Our friendship is probably the best I’ll ever have. There’s not a thing I’d change about it. If I were

younger and more naïve I'd write for pages and pages about it. But I'm tired of writing and tired of thinking. Just want to be around Sangeetha.

June 15

I'm lying in bed next to Sangeetha. We're really exhausted and sweaty and hot. —But it's not what you think. We spent most of the day traveling to Berlin and then walked several miles to the hotel. (All the hostels were full.) We've decided to travel in France and Italy together after the course ends.

I'm reading *Tess of the D'Urbervilles*.

June 18

These past few days have been fun. Sangeetha and I have 'passionately' kissed many times. We slept in the same bed in a hotel for two nights, during which she fell asleep in my arms. Berlin wasn't wonderful, but since we were together we enjoyed it. She's breaking up with her boyfriend.

I could describe to you so many deliciously romantic things we did—and are doing—but I don't have the time or energy. We didn't make love, though, nor do we plan to (she wants to have sex with no one but her husband).

The first night in the hotel I expected her to have no desire to do anything with me, so I quickly started to fall asleep. But suddenly she broached the topic of sex. My fatigue miraculously vanished. We talked awhile, but eventually she fell asleep. Of course, I was now wide awake. So I was pleased when she woke up a half-hour later. We whispered to each other, lying in a rich silence, until at last I got the nerve to say that if I were more impulsive I would have kissed her by now. At that point she asked if she could hug me; I answered in the affirmative, so for the rest of the night we lay in each other's arms. After an hour or more she gently kissed me—and was momentarily mortified at the thought that she'd cheated on her boyfriend—and then our kisses became passionate. At 3:30 she fell asleep on my chest; I lay awake until after 6:00.

The second night was similar to the first. Since we'd previously decided (that day) to be friends rather than lovers (which decision I'd spent a long time arguing against), we didn't kiss much the second night. But she lost her self-control the next day and today. Especially today. We were practically lovers tonight.

Berlin, incidentally, wasn't worth the trip. (Actually it was, but not on account of the city's merits.) We went to the Pergamon Museum, which was interesting, and the Nikolaikirche (I think), which was stupendously beautiful, but the rest of Berlin wasn't much to brag about. Potsdam was very pretty, but since it rained we were forced to tour the city in a bus. —No matter. I was happier hugging and kissing Sangeetha than I would have been walking around anyway.

June 19

Irving Howe calls Hardy's Tess "one of the greatest triumphs of civilization: a natural girl". Sentimental fatuity!

Sangeetha still wants us to be just friends. She doesn't want to have a broken heart when we separate in August. Thinks she'll be miserable and won't 'get over me' for years. But I really love kissing her—and she likes kissing me even more, I think. So I kiss her even against her gentle protests.

Do I feel remorse for this selfishness? No, though I probably should. Will I feel bad if I'm the cause of her unhappiness? Probably not unless I think about it deeply. I guess most of the time I just don't have

spontaneous upwelling empathy for people. [...]

These ‘feelings’ are only on an intellectual level. I.e., they exist in my imagination. They don’t give me the kind of satisfaction I’d always hoped they would.

I don’t think I’ll ever fall in love with Sangeetha, much as I’d like to. Maybe it’s not part of my personality to fall in love. Or, more likely, I can’t love anyone but a *gorgeous* girl.

So if I can’t love her why am I pursuing her? Possibly because I’d like to be the most important person in a girl’s life, purely for the intellectual pleasure of it. I think I could tolerate being only her friend, which is what she wants (contrary to her emotions). So why don’t I? It would be the chivalrous, selfless thing to do. I’d feel good about myself. –But I wouldn’t feel good *enough*. –But I’ll try to do it anyway. To an extent, that is.

June 22

Sangeetha is *achingly beautiful* when she wears a bit of make-up.

Before I’d experienced love, I thought it would be an unearthly feeling. Now that I’m half in love, I’ve become disillusioned with it. When I finally achieve *true* love....will these two extremes be reconciled?

You’d be charmed if you saw how Sangeetha and I act together. We’re as affectionate as Helen and Paris.

June 24

Last night we attended a Mozart-Mendelssohn-Schubert-Webern concert. String quartets. I thought I’d hate Webern, but there were many *breath-taking* passages in the piece (Langsamer Satz für Streichquartett 1905). Sangeetha enjoyed Mozart the most, as did I.

(We were actually supposed to go to a different concert, one that included Chopin and Rachmaninoff, but somebody accidentally gave us directions to the other instead!)

I read a few pages of Sangeetha’s diary today, with her consent: it’s obvious she ‘cherishes’ me. Apparently it will hit her “like a ton of bricks” when we say goodbye in August. I too will be very sad, but not as much.

This weekend I read *The Middle East in the Twentieth Century*, by Martin Sicker. It’s a political history of the region.

June 26

Sangeetha is still very confused about our relationship. It’s understandable: yesterday, for example, we kissed for a long time but didn’t go beyond that. We probably never will. She feels guilty about not yet having broken up with her boyfriend, though I doubt he’s worth her guilt: she told him she’d gone to Berlin with me and his response was, “Who the fuck is Chris?” Nice guy.

[...]

Thomas Hardy’s sentimentalism irritates me. I too am often sentimental, but such moods I usually transcend quickly. I would never write a *novel* the foundation of which was sentimentality!

June 27

Haven’t finished *Tess* yet, but I’m reading Rondo Cameron’s *Concise Economic History of the World*. Not an excellent book, but it’s a good preview to my future detailed studies of economic history.

June 28

Our relationship, of course, hasn't changed at all. Except that daily we grow more attached. Occasionally I feel a surge of deep love. In those moments I experience a tremendous urge for physical and spiritual union.

June 29

I'm reading the Koran. From the 80 pages I've read, it's evident that the book is nearly worthless. It's repetitive, contradictory, boring, intellectually sterile, spiteful, dogmatic, confused, petty, unoriginal, confrontational, malicious, nonsensical, and dishonest. I.e., it's too religious.

There's an obvious tension in the Koran between free will and the omnipotence of God. (Of course, the whole thing is one vast absurdity punctuated by thousands of little confusions.) In my opinion, in view of its myriad philosophical dead-ends, this book should have no more than a historical interest.

Incidentally, why should God care so much about convincing people to believe in him? It's as if the Heart of Being has an inferiority complex.

June 30

I admit that it reaches admirable heights in some chapters (such as "The Merciful"), but on the whole it's too vindictive and empty to appeal to me.

However, it provides insight into Mohammed's psyche—and that of any fanatical Muslim. Hatred and malice, as well as a perverse naïveté, radiate from its pages. This was indeed appropriate in the 7th century, but the Koran has no place in the modern world.

Sangeetha is in Amsterdam this weekend, so I'm alone.

July 1

I should remark that the Koran contains the literary merits of, among others, vigorous prose-poetry and striking images. It's certainly a powerful voice from the past.

I miss Sangeetha. She's my only real friend in Germany.

July 4

Yesterday she told me something startling: in December she'd had a dream in which she saw a boy who she felt would have romantic importance in her life—and the boy was indistinguishable from me! She'd woken up with the uncanny feeling that she would spend her life with him. The vividness of the dream has allowed her to remember his appearance: he had red hair, facial features similar to mine, a similar voice, and was an American. This was in fact the reason she'd introduced herself to me last month.

No doubt you think Sangeetha made this story up. But you're wrong. I read it in her journal. Besides, her eyes projected sincerity (and the eyes rarely lie). She'd really seen this person, and this person really, it seems, was me.

The difficulty is in understanding how such a phenomenon is possible. After all our conversations I've come to believe that the scientific, rationalistic tradition of the West is cracked in its foundation.

Mysticism has something to contribute to philosophy; I can no longer afford to neglect it.

July 5

I'm reading *A History of the Indian People*, by D.P. Singhal.

Sangeetha is angry with me: she thinks I'm interested only in sex. But the truth is, I couldn't care less whether I'm affectionate with her or not. I've simply gotten into the habit of kissing her all the time: it's not really a manifestation of love or even lust. Love is a sham, an illusion, a trick the mind plays on itself. I have no 'need' whatsoever to be affectionate with her. [...]

—Life lacks a heart. I'm only a reflection of its empty core.

July 6

I've screwed up royally. I'm an ass. Sangeetha's probably furious now.

Ironically, everything was going wonderfully until a few minutes ago. I bought her flowers today to atone for my mistakes last night. When I gave them to her she was flattered, but it took a good deal of discussion to convince her that her anger was based on misunderstandings: I genuinely do enjoy being with her, and not mainly because we 'make out'. I love talking to her, and I sometimes feel a spiritual/romantic love. For quite a while we discussed this and similar themes; at length she forgave the mild pushiness I'd displayed last night.

Later it foolishly occurred to me to read her a few sentences from yesterday's entry. (She had told me that last night she resolved, in a fit of anger—just as I had—not to be affectionate anymore, so I thought it would be funny to read to her the last three sentences of the entry.) After I'd read them she was amused—but she wanted me to read her the rest of the entry. This wasn't a good idea. So I refused. But the more I refused, the more she thought I was hiding something fundamental to the way I think about her. So I finally had to give in (though I didn't read the bit about the "manifestation of love")—and she took it harder than I'd expected. I explained how fickle my moods are, and that I hadn't meant what I'd written, but she didn't believe me. Said I shouldn't try to justify myself. And then she left.

So now I have to reconcile with her again. What a bummer! What's even worse is that her anger is, once again, based on a misunderstanding. You who have read my journal know it's a record of one 'mask' after another, but *she* doesn't know this.

Okay, I've fixed everything. I'm a smooth talker. (Ha! What a joke.) —But that doesn't mean that not everything I said was true! We had an intensely intimate conversation in which we 'bared our souls', and by the end I had reassured her of my proto-love. It was hard work, but now we're closer than ever.

July 7

Why has the lust for power been such an overwhelming force in history? What are the precise psychological reasons? What does it say about mankind?

July 8

I spent the night at Sangeetha's. Cuddled and kissed for hours. In the morning, as we woke up looking into each other's eyes, she said she loves me. Doesn't know how she'll be happy in India without me. She's quite sad.

This profession of love hasn't really sunk in. No girl has ever loved me. For years I've wanted someone to fall in love with me—but now that it's happened I don't feel glorious. One of the reasons is simply that I haven't yet reflected on the implications of Sangeetha's love, and another is that I don't entirely 'love' her, but this lack of emotional response is disillusioning nonetheless. It's further testimony that I don't usually experience emotions unless I *concentrate*.

[...]

I finished the book on India. Now I'm reading *The Formation of Muscovy: 1304-1613*, by Robert Crummey.

July 9

One day I'd like to write an orchestral transcription of Beethoven's Hammerklavier sonata. Nietzsche gave me the idea. The piece is begging for an orchestra. It could be a veritable symphony.

July 10

Sangeetha is frustrating. Because she thinks she'll be sad in September she refuses to acquiesce to a little pleasure now. She won't even 'make out', much less have sex. She won't give in to the moment! Her philosophy is that it's better not to experience life if doing so involves emotional pain. I'm tired of her weird insecurities. I'd like to find another girl here to 'have fun' with, but that would be insensitive and would probably confuse me emotionally.

July 11

I'm writing the transcription of the Hammerklavier. Bought a score of Beethoven's Ninth to learn how to write for an orchestra.

July 13

It would be easy for me to turn my life into a tragedy. If I simply embraced my own nothingness—carried it from the realm of metaphysics into reality—I would be forced from my "miserable ease" into painful introspection.

Sangeetha begged for two hours to read my journal. I adamantly refused. It would wreck everything. It might destroy our relationship. —But in the end I had to yield. I think some of the entries disillusioned her, but on the whole she took it rather well. *So far*, that is. Tomorrow she'll probably hate me.

I'm depressed. Sangeetha probably is too.

...I went to her room. She told me she's not obsessed with me, she doesn't give a shit about me, and I should leave. So I left.

And now I'm crying. She thinks I don't care about her, which is false. As a friend I genuinely desire her happiness. This desire isn't a powerful *feeling*, as it is in other people, but it exists. It's equivalent to my desire for my family's happiness.

It wasn't particularly kind of Sangeetha to say she doesn't give a shit about me. But since it was said in anger and I probably deserved it, I don't really think less of her for it. —Even so, it causes me to wonder if I care more about her than she does about me.

This life is cruel. No one can deny it. It's pointless, tragic and cruel. Maybe suicide is the answer

after all. If I were more selfish and weak I might leave this world. I'm tired of being alone. I'm tired of having to be arrogant to compensate for insecurities.

I care about people! I'm not a sociopath. At this moment I care more about Sangeetha than anyone else, even though she's devastated me.

I went up to her room again (several hours after the first time); she hurled at me one accusation after another. Finally she said, "The one person I really liked doesn't care a damn about me. That makes me feel good", and I left the room instantly. The moment I was outside her door I burst into tears—not because she'd hurt my feelings but because she misunderstands me and there's nothing I can do about it. She'll just think I'm lying.

I desperately need her as a friend. I don't think even Rebecca knows me as well as she does. But it's imperative that I correct her misconceptions.

She thinks I got "kicks" out of being important in her life. Yet at this moment, in the 'depths of sorrow', I think I love her. Is such a reaction likely from one who "got kicks out of being important" to her?

Why do I think I love her? Because I care more about her than anyone else, because I feel 'complete' when I'm around her, because her moods are always reflected in mine, because I *need* her to think well of me, because I *need* her in my life.

Sometimes, I admit, I can be a hollow person. But I've never felt this way about anyone. For once I don't feel hollow.

Once again I went to her room. This time I cried the second I arrived. We hugged for a long time. [...]

She returned to her former wonderful self as soon as she saw that she'd hurt me. She told me that everything she'd said was only meant to hurt my feelings, that she loves me now more than before. I let her read what I'd written today: she doesn't think that my professed love will last, but it was good for her to read it anyway.

July 15

I'm reading *A History of the Modern Middle East* by William Cleveland. It's a more useful book than the other. Also *Ancient Greece*, by Donlan, Pomeroy, Burstein and Roberts.

July 20

The more I'm around Sangeetha, the more I think I love her. I can't imagine a happiness at once deeper and more secure than when I'm lying in her arms. At such moments—or perhaps when I'm kissing her nipples—I feel united with the universe.

My family came to Freiburg yesterday. (Unfortunately they missed—by thirty minutes—my performance of Liszt's *Liebstraum* No. 3 in the Goethe Institut's concert.) Sangeetha had dinner with us; Mom thought she was adorable. (Who wouldn't?) After several hours I was able to escape from them; immediately I ran to Sangeetha's room, where I spent the night. She gave me a lesson in salsa dancing, wearing her tight black pants, bouncing her bottom back and forth, giggling. God, I love her.

Today my family and I are going to Salzburg for the weekend.

I wish I could find a copy of Gibbon's *Decline and Fall of the Roman Empire*. I'm tired of reading introductory books by obscure authors.

July 23

The weekend went as well as could be expected. The car ride to Salzburg was hellacious (7 hours), but Saturday wasn't bad. We saw Mozart's house and walked around the marketplace; later we took a tour through a salt mine. In the night we had an informal concert in Susan's living room, Jay and I playing Chopin's A-flat étude together on Susan's two pianos.

On Sunday I took a train to Mannheim at 3:00, but I got onto the wrong connection to Freiburg. So I had to get off at the next station—having been given advice by friendly passengers—and wait for a train to Karlsruhe. This time I took the right one, but due to its delay I just barely made it to the connecting train to Freiburg. Asked a man if it was indeed going to Freiburg; he said yes. But he was wrong. So, having had my itinerary planned out *again* by a friendly passenger, I debarked at Heidelberg and waited till 3:30 a.m. for *another* train to Freiburg. By then I'd become rather impatient. But I arrived safely at 5:30.

Much of the weekend I spent thinking about Sangeetha. The only reason my delays were frustrating is that I was frantic to see her.

Today (Monday) I spent a lot of time with her and thus felt complete again. She took a nap as I sat at her desk reading, the soft lamplight angled away from the bed so as not to disturb her. When she awoke I was in the same position, reading; she smiled groggily and remarked how pleasant it was to wake up and see me watching over her. "It makes me feel protected. Warm and protected." I'm still in her room and might sleep here. I'm so happy with her!

July 25

Finally finished *Ancient Greece*.

I still can't understand why Sangeetha loves me. —Actually, I'm almost convinced she doesn't. Despite her protestations of love, she seems to take me for granted. I, on the other hand, *never* take her for granted. I never ignore her, I never treat her with an iota of disrespect, I constantly indicate that she means the world to me....

As an example of the discrepancy between her words and her acts I'll describe what happened tonight. At 8:00 Sangeetha, I, and a Brit named Rufus went to a bar (with others) for a few hours. Most of the time she ignored me. I was happy sitting next to her, gently rubbing her back once in a while; but she told me to stop because it embarrassed her. So I sat there feeling rejected and dejected. We all left at 10:30. We had planned to go dancing, but since we couldn't find a "discothek" we ended up walking around town for an hour. Again, she ignored me and showered attention on Rufus (who, by the way, tried to kiss her several nights ago and convince her to go out with him). Gradually she forgot my existence. Whenever I tried to talk to her she answered in near monosyllables and returned to Rufus. The experience was painful. Ultimately I got fed up and returned home.

What's even worse is that Sangeetha already knows I'm not fully comfortable about her relationship with Rufus, for he's handsome, smart, funny, interested in her, 'sexy' (according to her), etc. We've had light-hearted conversations about this, so she's well aware she's not the only one with insecurities. —Yet after all our conversations she's capable of being so insensitive! Does she lack a shred of common sense? [...]

I may be making a big deal out of nothing. But if I were aware only of Sangeetha's actions and not her words, I'd think she sees me as some kind of a love-toy to play with for a time and then discard. After all, how can anyone in love act the way she sometimes does? From my perspective it's impossible. So either she's lying to herself and to me or the kind of love she's able to feel is less intense (or 'devoted') than the kind I am.

All in all, I'm tired of dishonest relationships. I wish I could find a soulmate. For a time I thought Sangeetha could be this person, but I guess I was wrong.

—This is my definition of *homo sapiens*: the animal that can't help but be dishonest to itself and its fellows.—

July 26

Sangeetha's insensitive behavior last night wasn't just my imagination. We talked about it today. Apparently her friends in India had told her she should end her romance with me before we travel around Europe together. Why? I have no idea. She told me she's being inconsiderate to her boyfriend by having a "physical" relationship with me, so she wants to stop. [...]

Sangeetha predicts we'll drift apart over the two years before she comes to America. Because of this vague prediction she feels justified in crushing my feelings and forcing me to suppress my love. She says our relationship is pointless and going nowhere. Because of this she thinks it makes sense to end it—prematurely—on a sour note. I had no idea she was capable of being so unreasonable and inconsiderate.

Moreover, if she still loves me (which she says she does) how does she expect to 'turn it off' as we're constantly around one another for two weeks?

Today I told her the only reason I'd gone to the bar last night was to be around her. So what did she say? "I've never done anything only to be around you." Boy, that made me feel great. When I pointed out the effect her behavior last night had had on me, she first accused me of acting like a jealous boyfriend and then admitted that she "hadn't been thinking". I find it mind-boggling that anyone can be so insensitive. This whole experience has left such a bitter taste in my mouth that I'm not even *really* looking forward to the next two weeks. She handled it in the worst possible way. She didn't tell me about her decision until I'd squeezed it out of her; she didn't reflect on how her actions would affect me; she got defensive even as I was *crying*; her attempts to console me have been half-hearted; and her hasty 'decision' itself is asinine. She seems to care more about her oblivious former boyfriend than about the boy she loves and who loves her. I'm quite disillusioned. Sangeetha seems to have a weak, unempathetic character.

On the other hand, I'm too good-natured to hold a grudge against her. She probably feels repentant. Undoubtedly she doesn't appreciate me, but I appreciate her good qualities and can try to ignore her bad ones.

We've talked about everything and have sorted it out. First she read my journal; then she explained what had been going through her head in her episodes of insensitivity. Apparently she'd become afraid of how dependent she was on me. I was the center of her life. Instead of discussing her concerns—which she's not used to because her boyfriend never did—she simply 'shut herself off' and tried not to love me. This resulted in her callous behavior.

Anyway, our physical relationship is probably over. But at least we're back on good terms. I entirely forgive her; it's 'water under the bridge'. She is who she is, and it's admirable that she's trying to change herself by discussing her concerns rather than ignoring them.

July 28

I'm sitting in front of the Louvre right now. It's intriguing that mere humans were able to build this palace. It's disappointing, though, that such a monument is conspicuously out of place in the modern world. It doesn't belong. It's evocative of the Sun King's era and the unbounded confidence in historical progress and national greatness that characterized it. The Louvre reminds me both of humanity's potential and of its inevitable decadence. —If only we could experience a classicism without its attendant misery of the masses!

I'm in the Islamic section of the museum. The ivory sculptures and carvings from the Middle Ages are remarkable in their vivid depiction of Near Eastern life. A 7- by 3-inch fragment of a relief shows a warrior fighting an animal; in another fragment, a lion devours its prey as a minstrel sings; in yet another, men dance and drink wine, celebrating their existence and momentarily forgetting God's wrath. —What a

majestic, naïve age it must have been.

The ancient Mesopotamian art is equally striking. Indeed, more so, for it has immortalized the birth pangs of civilization. It signifies man's triumph over nature, just as the remarkable statue "Hercule combattant Acheloüs, métamorphosé en serpent"—which was carved in the early 1800s—celebrates human beauty, power and form as contrasted with the savagery of untamed nature. At the same time, the statue "Roland furieux", built in the mid-1800s, symbolizes man's constraint in the macrocosm, his entrapment, his irredeemable frustration. These two sides of man are in tension with each other and thus compel him to reach ever more exalted manifestations of his power.

—However, such dichotomies sound suspiciously Goethean, i.e. lofty and unscientific.

Paintings and sculptures have never been able to affect me (intellectually or emotionally) as strongly as music, literature, philosophy, science, history, psychology/sociology and religion [Buddhism] have. I ought to have read more books on art before I came to the Louvre. As it is, art interests me primarily as a muddled reflection of society.

Because Sangeetha isn't here I feel too listless to do anything. I'm apathetic and alone. I guess I'll read *Das Kapital* (of which I still haven't finished half). But I don't have the energy to do that either! I'm obsessed with Sangeetha! Nothing seems to matter without her here. Normally I'd write about philosophy in my spare time, but since I'm in love¹ philosophy seems dry and contentless. I can't enjoy myself without Sangeetha; I'm only a half-self. *I* give my life *form*, *she* gives it *content*. I miss sleeping at her side, holding her and being held in her arms, brushing her lips against mine. I miss laughing with her.

There are many 'deeper' thoughts I should pursue—such as my partial dependence on the memory of Goethe in determining how to mold myself and which experiences to seek out—but the less productive activity of kissing Sangeetha is what occupies my mind. I could reflect on mysticism, ethics or the labor theory of value, but instead I mull over my loneliness. Strangely, however—although I'm frantic to see my beloved—my solitude is more comforting than the kind I'm used to.

July 29

I don't know what to do today. I'm devoid of energy: can't stop thinking about the joy Sangeetha brings into my life and the unfortunate fact that I can't trust her anymore.

Anyway, I should eat breakfast.

A mother nursing her child is a touching sight. It's a communion between two bodies of the same substance, a special kind of sex. While the sexual act has often been associated with pain and death, the act of nursing is purely life-giving. It is an innocent, intimate affirmation of existence.

What if Sangeetha doesn't come tomorrow? What if she never comes? We have no way of getting in touch with each other. Theoretically I might never hear from her again.

July 30

I'm starting to panic. When I confirmed Sangeetha's reservation, the person at the desk couldn't find it. What if Sangeetha can't find her way here? What if she accidentally told me the address of the wrong hostel? What if she decides it would be emotionally easier for her not to accompany me on this trip? What if I never see her again?! I don't have a way to get in touch with her.

....It's almost 11:00 a.m. I'm sick with fear that she won't come. Seeing her walk through the doorway would be too grand an experience to happen to *me*.

¹ I must be, or nearly so.

....It's 12:00. If I weren't listening to Mozart I'd be pacing the room in anxiety. Instead, I'm staring out the doorway, nervously praying each second that she'll suddenly appear as if by magic in my line of vision.

....It's 1:00. I feel worried enough to cry; hence, I'm crying. I'm imagining myself traveling through Europe without Sangeetha. In spite of her flaws, I love her without reserve. Life is as a shell without her. I can understand why some lovers commit suicide after losing their beloved.

August 2

Sangi and I are in Barcelona. We left Paris yesterday, having visited Versailles, Notre Dame, l'Arc de Triomphe, the Louvre, the Musée d'Orsay, the Eiffel Tower, the Tuileries, the Catacombes and other sites. We also took a trip down the Seine at night.

As you probably remember, my last entry ended on a mildly despondent note. Fortunately for my sanity, Sangeetha arrived soon after I'd finished writing. She'd gotten lost.

August 5

I ought to write more often, but I don't have time. The two of us are in Rome today and tomorrow: we've seen the Colosseum, the Forum, the Pantheon and the Vittorio Emmanuele monument. The architecture of the latter was startlingly palatial for the late nineteenth century. It could have been built in classical Rome.

August 8

In the past few days we've been to Pisa and Florence; now we're in Venice. Pisa is a charming town with some striking architecture—notably, of course, the leaning tower. This building is old enough to have increased its angle of incline by less than one cm each year and yet today to be four or five meters off the perpendicular. Reflecting on it, I was struck that history provides so few examples of similar occurrences. In antiquity, how could architects have known whether the soil they built on was capable of sustaining their projects? Maybe they got lucky most of the time.¹

We stayed in Pisa for one night. On the morning of the next day we took a train to Florence. After finding a hostel we wandered through a flea market—in which I ate one bite of a cow's-stomach-sandwich and threw the rest away—and got lost in several narrow alleys, until finally we found the Duomo. This cathedral was staggering in its luminescence. I didn't go inside, but the exterior consisted of such a dazzling array of dancing tints of light that I felt as if the interior could only be a disappointment. I've forgotten the exact appearance of the main structure of the monument; instead, there remains indelibly inscribed in my mind an impression of brilliant greens, yellows, reds and whites harmoniously commingled in a perfect totality of sculpted reliefs and Corinthian columns. Few other medieval buildings can compare with it as a simple glorification of life and humanity (sublimated into worship of God).

Our next destination was Michelangelo's *David*. Everything else in the Galleria dell' Accademia is a mere prelude to that masterpiece. I was completely unprepared for its size (twice a man's height), but the real marvel was its fidelity to life. The veins on David's hands were realistic enough to have been modeled from Michelangelo's own; the muscles of the knees contained the same twisted sinews that my own do when I stand; the face radiated that boyish confidence and equanimity which is evident in certain sculptures of Alexander the Great; the bodily proportions were seemingly *perfect*. Were there, indeed, any flaws in the statue? I could discern none.

¹ [Yes, that was clearly the reason. Luck.]

I was moved as I pondered the immortality of art. Four centuries ago Michelangelo carved his masterpiece; to this day it survives. It has remained a beacon of hope and stability through wars, inquisitions and plagues. David's expression of 'boyish triumph' hasn't been altered an iota—even as millions of Jews have been slaughtered, two thirty-year wars have devastated the continent, Italy has declined as a power, the British empire has risen and fallen, feudalism has succumbed to capitalism, one hundred thousand Japanese have evaporated in a flash of light.... Humankind doesn't cease to strive, and all the while there remains the *David*.

Of course, there also remains St. Peter's Basilica. This cathedral, the largest in the world, needs no introduction and can suffer no description. Seeing it was the climax of my trip to Italy. I hadn't imagined that such a structure existed in the world, for even Notre Dame pales in comparison. (Think of all the creative energy that has been devoted to worshipping God!) The Basilica is one of the wonders of the world; in its beauty it rivals the most exquisite creations of nature. I who haven't been educated in art and architecture am unable to provide detailed commentary, but I know enough to recognize beauty when I see it.

As I write these words I'm standing on a balcony overlooking a canal and a long line of gondolas. Every fifth gondola carries an accordion-player and a singer; as they pass, I'm regaled with their tunes. This is quintessential Venice. Time has come to a halt in this place;—or, at the very least, this place recognizes none of the trappings of time. It is the spirit of Romance made real.¹ Venice lacks the majesty of Rome, perhaps, but it's more consistently seductive. Its narrow alleyways in which one soon gets lost have a rather more tranquil air than the congested backways and byways of the typical city. Indeed, the absence of cars is one of Venice's greatest strengths. Were it not for the tourists I'd want to spend my life here.

Tonight I'm sleeping on a bench. After a day of searching for accommodations in the sweltering heat, Sangeetha and I finally met tourists who knew of a single vacancy in a nunnery. That's where Sangeetha is sleeping. There was no room for me. But it doesn't matter: I'm satisfied with life's bare necessities.

Venezia, city on the sea,
Embodiment of the muse 'f Tranquillity
- In our society an anomaly -
You cannot but eternally fascinate me!

August 9

Last night wasn't especially fun. I slept about two hours.

This morning Sangeetha and I took a boat to the San Marco piazza, after which we split up because she was mad at me. The day started off well: we had breakfast, walked through streets together and had a great time. The previous night had ended on an even better note: as we cuddled on the bank of a canal, Sangeetha expressed her profound regret at leaving me in two days—in tones bordering on tearful. But today, as we entered the boat taking us across the canal, I neglected to buy a \$3 ticket for the ride. Sangeetha bought one after the boat had already begun its trip, so I jokingly called her a "goody-goody". She retorted that not buying one was tantamount to stealing, so I good-humoredly said that at least I wasn't stealing from anyone in particular (rather a wealthy business that could afford not to gain three dollars). Our 'argument' gradually escalated. Eventually she professed—still smiling—to like me less because I hadn't paid for a ticket, so I countered that my action wasn't nearly as bad as something her boyfriend had once done, viz. bribe university officials to give him a good grade on a major exam he had failed. But she disagreed with me! I pressed her, but she continued to disagree! Even worse, she *insisted* she liked me less now. Still

¹ That may be an exaggeration.

smiling, she actually insinuated that she didn't like me at all. I didn't know what to make of her sudden change of mood, so I alternately accused her of trying to be funny and being mean. The upshot of the conversation was that I became convinced of her sincerity and then half-jokingly accused her of self-complacency. That, unfortunately, was not a diplomatic thing to do. She stopped talking to me, a sure sign her mood had changed for the worse. Well-acquainted with her peculiar alterations of temperament, I knew the best policy was to be silent myself. Hence I followed her around the Piazza and through winding streets, sometimes not saying a word and sometimes acting as if nothing had happened. At length I grew tired of this game, so I asked her if she wanted to meet me sometime later in the day. She said yes: at 4:00. It was 10:30 at the time!

For a while I was angry and confused, but now that that's subsided I can examine her actions objectively. Clearly she perceives me as self-complacent and arrogant. This perception has been at the heart of all her severe mood-swings around me. Assuming for the moment that it's true, why does it so exasperate her? I can vouch that an inability to make a person care about his faults is quite frustrating (though I don't know exactly why), but she's mistaken if she thinks I don't care about my own. —Be that as it may, she sees me as self-complacent and hence frustrating—and also, my arrogance maddens her, since she is a girl well-acquainted with insecurity.

My point of view, however, has strengths as well. For one thing, a good friend ought to constructively criticize my flaws rather than insult me. Sangeetha shouldn't interpret it as a personal affront whenever I unwittingly act complacently. I respect my friends—of whom there are two or three—and their feelings, regardless of their character flaws. I may criticize them and encourage them to develop themselves in ways they might not have previously considered, but I'm always circumspect with the words I choose in so doing. [...]

Sometimes it seems as though Sangeetha interprets our relationship as a kind of subtle competition. She possibly thinks I see myself as better than she, or that I have high standards for her that she doesn't have even the inclination to fulfill. (Maybe this is why she found our romance “constraining”.) Aside from being untrue—I wouldn't be a friend of someone whom I really thought was inferior—this perception of ‘comparative arrogance’ is potentially fatal to meaningful relationships. [...]

Anyway, this trip has rid me of my “love” for Sangeetha. I don't think less of her than before, but she's right that we're too different to be around each other all the time. Our personalities and our convictions—even some of our moral values—are quite dissimilar.

Regarding my pride, I can at most diminish it by degrees. It will, for better or worse, always be a component of my character.

Maybe I should write about Paris. —It was marvelous. Sangeetha and I both enjoyed it immeasurably, although the heat was scorching. (Heat makes her cranky, so she wasn't always an ideal travel companion.) Versailles and the Louvre are so immense that we saw only fractions of them, but the Catacombes were *incredible*! Bones everywhere! Skulls arranged in the shapes of hearts! Never-ending tunnels of death! I thought it was disturbingly appropriate that the French Resistance had had its headquarters there.

August 12

Sangeetha and I bade farewell yesterday morning. We were sad. Despite our differences, we were half in love for the two months we spent together. We returned to this romance during our last two days together, making our parting all the more doleful.

On the evening of the ninth I discussed with Sangeetha her anger at me. She was reluctant to explain it, so I read her my speculations. This triggered a mutual exchange of thoughts, including reflections on friendship, which I considered valuable in that it ‘cleared the air’. For example, she professed not to want to change my arrogance, since she didn't think she had the ‘right’; I tried to convince her that friends are

supposed to improve each other, indeed intentionally. Anyhow, our talk lasted quite a while, at the end of which we had become, predictably, ‘closer’ than before. We shed the appearance of mere friendship and grew lovey-dovey once again.

The next day, our last in Venice, we walked through pleasant cobblestone streets in the vicinity of the train station for five hours, holding hands and kissing. At 8:00 we took a train to Vienna. The ride lasted the entire night, during which, for the last time, we kissed and groped each other fervidly. Sangeetha got much more sleep than I did: she finds my lap comfortable. I remained awake, staring tenderly at her face and cradling her breast in my hand. For a long time I’ll look back on that night with fondness.

Sangeetha wanted to spend a day with me in Budapest, but since her visa didn’t extend to Hungary we had to say goodbye in the train station. She’s going back to India in two days. I won’t see her for at least two years.

Lately I’ve read *The Soul of Man* and *The Ballad of Reading Gaol* by Oscar Wilde; poems by John Donne; “The Gold Bug”, “The Black Cat”, “The Fall of the House of Usher”, “William Wilson”, “Ligeia” and other short stories by Edgar Allan Poe; and *Parapsychology and the Nature of Life* by John L. Randall. The latter book wasn’t impressive—the last chapter, consisting of philosophical speculations, was comical—but at least it’s nearly convinced me to believe in ESP. This belief will have a momentous effect on the development of my thought: it necessitates major revisions in the prevailing scientific worldview.

Here I am atop Mount Something-or-Other, glorying in the prospect of Pest below. On the horizon is a never-ending sea of misty green. Lovers surround me, steeping themselves in each other’s presence, nourishing themselves on it, dancing to the ‘music of the spheres’.

’Tis a pity I lost my camera last week. –But I value the moment more than faded mockeries of it.

I can well understand why Goethe remained idealistic his whole life. When there are views like *this* in the world, it’s hard *not* to be sanguine. At this instant I’m not even bothered that I technically don’t exist. (I’m postponing philosophy for a later date.)

August 13

Love is an eclipse of the intellect. Hence, it must be pursued at all costs.

To say that Marx confused capitalism’s birth pangs with its death throes is misleading. It thrusts back upon history a halo of necessity. Nothing is inevitable. Had strong leaders emerged, socialism could have triumphed in the late 19th century. [Nope. Definitely not true.]

(Even if in a metaphysical sense *everything* is necessary, in the sense Marxists have assumed, *nothing*—or very little—is.)

I’m atop Castle Hill on this most glorious day of the year: the infinite ocean above me is marred not by a wrinkle. St. Stephen’s Basilica lies directly in my line of sight, competing with a corner of the sky, reaching toward the heavens. –Mankind asserts its will to power yet again.

August 14

I’m in the Statue Park. This little park consists of monuments from the communist era. Some are impressive, but on the whole they’re typical products of barren socialist realism.

Today I’m traveling with my two roommates (American and Japanese). One is friendly, the other is as quiet as all Japanese.

....We went to a Turkish bath after leaving the park. (It took a helluva long time to find it.) That was quite an experience. In some of the pools we were forced to savor the fragrant aroma of sulphur, but what I found more ‘distinctive’ was the sight our eyes feasted on: round old men, happily naked as

hippopotamuses, waddling from bath to bath. Nevertheless, on the whole it was a GRAND experience. In terms of sheer physical pleasure it towered above everything but sex. For two hours I walked from cold baths to hot baths to cold baths to hot baths, so that by the end my skin had advanced seventy years in age. However, the hottest and steamiest of the saunas was not so pleasurable. The moment I walked into it, my American friend, who was already sitting there, said, “Hello Chris.Do you believe in hell?” I hadn’t until that instant. It was, first, impossible to breathe in there, and second, boiling hot. Even so, I endured it for four minutes. After that I utilized the remaining molecules of oxygen in my body to stagger out of the room and into the frigidarium.

Anyhow, the baths were veritably *decadent*. I felt like a Roman.

I’m reading Oscar Wilde’s *De Profundis*. What befell him as the culmination of his relationship with “Lord” Alfred Douglas incites me to fury. If there is a grain of truth in Wilde’s characterization of the man, Douglas was despicable. How often have artists suffered Wilde’s fate at the hands of people like Douglas and the public?! How wearisome I find the herd’s self-assurance after so many calamities have been caused by its prejudices! –The reason that moral and cultural relativism are wrong is that if the herd had had its druthers in the domain of culture, mankind would have died out long ago! There would have been no *ideals* for it to realize,¹ so it would not have passed beyond the first stages of history.

(One day I’ll have to thoroughly research the role of cultural ideals in propelling history forward.² This notion is decidedly un-Marxist.)

August 15

Poe is right: to understand people’s states of mind is much easier if one momentarily adopts their facial expressions. This indicates, of course, that the face is an objectification of the mind and that the mind is significantly influenced by the contours of the face. (The “science of physiognomy” was less silly than phrenology.)

De Profundis contains many truths whose profundity I can’t yet appreciate. I’m too young.

The people of Budapest seem unfriendly. And few speak English.

I miss Sangeetha. I miss loving her. I’m tired of comparing myself to great men. I’d like simply to bathe in sweetness and light.

Some preach the richness of our “inner life”, some [e.g., behaviorists] deny its very existence. What a confused thing is man!

For a long time I’ve had one overriding concern: if there is ‘emptiness’ at the heart of the self, how can one know oneself? Must one’s actions be relied upon, as expressive of the *real* rather than the *surreal* self?³ But is this indeed always true of them? What does it *mean* if it is? Is the two-self distinction valid? (I doubt it. At best, the lines between the two are blurred beyond recognition. This is evident from today’s earlier reflections.)

The way I can tell that my recent intellectual and personal developments are the true me and not merely imitations of others is that they are natural outcomes of my adolescence. In the earliest entries of this diary I was hardly influenced by any idols whatever. My adolescence was pure, unadulterated *me*: even my style of writing was naïve and candid. (Unlike other ‘great’ men, I had a poor education. I had to willfully rise above it to acquire culture and writing skills.) In college I began to be influenced by historical figures, but their own resonance with my nature suggests that they merely sharpened my self-awareness and thus sped up the process of growth. In short, I’m not deluding myself by trying to be an artist or

¹ The herd always follows, never creates, ideals.

² Or enabling it continue.

³ I always use very precise terms. [Sarcasm.]

philosopher.

(In any case, after my fling with Nietzsche, these individuals have had but a negligible influence on me.¹ I now emulate them as a class.)

August 16

Oscar Wilde, whose face sparkled like clay, was an unimpressive thinker. There is much of value in *De Profundis*, but Wilde couldn't have been a philosopher if he had tried. Neither could Goethe. Kant, Herder, the Greeks and others determined Goethe's philosophy (if indeed he had one). His conception of the "demonic" has some intuitive validity—though it, too, is derivative—but it's woefully imprecise.

Returning to Wilde, I must admit that his extravagant style of writing is embarrassing. It's beautiful, but if I had written in that style I would have felt artificial, dishonest and cheap. The Romantic movement exaggerated *everything*.

I arrived in Prague today. I was happy to leave Budapest, where the people are uncivilized. [Not true!] I'm staying in a hostel next to the train station.

Food for thought: philosophers must be almost as imaginative as poets, but rarely are both arts combined in a single person.

I don't understand children's universal desire to scare birds. Is it their immature will to power?

People who constantly honk their car horns are foolish and annoying. What has it ever accomplished? Hungarians, or those living in Budapest (Buda-pests?), love to beep their horns; Czechs are more sensible.

How can definitions of art be other than arbitrary? There is no 'true' definition or ideal of art, although I wish there were.

—Is everything relative?!?! God, let that not be true!

August 17

I'm somewhere in the vicinity of Prague Castle. The area is picturesque, to say the least.

Nothing in life is more 'flower-like' than young love. Nothing is fresher. I'm not referring to its sexual or passionate aspects, but to its spiritual aspect. It is Innocence. It is the first bloom of life's instinct for renewal. It is a return to childhood and all things associated with children. What can be more glorious than that?

—That babble was the Romantic approach to love. There is also the scientific approach, which is less pretty but more valuable. One day the scientific in my nature will win out over the romantic.

August 18

Sangeetha and I write to each other every day. She feels empty and miserable because I'm not with her; she's worried she'll feel this way for two years! (That's absurd.) She broke up with her boyfriend yesterday. Today was her first day of something like "graduate school".

I'm trying to write a short story about a composer who works himself into such a frenzy while composing that his body vanishes. There will be various philosophical themes.

I'm in Staroměstské náměstí, eating supper next to the St. Nicholas Church. This square is truly a tourist's heaven. It contains a little museum of medieval torture instruments, which I of course visited,

¹ Example: my "misanthropy" lasted none too long.

whose exhibits are fascinatingly barbaric. (The Middle Ages were not a nice time to be a criminal.)

Today I also tried, and failed, to find the Mozart Museum. I saw the Museum of Decorative Arts, but for sheer human interest it didn't hold a candle to the torture museum.

...Went to a performance of Mozart's Requiem in St. Nicholas's Church. Some of the instruments, particularly the trombone, had excellent tone quality, but overall the production wasn't impressive, for two reasons: we might as well have been in an echo chamber, and the sopranos and altos were women. Never trust women to sing classical music. [Decades later, I still remember that the vibrato in that performance was terrible.]

I also saw the exterior of the opera house in which Mozart conducted Don Giovanni's premiere. It occurred to me, I know not why, that it's a tragedy I didn't meet Mozart. We could have benefited each other enormously, as always happens when sensitive minds meet. He could have given me insights into the nature of genius, which I would have communicated to history, and I could have been a moderating influence in his life.

Two American girls struck up a conversation with me before the Requiem began. We sat together during the performance; after it had finished we perambulated. They were charming girls—though not as charming as Sangeetha.¹

August 19

Today I went to some museums in the Jewish Quarter. Rather boring. Didn't do much else except write to Sangeetha and buy three books (*De Anima*, *Eugene Onégin*, and Frank Walbank's *Decline of the Roman Empire in the West*). Tomorrow I'm going to Krakow.

My impressions of Prague were, on the whole, of unqualified admiration. Its architecture is as consistently 'lavish' as that of Venice; its people are friendly and helpful; its culture and history are rich. That it was not destroyed in World War II is an extremely fortunate accident.

August 21

I'm in Krakow. The Old Town is nearly as enchanting as Venice; the architecture reminds one of Krakow's distinguished past. I feel like I've been transported to the 18th century.

Yesterday on the train I read Walbank's book. It was very good, though brief. The author has obvious Marxist sympathies—he thinks the economic structure was the main reason for Rome's decline—so I'm sympathetic to most of what he writes. I even agree that Rome's decline was, on the whole, inevitable. Without an industrial evolution such a byzantine empire couldn't be self-perpetuating. Nothing anyone could have done would have changed that.

I also read most of a 100-page introduction to Aristotle's work.

On the train last night I met an Irish girl who was going to Krakow. She was friendly, though a little dull. Through her I met an elderly couple—a Canadian and a Pole—who helped us find a hostel. The four of us had a short conversation about Marxism and its relation to Communism: I defended Marx and the others criticized him. They couldn't understand that perversions of his doctrine are irrelevant to the doctrine itself. Like all close-minded imbeciles they conflated a huge range of vastly dissimilar phenomena because they share a few superficial resemblances. The herd is not capable of abstract thought.

Anyway, the Irish girl and I walked to our hostel as she did nothing but complain that she wouldn't see her friend in Krakow, since she didn't know where he was staying. But suddenly he was standing right in front of us, purely by coincidence! And guess who he was! —A kid I'd known at the Goethe Institut! I was stunned. It was a remarkable occurrence.

The three of us walked a hell of a long way to a hostel. In the morning the two friends left Krakow,

¹ She has zest, innocence, and a strong presence.

so I was thankfully alone again. (Their conversations were none too edifying.) In the safety of solitude I walked to Wawel Hill, which is crowned by a castle and a cathedral. I spent two hours there, missing Sangeetha more than I ever had since she'd left on the eleventh. I had the distinct feeling that half of me was in India. So I e-mailed her again, sounding a little sentimental, and then e-mailed Jenny. We've been discussing philosophy and relationships. Soon she's coming to Copenhagen; we plan to meet for a day or two. I have no idea where I'll go after that. Maybe Spain again. Certainly the Netherlands.

August 22

I had planned to leave Krakow today—I should have, since it's cloudy and drizzling—but I was too lazy to get my act together. Tomorrow I'll go to Warsaw.

Walked to Kazimierz, the Jewish district of Krakow. It was quiet and dead. Reminded me of a ghetto, ironically. I left it as quickly as I could. Now I'm wandering around and writing e-mails. Sent Sangeetha a postcard.

August 23

I'm on the train to Warsaw. I loved Krakow, but it has one flaw: a mist of pollution hovers above it.

I bought two CDs to send to Sangeetha: Mozart's last four piano concertos, and Grieg's and Schumann's piano concertos. I wrote notes on the cover flaps to help her appreciate the music. [...]

In Barcelona Sangeetha and I saw the Picasso museum. I was impressed with the man's early, sophisticated art, but in his later phases he degenerated into childishness. Supposedly he tried to discover the "essence" of art in his seemingly immature paintings, but I have no idea what such a discovery entails. How can a person find art's essence? What does that mean? Why didn't Picasso communicate his earth-shaking discovery through *words* rather than *paint*? In any case, art has no "essence", just as the concept of the "game" probably has no essence.¹ Besides, if it does—couldn't Picasso have searched for the essence in a more sophisticated manner?! [...]

Why did physicalism and related philosophies emerge in the 20th century and not before? Why has Cartesianism fallen out of favor? I can think of convincing reasons for these developments, all of which are related to the feudal, industrialist and late capitalist economic structures (and science, etc.). But I'll let the reader do some independent thinking for a change.

Oscar Wilde's tract "The Soul of Man" is interesting but woefully inadequate both philosophically and prescriptively. What's the use of praising socialism if he doesn't even define the term? "But you're missing the point. He's merely using a utopian idea to highlight the inadequacies of capitalism." Oh well, la-dee-dah. Even his artistic reflections are defective. The whole piece is too Romantic and unphilosophical. "But you're ignoring the historical context. He lived during the heyday of late Romanticism, so his errors are excusable." Sure. What does that mean? How are they "excusable"? He prided himself on being an individualist, yet he couldn't break out of the unscientific cant his age wallowed in! He embraced it, just as he embraced other prejudices current in his day. Individualist, my arse! "What's your point?" I don't have a point, duh! I'm bored, so I'm ranting and raving and holding dialogues with myself to pass the time! "Shut up." With pleasure.

August 24

¹ Wittgenstein.

It's hard to believe I'm in Poland, sitting on a wall of bricks in the Old Town, listening to street performers play Vivaldi. A year ago I would have laughed if someone had predicted this future. I'm in Warsaw, my friend! I'm in a city the mere existence of which is a triumph of the human spirit. *History* happened here: WWI, the Great Depression, WWII, the Occupation, the reconstruction. I am a participant in history! How glorious it is to be alive!

....I'm going to start exercising again, or at least doing sit-ups and push-ups. The main reason, of course, is that I want my future girlfriend to love *every aspect* of me. (I didn't feel great when Sangeetha described to me her boyfriend's fabulous body.) However, I'm also just wary of cultivating my mind and not my body. I want to be cultivated in as many ways as possible.

Today I saw the Chopin museum, which basically consisted of one room. I spent most of the day writing the beginning of my short story.

August 25

I'm bored. I don't feel like doing anything. I'm sick of museums. I'm sick of trying to feel "appropriate emotions" as I explore Warsaw.

....I saw the Royal Castle. (Entirely rebuilt after the war.)

It's disgusting that every human being defecates. Every one! That's unthinkable! How many tons of shit are produced by us each day? How many gallons of urine? How many gallons of semen dribble down women's legs every night?

August 26

I called Sangeetha. The conversation was so expensive we were able to talk for only two minutes. But hearing her voice was worth all the money. Incidentally, I don't think she misses me as much as she did a week ago. She's enjoying her independence, her freedom to do as she likes and not have to worry about the feelings of a 'boyfriend'. Have I mentioned she's writing a novel? It's a fairytale.

Today I'm taking a twenty-hour trip to Stockholm. That ought to be fun.

I said once that German is a beautiful language. What was I thinking? In poetry it can have a strange beauty, but not when spoken on the streets! In the latter case I can almost hear the doctrines of Nazism being espoused. This leads me to believe that there's an intimate connection between Nazism and the German language. (After all, no philosophy so hate-filled could be expressed (compellingly) in French!) How influential is the way a particular language sounds on the beliefs held by its speakers?

Etymology, by the way, fascinates me.

I'm bored. Tired of writing my story. Don't want to read. Tired of traveling alone. Tired of sitting on this train. Tired of not having a girlfriend.

Well, things haven't worked out quite the way I'd planned. (Do they ever?) I'd hoped to arrive in Stockholm at 12:30 on the 27th; now I won't get there until 6:00. You see, the train reached this Berlin station a few minutes late, so now I have to wait around here until 4:00 a.m. and then switch trains three times before I reach Stockholm. There's a fun journey ahead, my friend.

I wish I could rid myself of my temporary creative impulse. I'm unable to read when I have the insatiable appetite to write.

....I loved Sangeetha.¹ Had we stayed together I might have *desperately* loved her. When I think of

¹ It's 3:00 a.m. Forgive the blatant repetitiveness.

her I feel a throbbing, an ache to kiss her, to feel her legs wrapped around me. Her behavior the last week at the Goethe Institut still pains me when I think about it, but I forgive her because she's so innocent. I *loved* her! –God, how I could have loved her if she had been a little different! Sangeetha, darling! Do I still feel the bloom of love for you? I want to see you again, even though I know you'd disappoint me.

August 28

I reached Stockholm last night, after a thirty-hour trip. My hostel room is in a boat. The location is romantic in the extreme, but I have no one to share the experience with, so it doesn't matter. Last night I felt crushingly alone. Today I'm wandering around Gamla Stan, the beautiful old section of Stockholm, but since the weather is cold and dreary and my mood isn't much different, I'm not having the time of my life. I don't want to see museums. I can't wait to visit Jenny! Traveling alone is fine for a time, but after two weeks it loses its charm.

Mr. Sun has come out. Like a dutiful tourist I saw the Royal Apartments and the Treasury. Now I'm letting the weather improve my mood.

August 29

I'm atop Skånsen hill on this most glorious of days. What an amazing place! The zoo and outdoor museum are both splendid, although it's primarily the natural beauty and tranquility that grab me. I saw some playful, adorable monkeys, and it occurred to me that my childhood fascination with insects hasn't left me; rather, it's been broadened to include the whole of the animal kingdom. I could watch those monkeys for days, studying their behavior and enjoying their presence, doing nothing else but eat and sleep. They're so marvelously "innocent"! There are also many insights into the "human condition" to be had from examining the behavior of other primates. (Are we, too, fundamentally playful animals?)

I'm setting aside my story till I can write on the computer (in October). I have only to compose the climax, but that'll be the hardest part. In the meantime I'm trying to think of another story with more of a plot. Spent most of yesterday doing that but didn't get anywhere.

The lone ant surveyed the wreckage of its colony
And thought, "Civilization's been destroyed. –I'm free!"

The golden calf was terrifying
In its stoical majesty.
Believing it to be divine,
Each man sank to his knee.

"Get up, you fools!" cried the creature.
"Why do you kneel before a calf?
"Make a cross, find a beggar,
"Pin him there, and worship that!"

My heart afire, I softly kissed
Her subtly rougèd lips:
'Twas pleasant, but oh! I longed to kiss
The lips between her hips!

I like writing bad poetry.

August 30

I'm in a town called Uppsala. At the moment I'm trying to find a hostel. Ain't having much success. By the looks of it I'll have to sleep on the streets.

September 1

Yesterday I met three friendly Brits. We wandered around Gamla Uppsala together, went to a museum of pre-Viking times, saw parts of Uppsala's old university, admired the immense—though rather new-looking—Gothic cathedral (which I suspect is larger than Notre Dame), and then went our separate ways. The three Brits, two guys and a girl, were intelligent medieval history buffs in college. We got along well.

We tasted mead, a drink that's made from honey, water and spices. It was thought to have magical powers by the Vikings because it intoxicates. Needless to say, my tastebuds rejected it.

On the whole, Uppsala was a charming, attractive town. I can't think of much else to say about it. Spent the night at a hostel in Göteborg. The weather today is dark and dreary.

I'm walking down the Kungssportsavenyn, a boulevard lined with classical architecture (and some contemporary concrete things). It's hard to comprehend the patience and skill that must have entered into the construction of this "monumental architecture". We take this kind of art for granted because we lack the imagination (and inclination) necessary to let ourselves reflect on it, admire it *truly*, contemplate its implications, and imagine it being constructed.

It's a pity that postmodernity is unwilling to tear down its concrete blocks and erect classical or Gothic architecture in their places. This would have a healthy effect on the herd, for pre-20th century architecture "broadens one's outlook". Modern buildings have only a *function*; older buildings have also a *beauty*. Their "Forms" are more complex and life-affirming. They "encourage even the masses rather than belittling even the philosophers". My critic will, of course, say that we can't return to an earlier period of history; architecture, like everything else, marches on. I understand that. It's nearly impossible under late capitalism to achieve beauty on a large scale. But this is because of the 'mind-set' and ideologies that capitalism fosters. We must simply transcend postmodern decadence. With this happy happening will our ideologies change again. Great art will become the fashion, not because we'll return to a more naïve era, but because the causes of capitalist artistic atrophy will be abolished. Mass society will be abolished, and a joyful rather than cynical self-consciousness will be the norm. —You want *reasons* for all this; see my earlier entries. Contemplate the march of history and its underlying forces and you'll see I'm right. Observe the workings of the dialectic! There is much to be learned from the dialectic!

Unfortunately, none of my predictions will come true if the economic basis of communism is impossible.

[...] Secrets about human nature can be gleaned from our rituals and ceremonies.

I'm taking a bus to Oslo tonight, for the train has already left.

--Okay, I'm in Oslo. I couldn't find a hostel with an available bed, so I'm sleeping in a train station.

I couldn't sleep in the station because it closed at 12:30. So I wandered around until 1:15, when I met two friendly Portuguese girls. For two hours we toured Oslo, observing the night life (it's Saturday), and now we're sitting in Burger King until the train station opens. Scandinavians are noisy at night. We saw a great many of them staggering through the streets, yelling at the top of their lungs.

September 3

Yesterday I left the girls at 7:30 a.m. Took a tram to a hostel in a muddy meadow, slept on a couch until 12:00, and returned to the city. After e-mailing Sangeetha and my parents I walked to the Royal Palace, the National Theatre, the parliament building and the Akershus fortress. Unfortunately it was raining. Finally I went back to the hostel and slept.

Today is cloudy. Right now I'm in the wonderful Vigeland park, which contains a central walkway lined by statues. Later I'll go to the Munch museum.

Yesterday I finished reading *Eugene Onegin*. A delightful masterpiece. Reminded me, in some respects, of *Don Quixote*. Its themes were, for example, nihilism, mankind's loss of innocence, the emptiness of modern life, and the inexorability of time. They were all treated with an amusing, self-deprecating self-consciousness. The translation by Babette Deutsch is excellent.

[...]

Vigeland's statues are impressive and thought-provoking, but they're a regression from Michelangelo's *David* and *Pietà*. This, however, is to be expected.

September 4

[...]

Yesterday I walked through parts of the National Gallery, which is an enormous museum featuring Norwegian and European paintings and sculptures. Today I'm not sure what to do.

Saw the Munch museum; it was excellent. Some of the paintings are truly disturbing and thought-provoking, such as "Inheritance I", whose focal point is a blood-bespattered infant. I'd like to contemplate the 'nature' of cultural decline and muse on when and why it has occurred at particular points in history—and do the same for eras of cultural renewal,¹ such as the Renaissance—but I don't have time.

Incidentally, it's impossible for humans not to believe that the self is a 'substance'. This belief is ingrained in the way we perceive the world. Some people² may *intellectually*, i.e. superficially, believe in their own 'nothingness', but on a deeper level they don't.

...The one unfortunate fact about my travels around Europe is that they've prevented me from thinking deeply about anything.

Judging by my asexual dreams, I think Freud was wrong about the omnipresence of the sexual instinct in the psyche. I'm not sure, though, since it's hard to tell where and why its influence would end. The pleasure-principle, with its hedonistic overtones, is of course wrong. [...]

September 5

I still can't believe that as beautiful a girl as Sangeetha fell in love with me. She actually wanted to have sex with lil' ol' me! That's incredible. My self-confidence has certainly climbed as a result of her love.

Those two months were wonderful, just because I met her. At last I have experienced a bit of love! No longer need I believe that I'm a bookish nerd who hasn't encountered life. Now I can reasonably begin to hope that, like Goethe's, my life will be my greatest achievement. Nor need I think that I'm cerebral in a bland way. My thoughts are simply a part of my life, in the way that my relationships are.

[Deleted some stupid reflections on Aristotle.]

¹ I'm skeptical of these terms.

² Like me.

September 6

The trip to Bergen yesterday was spectacular. Mountain ranges, lush vegetation, shimmering tarns, barren crags.... I arrived at night and slept in a hostel. This morning I missed the “Norway in a Nutshell” train, but there’s another one at 10:30. At 11:00 p.m. I have to take a train back to Oslo in order to arrive in Copenhagen by Saturday.

Mankind hasn’t constructed any towering monuments on the scale of Norwegian fjords. This is sad. It’s time we cooperated with nature in molding massive tributes to Beauty. We ought to erect a statue comparable to the *David*, but on a more immense scale, at the pinnacle of a medium-sized fjord.¹ (It must, of course, be hand-made. We can’t let machinery eclipse our own natural abilities.) In the middle of the Sahara we should build a great city consisting of marble statues, fountains and temples in which people contemplate the immensity of the universe.

....I wonder if Bryan Magee is right that the basis of the dialectic is simply that it is man’s automatic reaction to new situations or new problems. It’s our “problem-solving” capacity. For example, in my earlier youth I wasn’t arrogant, but as I grew up and was exposed to the stupidity of people (and my own attendant rejection by my peers) I oscillated to arrogance, and now that I have begun to accept and expect a certain amount of both simple-mindedness in others and my own social isolation, I’m more comfortable with my situation in life and don’t need to be aggressively arrogant in my diary. I suspect, though, that this scheme is drastically simplistic even as an explanation of the dialectic in individuals; it certainly doesn’t take account of mass movements (or not *entirely*) or the dialectic in the physical sciences—if such exists.

Returning to an earlier topic, it would be a crime against good taste to build such large sculptures in the wilderness.

....I’m in the little village of Flåm, situated in a gigantic fjord. What a place to live!

I’ve never fully understood Newton’s theory of color. From what I’ve seen of Goethe’s, it’s inadequate, but I think it does raise interesting objections to Newton’s.

How can all the colors be ‘latent’ in white light? I’ve never understood it. What does it mean? Is it really likely that all green plants contain the same substance that reflects only one tiny fraction of the color spectrum? How can Newton’s theory explain the colors that appear when one presses one’s eyes? It can’t, yet any comprehensive theory of color must. [...]

Regarding man’s relationships with nature, it is certainly true that nature is a kind of ‘other’. (Neither Goethe nor, perhaps, the young Marx sufficiently recognized this in their philosophies.) But humans also feel united with it in essential ways—mystically and intellectually (sometimes), and even practically. Anyway, I’m not in the mood to think philosophically.

I’ve been in the ship heading to Bergen for several hours. The weather hasn’t been great, but most of the views have. I don’t feel the kind of pleasure or excitement my mom seems to when presented with sights like these; rather, I try to *think* about them. For example, I find it funny that we always ‘see’ lakes incorrectly (just as we shadows incorrectly): it appears to us that the surrounding land is floating on the water, that the shoreline is truly the edge of the land. In reality, of course, the body of water is more like a puddle, in that it’s placed on top of land we can’t see.

September 7

When I read entries from the first four years of this journal I feel polluted.

September 8

¹ Or rather, on a mountain that is one side of a fjord.

I'm in Copenhagen. Last night I spent a long time searching for a hostel (in the rain), since I'd forgotten to make a reservation. Today I met Jenny in the train station. She's as attractive as ever. First we ate lunch in a wonderful Turkish restaurant; later we walked down the main pedestrian street. The weather was fickle today—rain and then sun—but I had fun. Copenhagen has some truly stunning buildings. Jenny was nice to talk to, but I enjoy Sangeetha's company more. Sangeetha is more responsive and easygoing, and laughs more often.

September 9

Today I stayed inside and read, the weather being miserable. I finally finished Thomas Hardy's novel! It was a frustrating, though beautiful, work. At times it was slow-moving and at times fast-paced; sentimentalism exuded from every page (though this contributed to its beauty); Tess's fate was far from inevitable, based largely on contingencies and whims, so the book wasn't as effective a social commentary or a tragedy as it could have been; the characters themselves were annoying twits, puffed up with absurd pride (on the whole); occasionally I grew weary of the endless word-painting. At any rate: no more Thomas Hardy for me!

In Bergen just before I left for Oslo I met two friendly, cute 20-year-old Japanese girls. We talked for a long time; it turned out they were taking the same train as I that night. I didn't see them during the train ride, nor when we arrived at Oslo, so I thought they were gone from my life forever. But half an hour later, as I was beginning my six-hour wait for the train to Copenhagen, one of them appeared out of nowhere. Her friend had gone to the Munch museum, but *she* hadn't because she was sick. So we talked for quite a while—in German, no less—until she felt better and wanted to see some sights while she waited for her train. Fortunately the weather was incredible, so I took her to the Royal Palace and its surrounding park. Until 12:00 we sauntered around the grounds, enjoying the sexual tension, standing in silence or enthusiastically talking. We exchanged email addresses.

September 11

This morning I bade Jenny farewell. Went to the National Museum, bought a copy of Charles Lyell's *Principles of Geology*, had lunch, and walked to the station to buy a ticket for a train to Amsterdam. It leaves at 7:00, so I have time to read my new book.

September 12

I was always surprised that terrorists hadn't undertaken massive attacks against America. I need be surprised no longer.

My beloved country is, in a sense, getting what it deserves. What goes around comes around: the law of karma. We've done far worse to millions of people everywhere in the world. I feel no shock whatever at this attack, though I am, of course, dismayed that it ended so many lives. [...] But since Bush is effectively condoning the suffering of Iraqis and Palestinians (and many others), the fault lies also with him and his ilk. On the most basic level the fault lies with late capitalism [and imperialism!], which as we have seen contains the seeds of its own destruction, but powerful individuals can have a more positive effect than Marx thought.

Bush can deal with the situation intelligently—by acting as a mediator in Middle East conflicts, or by devoting resources to the political and economic development of Muslim nations—or he can use it as an excuse to push through his missiles proposal. He'll do the latter, of course. Stupidity is as predictable as

genius isn't.

I arrived in Amsterdam at 10:00 this morning. After finding a hostel I went to the sex museum, which I didn't like. The one in Copenhagen was more tasteful.

My hostel is located in the Red Light District. This area is intriguing, to say the least. Pornographic pictures abound in window displays; sex shops litter the streets; prostitutes sell their bodies to men who have no compunctions about entering brothels in broad daylight. I myself could have sex with any of those girls, but unfortunately I have self-respect.

My gut reaction is to be repelled by the Red Light District, but maybe its sexual openness is socially healthy. Aside from reducing the incidence of prostitution-related crime, it may be psychologically wholesome to legalize whoredom. Society is probably less repressed as a result.

On a somewhat related topic, yesterday a friend of Sangeetha's died from a drug overdose. He was found lying in a street. Many of her friends take drugs; hopefully this incident will teach them some caution.

Copenhagen, by the way, was indeed "wonderful". (Its nickname is Wonderful Copenhagen.) The main pedestrian avenue is fun and has character. The museums are worthwhile too. But the weather is horrendous.

I like Amsterdam more.¹ The architecture is extremely creative, there is much more 'character' on the whole, the atmosphere is more relaxed (though this isn't an unqualified good), the canals are fairly unique, and its history is, I think, richer. The Netherlands has always been one of the most liberal and progressive nations in Europe, due largely to its early trade and resultant cosmopolitan outlook. (It was commercialized *long* before France emerged from feudalism, and even England was for a time backward in comparison.)

I've read a good chunk of the abridged edition (published by Penguin Classics) of Lyell's book. I'm much more interested in astronomy, physics, biology and psychology than geology. Even so, geology is less dull than I thought it would be.

September 13

For the past few hours I've been skimming philosophy books in a store. Predictably, I've become frantic to escape economics and geology and return to the fundamental questions. I feel terrible that there are so many books I haven't read. I know nothing about postmodernism, for example, and very little about existentialism. Even worse, I've forgotten the details of Schopenhauer's philosophy. I must confront Popper's critiques of Marxism. I must decisively refute empiricism. I have yet to acquaint myself with analytical philosophy. There's so much I have to do before I can escape my constant muddled state of mind! I think I'll take a break from *Capital* and the *Principles of Geology*.

Briefly, let me state a few intuitive and immature opinions on doctrines I'll one day confront in full. First, I concede that non-falsifiable theories are not fully scientific (though certainly not meaningless!), and Marxism may be one of these theories. Or rather, *some* of its doctrines undoubtedly *are* non-falsifiable. The labor theory of value is not falsifiable in the same sense that the physical sciences are. But what is the point of deciding whether the label "scientific" is applicable to doctrines? "Scientific" is not synonymous with "potentially true", so we can ignore it when judging the validity of theories.

[...]

The claim that social being determines consciousness is inexact and impossible to prove, but it's suggestive. Hence it's not meaningless. But it may have to be abandoned as a philosophical theory in favor of a more nuanced one that is (1) easier to understand and (2) more easily argued against. [...]

I'm unimpressed with what I've read of Karl Popper. His criticisms of Marxism lack a hint of

¹ Copenhagen can't compare to most cities I've seen.

intellectual integrity, i.e. of an attempt to understand the subtleties of Marx's thought and imagine what Marx's replies would be. If one caricatures doctrines, it is easy to refute them.

Additionally, this academician's other philosophical positions are boring and unoriginal. Some are simply obvious.

I know full well that Americans won't learn anything from the terrorist incident. They won't even become significantly less naïve. I don't mind, though, since revolution is what interests me most.

I'm wandering through the city again, though it is, sadly, after 7:00. I love Amsterdam. It's exponentially more appealing than Copenhagen.

Returning to Marxism, I'd like partially to justify Marx's reliance on historical "laws" in *Capital*. How can history have laws, you ask. In the strictest sense I admit it doesn't. But, confining ourselves to capitalism, we need only to make a few basic assumptions in order to realize that Marx's scientific method is *somewhat* permissible. For example, capitalists make profit, which is the goal of capitalist production, by competing against one another (generally speaking). Firms exist in a fragmented economy, and they try to benefit only themselves. Etc. etc. When manifold other conditions, historical and logical, of capitalist production are taken account of, and bourgeois ideology is thrown into the equation, and Marx's tenets regarding production and consciousness are invoked, it's apparent that there are good reasons to speak of capitalism's "laws of development". The success of many of Marx's predictions in itself demonstrates the validity of much of his theoretical framework. The failure of other prophecies shows us that we cannot speak of laws but only of tendencies and probabilities, which however are grounded in the same reasons for which Marx thought he could speak of laws. So you see that Marx's scientific method isn't cracked in its foundation; it's only more fallible than he thought.

September 14

When I think of decadence, I think of postmodernism. This so-called philosophy, a product of the Great Weariness,¹ is so nihilistic as to be positively degrading. It's also mendacious in the highest degree, partly because it blames the tradition of Western philosophy for the 20th century's atrocities! It abandons philosophy for political correctness. It "critiques" everything—except itself. Perhaps if postmodernists had an intellectual conscience they would recognize that their beliefs are so much a product of the late-capitalist will-to-nothingness that one day these, too, will be supplanted—one day, when civilization has regained its confidence, their ideology will be cast aside like a plague.

Postmodernists think there is no Truth. But is there truth with a small 't'? Of course; it's impossible for humans not to believe in truth, just as it's impossible for a certain class of propositions to have no truth-value. The philosophical system that contains none but true propositions is the Truth. We may never arrive at it, but the nature of language necessitates that it potentially exist.

Unfortunately, philosophy is concerned primarily with thoughts, and not all thoughts can be expressed linguistically. I'm not sure how to overcome this difficulty. (Schopenhauer recognizes that it's this divergence between thoughts and language that makes it easy for philosophers to go astray in their doctrines.) This "difficulty" is all the more frustrating for me in that I so rarely arrive at opinions through logic: I somehow 'intuit' what I think is true.

By the way, I admit that I may be underestimating postmodernism.

I'm reading A. J. Ayer's *Language, Truth and Logic*. I've read only five pages, but I can tell I won't agree with much of what this "founding text" of logical positivism has to say.

...I read the first chapter. It was absurd. The confidence exuding from Ayer's writing is embarrassing, not least because most of what he writes is wrong. His basic idea, that metaphysical "pseudo-

¹ [I guess I meant the weariness engendered by history, by the failure of utopian hopes, the supposed collapse of the search for truth and of Enlightenment ideals, a great cultural skepticism and nausea, etc.]

propositions” have no meaning, is based on an arbitrary interpretation of the word “meaningless”. He dogmatically says that nonsensical statements are those that can’t be verified by appealing to experience, and then triumphantly declares that because metaphysical propositions can’t be verified, they’re meaningless! But he hasn’t defended his own arbitrary definition of the latter term, except by rejecting an even more absurd definition. Essentially he’s fabricating definitions and casting aside a huge realm of philosophy based on these fabrications. Furthermore, it’s manifestly true that almost all metaphysical claims have some kind of content, and thus are not meaningless in the conventional sense.

Ayer thinks that no metaphysical propositions have a “literal” meaning. He repeatedly says “literal”. But I have no idea what this word is supposed to contribute to the sentence.

Wittgenstein, incidentally, was wrong to say that “in order to draw a limit to thinking, we should have to think both sides of this limit”. This statement is a result of reflecting on the ‘form’ of Kant’s project—viz., critiquing reason by means of reason—and being misled by its apparent circularity. It’s a mistake to ignore content and concentrate on form, for content is intuition (see Schopenhauer), and it’s intuition that invests thoughts with meaning. I’m still not sure why the distinction between the content and the form of thoughts is able to be the ground of misunderstandings. That is, why is form misleading and content *not* misleading? Is it only because form is an abstraction? Probably.

I think I agree that “any attempt to base a deductive system on propositions which describe what is immediately given is bound to be a failure.” Or, at least, it won’t be nearly as certainly true as what is immediately given. Then again, no system will be.

I don’t know why induction is looked on so suspiciously by philosophers. It’s less certain than, for example, syllogistic reasoning, but that doesn’t mean it’s inherently flawed. Nevertheless, I’m not sure *why* it’s not inherently flawed—or rather, why it works.

All this philosophizing seems pointless when it’s possible that thousands of people will imminently die at the hands of our military. The old slogan “socialism or barbarism” is relevant once again. Indeed, I’m nearly frantic that the consequences of Bush’s decisions will be catastrophic.

September 15

The phenomenalist theory of perception seems to make sense. On the other hand, I can understand Schopenhauer’s belief that there must be an underlying ‘substratum’—which belief has little to do with “grammar”, much as Ayer would disagree. Even so, it’s the result of induction, is it not?—and induction is never infallible. But there must be *something* underlying phenomena. Berkeley was right that perceptions, which constitute experiences, are essentially mental, in that they exist only within consciousness. But consciousness itself can never really be an object in the way that all other things (except time) can, for it is always consciousness that looks on other things as objects. Consciousness is necessarily the subject, even when it reflects on itself; it has no attributes that can be abstracted from it and contemplated *separately* in their *real being* (as do all other objects except time, and perhaps space by virtue of its mere abstractness) as opposed to only ‘conceptually’. Hence it is a kind of substratum of the type that Schopenhauer had in mind (because, again, it can never be a ‘real’ object, separate from the subject). This suggests that the reason we’re so tempted, almost compelled, to believe in a substratum (or substrata) is that we essentially *are* a substance of this kind. [...]

I’m on a ferry to England.

It seems as if the meaning of words and sentences must somehow be a combination of their referents and the concomitant intuitions (or ‘intentions’)¹ in the mind, because this is the only way to avoid inadequacies that result from the adoption of one account and the exclusion of the other. (For example, (1) synonymous sentences which, however, have different structures or different words don’t ‘cause’ precisely the same intuitions; (2) I still don’t understand the concept ‘intuition’; (3) the referential theory has

¹ [In Fregean terminology, ‘senses’.]

problems too.) But how is this so-called combination possible? Clearly the notion of meaning is woefully imprecise and will remain so, so maybe the fault lies in the vagueness of our language. That is, our language creates problems that it prevents us from solving by its very nature (whatever that means). Does this mean it's not a "genuine" problem, as Ayer might contend if he adopted my assumptions? I don't know.

[In talking about meaning, it's necessary to distinguish between semantics and pragmatics. Which I wasn't doing. There are different kinds of meaning: the rules of how given words are used, the person's intentions in a particular context, a state of affairs the person intends or is referring to, etc.]

For the past five minutes I've been thinking the following: the round square....the round square....the round square....the round square.... At last I've come to two conclusions: (1) I'm losing my sanity and (2)—actually, this second conclusion requires another paragraph:

We think the phrase "the present king of France" is empty because its referent doesn't exist. Similarly, though on a more extreme level, "the round square" presumably has no content. But clearly these phrases aren't as empty as, for example, "blah blah blah". Hence there are degrees of meaning. The words that compose the two phrases each trigger a recognition in consciousness, so the phrases aren't completely empty. But they have different degrees of meaning: the concepts of the second are logically incompatible, so it's not an organic whole but rather a mere collocation of two distinct words; the concepts of the first are logically consistent, so the phrase *is* an 'organic' (?) whole in that (1) the mere sum of its parts is not equivalent to the actual phrase and (2) we can imagine a situation in which there is a king of France, i.e. there is a *sense* to the phrase.¹ But since it has no referent yet is clearly 'reaching out' toward one, it is meaningless in this sense. Thus, my idea from three paragraphs ago isn't as ridiculous as it appears.

A few minutes ago I saw a cloud in the shape of a gigantic "mushroom cloud". Given the time we live in, a more superstitious person would have been affrighted.

Oscar Wilde, whom I genuinely admire, was, I think, right that we should mold life into art. This would signify a "joyful self-consciousness" of the kind that both Nietzsche and I see as the "highest good" (put romantically).

I had to buy another guidebook because, of course, I lost my second one.

Humans aren't primarily playful creatures. We have a whole variety of 'fundamental' attributes, which is why our lives can be so rich.

When I can't remember dreams I have the distinct feeling that the dream-images are too *close* for me to see. It feels like if I could somehow 'back up' I would remember them. This illustrates the reason for our difficulty in understanding the self: we are, quite literally, too close to it.

September 16

Today I meandered through the streets of London until I reached, first, St. Paul's, then Trafalgar Square, and then Whitehall. I had no idea London is so magnificent. Quite aside from Westminster Abbey, Big Ben, the Parliament buildings and St. Paul's, the architecture is consistently imaginative and striking.

I met a delightful, cute Slovakian girl near the Abbey. Together we walked to Buckingham Palace and through parks that led to Kensington, and then back to the Abbey and across the bridge. Talked about a variety of subjects, including her culture, philosophy, her family, and terrorism; when we reached the other side of the Thames we separated. I subsequently took the metro to my hostel, pleased at the amount I had accomplished today.

September 17

Americans, than whom no one is more myopic, are digging their own grave by supporting military strikes. This war is going to unleash the Furies of Islam and revolution. If Muslim terrorists have sufficient

¹ Uhh, that last part is very misleading—or, to be exact, the "i.e." is. Maybe the "i.e." is wrong.

resources, they'll assassinate Ariel Sharon and attack D.C. again.

I'm impressed by the seeming inexorability of the coming disaster. All the circumstances fit together perfectly. For example, George Bush is bound to make decisions fatal to America; Sharon is the worst possible man to lead Israel at a time that calls for conciliation; Afghanistan may attack Pakistan, and the latter has nuclear weapons! I can't conceive why the Taliban would be so stupid, but it has threatened the action. (Probably an idle threat.)

Clearly the (apparent) existence of ESP and the success of some religious prophets throughout history suggest that behind phenomena is an undifferentiated thing-in-itself. This is an example of inductive reasoning (I think), but since it is the most obvious (semi-)explanation, we ought to adopt it as the probable truth. Time is the moving image of the eternal. The future has already happened, or is perhaps happening at this very moment, in another dimension. I haven't the faintest idea what that means, but it contains *some* content.

In chapter 3 Ayer is wrong to suggest that the question "What is the nature of a material thing?" is primarily linguistic. It is actually 'conceptual', having to do not with symbols (words) but with things themselves. [...]

The reason that philosophers can never seem to arrive at truth, or to reach a consensus on it, is that they don't experience each other's intuitions. They superficially critique opposing *doctrines*, or certain *verbal expressions* of these doctrines, while ignoring opposing *states of mind* [or 'intuitions', 'understandings'] (which are the real content of doctrines).¹ The philosopher who wants to arrive at truth must first understand all philosophies as well as he understands his own, and then transcend each and every one by subsuming it in the whole. This is what Hegel tried to do, but he went astray in not really understanding certain positions (esp. ones asserting the primacy of the individual and the 'irrationality' of the universe) as well as he understood his own. I suspect it's impossible to be so generous to *all* philosophies, but if this is the case we'll simply never arrive at the Truth.

September 18

Now that the herd mentality has manifested itself once again, my "patriotism" has decreased. Most Americans have no compunctions about killing Afghans—as if that attitude is any different from the attitude that spawns terrorism! It's callous and hypocritical, just as terrorists usually are.

Empiricism is manifestly false: the law of cause and effect has factual content (is synthetic) and yet is *necessarily true*—'independently' of experience.

Interruption: How does the U.S. government know that bin Laden was in charge of the attack? It doesn't. It's desperately searching for a scapegoat, and bin Laden is the convenient one. There is no concrete evidence linking him to the crime. Now that the Taliban have demanded this evidence, the government will (1) ignore the request, (2) hurl accusations at the "protectors" of bin Laden, and (3) attack Afghanistan, thereby sowing the seeds of *its own* destruction and that of thousands of Afghans.

I went to the British Museum yesterday and listened to a superb operatic tenor sing "Nessun Dorma" in Covent Garden, but most of the day I wandered around. I'm in York now—sitting in the cathedral—where I'll stay until tomorrow, when I take a train to Lisbon.

York is one of the most captivating places I've visited. Its medieval ruins are amazing; its streets are delightfully narrow and fun to walk through; its history is long and distinguished. If the weather were better I might want to live here.

Returning to philosophy: the laws of Euclidean geometry are expressions of the ways in which

¹ [Think of Heraclitus: "Listen not to my words but to the Logos," i.e. the meaning behind my words. Which is in my understanding, so to speak, not in my words. They are only poor expressions of it.]

space is manifested to us. They are truths about experience known independently of experience. No amount of word-twisting can get past that.

I don't see how the falsity of empiricism can be doubted. It's self-evident that the mind imposes *a priori* forms on experience: moreover, all the major discoveries of physics in the twentieth century have confirmed this. The one argument sufficient to 'disprove' empiricism is that there are *compelling, 'necessary'* truths that apply to experience, and if empiricism were true there wouldn't be.

Furthermore, how can Ayer seriously assert that geometrical truths are tautologies (based on definitions alone)? Definitions are not *certain* in the way that Euclidean geometry is—they don't *strike* you in a moment of illumination as *having to be true*—and this is so because definitions are merely inventions, or conventions, whereas geometry is a product of our intuitions of space. This is indeed why it's so helpful to use diagrams when proving geometrical propositions, and why the truths seem to leap out at us (once we understand them) in a way that definitions don't.

...What the—? Ayer declares that "our knowledge that no observation can ever confute the proposition '7+5=12' depends simply on the fact that the symbolic expression '7+5' is synonymous with '12', just as our knowledge that every oculist is an eye-doctor depends on the fact that the symbol 'eye-doctor' is synonymous with 'oculist'." Wrong, wrong, wrong. A *static symbol* like '12.00' would be synonymous with '12' in somewhat the way that 'eye-doctor' is synonymous with 'oculist', but it's entirely different with the symbolic *operation* '7+5'. '7+5=12' is the equation of a *process* with its necessary *end-result*; it's not an arbitrary linguistic convention. But I need not continue arguing against empiricist claims: in my mind, they've been refuted.

September 19

I'm in London again. In a few minutes I'll take a train to Paris, whence I'll proceed to Lisbon.

I'm not sure what to think of Ayer's theory of truth. In regard to empirical propositions I agree with much of it, but since I'm a transcendental idealist I must disagree with his ideas on a priori truth. I suppose my main (and perhaps *only*) bone of contention is that synthetic a priori propositions do exist. But I also think that there's such a thing as intuitive truth—which can be mystical—although I don't know how to define it.

In chapter 7 Ayer is wrong that the only thing "involved in self-consciousness is the ability of a self to remember some of its earlier states." This is one 'type' of self-consciousness, but the fundamental type exists purely in the moment, with no reference to the past. Moreover, although I agree that the self is composed of experiences,¹ it is nonetheless obvious that 'presupposed by' experiences is an *awareness* of them, and the self is produced when this awareness is turned on itself (that is, when we have experiences of this awareness—which are so subtle they're ignored). Additionally, since it's intuitively evident that this awareness is in some way *active*, and in order for something to be active it must be a kind of substance, awareness is substantial somehow.

...I reached Paris at 10:00 p.m., asked two unfriendly ticket-people about departures, raced to Austerlitz on a whim, was told (again) that no trains were going to Lisbon or Madrid or Seville until tomorrow, was advised that I should take a train to the border and thence to Lisbon, ate quiche and ice cream, decided that the advice was wise—and now here I am on a train going to God knows where.

September 20

I took the wrong train. Luckily it went to Tarbes, which is reasonably close to my original destination (Irun). I have to wait until 6:00 p.m. to take a train to Irun, whence I'll travel to Lisbon. So I have the whole day to explore Tarbes.

¹ Albeit ones of a specific kind.

I tentatively agree with Ayer's rejection of ethical and aesthetic 'truths', unfortunately (for my sanity). They are merely feelings, inclinations, whereas metaphysics is based on logic and observation—both intuitive and sensory.

In chapter 8 Ayer makes a metaphysical claim. Briefly, he writes that “there are good inductive grounds for believing” that objects exist unperceived. This, however, is equivalent to saying that, even though it's logically impossible for us to have a sense-experience of an unperceived object, such things probably do exist in some way (or rather, ‘behind our backs’ exists the potentiality for future sense-experiences to occur)—which is a metaphysical claim in that it is a factual statement that cannot be tested by experience. Hence Ayer himself has ‘proven’ that logic sometimes forces us to make metaphysical claims.

The “argument from illusion”, which Ayer criticizes, does indeed suggest that there is no independently existing material object with a definite, ‘correct’ appearance—which is the argument's purpose. Moreover,¹ I don't know what Ayer means in saying that objects are logical constructions, for it's plain that we have no need of logic or language in order to see objects. Maybe his idea is similar to Schopenhauer's, but I doubt it. Additionally, why can sense-contents be neither physical nor mental? In my opinion they're subclasses of mental phenomena. (Everything [in our experience] is mental in the final analysis.)

Ayer's response to the objection from four paragraphs ago would be that by saying a material thing exists unperceived, he means only that under certain conditions there would occur the relevant sense-contents. But I retort that he's nevertheless making a claim that applies to the moment in which it is made, and in the moment it can't be verified. But he asks why it must be verified in that particular moment. So I respond that he's actually saying a material thing *in this moment* exists, which implies that in this moment it has to be verified, which is impossible because it's unperceived. So he falls back on the assertion that the meaning of his proposition is merely that under conditions not currently fulfilled there would occur sense-data whose logical construction would be the material thing. So I return to my first response. And he returns to the one just mentioned. –Now, I ask you, how can this debate be resolved? Both sides have valid arguments, it seems to me. *Can* it be resolved? Or is it not a “genuine problem”? I don't even know what a genuine problem is.

I agree with Kant, which I used not to, that ‘ $7+5=12$ ’ is synthetic rather than analytic.Well, actually, I'm not sure: if we analyze the ‘concept’ $7+5$ we'll be forced to come up with 12, right? And this means it's analytic. So are all mathematical truths and equations analytic, since the product of an equation seems to be contained within the equation's left side? But maybe the distinction between analytic and synthetic doesn't apply to math—no, that's wrong; I've figured out where the problem lies. I assumed ‘ $7+5$ ’ to be a single concept—which I recognized was false two days ago—because it appears to be the subject of the proposition, whereas it's obviously a combination of two (or three) concepts. But in *language*, when two concepts ‘added together’ result in a third logically necessary concept, is the proposition considered analytic or synthetic? Clearly analytic, for I don't think this situation would arise unless the first two concepts were the definition of the third one. In mathematics it's different because numbers and axioms (and, indeed, most other ‘terms’) aren't arbitrary definitions: they're necessary in a way that linguistic definitions aren't. –But what is all this about definitions? Obviously the focus of analysis should be propositions. The laws of logic seem as compelling as mathematical laws: what's the reason for this? Clearly they're a priori, even though language is invented by us. Or perhaps it's merely *discovered* by us, similar to the way math is discovered rather than invented. (This in itself shows that math is not based on ‘arbitrary’ definitions but rather direct intuitions. –Incidentally, I now do think that arithmetic is synthetic. [That is, it involves cognitive “syntheses.” But it's not *empirical*, so it's not synthetic in that sense. These categories of analytic and synthetic are kind of simplistic anyway.]) But it can't be ‘discovered’ in the same sense, for there are many languages with different structures and only one universal system of mathematics. Maybe—probably—after we've invented or learned a language it becomes ingrained in us to the extent that its logical structure seems necessary. But actually the only rules that seem as necessary as mathematics are

¹ This paragraph is actually a random collection of comments.

ones like the law of non-contradiction, the syllogism, the principle of sufficient reason (even this is stretching it) and other basic ones that *must* be integral to *all* languages! –Oh, wait a minute! Kant already addressed all this, didn't he? Damn. I'll shut up now and go to sleep. (I'm on the train to Lisbon.)

September 21

I reached Lisbon at 11:00 this morning. After dragging my luggage around for half an hour I found a pension with a bed available. I then explored winding, poverty-stricken alleys until I came upon the Avenida da Libertade, which is the main boulevard in Lisbon. With hardly a care in the world I strolled down the avenue under the palm trees, admiring the statues and hotels and diverse architectural styles. For several hours I walked up and down the steep hills on both sides of the Baixa area, seeing—among other masterpieces of architecture—the Praça do Comércio and a cathedral, and at last came to the conclusion that Lisbon overflows with character. It has, perhaps, more character than any city I've visited. Most of it is poor, but the poverty has a picturesque, exotic flair. It gives one the impression that the city has existed for ages, and thus augments one's fascination. The narrow streets and precipitous hills add much to the mystique, as does the castle overlooking the city (which I haven't yet visited). Nonetheless, I wouldn't live here in a million years.

Today I felt rather alone again. Wanted to be with Sangeetha. I've long since grown used to traveling alone, but I can't wait to settle down in Austria and make new friends. I could keep traveling for weeks without excessively griping, but I'm tired of living out of a backpack and relying on my own resources. I really just want to fall back into a routine—and find a girlfriend. Yes, yes, there's that word again: girlfriend! I need one! After a two-month-long hiatus my sex drive has returned with a vengeance! I absolutely must fall in love and have sex soon or I'll explode. (Fortunately I have Mozart to distract me.)

Speaking of whom, I must say that there's something indescribably moving about the restrained, unpretentious, measured melodies and dynamics of the second movement of his sonata for piano duet, KV 497. The dissonances are gentle, the transitions smooth, the tense moments somehow soothing, and the whole piece has an exquisitely classical air which is the more remarkable for the obvious passion behind every phrase. It's as if Mozart is molding his melancholy into a resigned, happy acceptance of itself—and yet this imposed form adds poignancy to each note. It's more effective than the formlessness of Romantic art.

I wish I could convince Sangeetha to renounce her pop music. I know from experience that classical music can facilitate an appreciation of life and undermine one's vulgarities, but I don't think she believes me. That's not surprising.

September 22

Most of the details of my relationship with Sangeetha I haven't told you about. [...] –Those were happy days.

Unfortunately I didn't always appreciate our relationship. When I was with her I usually concentrated on either talking, kissing, or admiring her face, so I didn't feel the kind of 'happiness' I wanted to. When I was away from her, on the other hand, I lacked the imagination to feel consumed by my love—or even to feel this love at all, if indeed it was love—so I just read books! Nevertheless, there were many moments in which I was nearly overpowered by happiness and by Sangeetha's superhuman girlish cuteness. Sometimes I was *forced*, by a will not my own, to murmur in embarrassed tones, "I love you!"

Some parts of Lisbon remind me of the sun-drenched Greek isles. Like Paros, it has hundreds of lovely whitewashed homes and is speckled with palm trees—and the weather is magnificent. Lisbon is the perfect city in which to end my two months of traveling. [...]

September 23

Today I went to an area of Lisbon called Belém. The star attraction there is the Mosteiro dos Jerónimos, a vast monastery built in 1496. The exterior is decorated with microscopically intricate carvings, and the interior is nearly as impressive (or perhaps more so, on account of its sheer immensity). There was a cultural festival along the Avenida da Libertade, featuring talented break-dancers, African dancers and musicians; I spent most of the day observing the festivities and the people. I wish I could dance as well as I can think.

Let's examine the consequences of Ayer's theory of meaning. It entails that the statement "The self is self-consciousness" can be neither true nor false, for it can't possibly be verified, it's not immediately evident, and it's not analytic. Upon analyzing the proposition, though, we find that this conclusion is either incorrect or an oversimplification. For the proposition can be stated more exactly as follows: Insofar as I am abstracted from my body and my observable characteristics, I am merely consciousness aware of itself. No doubt this statement still seems meaningless to you, but that's because you haven't experienced the intuition that corresponds to it. That claim itself, I realize, is dogmatic and probably hard to understand, but I can do little else except (1) suggest that you observe your own states of mind until you recognize that behind every meaningful statement is an intuition that 'gives' you the statement's meaning, and (2) tell you that I myself have experienced the intuition behind the proposition in question, though I concede that it certainly is more obscure than that behind common-sense statements. —I'm too tired to think.

September 24

Certain propositions are almost self-evidently true *intuitively*. For example, Ayer thinks it's obviously true that John Stuart Mill was mistaken in believing that arithmetic is just a generalization from a large number of instances. Ayer does provide a couple of reasons for his belief, but it's clear that ultimately he thinks we can *see* Mill's proposition to be wrong. Similarly, I can, without reasoning, 'see' that the proposition asserting the self to be a combination of personal attributes is wrong; and though I may subsequently provide evidence or argumentation for this belief, I originally knew it was correct without considering the evidence. (I suppose what I'm intuiting in this case is that 'I' am immediately active—every moment, as it were—and that if I were only a collection of attributes I couldn't be active in this way.) The point is that we can know truths intuitively even if they aren't analytic or synthetic a priori. We don't know them with the same degree of certainty as the latter, but we 'know' them nonetheless.

An inevitable reply to that argument is that intuition is properly psychological, not philosophical. I consider this objection unworthy of my attention. A more serious criticism is that what I intuit in cases not analytic or synthetic a priori are the most obvious *reasons* for the proposition, not the *truth* of the proposition. This objection may be valid. For in the case of the obscure proposition from yesterday's entry, I think I am merely intuiting that the most obvious and sensible possibility is that the self is self-consciousness—i.e., that all other possible definitions of the self are either meaningless or wrong. Thus, in my instantaneous intuition I actually arrive at my definition of the self by default, and at the same time by deciding that it makes sense and contains no serious flaws. In thinking it makes sense I'm intuiting that when consciousness is *entirely* oriented towards an external object (if such is ever the case), I, insofar as I am necessarily an active awareness of myself, can't possibly exist, for there is no 'room' for me in consciousness. In realizing that I'm necessarily an active awareness of myself—which realization seems circular when it occurs in the middle of a chain of reasoning meant precisely to establish it—I'm imagining consciousness focused absolutely on an object and intuiting that in this case I wouldn't exist, for there would be no room for me in consciousness, and inferring from this fact of 'no room' that I must be a creation of consciousness (for—to put it logically—if I don't exist in this moment, and the only difference between this moment and moments in which I do exist is that, in the former case, consciousness is absolutely preoccupied with something outside itself, then clearly I exist only when and because consciousness is *not*

entirely preoccupied with something outside itself, which means that in these moments consciousness is partly focused on *itself*, which means that I exist only when consciousness is aware of itself, which means (or very strongly suggests, particularly when combined with intuitive thought-experiments) that I am consciousness aware of itself). The step in this argument that runs “...I, insofar as I am necessarily an awareness of myself, can’t possibly exist...” is based entirely on thought-experiments and an intuitive recognition that I must be aware of myself when I exist.¹ (The aforementioned circularity isn’t fatal to the argument because “awareness of myself” isn’t, at the start of the argument, equivalent to “consciousness aware of itself”.)

The ostensible proof of my definition of the self in the foregoing paragraph was merely an incidental byproduct of my purpose, which was to analyze an intuition that seems certain to me. This analysis has suggested that, except when we intuit thought-experiments and a priori propositions, we’re actually intuiting the *reasons* for a proposition rather than the self-evident *truth* of this proposition. That is, Ayer is probably right that intuition can never be a criterion of truth, which means that “intuitive truth” is only a sub-class of ‘linguistic’ or ‘propositional’ truth. Hence philosophers should always try to articulate the logic and empirical reasons behind their intuitive recognition of obscure truths. So, to conclude, intuition is not a method separate from logic to arrive at truth; it is merely an instantaneous ‘absorption’ or ‘seeing’ of logic and various reasons for judging a given proposition to be correct or false. (We can arbitrarily define a class of truth as being somehow ‘existential’ or ‘mystical’ or ‘non-logical’, but then this is excluded from language by its very definition.) Of course, it’s still the intuitions behind (or: which are part of) propositions that give the latter their meaning, but, again, these intuitions can always be translated into language. Even thought-experiments can (to a more or less adequate degree).

I’m temporarily forsaking philosophy. In a few minutes I’m taking a train to San Sebastián in Spain. Lisbon was the perfect climax to my travels: it’s one of the great cities of the world. I *would* live here in a million years! I like it as much as or more than Rome, more than London—and almost as much as Paris! Parts of it are dirty, but even its poor neighborhoods are captivating. I’d love to spend more time in it.

Today a startling coincidence occurred. I was eating breakfast on my way to the train station when one of the Portuguese girls I had met in Oslo showed up! (This type of incident has happened many times on my trip.) We talked for a while, astounded, and exchanged e-mail addresses.

September 25

I’m not so sure thought-experiments can always be described. How do I describe the intuition that was so crucial to yesterday’s demonstration of ‘my’ theory of the self? I tried to explain it by declaring that there was no “room” for me in consciousness when the latter is absolutely focused on an object, and that this is because I’m an awareness of myself. But I can’t argue for the last part of that sentence;—or rather, I can, but the arguments, in being discursive, aren’t the real reason I believe it. The reason is just my private intuition. And it *is* somewhat circular in the context of the argument, for since consciousness is the only thing that can possibly be aware of anything, the statement implies that I am consciousness aware of itself. So when we try to translate intuitions into logic we may very well find ourselves committing a logical fallacy. But the same is true if we try to ‘reason through’ arithmetic propositions: we inevitably presuppose the laws of mathematics. I.e., we’re trying to establish them by presupposing them. Hence it seems that, at least in the case of the intuition we’re discussing, it’s a synthetic a priori truth: for, (1) like mathematics, a logical justification of it results in circular reasoning; (2) the intuition certainly isn’t analytic, but it isn’t based on contingent empirical facts either, since (a) it is actually a presupposition of the possibility of certain experiences² and (b) it’s a *necessary* truth. That is, if we understand what it is we’re defining, we can’t conceive of a different definition of the self. (Don’t be misled by the word “definition” into thinking that the intuition is somehow analytic: what we’re doing is *establishing* the definition, not *using* it. Besides,

¹ See four paragraphs later.

² No, that’s wrong. Ignore it.

the intuition certainly adds something to the abstract concept of a self.) –I’m getting tired of this, so I’ll sum up:—oh wait, I forgot to add something: if my idea of the self seems less necessary than $2+2=4$, it’s because (as I mentioned several days ago) we’re so ‘close’ to the self that it’s difficult to back away and contemplate it, which is how we understand mathematics. This proposition is verifiable only through intuition.

The train ride was fourteen hours long—and I was in a compartment with two noisy drunks the entire time—but *man* was it worth it! San Sebastián is, like Venice, heaven on earth. The weather is unearthly, the beaches smell of an irrepressible love of life, the streets are clean and yet full of character,¹ the architecture is a model of good taste and melds perfectly with the mountainous environs. Atop one hill is a giant statue of Christ. The harbor is the color of turquoise, reminiscent of the Mediterranean. The people are friendly, conscious of their privileged status vis-à-vis the rest of mankind. This city is wealthy in all senses of the word.

I feel a tremendous love for humanity! I feel connected with everyone, conscious of only an *artificial* isolation. Couples in love don’t excite my envy;² they arouse exhilaration! Love is the greatest truth of all: it *must* be, if only because of its omnipresence and potency. It exposes philosophy as a sterile, vain pursuit. (Sitting on the beach, surrounded by gorgeous half-naked women, effectively kills the appeal of philosophy.)

Before I forget, I should write down two thoughts. First, Wittgenstein’s picture theory of meaning isn’t too impressive, since on one interpretation it’s manifestly false and on another *obviously* true. (I may be misinterpreting it.) Second, I’m skeptical that “joyful” self-consciousness can ever not contain an element of self-deception; i.e., it’s impossible not to feel as though in some sense we’re only acting. Even if this feeling can be partly ‘transcended’ it will always exist for self-aware people.

I’m not sure that the intuition discussed earlier really is an a priori truth: it *seems* as if I can conceive that I am a noumenon behind appearances, which means that the ‘intuition’ isn’t as necessary as an a priori truth. But in any case, I now think that there are some intuitions—though probably very few—that genuinely are ways of arriving at truths which can’t be reached through logic (because logic in this case results in circular reasoning, and this isn’t a problem with the intuitions themselves because they are *immediate* and unrelated to logic). Actually, maybe the “I am awareness of myself” intuition is in the same class as immediate *empirical* intuitions like “bed-in-front-of-me”, and *this* is the reason why logic can’t be applied to it. If so it is a direct intuition of ‘truth’, but in a different way than synthetic a priori intuitions are. (I wonder if the idea of the synthetic a priori is an artificial ‘form’ that brutalizes the richness and variety of our many possible intuitions.)

I’m glad that in the past year I’ve learned to suppress and overcome my frequent frustration with people. That was an unpleasant aspect of my personality. *Now* when I feel frustrated I let the sensation arise and pass away. This is not only good for my mental health; it also undermines my arrogance.

September 26

I have to wait until 9:00 tonight to take a train to Paris; from there I’ll go to Salzburg.

I’m loath to return to philosophy, but there are a few thoughts that need expressing. Metaphysical propositions may not be susceptible of the kind of verification that scientific propositions are, but they can be indirectly verified.³ If, for example, a metaphysical system contains outlandish ideas with no basis in logic or experience, or it brutalizes experience in trying to explain it by means of the system’s concepts (as

¹ The character is purely a simple happiness and love of beauty.

² Or—not much, anyway.

³ [Actually, science *is* metaphysics. It’s an investigation of the world-in-itself. Physics in particular tries to elucidate the nature of ultimate reality.]

do Hegel's and Spinoza's philosophies, and perhaps Schopenhauer's), we can cast it aside as false. But if metaphysical propositions (or systems) are composed of fairly well-defined concepts that correspond to intuitions, and if they can be made compatible with accepted scientific truths, and if one or two other obvious conditions hold, then we can accept them as probable truths. —The same applies to pure intuitions that can't be directly verified (like "I am self-consciousness") except through a *possibly* dubious introspection. (That is, we articulate the propositions they entail and then judge the probability of these, etc.)

Today I spent more time on the beach, vainly attempting to acquire a tan. I also wandered around—observing people, which I love to do—and listened to Mozart for the first time in five days. The music had an almost physical effect on me: I returned to yesterday's happiness instantaneously. I was the brother of my fellow men once again! I recognized with enviable clarity the base animal aspects of humans, yet I loved those poor creatures all the more for that! I saw delectable girls wearing tight Spandex walk by, and instead of feeling lustful and frustrated I felt tender and protective. This is the effect Mozart has on me. (Show me the greatest 'masterpiece' of Indian classical music and I'll show you a minor composition of Mozart's.¹)

There are important similarities between Aristotle's idea of the active intellect and my notion of self-consciousness. For example, he writes that it is "in substance *activity*" and that it is "separate, unaffected and unmixed" and never a mere *potential*. I think he had the same intuitive idea in mind as I do, for I too have divided the mind into passive and active aspects ((unreflective) consciousness and self-consciousness).

Random thoughts: I have to find out why Greek art, for example, is so different from Egyptian art, and why the East never developed the twelve-tone musical scale, and why the Aztecs loved terraced pyramids, and why Persian art (and architecture) is so distinctive, and why no sprawling kingdoms were constructed in Central Africa, and why *Homo erectus* died out, and the solutions to a thousand other mysteries of history.

September 27

Schopenhauer took sight and touch as the paradigms of representation, since they're the most concrete senses. This being so, it's understandable why he thought that music is an immediate manifestation of Will: it can't be seen or touched, but it 'feels' like it should be. It seems like something substantial, but it can't be 'grasped'; it's elusive (always just beyond our reach) in the way that the self and time are, though to a lesser extent. Moreover, aside from drama (which however exists 'out there' in space) and literature (which is, however, abstract in Schopenhauer's sense), it's the only art that is intimately connected with time; and since time is our inner sense, music is intimately connected with *us*. More so than any other art. (Additionally, sound is—originally in the form of the human voice—closely connected with emotions, which are the most concrete, yet, again, elusive, aspects of the mind.) Thus, because of all these considerations and others regarding the relation of consciousness to the external world (which I have already touched on in previous entries), music *seems* to be a part of inner reality.

....I'm on the train to Salzburg. Had to wait six hours in the Paris station because I missed the connecting train at 8:00 a.m., but this gave me an opportunity to read more of Aristotle and Marx. —On an unrelated topic, San Sebastián is a slightly more 'sterile' city than I indicated: it's a resort town, albeit a stunning one.

The ancient Greeks are my model in all areas of life. If I want to be a universal human being—and

¹ (In fact, Indian music doesn't really have "masterpieces", it seems. The music isn't individualistic enough for a piece to be masterful in comparison with others; it's all of the same kind and on the same approximate level of quality. It barely has melodies and it doesn't have inner direction in the strict sense in which Mozart et al do. Creatively, it's inferior to the best Western music.)

this is my strongest desire—I must force myself to submit to the rigor of physical exercise, and become a—dancer.

The older I get, the harder it is to believe that I actually wrote the bitter journal entries of my freshman year in college. I rarely felt as angry as they made me appear. And I'm surprised my self-consciousness didn't prevent me from writing what I knew to be a one-sided portrayal of myself. But there are obvious explanations of this puzzle, two of which are that I was determined not to let self-consciousness emasculate the bold expressions of a turbulent nature, and that night carries with it an impulse to curb self-censorship.

The scenery in Europe is ravishing. Shapely and well-proportioned. Pulchritudinous, in fact. Hundreds of acres of cornfields lie at the base of a mountain range, which sits directly beneath a pale blue universe, which overlooks miles of verdant meadows.... Villages are tastefully interspersed here and there. The countryside is evocative of such tranquility that it's hard to believe four major wars and hundreds of minor ones have, since the 1600s, decimated everything in sight. Yet peace inevitably returns. There is something *universally comforting* in the fact that “the eternal hourglass of existence is turned upside down again and again”.

Watching myself grow up is scary. Ever since I was a boy I've thought I'll remain a child my entire life: it's impossible to imagine myself as an adult. I'm too silly! And irresponsible! How could I ever be a *father*?! So far I haven't had to confront the aging process, but now I can discern traces of maturity in my facial features. I can imagine myself with long hair and a mustache—and the image is frighteningly similar to my dad's face.

September 29

I stayed in a hotel my first night in Salzburg, after searching (at midnight) for hostels that were all closed. The next day I took a cab to my dorm. Commands a good view of the Alps. I found out from the Americans I met that the entire program consists of thirty American students. ‘Wunderbar!’ What's even worse—none of the girls are very pretty.

October 1

It's imperative that I distinguish between types of intuition. The least noticeable but most ever-present kind takes place when we ‘intuit’ immediate sense-experiences; then there is the intuition involved in immediately understanding words and propositions; lastly, there is the second major class of intuitions (the first two are subclasses of the category of ‘imperceptible’ intuitions), which consists of thought-experiments and the imagination. Thus, if I want to assess the validity of Nietzsche's theory of slave morality, I might imagine myself as a poor Christian in Roman times and introspectively ‘examine’ the probable motives for my beliefs. (In this case, I think that “slave morality”—which must be clearly defined, of course—is a valid reason for the existence of the *majority* of Christians in Roman times. I can translate this intuition into arguments....but I don't feel like doing that.)

I'm reading the New Testament. The translation isn't as good as the King James version,¹ but it's satisfactory. I've read only ten chapters in Matthew, but I can already see that most of what Oscar Wilde wrote about Jesus in *De Profundis*² was true. (I'm glad I read that work before the Bible.) That is, Jesus was the supreme individualist, who wanted us to live not for others but for ourselves. He knew that love is the pinnacle of life. He told us to forgive our enemies not for their sake but for our own.

I feel peaceful as I read the Book of Matthew. It has none of the pettiness and vehemence of the Koran: it is full of hope and wonder. Certain passages are magical. If one adopts Wilde's interpretation,

¹ It's the New King James version, published by Gideons International.

² Parts of this letter are more sublime than anything I've ever read.

Jesus does seem to cast a spell upon him who encounters his personality directly or indirectly. The man was a work of art. —Nonetheless, I don't think that modeling one's life or personality after Jesus's is the best thing to do. There are other, perhaps 'better', ways to live a beautiful life. (Actually, I don't think there's a single 'best' ideal, except maybe in incredibly vague outlines.) Moreover, Jesus was only human: his flaws partially offset—but made possible¹—his greatness.

October 2

My judgment of last night was premature: Jesus wasn't as impressive as the Buddha. I'm not sure there's a coherent underlying principle in his teachings—and if there is, it can't be reduced to Wilde's interpretation.

Today was a good day. I made several new 'friends', one of whom is a pretty Austrian girl. I've agreed to see *Aida* and a Mozart concert with an American girl, who, by the way, is an excellent pianist majoring in music. (When I discover a talent in someone I instantly lose my self-absorption: I become *fascinated* with the person.)

Returning to the Bible: I won't read any more until I can find the King James version.

Science and philosophy can try their hardest to explain the world, but there will always remain an element that can't be sifted through a conceptual scheme. Listen to music and you'll understand what I mean.

October 3

I'm inclined to accept transcendental idealism, since I can't think of any way to avoid it, but it contains obvious problems. Maybe I'm searching for the 'Truth' from the wrong direction somehow: every metaphysical philosophy I know of is inadequate. Even so, I can't just abandon metaphysics, for science, logic and epistemology lead directly into it. [Such confusion! Science *is* metaphysics, dude! I was misled by the confusion of previous philosophers who distinguished between science and metaphysics. Natural science is just the modern, naturalistic form of metaphysics and ontology.]

I'm reading *An Inquiry into Meaning and Truth* by Bertrand Russell.

There are difficulties involved in my idea of meaning as both a reference and an intention, one of which is that intentions are inseparable from the very words whose meaning I'm trying to understand. [...]

October 4

In some ways, *Thus Spoke Zarathustra* embodies the romanticism that Nietzsche despised: it's relatively formless, it's full of passionate excess, it's modeled after the Bible rather than Greek literature, etc. In this sense Nietzsche was a bit of a hypocrite.

I ought to remind you that I'm not always entirely honest in this journal. I can't be, or else I'd have to interrupt every paragraph with disclaimers and self-analyses. Stylistic considerations must be adhered to, though their result is that I appear more superficial than I am.

October 6

Yesterday, from 2:00 to 5:00, I toured Salzburg with the kids in my program. It was a 'geographical'

¹ Because everything in our psyche determines who we are. It is holistic.

rather than historical or artistic tour. Unfortunately the guide spoke only in German, so I understood 0.1% of what was said. [Later met up with an American named Rachel.] Together we walked to the castle overlooking the city, which was where the concert was to take place; after a half-hour of minor travails we reached our destination. The setting was, needless to say, exquisite: an intimate, ancient room towering directly over Salzburg. At 8:00 the performance began: first was a symphony by Haydn, second a bassoon concerto by Mozart (delightful!), third a brilliant set of variations for cello and orchestra by Paganini, and fourth was “Eine Kleine Nachtmusik”. During the intermission, Rachel and I gazed out of an open window upon a Salzburg lit by moonlight and street lamps. In short, for two hours I communed with the Almighty.

Now that I’ve recounted what happened last night, I ought to tell you about today. At 8:00 a.m. we all met at a designated bus stop. (Landgraf, the director, and his wife were with us.) We then took a bus to St. Gilgen, after which we walked across a small mountain to a ship that took us to a town called St. Wolfgang. Later a train carried us to the summit of Schafberg, where we ate an immense lunch. At 1:30 we took the train down the mountain, and then (in small groups) we wandered around St. Wolfgang for two hours.

Enough of the skeletal outline of our journey: I have to describe to you how glorious the day was. Walking through St. Wolfgang was the highlight. The town is minuscule, but it’s situated on a lake nestled within the Alps. The weather was warm and sunny (though the day began quite cold); this helped me absorb the elemental forces that surrounded us. For an hour I sat on a pier. I experienced what one might call a pleasure-overload. The feeling wasn’t ‘overwhelming’; it was, rather, peaceful and spirit-cleansing to the point of realizing Truth in some way. I felt pure. Didn’t feel small in the shadow of the Alps, but serene and privileged and *part* of them.

I’d like to live in St. Wolfgang more than in Venice or Salzburg. This village is truly one of the ideal places I’ve seen in my life. The view from the heights of Schafberg was awe-inspiring, but I felt more natural gazing up at the peaks from St. Wolfgang’s shore.

Now I have to tell you about Thursday. In the morning I took a German placement test. Didn’t do as well as I should have, so I’ll be in Mittelstufe 1 this semester. Didn’t do much for the rest of the day, but at night there was a party on my floor (in the kitchen, next to my room). At first I was a hermit, preferring to indulge my melancholy, but at length I decided to get drunk and meet girls. Within minutes a girl named Sofia, who lives in my hall, was talking to me; we spent most of the night together. She’s a twenty-year-old Austrian who studies languages and loves to paint; she’s pretty, and sweeter than most people I’ve known. Her smile is magnificent, luminous. As the night wore on and I grew tipsier, I felt the urge to kiss her many times. Later we and several other girls went to a party across town, but since there were hundreds of people—and the smoke-ridden atmosphere hurt our eyes—we left at midnight. Sofia and I walked home alone, discussing our families, our lives, our interests, and politics. She invited me to her room to view her posters of Monet’s paintings; for a while we talked about our favorite types of art. (She was actually surprised she was having this conversation with a boy. “You’re not like other boys I know.”) At last I judged it was time to go. This weekend she visited her family, so I haven’t seen her since that lovely night.

October 7

Yesterday, during a conversation with a girl named Christine, I remarked that most twentieth century artists are too self-conscious. It occurred to me that this claim has philosophical potential, but later I realized it’s only old wine in new wine-skins: artists are self-conscious *cynically* (hence their love-affairs with types of minimalism), which means they aren’t yet aware of the poverty of cynicism. However, questions remain. What are the *precise reasons* for the shallowness of cynicism? (I realize that cynicism is the antithesis in a dialectic, but this essentially begs the question.) Does self-consciousness in itself somehow dilute the greatness of art, or is it only in its current manifestation that it does so? Indeed, is it true that in its current manifestation it does so? How would one analyze and solve this question?

So far I’ve disagreed with, or thought superfluous, many of Russell’s ideas. He constantly delves

into logic when it seems unnecessary. I haven't written down my criticisms because I want to finish the book as quickly as possible, and also because I've agreed with most of his substantive claims. But in a footnote at the beginning of chapter 4 there occurs a somewhat technical logical discussion that I'd like to demonstrate as superfluous, for the sole reason that I dislike 'logical' language to the point of wanting to expose *as much of it as possible* as inessential. (This involves providing non-'logical' solutions to problems that logicians have supposed can be solved only with the use of formal logic.) First I'll copy the footnote.

The arguments [for the necessity of a hierarchy of languages] are derived from the paradoxes; their applicability to the words "true" and "false" is derived from the paradox of the liar.

....A man says, "I am lying", i.e., "there is a proposition p such that I assert p and p is false". We may, if we like, make the matter more precise by supposing that, at 5:30, he says, "between 5:29 and 5:31 I make a false statement", but that throughout the rest of the two minutes concerned he says nothing. Let us call this statement " q ". If q is true, he makes a false statement during the crucial two minutes; but q is his only statement in this period: therefore q must be false. But if q is false, then every statement that he makes during the two minutes must be true, and therefore q must be true, since he makes it during the two minutes. Thus if q is true it is false, and if it is false it is true.

Let " $A(p)$ " mean "I assert p between 5:29 and 5:31". Then q is "there is a proposition p such that $A(p)$ and p is false". The contradiction emerges from the supposition that q is the proposition p in question. But if there is a hierarchy of meanings of the word "false" corresponding to a hierarchy of propositions, we shall have to substitute for q something more definite, i.e. "there is a proposition p of order n , such that $A(p)$ and p has falsehood of order n ". Here n may be any integer: but whatever integer it is, q will be of order $n+1$, and will not be capable of truth or falsehood of order n . Since I make no assertion of order n , q is false, and, since q is not a possible value of p , the argument that q is also true collapses. The man who says "I am telling a lie of order n " is telling a lie, but of order $n+1$.

The third paragraph is unnecessary, not to mention that its solution of the difficulty seems contrived. We can resolve the paradox simply by saying that q —the original q —lacks a referent. That is, there is no proposition it refers to. In this case the lack of a referent means that q is false, for it is asserting precisely that this referent exists. Further reflection on my solution yields the insight that propositions can never both refer only to themselves and have a truth-value, for if they refer only to themselves there is no criterion by which to judge their truth. Thus, the statement "this proposition is absurd" is neither true nor false, for "is absurd" refers to the subject, and the subject is "this proposition", which contains no claim whose absurdity we can judge, but rather refers to the statement that hasn't been completed when the first two words have been spoken. *This* statement, however, would be true: "'This proposition is absurd' is absurd", because the subject is a proposition in and of itself, albeit a meaningless one, which however is exactly why it's absurd. —Hence the general rule we've arrived at as a result of our solution of the paradox is itself the ground of our solution, for it makes a claim about a class of propositions that includes q , and we're merely applying the claim to a specific instance. Therefore my solution suggests its own justification, whereas Russell's has an air of the 'ad hoc' about it. Moreover, my solution does not rely on an invented "hierarchy of languages".

October 9

[...]

Today I read a column in the *New York Times* by Thomas Friedman entitled "It's Freedom, Stupid".¹ It consisted of worthless, unoriginal apologetics for American foreign policy. Truly, I can't imagine having an intellect as shallow as Friedman's. However, the most enraging characteristic of him

¹ The quality of the article was directly proportional to that of the title.

and his ilk is that *it's impossible to get through to them*. They're absolutely smug in their commonplace ideological moralizing. This is indeed why I was so vicious in my journal entries from two years ago: I was acutely aware that it's impossible to pry open the closed mind¹ of the herd. I was frustrated that I could do nothing but *tolerate* people like Thomas Friedman. —In any case, *ich soll nicht an sie denken*.

I'm not going to read Russell's book anymore. It's boring. It ain't rewarding enough to be worth the effort of deciphering. In its stead I'm going to read Franz Brentano's *Psychology from an Empirical Standpoint*.

October 11

My courses are as follows: Mittelstufe 2, 20th-century German Literature, History of Renaissance and Baroque Art, Conversation and Living Grammar, and Contemporary Themes in Austria. They're all auf Deutsch, of course.

I've read most of Brentano's book. (I'm skimming through it.) It's not a bad work, but much of it seems confused. This judgment may be only a reflection of my own muddledness, but I get the impression that Brentano introduces conceptual distinctions where there ought to be none, and periodically *fails* to make necessary distinctions. His notion of "presentation" seems vague, but his classes of mental phenomena seem too 'precise'.² Indeed, I'm skeptical of attempts to classify mental activity, since consciousness is fundamentally a unity (and conceptual distinctions necessarily brutalize this unity). At any rate, I'm tired of phenomenological psychology: I think it somehow lacks a foundation. The very notion of consciousness seems misguided in some way, though I can't state precisely how or why. Psychology, of course, isn't alone in lacking a foundation. I'm still searching for *philosophy's* starting point!³ Nevertheless, psychology is more in dire need of help.

Tonight I attended a guitar concert in the elegant Mozarteum. The pieces played, except for one by Leo Brouwer, were superb. I especially loved Fernando Sor's Variations, Op. 28, and Grand Solo (Op. 14). I've heard other pieces by that Spaniard: every one is a triumph. Sor understands the guitar like few other composers.

Back to philosophy for a few minutes. I've often been bothered that phenomenological and properly 'psychological'—not to mention physiological—explanations of mental life can contradict each other. When the supreme importance of the Other in our psychic life can be explained by either the intrinsic characteristics of self-consciousness or by the sex instinct, which explanation ought to be preferred? Perhaps neither. They're each appropriate on 'different levels', and neither is more basic than the other. That is, since we are fundamentally objective beings, and yet the self is self-consciousness, the two classes of explanations (which refer respectively to these two aspects of us) complement one another. They're never really contradictory. Moreover, physiological explanations of mental phenomena must always complement psychoanalytical (that is, psychological—not phenomenological) ones, because the latter are based on the former. They are the 'reasons for' or 'expressions of' physiological phenomena. Thus, supposing that Freud's theory of infantile polymorphous perversity is true, it's only an expression in psychological language of the chemical and physical dispositions of infants. (Insofar as our objective being is matter, clearly physical/chemical theories are the basis of psychological ones.)

I'm still not sure what the *relation* is between psychoanalytical and phenomenological theories. If they're completely unrelated we'll have to adopt a kind of modified complementarity theory of psychic life.

October 12

¹ I use the singular advisedly.

² However, I haven't yet read the relevant chapters.

³ The entire philosophical enterprise is circular, of course. In more than one way.

They obviously are related, however. One of the methods used by psychoanalytical theorists is to examine what's immediately present in consciousness. They then reason inductively [or abductively], which isn't permissible for strict phenomenologists; the latter must draw conclusions only from the direct analysis of consciousness. Thus, psychoanalysts try to find the reason behind our states of mind—the laws beneath them, as it were—while phenomenologists try to find the immediate laws and characteristics of consciousness. The existence of the two fields reflects the fundamental division in our nature. On the other hand, ultimately it must be possible to transcend this theoretical dualism (or at least to provide connecting links between the two disciplines), because the human being is an immediate unity.

If we define the unconscious simply as thoughts of which we're unaware, then clearly it doesn't exist; for thoughts, in order to be such, must be conscious. (That's part of their definition.) However, this doesn't mean that consciousness isn't determined by neural processes, or that there isn't a pre-conscious realm of potential thoughts¹ in constant movement. Moreover, the conceptual need for an unconscious cause of thoughts is evident from phenomenology, for thoughts appear *out of nowhere*—and yet they must come from somewhere. (Strictly, this simple and obvious hypothesis of an 'unconscious' isn't part of phenomenology, because it's based on [ab]duction.)

Last summer I was too harsh in my judgment of my valedictory. The speech did have faults, but it wasn't a "hodgepodge of unrelated ideas". Two themes ran through it: we ought to know ourselves, which involves affirming our humanity over technology, and once we do we'll recognize that the most truly human life is spent in the service of mankind. I don't necessarily still agree with the latter idea, but it contains at least a kernel of truth.

Today fifteen of us Bowling Green students climbed the Gaisberg. *Es war sehr lustig*. The weather was perfect, as usual, and the hiking itself was invigorating. Mountain-climbing is one of my favorite physical activities. The view of Salzburg and its environs was majestic enough to trigger profound philosophical ideas; the air was pristine and pregnant with a 'vital force'.

I need order in my life, but it has to be a self-imposed order. It has to be an *inner* order. My objective situation might be entirely disorderly—as it was in August and September—but this would bother me only a little if there were a direction to my life. On the other hand, order imposed by institutions, like college, interferes with my own internal self-control, so it has the paradoxical effect of introducing a bit of anarchy into my life.

I love not having the faintest idea how my life will unfold. This uncertainty ensures that the next sixty years will be a journey of self-discovery unhampered by career goals and the pursuit of money.

I think Brentano is wrong that the sentence "A exists" is only an affirmation of A rather than a combination of the attribute 'existence' with A. In asserting that A exists we're stating that an objective referent corresponds to our idea. (Saying that an *idea* exists [as an idea] is, perhaps, a tautology.)

On second thought, many existential propositions are tautologies. "That tree exists" and "The house in which I live exists" are tautologies because the subject already refers to something 'out there'.² However, "God exists" and "A green tree exists" are not tautologies, for the subject is only a concept 'pure and simple'; that is, the subject doesn't say something about the concept which entails its existence.

[...]

October 14

It may be impossible, even theoretically, to provide a physical basis for all non-phenomenological psychological statements. This is one problem with my earlier reflections, but there's another: even if

¹ Dreams are, perhaps, expressions of the constantly existing potential thoughts.

² Because of the words "that" and "in which I live".

phenomenology can be definitely restricted in its scope, I don't think psychoanalysis can. It overlaps with phenomenology. This would be merely a verbal issue if it weren't that psychoanalysis can contradict phenomenology. I won't get any further with these ideas, though, until I examine specific psychological theories.

Actually, two true hypotheses can never contradict each other. They're either appropriate on different levels (which is vague, I know), or there are simply multiple reasons for a phenomenon.

[...]

October 15

I finished reading Brentano's book. Now I'll finish the *Philosophical Investigations* (of which I haven't read even 200 sections).

October 17

Yesterday I talked to a cute Austrian on the bus. She studies in the same building as I do, so I'll probably see her again. Today I met a 19-year-old Czech girl in my Mittelstufe 2 class: her name is Michaela and she's directly descended from Helen of Troy. I can imagine men going to war for her, solely on account of her beauty. We talked for a while, getting along 'famously'. I'll see her again tomorrow.

My academic studies are as boring as ever. I'm reading Arthur Schnitzler's short story "Die Toten Schweigen" for Literature; most of its words I'm unfamiliar with. The students (mostly Americans) in my courses are dumb to the nth degree.

There have recently been anthrax attacks in Britain and the U.S. What a surprise. This is exactly what I predicted would happen. As the bombings in Afghanistan escalate, so will the terrorist attacks. Eventually the Taliban will be ousted, and this won't have the slightest effect on stopping terrorism. As I've insisted all along, the "war against terrorism" cannot be won¹ unless the U.S. provides massive economic aid to poor nations. No other method will be anything but counterproductive in the long term. Since our politicians, however, aren't Marxists, they won't follow the wisest policy.

October 18

I saw Michaela again. I may have exaggerated her beauty, but not by much. I want to write a poem about her, but I have no poetic talent.

It didn't even occur to me today to ask for Michaela's phone number! I planned to invite her to a concert next week—though she's required at all hours as an "au pair" for an Austrian family—but I ought to get her phone number first. I can't do that until Monday, though!

I spent the last hour writing eight lines of a long narrative poem—but I quit the enterprise soon after my inspiration had. (The inspiration was fueled by the thought of Michaela.) Now I'm bored.

October 21

Yesterday I wrote three pages of a mediocre short story. Today I'm trying to finish the one I began this summer.

...I was just given a piano for my room! Dad's cousin, who's a concert pianist in Salzburg, is lending me her Clavinova so we can play Mozart's Larghetto and Allegro in E-flat together. This is a dream

¹ Certainly not in the long run.

come true, my friend.

I finished the story of the vanishing composer. I'm pleased with it, surprisingly enough. (Its extravagant language, though, is excessive at times.)

....Actually, I think it's amateurish. It's too short. Its inconsistencies in 'phenomenological' language are indeed intentional—they're meant to illustrate the inconsistencies of the common notion of the self—and its form is more complex than appears at first (just as its philosophical themes, among them an implicit critique of dialectics, are fairly profound), but this doesn't mean it's a good piece of literature.

October 23

My story, despite its flaws, is a good debut to a life of literary endeavors. It unites art and philosophy. Schopenhauer's philosophy is implicit in it, as are my ideas on the self, as is my enlightened 'contempt' for matter (bodies), as are theories of artistic creation (such as its relation to self-consciousness and to the sex drive)... It even contains original ideas I've never articulated...and, of course, also ideas I'm not yet aware of.

Last night I saw *Aida* with Rachel. (It was the first opera I've ever been to.) Verdi's music was phenomenal, but the orchestra occasionally overpowered the singers. The women's voices had a little too much vibrato. The direction was awful: the set was modernized, the costumes were unimpressive, and several grand scenes were *pitiful* rather than overwhelming. At the end of one, the audience booed. (And also when the director bowed at the end.) –Even so, I thoroughly enjoyed the evening. Verdi's music saved it.

My strong sex drive and the fact that I'm a perfect gentleman conflict. (Coercion and violence are obviously implicit in the sexual instinct and act.)

October 24

The last sentence of §202 in P.I. doesn't follow from the previous one. Besides, if thinking itself follows rules, as it obviously does, then clearly it's possible to obey a rule privately. –Or is W. going to deny that we think?

I can't figure out what Wittgenstein is arguing for. If he's arguing that intuitions don't exist, he's wrong. (The most that can be said is that they're usually 'imperceptible'.) If he thinks they're somehow unimportant, I don't know what he means.

§242 is interesting, but I don't entirely understand it. I don't understand the significance of 239 either. 248 is peculiar. I'm not sure that the last sentence of 247 is correct. 251 and 252 are very intriguing but I'm too tired to think about them. I'll say only that I don't understand why the first sentence of 252 could be called nonsense.

[Deleted entries about meeting a couple friends from college.]

October 31

[...] Lately I've been interested in the philosophy of science. I can't figure out the relation between the noumenon, phenomena and theoretical concepts like chemicals and molecules. How can the latter have such explanatory power if there doesn't really exist anything that corresponds to them? Schopenhauer believes that theories are accounts of how the Will manifests itself, but I'm skeptical that this idea has as much content as he thinks. I ought to read about Bertrand Russell's philosophy of science, but learning German occupies too much of my time.

Sometimes I feel on the verge of intellectual breakthroughs, but I never get anywhere because I can't devote more than a few minutes to philosophy each day. I have to practice the piano, read about art history, attend classes, and think of ideas for short stories.

November 1

I've felt constricted lately. I'm frantic to accomplish something magnificent. My interests are so varied, and it's so hard for me to stay focused, that I don't get anything done. School contributes much to this anarchy.

It's frustrating for me to pretend that adults are my superiors—to caress their vanity, to acquiesce in the charade of “respecting one's elders”. Adults are boring, not wise.

Today I wrote a parable about a willow tree. It's meant to be a short children's book, although children wouldn't appreciate the symbolism behind each sentence.

The key to explaining the startling analogies between history and the growth of an intelligent individual lies in a society's collective consciousness, “which appropriates and learns from past experiences like individuals do.” (From my letter to Jessica.) This analogy in turn is explained by the fact that collective consciousness is nothing but the ‘sum’ or ‘collective tendency’ of individual consciousness. The former is more sluggish than the latter for a variety of reasons: (1) collective experiences can be ignored or forgotten more easily than an individual's experiences can (because c.c. isn't a single continuous consciousness); (2) c.c. is composed largely ‘of the masses’, and individuals in this category learn from (and reflect on) their experiences more rarely than intelligent people do; (3) a society's experiences are far less important—and *compelling*—to people than their own are; etc.

I realize that the concept of collective consciousness is incredibly vague, but it's necessary. Not only does it correspond to a reality, but only by using it can one arrive at the most sensible explanation of the first abovementioned analogy. Thus, collective consciousness is one of the links between the individual and history.

The dialectic is so much more noticeable in history than in individual psychology because collective consciousness isn't subtle: whereas individuals cover much psychic territory in traversing from the thesis to the antithesis, c.c. seems to leap from one to the other because (1) it's the *product* of many individual ‘facts’,¹ (2) it doesn't *exist* in the way that consciousness does (it's simply an extrapolation), and (3) [partially because of (2)] it's not as easy to interpret as real consciousness. (So we notice only its broad outlines, and only when *these* are obvious.)

C.c. is a difficult concept, but a revolutionist can't afford to neglect it.

Lately I've felt somehow isolated, cut off, from my earlier self. I want to be inspired again. I'm tired of everything. I'm tired of dreary “wisdom” and discontinuity with passion. And I hate feeling like a foreigner to myself.

Incidentally, I'm convinced that nearly every philosopher in history has approached the problem of self-continuity from the wrong angle (i.e., with incorrect assumptions). I'll elaborate on this some other day.

November 2

I'm not especially brilliant. I just happen to be *right* most of the time.

I wonder how philosophers have resolved Zeno's paradoxes. I think I know how Kant did, but how have empiricists done so?

The following is my rough thematic outline of the novel I'll never write.

¹ And hence lags behind the facts themselves. (Or at least our awareness of it is delayed.)

Gradual emergence of naïve self-consciousness. (Absence of self-reflection except in exceptional moments.) Proto-sexual incidents in childhood hint at the terrifying nature of the subconscious and the vastness of the universe. Conformism in middle school. Reflection on others but little on himself. Extreme popularity in middle school and high school. Contempt for everyone intellectually and socially beneath him. (Hegel's master-slave relationship. Striving for recognition by an equal or superior.) A competitor arrives—a true equal—but he's finally 'disgraced' by the main character. (Drives for power and for recognition conflict. Consequent Faustianity of life.) Triumph is short-lived; contempt returns. Beginnings of cynical self-reflection/self-consciousness. Depression. Cruelty to classmates. Rebellion of the 'masses' against the 'leader'. College begins: 'fresh start'. Boredom for a time, but he discovers philosophy. Begins to 'realize' himself. Falls desperately in love with a girl; neglects everything else. One day she wants to read his entire journal; he lets her. She's appalled by it and breaks up with him. (Relationships would be impossible if we really knew each other (but not if we also knew ourselves).) Suicidal despair. Return to philosophy, but despair increases. Disillusionment with everything: life is meaningless. Not even sex is pleasurable anymore. Finally he abandons society....but not before stealing a lot of necessities like food and CDs (practical nihilism; consequent self-loathing). (Murder...?) Lives in a tent in the mountains, letting nature heal him. He has recently discovered classical music. For three years he struggles to overcome nihilism. He succeeds, though at the cost of abandoning intellectual integrity. Rejoins society (lives with his parents). Contempt for others begins to return, but he falls in love. This time it's less passionate: they feel comfortable together. They get engaged....and he's smashed by a train. (Marriage=death of the individual.)

In the months—and years?—to come I'll considerably alter this vague outline such that the story is a cohesive whole rather than a formless mass.

It seems to me that Wittgenstein could have done a better job of explaining his arguments.

November 3

I'm tired of thinking! I can't stand it anymore! I spend most of every day trying to ignore philosophy and psychology! But I fail, inevitably. Hence the wisest course of action is to *embrace* my destiny, with love.

Collective consciousness has an intricate dialectical relationship with both the *individual's* consciousness and the objective conditions of society. It stands between the former subjective factor and the latter objective one.¹ For example, in the beginning of history there were nomadic tribes. Survival was their primary concern. The conditions of production forced them to hunt and gather—it can be said that the latter *were* the conditions of production—and this necessitated that they always be working with their hands. Intellectual pursuits didn't occupy individuals, and starvation always threatened them. Hence these people weren't aware of any fundamental separation between man and nature. Because this was true of everyone (or certainly the majority), it was part of the tribe's collective consciousness to feel like a part of nature. With Sumerian and Harappan civilization the situation became more complex: agriculture had been invented, so cities could be formed (from the surplus product of the agriculture); there were further gradations within the city between people *somewhat* engaged in production (merchants) and those not at all (priests, kings). In broad outline, all these divisions, combined with the development of thought, pressed upon civilization the awareness that mankind was distinct from nature. This time, however, it wasn't a simple case of an aggregate of individual consciousnesses determining collective consciousness; instead, the earlier c.c. had become partially internalized by individuals, who thus took as their 'starting point' an

¹ That's misleading, though.

already *collective* consciousness¹ [?]*—*which was, of course, more ‘naïve’ than the emerging one. (Obviously collective consciousnesses are always in flux, but to simplify matters we can and do point to certain ‘extremes’ or noteworthy developments as being culminations or beginnings or historical landmarks. In fact, that’s all that the dialectic is: a simplification, albeit a useful one.) So you see that, once civilization has emerged, changes in production are basically the driving forces behind decisive advances in c.c. (certainly the level of productive forces confines possible c.c.-es within more or less definite areas), but that the specific details of a c.c. are determined by the one it develops out of (and many other obvious factors).

Collective consciousness is the sum of the most general, ‘agreed-upon’ ideas in a society, even if these ideas aren’t entirely articulated. (This is merely a rephrasing of my earlier definition.) It must be distinguished from the *conditions* of society, be they political institutions or relations of production. Of course, once these conditions are made part of an ideology, their ideological expression is included within the c.c.

Incidentally, the consciousness of a division between man and nature is the antithesis in one of the most general dialectics in history, which won’t be concluded until mankind realizes its unity with nature on a more enlightened level than before (i.e., until communism is established).

Today I’m officially 21 years old. Strangely enough, I *do* feel a little different than I did last year: I feel less ingenuous and impressionable, more confident. I’m also a little more bored (though this will soon pass). There is a variety of reasons for my subtle change, chief among them being my relationship with Sangeetha and my travels around Europe. –Yet in spite of my maturation, there will always be a core of childishness within me. It is this, I think, that will keep me interested in life.

Whenever I think about time I get into a muddle.

November 4

Today I went to Susan’s house. For a while I played with her adorable grandchildren and ate the cake she’d baked for me. Then we practiced the Mozart duet.

I can’t understand the meaning or significance of many sections in W.’s book. For example: 271, 296, 297, 298, 300 (who cares about *pictures?*), 302. Why is the proposition in 295 not experiential? It’s different from other such propositions, but its truth can be ascertained only on the basis of experience. (It’s not a priori. I admit, though, that I don’t completely understand the distinction between learning a priori ideas in experience and learning a posteriori ideas from experience.²) 304 is important, but we *can* say things about intuitions. (Pain is a kind of intuition.) That is, intuitions are more a something than a nothing, because they are perceptible. 305 is important as well (and 303), but I don’t think it’s entirely correct. I agree that in the majority of cases the picture of the inner process of remembering is irrelevant to an understanding of the use of a word. But it does help us describe the concept of remembering and acquire a more exact understanding of it. (In future entries I might provide examples of such descriptions, but it’s easy enough to see what they’d involve.) 307 and 308 are also significant, as are 315, 316, 311 and 312 (though I only vaguely understand the last two). In regard to 316, what W. criticizes can at least *add* to our comprehension of the word “think”.

W. is right to point to inadequacies in both the concept and the reality of intuitions. Because of these inadequacies, intentionality isn’t a sufficient explanation of meaning. However, it is necessary, for reasons I have stated before and probably will state again.

November 5

¹ Remember that ideas in c.c. are only a part, but a very influential part, of an individual’s consciousness.

² How can we tell when an idea isn’t based on experiences? Simply by its apodictic certainty?

Occasionally in this journal I've referred to my "inferiority complex." I ought to clarify that. Even on the most basic psychic level—probably even in my subconscious—I distinctly feel pretty impressive and 'good'. However, I know myself well enough to recognize that I'll never compare to my 'ideal man'. (This man will *never* be realized. He is only an ideal.) Hence, in this respect, I am inferior.

In knowing oneself, one knows humanity—i.e., everyone. (And one doesn't know oneself until one knows humanity.) Philosophers and psychologists ought never to forget this.

Last night I had many odd dreams, or one long one, having to do with cats and sex. But what I remember most clearly is that I listened to a piano piece by Bach so crushing in its emotional power that I literally convulsed with sobs. After the pianist had finished I raced to a library to get a copy for myself, but I had forgotten the name of the piece! I was devastated.

November 6

In spite of my recognition that genius exists only in the moment of creation and is thus more delicate and less 'monumental' than most people imagine, I'm inclined to agree with Michelangelo that only those works deserve to exist that are products of genius. This certainly seems true with regard to philosophy and music (and perhaps nothing else, though I know not why): all creations except the most profound are expendable. I don't know precisely what that means—it's almost surely wrong, in fact—but I believe it on an 'intuitive' level. ...Genius is akin to perfection, and perfection describes the thing in itself. The genius has access to the ineffable; what is created by him has *value*. His thoughts haven't been completely filtered through self-consciousness—the great equalizer—but rather contain within them a kernel of Truth. (This is the case especially with regard to the musical, philosophical and mystical genius.)

Unfortunately, these reflections aren't very exact. They're probably wrong or meaningless. [They're too Schopenhauerian.]

November 7

Tonight Sofia and I went to a concert. The program included Mozart, Schubert and Beethoven (the Kreutzer sonata), so we enjoyed it. We also enjoyed each other's company. After we had returned home I invited her to my room—to "take a picture" of her in her nice dress—and then for a while we discussed art and such topics. There were several awkward pauses. Finally I leaned over, stroked her hair and kissed her, quite suddenly; she reciprocated. We kissed "passionately". After we'd unlocked our lips, we shed our false social shells and asked each other what we had been thinking (about our relationship) during the past few days. She had apparently liked me for a long time but had thought I didn't like her, etc. A minute later we resumed our kissing; this time it evolved into more than that. Eventually she went to her room—to face the endless questions posed by her American roommate.

[...]

November 8

I think I no longer really fear death. I don't look forward to it, of course, but if it's synonymous with oblivion, why fear it? I am somewhat annoyed that it'll prevent me from witnessing the future of humanity, but this isn't a fear of death itself. —Even so, I'm anxious not to die before I've fulfilled my potential. I don't fear the end of life, but I fear not realizing my ambitions. (Are my ambitions more important to me than life itself?)

One of the reasons for my high self-esteem—a stupid reason, to be sure—is that I know Nietzsche would approve of me.

Tonight Sofia and I engaged in some sexual activities. Specifically, oral sex and 'fondling'. I didn't

like it very much. As my face was buried in her crotch I felt a bit disgusted. I was tasting, smelling, touching, seeing and hearing the animal aspects of existence. My finger was actually *inside* this girl! As time went on I got bored.

November 9

I'm in Wien.

Sofia is a sweetheart. I might love her one day. Even so, last night I had the peculiar feeling that I was cheating on Sangeetha.

November 10

Tonight I saw "Salomé", the opera by Richard Strauss. I had quickly read Oscar Wilde's play beforehand, so I understood the plot of the opera (which followed the play to the letter). The music was brilliant, but it couldn't compare to "Aïda". It was too intellectual—i.e., not aesthetically pleasing—and its few gorgeous passages were fleeting. Verdi can sustain beauty; Strauss can't. Or he doesn't want to, which is just as bad. The story itself was intriguing, touching on such issues as humans' tendency to 'kill' that which they love (because they want to possess it?) and their fascination with psychic forces they repress. (Wilde's play was a strange combination of comedy and tragedy, but I liked it.)

Earlier in the day we took a monotonous tour of Vienna. Later I walked through the city with two acquaintances. The weather was frigid, but that didn't chill my impression of the magnificent Altstadt. The architecture—Gothic, Baroque, Classical, Neoclassical, Modern—is possibly more attractive than most parts of old Rome. I *love* Wien!

November 12

I'm in a sparkling mood. I was just listening to Handel's Concerto a duo cori No. 2, but more importantly, Sofia and I like each other better every day. She is indeed a wonderful and attractive girl. Tonight we kissed and cuddled for over an hour; tomorrow we're attending a concert together; next week she's coming to the Thanksgiving party with me.

Moreover, I simply love my life! I'm HAPPY not thinking deeply about philosophy. Of course, I feel 'superficial' enough to be Goethe, but this absence of obsession is merely a temporary respite that will encourage a redoubled effort in the future.

I don't understand why our prehistoric ancestors became self-conscious about their genitals. The only reason *I* am, I think, is that I was brought up to be so. There isn't a good *reason* for this self-consciousness. (The only *reason*—as opposed to cause—I can think of for the original embarrassment is that excrement is smelly.) Maybe our ancestors covered themselves for protection, and after thousands of years this developed into the desire for privacy we feel today.

It's startling how many psychological insights are discernible in the structures of words. (German verbs in particular are suggestive.) Did the societies that invented these languages just happen to be abnormally perceptive? How did our languages come into being? How did people originally invent syntax? How did sounds become so sophisticated?¹ How was mathematics discovered? Was calculus somehow 'latent' before it was articulated?

November 13

¹ Obviously the answer is: time, time, and more time.

Sangeetha is my best friend, but it would require no more than a nudge for her to become an “enemy”. The need for tact in friendships—refutes friendships.

There is something vaguely pathetic in my craving to be “great”. Actually, I know how dishonest is the concept of greatness....but I strive for it anyway. Clearly the solution to this dilemma lies in the nature of self-consciousness: viz., that it is its own other. Ultimately, I want to be impressive in front of myself; only secondarily in front of other people. This is because, *to me*, the primary other is myself (since I’m so self-aware) rather than the “Other” (other people). Most people want to impress other human beings more than themselves because they’re *less* self-aware (i.e., they objectify themselves less than I do), and so they see their fellow humans as the most basic other. Be that as it may, inasmuch as we are all self-conscious (and therefore are literally an other from whom we want respect) we like to think well of ourselves.

Of course, I haven’t explained why pride (or vanity, in many cases) is preferable to self-contempt. What is the deepest reason for this? Is there a phenomenological reason or only a psychological one? Or are the two related?

How on earth are computers and televisions and cars and phones and lamps and refrigerators and particle accelerators and factories built? For years I’ve been fascinated by technology. One day I’ll learn the principles behind machines (after I’ve studied higher mathematics).

My inability to write well prevents me from undertaking ambitious literary projects. I’m exceedingly frustrated.

Yesterday a plane crashed in New York. It seems that America has fallen out of favor in God’s eyes.

November 14

Last night Sofia and I arrived at the concert late, so we didn’t hear part of Dvorák’s “Golden Spinrod”. Nevertheless, from what I did hear it sounded amateurish—as did Prokofiev’s Concerto for Violin and Orchestra No. 1. This piece did indeed have some sparkling moments, but I didn’t appreciate its apparent lack of continuity. Tchaikovsky’s 4th symphony was brilliant; it redeemed the concert. I especially enjoyed the playful third movement—and the fourth....and, for that matter, the first and second.

After the concert I gave Sofia a piano lesson in my room and then we made out for an hour. I also ‘pleasured’ her. I generally feel moronic in sexual situations—because, after all, we’re taking physical pleasure so *seriously!*—but I try not to let it show. (Thus, as I rub her and she gasps and gyrates her hips to a rhythm, I’m wondering when the hell she’ll reach her orgasm so I can stop this absurd rubbing!)

I’m reading a translation, by Charles E. Passage, of Goethe’s play *Iphigenia in Tauris*.

§329: I agree, but it’s nonetheless obvious that we must *recognize* the words; and it is these recognitions that, when doing philosophy, we can deepen into more or less distinct intuitions. In the first case the intuitions exist only in name, as a logical presupposition; in the second case they’re more noticeable, though they admittedly can’t be *felt* in the way that pain can.

337: In the last sentence he admits what he rejected! (Even if he didn’t really reject it, the sentence is nonetheless a triviality.)

342: My first impression after reading this was, “Shut up, Wittgenstein. You’re creating problems where none exist.” Incidentally, the existence of the very method I use in trying to understand him presupposes that he’s wrong or deluded.

347: Obviously we have to assume that everyone understands words as we do.

348: It’s possible to imagine what the first sentence means—I at least can imagine it fairly easily—and this imagination is our understanding. It’s a less exact understanding than more commonplace kinds, but this is only because the subject is more esoteric. The mere fact that we can’t test our understanding doesn’t invalidate the concept of “understanding” in this situation.

I don’t ‘understand’ 350, 351 and 354. 352 seems important. 353 could have been written by A. J.

Ayer.

Self-expression is the highest truth. (It's everywhere!) Our task is to achieve the highest form of this truth.

November 15

I've finished Goethe's play. It was undoubtedly a work of genius, and undoubtedly superior to Euripides's of the same title. It addressed the loftiest themes in literature, in particular: love, compassion, truth, and the relation between them. (Compassion is a product of love; love is the 'highest' truth, partly because utter truthfulness is its result.) Moreover, the author was invisible behind his characters: he didn't assert himself in every sentence, but let the characters speak for themselves. As Nietzsche once opined, only the greatest poets are capable of such self-suppression.

What a spiritually pure work of art! What a masterpiece!

November 16

I'm desperate to write a work of art. But I don't have the ability. My curse is that I have talent in most subjects but genius in probably none. [I.e., it is my talent that compels me to strive for an unattainable genius.] Why must I live in an ethereal world of dreams and pointless ambitions? Why must I compete with great men? Why am I doomed to the fate of Tennyson's Ulysses?

Another asinine goal of mine that I haven't often mentioned is that I'd like to be one of the most prolific writers in history. This necessitates that I write more often than I've been doing.

—So: Today I have to watch a German movie with my literature professor. It's based on Stefan Zweig's *Schachnovelle*, which we were supposed to read. I loathe that class. This weekend I have to write a thoroughly meaningless comparison, auf Deutsch, of the two main characters in the novel. I did something similar two weeks ago and received a C-. Why? Because such vain exercises hold no interest for me. They're drudgery. School itself, without exception, is drudgery.

Last night Sofia came to my room; we talked awhile about absolutely nothing, and then I gave her another piano lesson. [...]

I used to talk to two or three Americans in my group, sometimes with enthusiasm, but not anymore. Now I'm polite to them to the extent of *occasionally* having conversations. They're simply bland people. Would that I could find a single fascinating person in Salzburg! Why do accomplished pianists, for example, never fall in love with me?

Oh, "love", blah blah. Love is as Faustian as everything else. Not even this most supreme of emotions is a haven from boredom.

Yesterday I tried to write a poem. I got as far as turning the computer on. I also tried to write a piece of music, and was somewhat more successful—but I have no desire to create anything that isn't ingenious. There's too much mediocrity in the world; why contribute to it? Nothing deserves to exist except genius. Everything else is boring.¹

How frustrating that I can't be independent of the dialectic! Nearly everything I do conforms to dialectics.

Death must be somewhere in the vicinity of me: I'm not in the mood for life.

I watched the *Schachnovelle* movie. It was good, but....it was in German. Fortunately I saw it with a hilarious American student, so the time wasn't wasted.

Several hours tonight with Sofia. Aside from engaging in our usual 'erotic' activities, we *finally*

¹ You see I'm tired of critical thought.

talked about our relationship. The only conclusion we arrived at was that two months is probably too short a time for us to get seriously involved.

November 17

I'm often tired. I woke up three hours ago (at 11:00) but I already want to sleep again.

What's most incomprehensible about time is that it's a combination of objective and subjective factors.

Ever since my childhood I've had facial tics. They're very annoying.

....I spent the past two hours writing sixteen lines of a narrative poem intended to be in the style of *Eugene Onegin*. However, I have, inevitably, given up. I simply am not a poet! I'm a hack!

....Ha! Ha! With dedication, one conquers all! Tonight I wrote 31 lines of a poem; tomorrow I may finish it. It's amateurish, of course, but it's also semi-beautiful and relatively profound. When I sat down to write, feeling an exquisite longing that craved expression, I had no idea what would result. I knew only that I wanted to write—and that I hadn't the patience to consider a topic. At first the lines were mere description, but gradually (and unwittingly) there emerged philosophical themes. With each new line I recognized them more clearly. By the 31st line, philosophy had, unfortunately, begun to predominate, so I quit for the night. Even so, I was and am rather pleased with myself.

By the way, I have little desire to write in the formless, non-rhythmic style of twentieth-century poetry. (It would be easier, though.) My poem is in something like blank verse.

November 18

[...]

Speaking of music, I'd like now to tell you a story I'm fond of. One day, when I was two years old, my parents and I went shopping in a mall. Being sensible people, they constantly held my hand so I wouldn't wander off. However, being a mischievous little boy, I had an urge to do precisely what they dreaded most. In a moment of carelessness my dad let go of my hand; so, taking *carpe diem!* as my motto, I waddled as quickly as my stubby legs would permit to the other side of the mall. Soon my parents noticed my absence. Frantically they searched all the nearby shops. In terror lest they lose their son, they informed a security guard of the situation. He, in turn, sent the word out to his comrades. By now my mom was crying hysterically, but she could do little else except wait for news from the security guard. At last he heard from his buddy that a short red-haired boy had been spotted in a different section of the mall; my parents raced there to reacquire me. When they arrived at the store a guard smiled and pointed to a child sitting in front of a stereo system, oblivious of everything but the music.

Returning briefly to an earlier idea: we ourselves are a kind of self-objectification. This implies that, perversely, we are self-expression. Because, moreover, every action and thought is self-expression, the latter is a supreme truth not only of nature but of ourselves. The most sensible thing to do, then, is to cultivate, and achieve the noblest form of, self-expression. (Is this self-objectification also, somehow, self-creation?)

....Today I rehearsed the Mozart duet with Susan. After I'd returned home, I gave Sofia a quick piano lesson....and then made out with her for an hour. This time I felt quite happy kissing and hugging her: I felt *spiritually* close to her rather than just physically. Physical closeness is nice, but it's nothing without spiritual passion.

November 19

The reason time passes quickly when we're having fun and slowly when we're bored is that self-consciousness is less intense and more intense respectively. After all, time is created by self-consciousness. Humans are always self-conscious to a degree (though, I suppose, there *may* be exceptions; it's hard to tell, because in those moments 'we' don't exist), so they are always explicitly or 'implicitly'—non-thetically—aware of time. They're just more aware of it when they're more 'in existence'. —That relates to the subjective aspect of time. The objective is far more difficult to understand.¹

(Cats are almost certainly not self-conscious, and they're surely unaware of time.)

Today was uneventful. I skipped a class. Boredom assails me violently. I spent two hours with Sofia tonight.

I'm worried that I may one day lose my revolutionary idealism.

November 20

I think I was wrong that listening to classical music sheds one's vulgarities. It does so only if one isn't very vulgar to begin with.

Nothing matters. Life's a sham.
 Love's a Sadist's joke.
 I'm passionless. —Even so,
 I'm eager for a poke.

Last night I began a work somewhat in the style of *Notes from the Underground*. I intended it to peel away the layers of false values that cake the consciousness of the masses. But it was a pitiful piece of writing, so I've abandoned it.

I feel like a foreigner, an alien, to my fellow human beings. I feel as though I've been placed on this earth for a reason—as if I'm the tool of some higher power—as if I'm supposed to clarify unresolved issues and tie up humanity's loose ends before I depart.² I'm meant to help give mankind something to do for the next couple of centuries—to postpone or eradicate the Great Weariness. [...]

It's fascinating to reflect that Western civilization is, in a sense, based on the ideas of an obscure little cult founded in the time of Augustus. The doctrines of these religious fanatics glorified the masses, so they were circulated and accepted to the extent that they became the dominant ideology of an entire hemisphere. Marxism, too, can be interpreted as a philosophy for the herd; hence it once had enormous practical power and probably will again. (Particularly because religion is so far behind the times that it will never again have the inspirational power it once had.³)

[...]

Before I go to bed—I've actually already been there, but a thought occurred to me that I must write down—I'd like to explain why I recently classed the musical genius with the philosophical and the mystical. At first this comparison seems strange, for how is music related to *truth*? But there are two reasons for it: (1) the highest musical genius composes from his 'inner being' (he doesn't need the piano, or uses it only as an inessential aid to the creative process); (2) his musical phrases develop out of each other and are thus organically connected (creating a totality that seems to be *necessary*, though it really isn't). Mystical 'truths' share these traits. A philosopher's thoughts do as well: they're directly intuited—not arrived at *merely*

¹ Partly because it seems to contradict the subjective, in that it exists when the latter doesn't—e.g. in animals.

² This is similar to how I felt in 7th grade, when I imagined I was an alien sent here to report on his findings to the planet's inhabitants, after which I'd return home.

³ Don't point to Muslim and Christian fanatics as counter-proofs!

through reasoning¹—and they exist in a kind of totality that ultimately ensures their compatibility. (Just to warn you, I didn't experience a direct intuition when pondering that last statement, so it could be wrong or meaningless.) Ideally, the philosopher and mystic meet in one person.

It's *possible* that the greatest literary geniuses can be included in this category. Goethe probably can, as well as Shakespeare, Byron and James Joyce.

November 21

Today I finally received Sangeetha's letter. It was more personal and engaging than Jessica's; I liked it, on the whole. She also sent me pictures of our trip through Europe (though only one with her in it!). I had almost forgotten what a sweet-looking, twinkle-eyed, dimple-cheeked, adorable, petite, glowing girl she is. I was so happy around her! We were so wonderful together!

I've learned from her e-mails and her letter that our two months together had a deep impact on her (more than she's willing to admit). She's changed since she met me. She's now more critical of others, more self-confident, more mature, perhaps more independent. Her friends apparently aren't as interesting as she thought they were. Obviously her change is somewhat a result merely of her stay in Europe, but I flatter myself to think that her relationship with me was a factor.

I'm in the mood to write my darling a letter.

November 22

The reason I'm in such a philosophical muddle is that my reflections aren't precise. When discussing genius I use words like "totality" and "intuition", which are so inexact as to confuse me *more* rather than clarify the issue.

Moreover, I need a foundation on which to build my thoughts. I need a *methodology*.

....Tonight I went to the Thanksgiving dinner with Sofia. The food was decent (the dessert was delicious). Some of us students performed music; I played Liszt's *Liebstraum* No. 3. Sofia liked it exceedingly. (Who wouldn't?)

After dinner the two of us walked home in the rain. Sofia was quiet the entire time. I wasn't sure why until we'd reached our rooms, when she took me to hers and handed me a letter she'd written yesterday. It was addressed, of course, to me. I returned to my own abode and read it. It was a touching document that bared her feelings: she wrote that she was at that moment in tears, that she had never met anyone like me, etc.—and also that I had never given the impression of really liking her (that I rarely said her name, for example). I felt remorseful as I read, though many of her gentle accusations applied to herself as well. Instantly I began a letter in response to clear the air and end her confusion, and to raise her self-esteem. I haven't finished yet; by the time I do, it will be of a high enough quality to reassure her and help her feel better. (It won't compare to hers for sheer 'human interest'. —I.e., hers is more genuine, moving and innocent.)

Sofia is the first girl I've known to feel the need to express her emotions. In this respect she's more interesting than the others, and more like me. What a pity I can't sense a romantic spark between us! We could be perfect for each other—if only that spark existed! If only she were as quick-witted and charismatic as Sangeetha!

Speaking of whom, my letter to Sangeetha has grown quite long and rather weird. Last night I was in a sentimental mood, so I wrote a great deal about our friendship and what I hoped it would become. What I wrote was utterly inane, but I didn't have the energy to rewrite it all, so I let it stay.

¹ Which is superficial and prone to error.

November 27

I'm tired of 20th-century pseudo-philosophy. So I'm reading vol. 1 of Hume's *Treatise of Human Nature*. Of the 30 pages I've read so far I agree with almost nothing—in fact, most of the ideas are patently false—but since the book is an incredibly lucid classic I'll trudge on.

It irritates me that I haven't been reading more philosophy lately. I've been trying to write literature! WHY, in God's name?¹ Philosophy is far more important and absorbing than literature. Damn my vain creative impulse!

...I played in a concert tonight with Susan. We were the last performers. On the program, next to my name was the word "Guest". That was pretty satisfying; I've never been a "guest" before.

America, my beloved homeland: land of the slaves, home of the meek.² The human species is going to experience a holocaust within the next few decades because of my country. (—My country, late capitalism: what's the difference?)

I'm not impressed with Bertrand Russell. His social 'theories'—probably his moral, psychological and economic ones too—are superficial, derivative and boring. His criticisms of Marx in *German Social Democracy* are founded on startling misunderstandings of *Capital*. Was he a genius? Let's agree with Ray Monk that he was "marvelously intelligent" and leave it at that.

November 28

It seems to me that denying life is a deeper truth than affirming it. Life is time; hence, life is meaninglessness. (It's time that swallows potential meaning.³) When combined with our knowledge of the vastness of the universe, the denial gains force. However, in our merely human world, *affirmation* is a deeper truth. It's impossible for us to appreciate the enormousness of time and the universe, so we must accept this truth and use it to our advantage: it provides an excellent, honest excuse for doing what *feels* right (living life to the fullest). (Why does that feel right?)

Thus, affirming life is the third stage of a dialectic that includes (1) "affirming life" naïvely and happily, unaware of the apparent inconsistency between this attitude and 'deep truth', and (2) noticing only the 'grandest' truth of Meaninglessness—and thereby denying life (thus: cynicism, pessimism)—while ignoring the unavoidable and redeeming conditions of human existence (viz. our inability to appreciate meaninglessness). Hence the synthesis is, in a way, more superficial than the antithesis, but in a more important way it's profounder.

Surely there is significance in the fact that the attitude of 18th century Western Europe largely corresponded to the thesis, the attitude of 19th and 20th century capitalism corresponds to the antithesis, and the attitude of socialism/communism will correspond to the synthesis. This suggests that history, which is partly a record of man's increasing awareness of the world and himself, is also (and consequently) a record of his gradual approximation to the deepest truths. The reasons for the first half of that sentence are obvious.

Tonight Sofia came to my room again to discuss our relationship. She's still infatuated with me: she can't do her homework, she can't sleep at night, her diary is a record of our relationship. [...]

Why do girls often have strong feelings for guys who don't 'like' them? Is it because of some primitive instinct related to confidence/strength in the man who is to give them children? (There are at least two considerations that connect this to the foregoing.) Maybe it's related to the Hegelian theory of recognition: they want 'recognition' from a man they implicitly perceive as superior to themselves and others. (This begs a question, but it's easily answered.) Maybe it's for both reasons, in which case: dualism of biological instincts and phenomenology.

¹ I want to be a Renaissance man. That's why. Vanity.

² 'America, la-a-and that I lo-o-oathe...'

³ Put differently, it's self-consciousness that makes 'meaning' impossible and absurd.

November 29

Hume is surely right that the literary genius is he to whom the best words and phrases occur in a split second. It may be the best *artist* (the most disciplined) who can impose a simple, coherent form on his writings, but I don't think this requires an extra amount of genius. The musical genius is he to whom the best *notes* come relatively naturally, so he has more in common with the literary than the philosophical or mystical genius, to whom non-verbal *intuitions* come naturally. Maybe the theoretical scientific genius ought to be included in the same broad category as all the foregoing, for he works purely with his mind. His original thoughts simply *occur* to him, seemingly from out of nowhere.

The previous paragraph describes the subjective genius. The objective has less exclusively intellectual ability: he is the brilliant painter, sculptor, etc., and in some cases also the brilliant inventor. (Inventors can belong to either category, depending on whether they're more experimental or theoretical.) Great orators, I think, belong in the objective category.

Those are only suggestions, probably foolish ones.

November 30

Hume introduces the following classifications: impressions and ideas; complex and simple for both; sensation and reflection for impressions; memory and imagination for ideas; resemblance, contiguity in time or place, and cause and effect, for how we associate ideas; relations, modes, and substances for complex ideas; resemblance, identity, space and time, quantity, quality, contrariety, and cause and effect for *relations*; abstract and particular ideas, of which the former don't strictly exist. Passions are reflections of sensations (mediated by ideas of the sensations), so they belong to *impressions*. The difference betwixt ideas and impressions is the latter's vivacity. All ideas ultimately arise from impressions. (Simple ideas correspond exactly to simple impressions, but the same is not true of the 'complex' category.) Memory is more vivid than imagination. We have no idea of substance, since it cannot be derived from any impression. It's actually only a collection of simple ideas that have a name assigned to them. The same is true of modes. Regarding abstract ideas, Hume is wrong that "we form the idea of individuals whenever we use any general term".

Hume's argument for the proposition that no finite extension is infinitely divisible is wrong. It rests on a vicious circularity: "the 'compound' idea of extension arises from the repetition of the idea of a part of extension." Huh? The question that needs to be answered is, "How can it occur to us that the smallest part of extension we can conceive is itself a compound of *smaller* parts?" Joining this to Hume's argument demonstrates that the latter is circular and fails to address the main question.

His explanation of time is subject to a similar criticism. Both time and space, but especially time, are such 'holistic unities' that we think they *must* be infinitely divisible. If we're honest with ourselves we'll admit that the idea of an indivisible moment has an air of the absurd about it—just as, admittedly, the idea of an infinitely divisible moment is incomprehensible. The difference betwixt the former and the latter is that we know infinity 'exists' in one direction (vastness), but we know we can't comprehend even this—so what's the harm in supposing it to 'exist' in another direction that we can't comprehend? Besides, if we understand what we're asserting, we ought to *feel* dishonest in pondering the former. I certainly do.

....Does Hume understand the concept of mathematical points? They're *infinitesimal*, so their 'existence' is, if anything, a demonstration *against* his doctrine. (He's wrong to think they can be given solidity.)

One of Hume's greatest errors is to suppose that ideas are exact. The ideas I have are not "individual"; they're abstract and closer to nothing than something. They're individual only when I dream at night. (Surely this has a significance I don't appreciate.)

In section 4 of Part II, as Hume is proving the inadequacy of geometry, he writes that we can't rely

on reason because it's contradictory. His solution to the mathematical absurdities is to rely on the senses—on the *appearance* of geometrical figures. (Thus, we can judge their equality only by deciding if they look, or are measured to be, equal.) [Such are the absurdities to which empiricism leads.]

Saturday, December 1

Last night Sofia and I painted together. She brought her paints and brushes into my room, I turned on some Handel, and we made art. Well, not really. Her portrait of me wasn't a masterpiece, and my painting of many little headless stick-figures running around a city—the buildings of which were colorful, in opposition to the gray men¹—was meant to be a parody of modern art (and modern life). Hence, it wasn't a masterpiece either. (Modern art, of course, is its own parody.) I entitled the piece "*Menschen ohne Köpfe*".

Later we saw a wretched movie. Today we went grocery-shopping and cooked Wiener Schnitzel, which wasn't bad. I had fun being with her, though occasionally I didn't know what to talk about.

I'm giving her a piano lesson now. She's playing music I wrote for her.

Speaking of which, using physics as an explanation of the 'harmony' that the musical scale strikes within us isn't entirely adequate. —Well, it may be, but only if we articulate certain assumptions/logical consequences: namely, that the mind operates on a physical/mathematical basis and is thus only an effect of neural processes!

Returning to Hume, in the beginning of his book he concludes that all ideas are derived from impressions because some are! He gives examples of such ideas and then declares, essentially, that *therefore* all ideas come from impressions.

December 2

I agree with the commoners that self-righteousness and arrogance are usually a product of delusion. I disagree, however, that (1) they are *always* a product of delusion and (2) the commoners themselves are the only exception to this delusion. (For, let us be honest: the rabble (*and* its individual units) are arrogant and self-righteous.)

Actually, everyone inevitably thinks that his most basic beliefs are right, and hence that all people should follow him in these beliefs (or attitudes). —This implies that everyone, on some level (of which he may not be aware), has an interest in truth.

....Let me start from a different angle. It's a fundamental belief of mine that he who searches for truth must adopt a critical stance toward everything (himself, his beliefs, existence, etc.). This is because he must decide between alternatives, and in order to do this responsibly he has to examine them and their presuppositions. This necessitates that I be 'critical' of this belief itself—which is peculiar, since in doing so I'm more or less proving that I believe it. However, I may doubt the words "toward everything" and yet believe that it's necessary not to accept all *propositions* blindly. Doubting this leads to absurd consequences; therefore, it's true. So we should accept *no* propositions blindly (a generalization of the principle); i.e., the truth-seeker should 'critically examine' even such propositions as "There is something". —At any rate, the point is that because I'm firmly convinced of this principle, I automatically universalize it (so it applies to all truth-seekers). Another example: in doubting my first principle, I'm tacitly assuming that everyone ought to doubt it. In looking for the psychological causes of religion, or in doubting Hume's account of time, or in believing that the mind is a product of the brain, I'm assuming that these attitudes are truer than their opposites, and hence that everyone interested in truth should do the same. I might not explicitly *believe* this, but it's inherent in my action.

It's not inherent in all actions, of course; only in those that carry with them a momentary sense of

¹ In the sky a storm is brewing.

conviction/seriousness.¹

....I'm bored with this. I had planned to explain that we're all self-righteous to an extent, that we all 'pursue' truth (we think we're right), that my critical stance is the most sensible one for achieving this object, that therefore I've understood and transcended the self-uncritical attitude of the rabble, and that therefore I have an extra right to be 'self-righteous' (and to feel superior in this regard to anyone who isn't critical of his beliefs). I had also hoped to clarify all the foregoing ambiguities. –Some other day, maybe.

December 3

Morality isn't based on reason. It's based on feeling and tradition. The most that reason can do is support it with arguments. Why is murder wrong? Because it *feels* wrong. Why is charity good? Because it *feels* good, or *seems* good. Why does it feel good? "Because....you're helping a person." Why is that good? "Because....you'd like to be treated in the same way" or "it ties communities together" or "it's consistent with the undifferentiated nature of the thing-in-itself." Oh, come on! Isn't it obvious we just grope for arguments to support our feelings (or impulses, or 'intuitions')?² I can think of excellent reasons to treat people badly. Reasoning carries virtually no weight with any of us.

How do values originate in the first place? –That's a fascinating question that I'll investigate fully one day. In the case of some values created five thousand years ago, social necessity (reason) did have a role to play³—and feeling came gradually to accord with it as the conscience developed. From then on tradition and feeling were more important than reason. (Example: Christianity.)

My own values (creation, self-cultivation, non-conformism) are grounded in feelings intensified by reasons. The task of him who would create the most perfect value-system is to unite his feelings with pure intellectual integrity (i.e., infallible reasons based on truths).

The problem is that values will always be arbitrary. Even if they're based on "infallible" reasoning. They'll always be apologetic/after the fact. That is, it's impossible for there to be an a priori reason to follow any value; hence, 'miscreants' can't rightly be condemned or said to be inferior. This means that we can't impose a 'compulsory' intellectual *order* on life—there's no reason to strive for greatness, because ultimately it isn't ['objectively'] on a 'higher order' than thuggishness—and so life must sink into anarchy. (To repeat: this is because there's no a priori, non-"arbitrary" goal to strive for.)

Maybe this lack of a goal doesn't matter in the end. Maybe we just have to accept our intuitions and affirm life in the grandest ways possible, and simply look with pity on people who deviate from this path. –But that raises difficulties all over again! (The difficulties always seem to arise immediately upon confronting the Other.)

Sofia no longer likes me as more than a friend, according to her. She unloaded her feelings onto me and then moved beyond them. Good! It's much better this way.

Tuesday, December 4

[...]

Even people who, like Sangeetha, profess to be tolerant of all opinions and not to think that any is "better" than any other obviously believe their attitude is better than so-called elitism. Their response to this criticism would be that elitism takes more than a single 'foundational' belief as being better than its

¹ Thus I've changed my opinion since the sentence "—At any rate....". There are actually two relevant types of 'universalization'. [I forget what I meant by that, but I know it made sense when I wrote it. Maybe I was differentiating between a type that has to do with 'firm long-standing conviction' and a type that has to do with 'momentary focused and serious consciousness'.]

² [Needless to say, a lot of my arguments in these pages are rather Humean, though I didn't know that.]

³ Cruelty did too. (Hammurabi's code.)

opposite, whereas relativists minimize their own self-righteousness so that it covers only one basic principle. But this is beside the point. The question we have to ask ourselves is, “How can we have the right to think that *any* value is true or the best?” If relativism is to guide our way of thinking, *all* values must be subjective (not ‘true’), and hence intellectual life can have no secure foundation. (Most of our thoughts presuppose values.) Relativism, at least as a moral position (i.e., “It’s ‘bad’ to impose one’s values on everyone”), defeats itself, for according to its own ideas there are no absolute or true values (so we can’t in good conscience believe in any). Therefore nihilism is the result; i.e., nihilism is the only true ethical ‘system’.

All we can do is resort to intellectual dishonesty (ironically a result of intellectual integrity (our critique)): we must follow our feelings and our own subjective reasons.

(Interruption: if you’re skeptical of the inevitability of nihilism, remember that even if there are 1000 reasons to believe in one value and 0 reasons to believe in its opposite, doing the latter is perfectly permissible. For we ultimately make a “leap of faith”. There’s no a priori obligation to follow a value that somehow derives from truth or reason; in other words, there is no true or best value.)

The most intellectually honest thing that can happen is for a philosopher who has decided that he’s discovered truth to come forward and impose his will on the world. His values, he thinks, are the most sensible and admirable ones, even though this implies no obligation to follow them. So he has to mold the world in the image of his ideal man while ignoring the objection that there’s no reason for people to do as he says. He’s a nihilist; but he’s been more successful than anyone else in reconciling feeling¹ and reason, so he’s convinced of his own rightness. Once he has established communism, morality will no longer be the issue it is today. It will wither away, in a sense, and a celebration of life will take its place.

—That’s clearly romanticized. But its central points, which I’ll elaborate tomorrow, remain relevant even upon a confrontation with Marxism.

December 5

My recent discussions have contained elements of confusion. For example, I was wrong to suggest that certain values automatically derive from truth. Rather, it is in thus “deriving” them that we make a leap of faith. If it’s true that behind appearances is an undifferentiated noumenon, there remains nothing necessary in the conclusion that we ought to be compassionate to each other. The two statements are on different levels.

....Shit. I don’t know if that’s right. It certainly seems as if our togetherness behind appearances suggests compassion and love as values.

Aaaaaahhh!! Help me! I’m living in anarchy! There’s no foundation for me to stand on! I’m sinking, suffocating.... What can I grasp? Is there a single solid brick in the entire philosophical firmament? How do I begin to rescue myself? How can I? We each create our own truth. The dialectic is dishonest because we’ll inevitably arrange it such that the synthesis coincides with our own hopes. What kinds of truth are there?I pace my room like one possessed, thinking, thinking, approaching problems from various angles, frantically trying to order my mind—but getting nowhere. Insanity is the only light at the end of the tunnel. —And then I feel admirable for obsessing over truth, but what’s so admirable about it? Clearly the reason, if there is one,² is unimportant; the feeling, which creates the value, is the justification of both itself and its sycophant morality. So I keep feeling admirable even *because I wonder why* I feel admirable, and if I reach a conclusion I’ll feel even more admirable, and any conclusion I reach will inevitably confirm that I’m admirable, so it’s all a sham from the beginning. Finally I give up and listen to the Arietta from 111 or the last movement from 109.

....Ethical relativism implies cultural relativism, and cultural relativism implies ethical relativism (because cultures have their own values). And consistent relativism is nihilism (no absolute, best,

¹ His feeling, the feeling of a genius.

² It has to be invented, of course.

compulsory values). Nihilism seems logically impeccable.

Example: a reply to Schopenhauer could be that the principle of individuation makes true compassion/love impossible, so instead of deluding ourselves we ought to ‘intensify’ every experience—*savor* every experience, be it love or contempt—simply because such affirmation is the fulfillment of individuation, i.e. of the conditions of life that the noumenon’s mode of manifestation forces us into. Schopenhauer, of course, will continue to insist on his viewpoint. In the end we’ll choose our highest value—i.e., which ‘truth’ to ‘emphasize’ (individuation or inaccessible unity)—entirely on the basis of our predisposition/feeling, for there’s no other way to decide between the two. This is always the case. There are always arguments for both sides of a moral value, and neither is better than the other, for they either (1) state good and bad consequences or (2) infer the values directly from ‘opposing’ truths, in both of which cases we must rely on subjective preference to resolve the contradiction.

The immediate problem, then, is evident: how can I be honest and yet be convinced that my values are right?

December 6

The real reasons (or original causes of) why I think genius/art/philosophy/music is better than stupidity/philistinism/vulgarity are as follows: (1) the former fascinate me, stimulate my mind, stave off boredom; (2) it increases my self-respect to differentiate myself from others; (3) I’m a naturally curious, obsessive and whimsical person; (4) I’ve internalized certain great men, such that I have them looking over my shoulder; (5) creation in and of itself makes me feel good, partly because it heightens my self-respect—but also because it’s the only way to rid myself of tormenting thoughts.

Those and perhaps a few others (ignoring for the moment biological and psychoanalytical causes) are the true reasons for my highest values. I subsequently add, after the fact, reasons such as the one I sketched on December 2nd. These serve to justify, even intensify, my feelings/convictions by providing them with rational excuses.

....For an hour I’ve been thinking; I haven’t gotten anywhere. The hypothesis of the will to power seems potentially fruitful, but it’s inexact. (Incidentally, it wouldn’t be hard to combine Schopenhauer’s Will and Nietzsche’s will to power into a single theory.)

This morning, while I was in bed, Sofia slid a note under my door wishing me a happy weekend. (She goes home every Thursday.) What a wonderful girl! How truly considerate she is!

I took midterms yesterday; got a C on one and A’s on the others. In Literature we’re about to read Max Frisch’s play “Andorra”.

Suppose for a moment that it’s possible to discover a truest philosophical system. Imagine this system suggesting, beyond a reasonable doubt (there is always *some* doubt because of the leap of faith), the moral position that denying life is most consistent with truth. (For you sticklers, I realize that the moral position as such must be formulated as, “One should deny [or reject] life”.) Do you think many people would take this value seriously? Of course not. They’d continue striving and hoping and carrying on as before.¹ Therefore we don’t care as much as we think about reconciling “objective truth” with morality. The only reason we pretend we do is that there exists a rational side to human nature that likes to think it controls us. (This rational side is intimately related to self-consciousness, which is why it wants to be in control.)

....I had intended to draw from the last paragraph the conclusion that trying to reconcile truth with morality is doubly futile: not only (1) is such a reconciliation impossible (since morality introduces a subjective, arbitrary element into any chain of reasoning), but it’s (2) unnecessary, in that we’d never adhere

¹ The system would never actually suggest such a value, for it would take that last sentence into account. But that’s beside the point.

to a repugnant truth in the first place. But I've noticed an even more obvious conclusion (which I had, moreover, always been aware of): most people will do whatever they can (unconsciously or otherwise) to affirm themselves, to heighten their self-respect or self-contentment. The few people who might not do so are either extremely chemically imbalanced—which begs questions—or simply do so in unusual ways. Therefore the most sensible thing to do is to affirm oneself as completely as possible; and it may be that my ideals succeed in doing this more adequately than alternative ideals.

That obviously begs questions, but I'll ignore those for the moment. More relevant is the fact that the foregoing fundamentally true statement about human nature....forget it, my point was unimportant.

The word "self-contentment" triggered something in my head: even people who appreciate the value of depression and sorrow ultimately want *self*-contentment as much as others do. Contentment and ease, as distinguished from self-affirmation,¹ they don't want, but their reasoning is left unsaid: the product of struggle and despair is triumph, i.e. self-affirmation. (And admittedly a rich existence—and the ability to appreciate happiness—which both amount to the same as the foregoing.) Why else would 'ease' be looked upon so universally as contemptible, if not because people have learned from experience that it leads to a sense of meaninglessness, whereas its opposite engenders powerful self-respect and joy? If self-contempt is ever said to be 'good' in some way, it's primarily because it often evolves into its opposite. Thus, the highest self-affirmation rather than the 'highest realization of the will to power' is the true goal of individuals (partly because it's more exact than the other).

I'm bored with this shit.

Incidentally, what's the relation between self-affirmation and self-expression? Perhaps it has two sides: sophisticated self-expression affirms a person *objectively*, and generally does so *subjectively* as well. Actually, every moment carries with it (and *is*) a form of self-expression. S.a. is and is a result of s.e., but not every s.e. is s.a. (obviously).

So many questions are assailing me that I'm not going to comment on any of them.

College is a game I play in my spare time.

December 7

Nihilism, like solipsism, can't be refuted. But both are almost psychologically impossible. I think it's sufficient to rely on the intuition of the vast majority of people—including the greatest men in history—that we ought to abide by a fundamental 'human' morality. I'll outline it later. For now I'll say only that the values that can be reasonably derived from this morality are, on the whole, 'better' than their opposites. (I.e., it makes more sense, and is—again, relying on our foundational intuitions—more admirable/self-affirming/species-affirming, to follow *these* values.)

December 8

Today I wrote a little description of a dead Afghan woman and her child, as a way to escape from my intellect for an hour. I also tried to memorize random words in a German dictionary.

The preceding entries are essentially shit.

....Hume is obviously wrong that the difference betwixt memory and imagination consists in the strength of ideas produced by memory. The real difference is that our memory-images are involuntary. Imagination has a creative, unreal 'feel' to it.

Hume is also wrong that the idea of existence isn't different from the idea of a given object. I add something to my concept of a unicorn when I imagine it as existing: namely, I think there exists an external reference to my image. (This isn't necessarily belief.)

¹ (Yes, I'm actually differentiating between mere 'contentment' and 'self-contentment'.)

Another inaccurate statement: “belief is [defined as] a lively idea related to a present impression”. Actually, (1) it has a less voluntary feel than imagination does, and (2) it feels less ‘frivolous’, i.e. more serious and to the point. But since I can’t describe it well, I’ll shut up.

I suppose I agree that “reason can never satisfy us that the existence of any one object does ever imply that of another”. I’m not positive, however. And I’m skeptical of most of Hume’s classifications of mental life.

Why is the concept “meaning” confusing?¹ Because it lacks a clear intuition. The term “rape”, at least when one philosophizes, is coexistent with a half-image/mental-haze of ‘violent, forced sex’. “Meaning”, on the other hand, in isolation, is little more than a meaningless collection of sounds that acquire a use/half-meaning only when they’re used in context. (“Rape” is understood very well in isolation.) Philosophers make the mistake of trying to impose a new meaning on the word. (Examples: “What is the meaning of life?” has a recognizable sense only when translated into “....purpose....”, for *purpose* has a more concrete intuition (and hence definition) than *meaning*, and can therefore be used in a variety of contexts without confusion. “What is linguistic meaning?” is even more empty, since it’s so vague that any translation brutalizes it. There literally isn’t even a hint of a noticeable intuition behind it. It *seems* to have meaning because we’re used to using the word “meaning” in contexts like “The meaning of this word is....”) Therefore, strictly speaking, we ought not to search for the meaning of such terms as “linguistic meaning”, because they indeed have *no* meaning. But, being humans, we’ll keep searching anyway. The most reasonable suggestion I can make is to break down similar terms into specific categories and then clarify these. This is difficult, for it involves working in circles. (We’ll constantly have to presuppose the word “meaning”.)

December 9

The reason I write less extravagantly in diary-books than on the computer is that writing by hand brings me closer to my sentences. I’m more conscious of what I’m writing, so I feel more pretentious and silly if I write in a flowery style. (Example of the effects of self-consciousness.)

History confounds me. It is at once on a huge scale and yet *tiny*. In a mere four thousand years we’ve gone from Sumer to globalization. Four thousand years is *nothing!* Even on the scale of human history it’s *nothing*. Where will we be four thousand years from now? I think we’ll be extinct. All our achievements will be dust.... The Ninth Symphony won’t even be a memory.

What’s the point of it all? Who gives a rat’s ass, when all is said and done? Why do I care about anything? What’s so wonderful about love? “Man invented love, so he is great.” Yeah, right. Man himself judges that he is great, when the universe on a whim can flick him out of existence. One day he *himself* will end his existence;—how “great” does that suggest he is? Under conditions like these I can understand suicide.

Hume defines knowledge as “the assurance arising from the comparison of ideas”, proof as “arguments which are derived from the relation of cause and effect, and which are entirely free from doubt and uncertainty”, and probability as “that evidence which is still attended with uncertainty”. ‘Chance’ he defines as the negation of a cause. Two important principles on which he bases his analyses are “that there is nothing in any object, considered in itself, which can afford us a reason for drawing a conclusion beyond it; and that even after the frequent or constant conjunction of objects we have no reason to draw any inference concerning any object beyond those of which we have had experience”. I suppose these principles are right, but since I don’t always understand his reasoning I’m not *sure*.

Hume’s atomistic psychology is wholly wrong.

¹ Examples: reference, intuition, verification....

December 10

[...]

Today I spent a few hours in the philosophy library. Glanced through Gilbert Ryle, a bit of Sartre, some Popper, and a couple others. My, it's startling what a lot of pretentious shit is called philosophy! Verily. After Nietzsche, everything fell apart. There were a few original insights in the 20th century, but not enough.

Tuesday, December 11

I used to think that dialectical materialism (as opposed to historical materialism) was empty nonsense. I agreed with Sartre's verdict, primarily because I had read him before Engels. (I still haven't read much Engels.) But I'm becoming amenable to it, for nature undoubtedly is dynamic, developmental and, from certain perspectives, even teleological.¹ This is, of course, nature as seen through the prism of consciousness, but what else are we to understand by "nature" if not what we observe? The constructions from sense-data, which we have nothing to do with (Who consciously arranges his sensations in the shape of an animal?), are as dynamic as human history and psychology, though not in the same way. (No thesis - antithesis - synthesis.) There's no point in protesting that nature is given its dynamism by being filtered through senses, for nature is the only genuine object there is for us. There's no other less humanized object with which we can compare it to discover how "humanized" it really is—so, since it's certainly less human than we ourselves are, it's simply an object for us. We have to work with what we're given, and what we're given is a teleological object called nature. And that's the end of it.

If Sartre understood the foregoing argument he would have no choice but to accept it and then assert that in *consciously interpreting* nature we humanize it. We conduct experiments, we impose concepts on it. Science is one long record of humanization. This is true, but it doesn't significantly weaken the argument that nature is "dialectical" 'independently' of humans. (Remember the preceding argument: that the nature we observe is as independent of humans as can be expected from any object we're aware of—i.e. any object. It's not as independent as the noumenon, but the noumenon isn't an object. It's the nature we're aware of that we're trying to explain, not one that is unknown by—hence, *completely* independent of—us.) For (1) it can't plausibly be maintained that all the scientific theories implying potentiality, fulfillment, "immanent" principles of development/teleology, and struggle are mere products of the laws of consciousness and don't reflect realities in the nature which confronts us; (2) these theories have had enormous practical success, suggesting that their basic features are correct. Moreover, the dynamism of consciousness surely says something about the dynamism of nature, since consciousness arises out of physical processes in the brain. However, it seems to modify these aspects, such that the dialectic in history is different from the watered-down "dialectic" in nature.

The problem is that we still must explain the ontology of nature. Maybe this is impossible.

December 12

Tonight I got to know two girls. The first started a conversation in the communal kitchen as I was eating dinner. She was quite friendly. Seemed genuinely interested in me, for some odd reason. Later five of us had a snowball fight in front of our Studentenwohnheim, which was exceptionally fun. (Snow is one of those luxuries that make life worth living.) At 10:30, as I was sitting alone in the kitchen, a lovely blonde walked in to eat dinner. I struck up a conversation. Her name is Mariella, she plays a wind instrument and studies at the Mozarteum. As you can imagine, as soon as I'd heard that, my ears perked up. Tomorrow she's performing with an orchestra in Deutschland, so we discussed her traveling experiences. The more

¹ DNA, evolution. [That's wrong, of course. Nature isn't teleological.]

we talked, the less I cared, but that didn't matter: I'd started the conversation in the first place only so I could look at her amazing features (cheeks, lips, dimples, nose, vivacious eyes). She had an adorable tendency to burst into laughter over slightly amusing comments. My, what a smile that girl has!

Why didn't I try to meet more girls earlier?! I have only one month left! Damn, damn, damn!

December 13

I'm in my Deutsch als Fremdsprache class now. Why did I come today? It's hard to conceive of a more boring activity.

In some ways Marx was a far more mature and admirable person than Goethe. He wasn't subject to the childish romantic delusion that genius has its own special rights. (Is that a delusion? I don't know.) The rational part of his mind was on a higher level than Goethe's.

Women, women everywhere, and not a drop to drink.

One of the reasons I tend to denigrate Goethe is that I sometimes see him as a rival. You already know that. It annoys me to think he may have realized my ideal better than I'll be able to. I don't want to be second-best. (One day this absurd desire will die out, crushed by the burden of reason.) But I sincerely believe everything I write about him, e.g. that he's so admired because his admirers misunderstand themselves and him.

Tonight there's a huge party. I'd go if I thought I could find a sex-partner, but the last time I went I failed and didn't have much fun. (That was the night I met Sofia.) Blast it, I'm fed up with being a virgin!

December 14

For the past two months I've been more bored than ever in my life. Today I did nothing except read some of *Andorra*.

....Tonight I watched a movie called *Ten Things I Hate about You*. A charming romantic comedy about high school relationships. One of the actresses had a luminous face and played a delightful girl, so—being an eminently rational person—I quickly developed a crush on her. Seriously. I felt that I could fall madly in love with this actress if I met her. I could tell by her physiognomy that she was intelligent and we'd be compatible. It was painful to watch her, knowing we'd never be together. —Then again, most of the girls I see in Salzburg are so cute it's painful for me to look at *them* too.

But I'm still in love with Mozart, thank God!

December 15

Tonight I saw an altered version of the *Nutcracker* ballet. The life of E.T.A. Hoffman was integrated into the traditional plot and some pieces were omitted. (The Waltz of the Flowers wasn't played!) Nevertheless, I enjoyed myself. Loved it, in fact. Ballet is spiritually the purest art form. It appeals to both the eyes and the ears; no other art does this to the same extent. The movements of the dancers couldn't be more graceful (at least ideally), which is in fact why goofy characters (clowns) are sometimes seen in ballets: clumsiness, imperfection, is so foreign to the art that it's both amusing and highlights the grace of the other dancers. Extravagant costumes heighten the purity of the experience. Thus the purpose of ballet, more than any other art form, is to transform the spectator into his spirit.

December 16

Today I went to Susan's house to play the piano. On Christmas we want to videotape a performance of the Mozart duet and the first movement of Bach's "Art of Fugue" (in duet form). Susan is letting me borrow a book entitled *The Secret Power of Music*, by David Tame, which is partly a history of music and partly an examination of its effects on humans. The author's beliefs are basically in accord with Schopenhauer's.

Tonight I went to a Christmas party at the house of the program director, Dr. Landgraf. For the first time he and I had a real conversation, a long one about philosophy. Specifically Nietzsche and Freud. Landgraf loves Nietzsche; he suggested I read "Truth and Lie in the Extra-Moral Sense" and then discuss it with him. We also talked about Schopenhauer; Landgraf didn't seem to understand my doubts. He's an extremely intelligent and interesting man. [...]

December 17

The following profound piece of writing is from a Chinese text by Lü Bu Ve:

The origins of music lie far back in time. It arises out of proportion and is rooted in the Great One. The Great One gives rise to the two poles: the two poles give rise to the powers of darkness and light. The powers of darkness and light undergo change; the one ascends into the heights, the other sinks into the depths; heaving and surging they combine to form bodies. If they are divided they unite themselves again; if they are united they divide themselves again. That is the eternal way of heaven. Heaven and earth are engaged in a cycle. Every ending is followed by a new beginning; every extreme is followed by a return. Everything is coordinated with everything else. Sun, moon and stars move in part quickly, in part slowly. Sun and moon do not agree in the time which they need to complete their path. The four seasons succeed each other. They bring heat and cold, shortness and length, softness and hardness. That from which all beings arise and in which they have their origin is the Great One; that whereby they form and perfect themselves is the duality of darkness and light. As soon as the seed-germs start to stir, they coagulate into a form. The bodily shape belongs to the world of space, and everything spatial has a sound. The sound arises out of harmony. Harmony arises out of relatedness. Harmony and relatedness are the roots from which music, established by the ancient kings, arose.

When the world is at peace, when all things are at rest, when all obey their superiors through all life's changes, then music can be brought to perfection. Perfected music has its effects. When desires and emotions do not follow false paths, then music can be perfected. Perfected music has its cause. It arises out of balance. Balance arises from justice. Justice arises from the true purpose of the world. Therefore one can speak of music only with one who has recognized the true purpose of the world.

There is truth in both the mystical and the logical/scientific approach to life. Both yield the same product: dialectics. There is not one way of interpreting reality, for different interpretations are appropriate on different levels and each ultimately suggests (or presupposes) the others. [...]

December 18

What the....? In the *Genealogy of Morals* Nietzsche writes the following: "There is *only* a perspective seeing, *only* a perspective 'knowing'; and the *more* affects we allow to speak about one thing, the *more* eyes, different eyes, we can use to observe one thing, the more complete will our 'concept' of this thing, our 'objectivity', be." When I read that book I must have skipped over III:12; I have no recollection

of reading those thoughts. They're exactly what I've been saying all along!¹

I can't find a copy of "On Truth and Lies", so I'm skimming through two books on Nietzsche as a stimulus toward independent thoughts. (For some reason it's easier for me to think after reading. Probably because it provides me with a specific starting-point and a definite view to criticize, encouraging *exact* thoughts.)

....Nietzsche's reflections on causality in *The Will to Power* seem to be a regression from Kant's position. The belief in causality isn't an extrapolation from psychological prejudices (viz., that the will causes events, etc.); it's simply a 'given' condition of human life. How could it be the former? That's intuitively absurd. Moreover, causality isn't an error; e.g., it's *true* that felling a tree causes a sound. The most that can be said (against our common-sense idea of causality) is that there is a whole concurrence of causes and effects involved in every event. Of course, many of these aren't experientially accessible to us, but since they're theoretically necessary and empirically 'verifiable' they exist for us all the same (until they've been 'proven' not to exist). Things that we can't see or feel, such as molecules, are only concepts we invent to make sense of what does exist in our world. They may really exist in the bodies that we see, but we can't know if they do until we see them for ourselves. Biological cells exist, for we've seen them in microscopes. Do they exist when we're not looking at them? This question is useless (and ultimately unimportant), for we can't conceive of them as really existent except by imagining their appearance.

We know things to exist only through sensation. Objects indubitably exist *for us*, and practically—from the viewpoint of activity, of our natural and automatic 'life-process'—they exist in themselves.² The theoretical question of their independent existence is unimportant, unanswerable, and not worth pursuing.

It's inconceivable that there's not a thing in itself. Denying the noumenon is perverse. From the naïve practical viewpoint it's simply the objects we see; from the theoretical viewpoint it's an unconceptualizable realm to which even causality might not apply. (This isn't the "continuum" of causes and effects—a hypothesis that is located midway between the practical and extreme theoretical outlook,³ but isn't less true for that.) Physics connects the two outlooks: in searching for the laws behind our reality it inadvertently penetrates to the most inaccessible thing in itself. (Quantum mechanics.) But it can't say much of substance about the latter—particularly not through natural language—and everything it does say is subject to doubt on account of the impossibility of sensory verification and the radical divergence from our usual concepts (and hence the inappropriateness of concepts at this level). —By the way: if mathematics is capable of expressing characteristics of the subatomic world, it would seem that nature has implanted within us a mode of formally understanding its most basic level (the noumenon, so to speak). If so, this should in principle provide us with a way of *formally* understanding mystical truths like ESP.

Obviously it's only an interpretation that all truths are interpretations, but the latter statement can be true because it's the expression of an 'objective' standpoint—of a standpoint that examines all other possible interpretations and decides, on the basis of the psychological facts (experiences) as well as logic, that this particular one accords best with reality or makes the most sense.

December 19

David Tame is an ass. He thinks Beethoven composed from altruistic motives! He agrees with many of my opinions on music, but he's naïve and his book is unimpressive. He's too prone to mysticism. He has trouble thinking critically and clearly. He doesn't write well.

Currently there's a great hullabaloo in America about some poor idiot who abandoned his country

¹ It's a pity I live so late in history, because all of my original thoughts will mistakenly be seen as copies of earlier ones.

² We're oriented towards them, towards something 'out there'.

³ I.e., it posits a reality midway between representation and 'deepest' [or most microscopic level of the] noumenon; and this reality undoubtedly exists (in the only sense that matters) independently of us. It is the goal of the scientist and organizes his truths.

and sided with the Taliban. That means, of course, that he deserves to die. Personally, though, I respect traitors as such—traitors from any country. I may despise them for their motives and think of particular individuals as contemptible, but I have nothing against the ‘Form’ itself.

Tonight I talked to a gorgeous Austrian in my dorm named Stephanie. As we were talking in the kitchen a guy suddenly barged in and told a group of us that the washing-machine room had flooded. The others debated what to do and finally decided to clean up the mess themselves. Four of them proceeded to carry out their plan, Stephanie among them; since I wanted to be near her I took part as well. Until 1:00 a.m. we swept the floor with mops and rags, having realized fairly late that in dumping the water into the sink we were effectively dumping it onto the floor again. (The leak was in the sink’s pipes.) At last we finished doing the Hausmeister’s job for him, thoroughly proud of our self-sacrifice for the common weal. I, however, was secretly disappointed that my ecstatic conversion into a Good Samaritan hadn’t perceptibly altered my relationship with Stephanie. At least I had fun being with her.

I also enjoyed a concert I attended with Sofia tonight. Rachmaninoff’s Third Piano Concerto, which I had never before heard in its entirety, was performed in the first half; it was magnificent—as much in its control over passion as in its periodic emotional outbursts. There was a pristine feel of restraint hovering over the whole piece. (That may have been because the pianist’s approach was excessively technical.) Tchaikovsky’s 5th Symphony was played next and last. I loved it, though the 4th had made a greater impression on me.

I wanted to record some philosophical ideas, but it’s after 2:00. Wait till tomorrow.
(Today was my last day of classes!)

December 20

I can imagine that decades from now I’ll be a man tired and worn down by life and the failure of his dreams. I’ll be disillusioned with everything. Maybe I won’t care if humanity lives or dies. This is only a *possibility*, however, so for the moment I can remain buoyant.

Today Sofia and I are shopping in the Christkindl Markt and ice-skating afterwards. It’s snowing again.

The reason it’s not useless to search for a relatively objective basis of values (moral and nonmoral) is that it’s not a foregone conclusion that our ‘discovery’ will merely confirm our prior dispositions. Maybe I’ll decide that personal freedom is a higher good than self-cultivation, thus sacrificing my *feeling*.¹ Of course, even if we decide that we’ve found the truest measure of values there remains no necessity for anyone to believe that values should have a rational foundation, but on this level the philosopher must trust his own intuition. He can’t rationally convince the masses to do the same, but he can help change or destroy the society in which they flourish, thus ‘convincing’ them through the only mode of argumentation they recognize. (Actually, the project to rationally ground values *is* largely futile, for whatever values are consistent with the structures of society will be adopted. But the philosopher is ruled by a compulsion toward intellectual integrity, so he has to engage in this project merely to attain peace of mind.)

Sofia and I walked through the market. She was a flower as always. I bought an odd fuzzy hat and gloves, only to come home and discover that one of my parents’ Christmas presents was an excellent pair of gloves. We walked to the ice-skating rink, but it closed the minute we arrived. At 7:00 we’re going back.

Another of my presents was a CD of Billy Joel’s classical music. I’m impressed by it. It successfully avoids the New Age feel, despite a few borderline passages. (New Age is cheap sentimentality.) It doesn’t succumb to the temptation to indulge in pointless virtuosity that overawes the listener while concealing its own emptiness. I especially like the Waltz #1 and the Aria, which are quite Chopinesque. Billy Joel may

¹ [Um, but self-cultivation presupposes freedom, Chris.]

lack the spark of genius¹—for his pieces don't really go anywhere—but he's undoubtedly a "diamond in the rough". And I can tell from his songs that he has an "instinct for life".

I also received a copy of the King James translation of the Bible.

....Sofia and I went ice-skating. It was pretty fun, though I'm none too skilled. After we came home I read her a short fairy tale in German—understanding none of what I said—as she tried to fall asleep. She wasn't successful. Eventually we bade farewell (she's going home tomorrow) and she returned to her room as I returned to the Bible.

December 21

The main reason for my feeling that life is boring if (1) there is no one *great* to emulate and (2) we all understand each other is that this kills the Other. Or rather, it kills the 'master'—who is the most compelling and fascinating form of the Other. It interferes with the drive toward recognition, for there is no one left to 'recognize' us. (Who wants to be recognized by his equals or inferiors? That's just boring. It carries with it little satisfaction/self-affirmation.) However, in this case the [admirer's] desire for recognition isn't fundamental, for an unqualified admiration of someone is intrinsically fulfilling even though it entails a 'degradation' of the admirer. —My former unqualified admiration of Marx is an example. It had nothing to do with recognition. But then why did I find it so fulfilling? Simply because it provided me with a source of fascination? No. Because it encouraged me to strive for an ideal? Perhaps somewhat. Because it underhandedly affirmed *me*? Yes, this was important, and it was tied to my positing of an ideal. But was it *most* important? If so, what is the reason for the supreme importance of self-affirmation?

Interruption:—The reason that girls often choose punks who seem self-confident and dominating as boyfriends is that they want recognition by their peers and a master. Punks have the air of the 'master' about them,² so the girls they show an interest in are automatically recognized by a 'superior'. At the same time, the guys themselves are affirmed by having a girlfriend, for she is the Other—and usually isn't perceived as an inferior (nor as an equal, for she isn't male; she's just the incommensurable Other). Of course, they desire each other also for purely emotional/sexual reasons. (What's the relation between this and the foregoing? Surely they blend into one another.) Thus girls tend to see boys as somehow superior, as a more intense and dominating form of the Other, more commonly than boys do girls. The reason for this surely has to do with typical reproductive behavior (not only during the sex act) as well as, obviously, biology. But relying on biology as an explanation for anything is a cop-out; it should at most be the foundation and guiding light of all psychological investigations.

Incidentally, it's because I see girls as a more basic Other than boys that I prefer friendships with girls. They provide me with 'recognition' and thereby self-affirmation.

Returning to the former discussion, I suspect that only people who are highly aware of themselves and life have a desire to be fascinated by incomprehensible greatness. The thought that even the highest beings are "human, all too human" disturbs them alone, probably because they alone are truly able to understand it. It means that greatness is exactly similar to themselves, and hence that it's a dishonest concept. It means that there are no 'superiors', that there's no one worthy enough to 'recognize' them, that the only people they should strive to impress—and even then only dishonestly—are themselves. It means that the Ninth Symphony could, in a sense, have been written by *them*! What an atrocious thought! (While listening to music one can't help thinking that one is communing with the other world.) However, ultimately not even they can appreciate this, for if they could they would most likely lose their interest in life. —So you see how important is the Other for some of us.

Nevertheless, in the sense I'm referring to, the Other doesn't exist. I have to accept this and move on.

....I'm bored with these thoughts. I've finished reading Genesis. In spite of some peculiar passages

¹ Strictly speaking, there is no 'spark of genius'.

² For reasons grounded in the advertising business and also in their 'aura', the way they deport themselves.

it was extremely impressive. It has a ‘vast’ feel to it, a product partly of its tendency to understate, partly of my knowledge that it was written in the childhood of mankind, partly of the naïveté and candor (and simple poesy!) with which its tale is related, partly of the absolute lack of commentary by the authors, etc. How many men wrote it? How much is historical fact and fiction? Is there any truth to the story of Joseph? (There must be.) Is the account of the growth of the House of Israel nothing more than an allegory of the ‘birth’ of the Jewish race? (Maybe it outlines the history of a real family which is only one among many.) In any case, the Old Testament is a priceless historical document that sheds light on the mind of man at the dawn of civilization. Moreover, it illuminates how soft and effeminate society has become through the millennia. (Such a development isn’t necessarily to our disadvantage. It may be a decisive *advance*.)

December 22

What prevents us moderns from performing mystical miracles is self-consciousness. The more control we have over ourselves, the further we are from our mystical origins. [For example, anthropologists have recorded instances of tribal people with diseases of some sort being cured by semi-religious ceremonies and communal rituals. These sorts of cures, as well as ESP (which seems to have been shown to exist), are what I meant by “mystical miracles”.]

I can understand why Schopenhauer considered the Torah incomparably inferior to the Upanishads. Not a single verse is intrinsically valuable or ennobling, except poetically. However, its story is inspiring, and it runneth over with historical interest. It takes us back to a time when man and animal were equal, when animals were held accountable for their actions. Thus: “If an ox gore a man or a woman, that they die: then the ox shall surely be stoned.” Moreover, its harsh laws suggest that morality had to be *carved into the flesh* of humans at the time of its inception, such that over the centuries it became instinctual. (“He that curseth his father, or his mother, shall surely be put to death.”) Undoubtedly the Torah was written by priests in the service of ‘lawgivers’ who needed an apologetic foundation for their codes of law; and what better foundation than God himself?

This is intriguing: “Whosoever lieth with a beast shall surely be put to death.” Was lying with beasts common? Obviously common enough to warrant a brutal law against it—suggesting, again, that merciless violence was required to separate, in the mind of man, humans from animals (a separation that had already been accomplished in the mode of production and the mere existence of society).

In 23:12 of Exodus the priests let slip the real material reason for the Sabbath: “Six days thou shalt do thy work, and on the seventh day thou shalt rest: that thine ox and thine ass may rest, and the son of thy handmaid, and the stranger, may be refreshed.”

Obviously the reason for feasts like the Passover is to tie the community together. (Whether this reason was in the heads of the lawgivers is beside the point.)

The reason for not serving other gods: “It will surely be a snare unto thee.” In other words....

It’s amusing that in Chapter 32 Moses is forced to treat God like a child. He says, essentially, “Stop your tantrum. Try to be a little reasonable! Grow up!”—but very respectfully, of course. For once, the Lord listens to reason and refrains from annihilating the ants he’s created. What a cool guy! Seriously. He has a colorful personality and is ruled by his passions. He knows everything but doesn’t let that interfere with his having fun. He probably has thousands of concubines. I can imagine him interrupting sex with the exclamation, “Those foolish humans have got themselves into a mess again. Let me stamp a few nations out of existence to simplify matters a bit.” He surely loves to fart and get drunk. He’d make a good friend.

I’m bored. I’m the only student left in my building; everyone’s gone home.

The problem with Nietzsche is that he wasn’t a social thinker (in two ways....). He was obsessed with himself and had trouble understanding views opposed to his own. He claimed to want disciples who could think for themselves, but anyone who disagreed with him he attacked. (I often do the same, unfortunately.¹)

¹ However, I forbear from attacking genuine philosophers. And I don’t go to the extremes that Nietzsche did.

....Newton's theory of color can be correct because phenomena exist in some form even when we're not aware of them. Processes inherent in phenomena occur outside our perception of them. This may seem inconceivable to people who understand its significance, but the alternative is more absurd. Surely the wall exists in some way after I turn my back on it.

In any case, the point is that the success of scientific theories shows that reality isn't simply a representation. It has *levels*. There is the appearance itself, which, as an appearance, doesn't exist independently of our perceptions; there are the cells and microscopic components of the representation (what matters is that they exist when we see them and they help explain the representation); there are the molecules we can't see but which surely exist in some form because they explain our representations so well; there is the subatomic level where space and causality cease to operate and reality becomes the thing in itself [i.e., the 'deepest' level of the thing-in-itself].¹ The reality we live in *may* exist only when we do, implying that space and time are creations of consciousness, but then it would be paradoxical that phenomena conforming to space and time exist outside of our perceptions (which they must). It seems more likely that space and time are objective facts about the portion of reality we live in (not 'are aware of', for they would apply also to phenomena of which we're unaware). But this too raises difficulties! [Dude, surely space and time exist both objectively and subjectively, but their subjective form is naturally very different from their objective, *real* form.]

December 23

Whoever wrote the Torah had at best a muddled understanding of the distinction between actions and intentions.

December 25

My suggestion about the lawgivers was undoubtedly wrong. Also, now that I'm reading Numbers, it's evident that the Jewish God lacks the sense of humor I attributed to him earlier. He takes himself so seriously! What an idiot!

Today I played with the children again. But not as much as they wanted me to; I preferred to play the piano. Geza (their father) videotaped Susan and me playing Mozart and Bach: the product was a far cry from perfection, but my mom will be delighted.

....I can't fall asleep. Philosophy is bothering me. I've realized that Sartre's principle of the absolute translucence of consciousness is either truistic or wrong. It's truistic because anything of which we're not aware can't be part of consciousness! Consciousness can't be opaque—and can't have opaque elements—because by definition we're conscious of everything in it. The principle is wrong, on the other hand, if it implies that there aren't mental processes independent of consciousness that influence it. (To deny the discoveries of science is wrongheaded.) However, another implication of the principle is correct: namely, that the self can't be metaphysical, i.e. behind appearances. For the self is what I am; it's another word for 'I'. And how can I not be present to myself? That would mean that I am not I, which is absurd. Moreover, 'not being present to myself' is another expression for 'not present to consciousness' (since what else could I be not-present to?), which implies that consciousness isn't present to consciousness² (because 'I' and 'myself' are synonyms), which implies that....I am consciousness? This would contradict my belief that I am self-consciousness, but the contradiction is explainable by the superficiality of language and logic. (Incidentally, there's something truistic about saying that I am self-consciousness.)

I've also thought about the conscience, the Other and the changeability of human nature, but I'll

¹ To repeat, this idea of the thing in itself is somewhat different from Kant's. It implies that, somehow, there are several things in themselves (several 'levels' of the thing in itself, i.e. nature in itself).

² That's not an absurd or meaningless statement.

develop those thoughts later.

December 26

Leviticus was boring, by the way. Numbers was only a little more interesting.

Deuteronomy 1:17 articulates one of the basic principles of the modern legal system and liberal democracy in general: “Ye shall not respect persons in judgment; but ye shall hear the small as well as the great; ye shall not be afraid of the face of man; for the judgment is God’s...” The difference is that the Israelites still had to worship a mighty being in order to justify this legal principle, whereas we worship the laws themselves. (Legal fetishism.)¹

It’s intriguing that Moses, in Chapter 9, insists that the Israelites are receiving their promised land not because of their righteousness (which he thinks they lack), but rather because of the wickedness of the current inhabitants. So basically they’re receiving their land out of default (and because God made a promise to Abraham).

The frequent insistence that offerings be of free will indicates that the distinction between actions and intentions was indeed beginning to be made at the time of the Torah. Other indications are in Chapter 19.

Note to self: Judaism condemns transvestites. If I ever want to embrace Judaism I must discard my flamboyant transvestite tendencies.

Men whose penises (“privy members”) have been cut off aren’t allowed into the congregation. (John Bobbit, that means you!)

...I’ve finished the Torah. At last. It can’t compare to the Upanishads for philosophical fertility, but for historical interest it’s their peer.

It’s mind-boggling that even after World War II there remained anti-Semitism throughout Europe, America and Russia. A fifteen-year-long celebration of savagery culminating in the murder of millions wasn’t enough to rid the masses of their prejudices. Of a single prejudice!² Nowadays these same masses pride themselves on not being anti-Semitic, as if they deserve any credit for not succumbing to the disgusting prejudice. They have hardly any freedom in their beliefs: every opinion, in their hands, acquires the character of a prejudice. It’s accepted mindlessly, absorbed passively,³ during the tender years of youth. The most enlightened idea is degraded to the status of ignorance when the rabble seizes upon it—and soon it’s perverted into evil. Under different conditions the majority of people living today would have actively acquiesced to Nazism.

Oh, do I hear the voice of Equality screaming at me in the distance? “Why are you so special?” it asks. “You’re no different. Circumstances make men: you would have accepted Nazism like the rest of us.” From the other direction, however, I can hear the voice of Goethe. “There’s a fundamental core in each individual that can’t be altered by external conditions. Inevitably it fights its way to the fore, past all the accidents of life, and appears as the individual’s essence.” For most, this essence consists of servility; for some it consists of freedom. The few in the latter category know they belong in it; the many in the former *think* they belong in it—but they’re deluded insects. The freest people are necessarily self-conscious to an extraordinary degree. They have *autonomy*; they belong not to the crowd. (Most of us have free will to an extent, but only a fraction have *freedom* in the meaningful sense.)⁴

I’m rereading the Book of Matthew. Now that I’ve read the Torah I can appreciate how radical and daring Jesus was. What he undertook was nothing less than a revision of morality from the ground up. My

¹ A product of commodity fetishism, in particular the fetishism of money. God a result of nature-fetishism.

² What was required was a sustained process of capitalist/liberal-democratic brainwashing.

³ “Osmosis”?

⁴ “That’s all un-Marxist!” you exclaim. So what? (Never think you’re one step ahead of me. You’re not.)

earlier criticism of his teachings—that they weren’t entirely consistent—more or less missed the point. He didn’t care about consistency; his morality was based on feeling. What matters logic? An adherence to logic above all else is a life-denying fetishism.

Jesus’s apostles are duller than clay. It’s amusing when he taunts them: for example, 15:15-18 (where Jesus continues to speak in parables even after Peter admits he doesn’t understand them) and 16:6-12 (which Matthew relates with a heavy-handedness that makes it even more amusing). ...Ha! 17:17 is delightful as well. And 18:21 is absurd. –If Jesus had answered, instead of “seventy times seven”, “seven times seven”, Peter would have said, “49? What if my brother doesn’t sin 49 times? Or what if he sins 50? What should I do with him then? Do you want me to keep count of all the times my brother sins?....”

In 19:27 Peter again exercises his lambent wit and proves his exceptional understanding of Christ’s teachings.

(One last example of a charming passage is 21:23-27.)

The second half of chapter 26 is blessed with an atmosphere pregnant of melancholy and wonder. It calls to the mind visions of misted, flickering candle-flames nestled in a garden at midnight, glowing in dew drops rolling off rose petals. Translated into music, it is the achingly brief melody—sublimar than any of Chopin’s—hidden in the middle of Schubert’s Fantasia, D. 940. This chapter is one of the pearls of literature.

....I’ve read Matthew—for the first time. At last I truly understand the appeal of Christianity. It’s certainly the worthiest of the three Judaic religions,¹ and its founder was one of the worthiest beings in history. He came as close to perfecting himself as the human condition permits. He was one of the great mystical geniuses (a few of the miraculous feats attributed to him may have taken place), and of course few people can compare to him for skill with words. Like the Buddha he was somehow a living truth. Unfortunately, his teachings became institutionalized, which was clearly a betrayal of their spirit. I’m inclined to agree with Oscar Wilde that not a single Christian exists in the modern world.²

December 27

For years I’ve had the feeling that until I experience sex I won’t truly belong to the human community. I’ll remain an outsider, uninitiated to the secrets and rites of the tribe. I’ve given oral sex to a girl, but since I didn’t love her it bored me.

Tomorrow I have to wake up at 5:00 to catch a train. After three or four connections I’ll arrive in Amsterdam in the evening. Hopefully Jessica will be waiting for me there. At any rate, she and I will probably spend New Year’s Eve in the City of Debauchery, and then we’ll go to The Hague for a couple of days. I’m quite looking forward to seeing her.

....Quick thought after I get into bed: truth oughtn’t to be valued over life. Truth in itself has no value, and although life ‘in itself’ is probably valueless as well (whatever that means), living it to the fullest isn’t necessarily. However, there are different kinds of truth, and some of them go hand in hand with living meaningfully. In fact, the necessity of the latter is itself a result of investigations and truths (but ultimately intuitions). Some myths are *necessary*: for example, the self-as-substance myth is psychologically impossible to abandon. Similarly, meaninglessness can’t be appreciated, so we embrace the myth of meaning (while remaining intellectually aware of its true status) and thereby fulfill our destiny to *live dangerously*. Nevertheless, it’s very rare that we ought to willingly abandon a truth because it’s hostile to life: after all, ‘living dangerously’ involves precisely this confronting of challenges and rising above them.

(Truth and life are caught in a circle, but life always comes out on top. –Food for thought.)

¹ Ignoring its history, that is.

² Maybe there are a few, such as the Dalai Lama.

December 28

The more self-aware (free) one is, the harder it is to be convinced of one's judgments of people (i.e. to abide by them, to treat them as dead data, as indubitably certain).

I'm on the second train. It's 2:00 a.m. I read the Book of John in the past few hours. Didn't like it. The Jesus of Matthew is more impressive, more likable and more humanistic than the Jesus of John. He approximates more closely Oscar Wilde's description in *De Profundis*. John's Jesus is a deluded, self-absorbed, uninteresting, fanatical, dangerous character. Predictably, *he's* the one Christians worship.

I recognize that there are no sharp distinctions between humans. Whenever I discuss the masses—the “sheep”—I'm generalizing.

The solution to the dilemma of self-continuity is ever on the tip of my tongue, but I haven't yet been able to articulate it. Whenever I explicitly think about it I get entangled in paradoxes—but I can *feel* that I'm a hair's breadth away from the answer.

...I'm on the third train. I found it purely by chance.

Okay, I'm on the fourth train. Final leg of my journey!

[...]

December 29

I love this city! I love it almost as much as I loved Lisbon! Its greatest strength is its surfeit of *character* (and its beauty). An irresistible zest slams into one as soon as one leaves the train station. Excitement and joy and a festival of life are what this city means to me. Even the bums add to its charm. – Amsterdam is quintessential Europe: enormously more relaxed and easy to live in than America.

I met Jessica this afternoon. The first thing we did was see a sex show. It was weird, to say the least. For a few minutes a beautiful stripper did things like stick a lit candle into her vagina and twirl her legs about; then a couple spent five minutes having sex in various positions; then another stripper teased us; and then we left. I wasn't aroused very much, and if I had been I would have found the show merely frustrating. As I sat in the darkness I felt that Jessica and I had regressed to a pre-human evolutionary stage, and that the other spectators were the chimpanzees. On the other hand, part of me doubted there was any harm in the ritual: maybe in some perverse way it tied the women and men together. At one point the stripper walked into the audience and talked to the men as if they were friends—each man being respectful—and directly after, she stuck a dildo into herself! What's wrong with people accepting their instincts (provided they keep them within reasonable (non-violent) bounds)? Maybe strip clubs are healthy! –But I doubt it. They're degrading.

Afterwards we went to a museum of modern art. Jessica's a real art aficionado. There was a wonderful hallway of quotations from famous artists discussing art: Oscar Wilde's was something along the lines of “That an artist is a poisoner is no argument against his prose.” After the museum we walked back to the train station—which took forever, since we got lost in a blizzard—and went to Den Haag, where we're both staying for a few days (in a hostel). We had dinner together and then played pool, which was a blast. A six-year-old British boy gave us advice on our shots and took the liberty of making fun of us the whole time. We were terrible, so he was justified.

Jessica made the mistake of inviting a girl from London on this trip. Fortunately she wasn't with us today, but I met her a little while ago...and she's ANNOYING. Jessica hates being around her; she invited the girl in a fit of loneliness. What most upsets me is that Julie, who talks non-stop about nothing, will intrude into the fascinating conversations Jessica and I have. She'll make them impossible.

Imagine the logistics involved in the exodus of 600,000 people from Egypt into Palestine! Moses, who was presumably a real historical character, was superhuman.

I'm almost finished with Joshua, the story of which is mind-boggling. I can't think of any history

more inspiring and gigantic and unbelievable than that of the Israelites—in fact, of the Jewish people through the millennia.

December 30

Today the three of us took a train to Amsterdam. [...]

With regard to painting, I think pure realism is my favorite style. [In retrospect: No.] Perfect representations of nature and humans resonate most within me; Van Gogh strikes no chord. The Dutch still-lives I saw in the Rijks museum shocked me to the core: they could have been photographs, yet were infinitely more beautiful than such. Their colors leapt from the canvas. Van Gogh pursued vivid coloring, but his paintings don't approximate the sheer luminosity of the Dutch masters'. It seems relatively easy to paint like a passionate madman; it's more impressive to paint like an aristocrat. I'm intrigued by *skill* more than juvenile "originality". I like perfection. What does the cul-de-sac of mindless torment matter to me? It's necessary only as a contrast to the Ideal.

On the other hand, I recognize that painters like Van Gogh add depth to the art form.

January 1, 2002

Jessica is a goddess. She's the daughter of Ammon Re, radiating vivacity and sunshine. I enjoy nothing more than to talk to her about her life and interests, or to watch her as she talks to strangers like they're bosom friends. She's a wonderful, complex girl—more appealing and fascinating than Sangeetha.

I suppose what prevents me from having a crush on her is that she's too independent and not girly enough.

Last night we wanted to go to Amsterdam to smoke pot, but no trains were running. So we walked around The Hague again.

Today at noon the three of us ventured into the frigidarium to see the North Sea. We walked all the way to the beach. Which, though pretty, wasn't too special. It was just another beach.

Regarding the debate between realism and idealism, we have three major options: (1) we can believe that the world of the senses is nothing but a representation existing only in our minds; (2) we can think it has reality independently of us but that it's impossible even to *approach* certainty in our scientific theories explaining it (because theories are only constructions, etc.); (3) we can think that most hypotheses accepted as true *do* accurately explain the world. I consider the first option absurd, the second incompatible with at least two facts, and the third correct when supplemented with the spirit of the second and the first (resulting from one philosophical consideration). The second is incompatible with our ability to influence the world by relying solely on scientific theories (example: the atomic bomb) and with the subsequent 'confirmation' of hypotheses by means of microscopes and other advanced technologies. I think the third option is true if we keep in mind that we can't know how anything 'appears' outside of our perceptions (i.e. that phenomena in themselves are in this respect probably unconceptualizable). Hence the first option probably has a kernel of truth. At any rate, except on the level of quantum mechanics, hypotheses generally imply at least the idealistic realism I've outlined here.

Recently I discussed with Jessica the ostensible logic of my philosophical investigations: she was of the opinion that I always pursue thoughts to exhaustion, but I told her that, on the contrary, I usually 'cut myself off' when I reach a tentative conclusion. The instant there's a pause in the flow of my thoughts, I seize the moment and stop thinking. Otherwise I'll have to write endlessly, which would be distressing and boring.

I loved "Joshua". Was impressed by the battle prowess of the Israelites, who demolished all the kingdoms that stood in their way.

Incidentally, heaven and hell haven't yet been mentioned in the Old Testament. When did these notions enter the Judaic tradition?

The importance of the Other in our psychic life is not an immutable fact. It's a historical creation. I'm pretty sure the conscience in both its historical and individual origins is inextricably intertwined with an awareness of the Other, and the conscience is obviously a historical creation (implying....).

The words 'recreate' (recreation) and 're-create' must have been related in their inception, but how? Their senses are completely dissimilar. –This is an example of the hidden wisdom in languages.

Tributary (one who pays tribute) and tributary (offspring of a river) are clearly related. One probably grew out of the other:—actually, it's obvious that the latter came from the former. (For two major reasons.)

¹Trying to be "great" is deluded and futile, since greatness doesn't exist, but if it's how a person motivates himself to live brilliantly then it's a desirable myth. Not needing it as an impetus toward self-cultivation is preferable, for willful self-delusion is cowardly, but for asses like Wagner who need it, pursuing such an ideal is better than not.

January 2

Today we went to the excellent Mauritshuis museum and a modern art museum. Jessica was in a moody mood and apparently wanted to be alone, but she got stuck walking with two foreigners in addition to her two friends. I like Salvador Dali more than most modern artists: with the exception of his cubist phase he was a very exact, imaginative, 'realistic' and appealing painter. I also like much of Picasso, and not only his early work. In regard to Dutch painting, I've learned to appreciate Rembrandt—I love his large painting of an anatomy as well as his small landscape scene—and I find Vermeer to be perfect. Why is Rembrandt so famous? Why is his "Nightwatch" so admired (aside from the obvious)?

[...]

I like "Ruth". It's an intimate and touching story of one family—of an old woman and her daughter-in-law whose loved ones die, but who persevere and triumph in the end. The faith of Naomi is simple and sincere. This sad old woman illustrates one of the best qualities of the Old Testament: it is too naïve to be melodramatic.

Whence arose humans' ability to let their promises govern them? The Bible is replete with examples of people taking their promises as seriously as they take their belief in God, even when their oaths directly contradict their interests. What could have caused this self-denial? Nietzsche has some ideas, but I don't think his suggestions are the whole story.

January 4

The three of us saw Anne Frank's house this morning. It was very moving, of course. Miss Frank was the type of person who justifies my faith in humanity—who rends the veil (vale) of tears and 'redeems the light'. Her diary is one of the most moving documents in history. She was a much better writer than I am, a more genuine person with a more simple and sophisticated faith in life, eager and perfect, a delight unto all who knew her. Would that I had known her! I might have loved her, found a kindred spirit in her and suffered through life with her at my side.

I'm on a train heading for Duisburg, whence I'll spend all night traveling to Salzburg. Jessica and I bade a fond farewell at the train station, since I elected not to go to London for a day. I miss my home in Salzburg.

....Here's some news that might amuse you: I got onto the wrong train. It went to Eindhoven, where I took a train to Venlo. At 8:00 I'm going to Cologne, and I'll weave my way home from there.

I can't believe that Rudolph Giuliani was selected as *Time's* person of the year. What a joke! Isn't

¹ Return to an earlier discussion.

the criterion for this oh-so-august title that one have a major impact on the world? If so, I have a hunch that Osama bin Laden deserves the award *slightly* more than Giuliani. Patriotism, that disease to which the intellectually feeble are most susceptible, is the reason for *Time* magazine's willful inanity. *Giuliani?! His most immortal service was to prove that sheep need a shepherd—and that Forrest Walker Gump is one of the sheep.*

I'm skeptical that it's necessary for me to mold a morality. Of what use is such an enterprise? Morality isn't separate from society: it's a byproduct of objective conditions. And of personal dispositions. There's nothing rational about it, nothing 'valid'. Contradictions and artificialities and glosses are inevitable. Whatever is contrary to the basic principles of Marxism is wrong or futile; Nietzsche's ideal philosopher is deluded. Everything in thought and life will be anarchical until capitalism is cast aside. Are the freest geniuses somehow more valuable than the herd? I'll leave it to you to decide if the concept of "value" has a shred of content; in the meantime I'll fight to bring history to its climax. I refuse to be irrelevant, to follow the beaten path of all philosophers *ausser* Marx. I'll not pirouette in a garden of whimsies: I'll wrench the weeds by their roots.

However, it's psychologically and socially impossible for humans not to follow a morality. Marx was right that, on some level, morality is a sham, but he himself couldn't escape from making moral judgments and pursuing an ideal. Thus we end up where we started: which values are best? We live in a human world, so we have to work within human limitations. A morality is necessary.

If a better society comes into being, a value system will work itself out—with our help—but this doesn't mean we can't predict what it'll be or try to mold it before its inception (and thereby influence what direction it takes). In any case, we need a morality during the long transition period as well as ideals to look forward to.

In the Old Testament there's confusion between slave morality and a modified master morality. The writers admire and idealize powerful, rich, brutal men, but they talk of the oppressed rising up against their rulers. Their heroes are always poor men from obscure families who become strong and wealthy. The New Testament, on the other hand, is pure slave morality: its protagonists don't even *want* worldly power. This morality may be an advance even though its causes lie in degradation and self-pity and *ressentiment*.

I've read Samuel I. I like the character of David, whose personality-type is diametrically opposed to that of the slave moralist. The Old Testament celebrates self-confidence; the New Testament waxes poetic over meekness.

January 5

(Forgive me if I've already touched on the following subject.) Non-human primates aren't wholly un-self-conscious. Their self-awareness isn't as extreme as ours, but it does exist in a crude form. Read about the gorilla named Koko—which communicates with humans via sign-language—and you'll see I'm right. There's no definite qualitative change between mere consciousness and self-consciousness: there are many varieties of the latter.

I love Rachmaninoff's piano arrangement of Bach's Partita No. 3 for Unaccompanied Violin. It unites intimacy, dissonance and classicism.

When I listen to the overture to *Fidelio* I remember that awareness of Meaninglessness is an artificial and alienated way of experiencing life. Time makes possible art; self-consciousness is its own redemption. Life is Truth, and joy is the jewel of life [and therefore—]. Time is Luminosity.

January 6

Obviously the Greek idea that everything in nature has a potential, and whatever realizes all its potential is a perfect instance of its kind, readily justifies my values and ideals. But adopting it as the measure of all values is an arbitrary *cutting-off*, a dishonest easy-way-out of probing beneath appearance.

Moreover, it's so inexact and begs so many questions ('Which potentialities should we actualize?') that it's all but a philosophical dead-end. On the other hand, it's intuitively true and is ultimately the last word of morality. We can't progress beyond it—partly because it's so vague!

However, all of philosophy is, on the most basic level, stillborn. The intellect is an inessential second-order representation of reality, confused and severed from the objective conditions of life:—a dusty shelf cluttered with illusions and magical salves. Nothing invented by thought is real—nothing except that which doesn't pretend to be 'real'. (Imagination, creation divorced from 'truth'.) The moment the intellect separates itself from reality—i.e. the moment it comes into existence—is the moment we lose ourselves in flights of fancy. We try to understand the world, but this very act makes its own fulfillment impossible: there's a radical difference between an interpreted world and an experienced world. Interpretation is accidental and wholly unlike its object.¹ (There are no laws of logic outside of thought, no values,² no conceptual distinctions.) Self-consciousness too is accidental, but (1) it's the framework in which the world appears to us, and thus exists on the level of sheer *experience*, and (2) it exists even when thought doesn't (especially thought oriented toward reality, thought that abstracts from experience and is not 'in-itself' or 'for its own sake' (like other kinds of thought).) Philosophy is alienation from life—sometimes explicitly, as when it questions the value of living—but this doesn't mean it's not a valuable type of experience! It may consist of illusory inventions, but it's nevertheless an experience—and one that can teach us to “harvest from existence the greatest fruitfulness”. Moreover, the fact that philosophy is somehow illusory and circular doesn't mean it's *wrong* (which would itself probably involve an absurd circularity). Philosophical propositions can be true, but they're always imaginary fabrications with no real significance apart from the whimsical world of the intellect. Because morality doesn't reflect reality it gets lost in contradictions; and the same is true of philosophy in general, which is more autonomous from the world than most sciences are (and hence more unreal).³

—Oh, I'm sick to death of this shit.

The poem I wrote several weeks ago is intellectual refuse. I ought to throw it away. You can judge it for yourself:

Tucked away within my loneliest loneliness,
Trapped among the folds of a mystical yearning,
Is a jewel of glimmering opalescence.
It sparkles in the warm light of desire.
A sibilance hovers about the halo
Of its soft luster; a flower-like languor tints
The dreams of him who feels its affecting presence.
Its silky scarlet whispers tease and torment,
Remembering to the drowsy spirit—weary
From dusty days spent in dissipation—
Visions of satyrs and nymphs who skitter through wooded
Cloisters in gay self-forgetfulness.
'Neath drooping canopies dripping silvery
Dew, fairies dart 'twixt waking tulips
And speckled spider webs. The rosy-hued,
Plush, velvet dawn, painted in haunting
Shades of tempered chiaroscuro, lumines
Sleeping nymphs and is imbibed by darkling
Souls. Mine own is nearly drunk on this

¹ This statement is bound to be misinterpreted as a rejection of the correspondence theory of truth.

² Hence philosophy in particular is unreal.

³ So I'm using the term in two senses, one of which applies to all self-denying attempts to discover objective truth. But I think the senses bleed together. [By the way, much of that paragraph was rather Kierkegaardian.]

Lush dream too fetching to be real, too real
 To be not a passing whim. I feel
 Nought but myself and this intoxicating
 Wine so eager to drown the drinker and
 To sedate his boorish senses. Mine are
 Immune; but I can see, in front of me,
 A cloudy vision of the ideal, the goddess
 Of love, the peerless, potent Aphrodite.
 Coquettishly she turns her cheek to me
 As I approach in shy confusion, hoping
 Naïvely for a kiss in lieu of the act
 Of passion. Instead, I'm granted a flimsy handshake
 —Nothing more. She turns her back on me
 And, with a gesture of contempt, proudly
 Treads the sky toward her abode on sacred
 Mount Olympus. Rejected thus, I languish
 In my impotent despair: too weak
 For rage and bored with sublime quietude,
 I notice not my subtle shift in mood
 Till it's too late. The limpid waters of holy
 Longing in which I have been wading are now
 Frozen solid, impenetrable, dead
 To warmth and feeling. The pinions on which I was
 To float to a mystical Union with love and life
 Dissolve in an acid shroud of bitter
 Self-awareness veiling self-deceit.
 The charmed naïveté of the blooming tulip
 Is swallowed by cynicism; the tulip dies.
 The “darkling souls” adopt a sinister
 Significance: they brutally remind
 Me that fate is a desolate crag.
 —Yet Time, so often our sadistic foe,
 Here plays the role of savior: in weakness
 I sit and wait, reflect and muse, bore
 Myself to agony—and then am frantic,
 Pace my cell, batter the walls, rend
 My hair, long for joy and inspiration
 —And then, again, I am quiescent, as I
 Wait eternally. Hours pass....
 At last, happiness bestowed from heaven!
 My endless waiting has not been for nought!
 My eyes check my watch hopefully
 As I feel enticing mists of sleep
 Swirl within my mind: 12:00.
 Time for bed!

A great deal of historical exegesis would be necessary to discover the precise reasons for the universal existence of classes throughout history, but we can partially explain it by invoking aspects of human nature (even at the dawn of civilization), effects of an economic surplus, and so on.

The economy (and thus class) has a logical and historical priority over gender, race and nationality. It has more of an influence on these than they have on it. People who disagree ought to read *The German*

Ideology.

It was stupid of me to equate—one year and two months ago—non-alienation with happiness. What was I thinking?

I'm tired of not playing the piano as often as I should. At Susan's house I learned the second impromptu from D. 935; now I want to learn a Chopin polonaise. (I've already played the one in A.) Next semester I hope to master the Scherzo and the Barcarolle, as well as the nocturne in C# minor. Then I'll take a break from Chopin and play Bach.

...The type of truth with which pseudo-philosophers like Richard Rorty are exclusively concerned—truth that can be expressed in language—has to be defined as a correspondence between the world and propositions. The 'world' includes whatever is the subject of the proposition. I realize that often we judge statements as true because they're rationally acceptable (and "coherent"), but in so doing we're tacitly assuming that since they're 'rationally acceptable' they're true about the world! In the case of abstruse scientific hypotheses—and, indeed, many simple social theories—our only mode of proceeding is to decide if they make sense; but this doesn't mean we don't think they're true of some corresponding reality!

Actually, this whole way of talking is muddled. The point is that whenever we judge a proposition we suppose it to be true or false independently of us. (We think its truth-value won't change if we merely *want* it to, for it is 'set' objectively.) That is, we can't help but think that all truths correspond to a reality outside us. Sometimes this reality is the world of appearance, sometimes it's the essence behind appearance,¹ sometimes it's a description of subjective phenomena, etc.

January 7

Communism 'needs' to be based on a theoretical framework as little as capitalism does. It can and possibly will develop spontaneously—though not as spontaneously as capitalism did. However, a theoretical justification is desirable and inevitable in the way it was for capitalism. (People must organize their thoughts and believe their reality is good; and theories—or 'ideologies' when seized upon by the masses—provide this organization.) But the framework doesn't have to be all-encompassing; it merely needs to be *general* and related to humanity. It must articulate an ideal, explain it by reference to history and psychology, and describe how communism facilitates the ideal's realization. Truths not somehow related to this ideal need not be included in the theoretical framework. (Thus metaphysics isn't remotely related to communism.)²

Extension exists in the world of consciousness, but that doesn't mean it doesn't exist in a world outside of consciousness!

I want to understand the mathematics of quantum theory and relativity, for I'm sure these fields are the most philosophically fertile in the natural sciences. They're deliciously counterintuitive.

Supposing that humankind doesn't destroy itself or suffer some tremendous natural calamity, it will continue to evolve for thousands and millions of years. Societal earthquakes lasting centuries and millennia will shatter human nature to bits, wash away all remnants of "eternal truths", erode the mud of the psyche only to mix mud of a finer texture. Our biology and psychology will revolutionize themselves. Ten thousand years ago logic didn't exist [?]; ten thousand years from now it will be a memory,³ transcended [?]. All social orders are smothered under the sands of time. Unrelenting progress, hesitating not an instant, is Truth. We must accept it and contribute to it.

¹ I'm aware that my discussions are vague, but they're only outlines meant to stimulate thought.

² [It's too bad I rarely described the positions I was arguing against. It must be hard for the reader to relate my ideas to anything. To make sense of them. But the next sentence was obviously directed against some philosopher, maybe Kant or Schopenhauer.]

³ Actually, it won't even be that.

January 8

I'll never attain anything approaching certainty in my answers to the majority of philosophical questions. My theories will, one and all, be hypotheses.¹ They'll be educated guesses. I'm too aware of the absurdity of existence to hope for anything definite from it. The highest man takes life with a grain of salt: he knows that living is a play within a play. He recognizes that being a complete person involves suspending disbelief, even as it requires that he disbelieve all. (Living according to truth is a circular process.)

There's something thrilling in the fact that nature created man and then left him to his own devices. Aside from our instincts, we're alone. Consciousness has to carve its own world out of dead matter. We can do essentially whatever the hell we want! What can be more exciting than that?! The casting-aside of God is indeed synonymous with liberation.

It's hard to believe that in eleven days I'll leave Europe. Part of me is sad and part looks forward to being at Wesleyan.Oh, the march of time just kills me. One moment ago I was in a bus traveling to Freiburg—I was talking to Sangeetha for the first time—I was lying in a hotel as she slept on my chest—I was crying in her arms after we had fought—I was touring Europe in alternating bouts of loneliness and joy. I was in Lisbon and Oslo and Rome and Barcelona. I was in "love".... I'm tired of writing. I need silence.

—But I can't find it! My thoughts are too loud.

[Deleted entries.]

January 14

Karl Popper, my idol, declares triumphantly that 'ought' cannot be logically derived from 'is'. What a monumental discovery. He goes on to suggest that people who base their values on facts are wrong and deluded. But there's a flaw in his reasoning: if nothing about morality is 'true', it's useless to argue against moral positions (with the exception of the one that states that values *must* be derived from facts,² because this one declares that values and facts are necessarily connected—which is false). Arguments, in order to be worthy of the name, proceed from facts or from common beliefs—which are precisely what is missing in this case. So Marxists and Nietzscheans are not violating truths or facts when they choose to base their 'morality' on what is. They can base it on whatever they want: it's their choice! The only thing they can't do is claim that their position is the 'right' one. Even if it can be justified by relying purely on reason unrelated to subjective preference—which it surely can't—it's not thereby better than other value-systems. However, the designation 'better' is vacuous and useless: what matters to moralists is that their derivative values abide by their basic ones, and that their morality itself becomes praxis.

January 15

Today Sofia and I saw an art exhibit in the Residenzgalerie: it was *ganz hervorragend*. I wish I could paint like a Baroque artist. The building itself was extremely beautiful, though it had a little too much gold leaf along its ceilings and walls. We saw the room where Mozart performed when he was six.

Tonight I wrote some interesting, though obvious, reflections on history in my letter to Sangeetha. I also reread my short story "Transfiguration", which I no longer like (at all). I have potential as a writer,

¹ That statement itself is a hypothesis—as is that one—as is that one....

² Well, that isn't really a moral position.

but I lack discipline.

The gray infinitude of the whitewashed wall cut through the composer like a razor. It entered his mind through his eyes and ears and thence grew, tumor-like, to possess his soul. It began as nothing and ended as nothing, but he was powerless to resist its onslaught. Swiftly was he engulfed in its timelessness; inevitably did he lose his capacity to think; terrifyingly did he forsake his self-awareness; impossibly was he abandoned to Existence. He withered. Nothing remained of him but a name. He was the crushing apathy of the white wall, the despair of the self-proclaimed nihilist, the heartache of the unrequited lover. His will to live was overwhelmed by a deep void, a vast meaninglessness that shriveled everything but itself. In a splitting moment the composer was one with the underbelly of Being, and it nearly killed him.

A mosquito buzzing in his ear shocked him back to life. The moment was gone, along with its mystery. Sounds he knew well regaled him: the screaming of the landlady, the clatter of the cabriolet, the crying of the neighbor's child. Reality hit him with the force of death. He indeed wondered if his awe-inspiring experience had been but a figment of his imagination. Perhaps he had dozed for a moment. Perhaps the sweltering midday heat had burst a blood vessel in his brain. Disinclined to philosophical reflection, he didn't know how to react to the violent contrast between his world and the one he had just left. So he merely gazed again at the paper on his desk. This paper would have been blank but for the black lines drawn across its width. Its severe wrinkles and small tears attested to a brutal history at the hands of the composer, but it rested on the desk in simple equanimity, passively awaiting the man's next outburst. Blithely it remained motionless. To the composer it seemed as if the paper were convinced of its own superiority. It had witnessed all his frustrations, all his creative lapses, even his tantrums when in the throes of despair. Not one of his failings had escaped its notice. It had even been a party to his humiliating experience of a few moments ago! It sat there taunting him, and his frustration increased. A bead of sweat dripped off his forehead and splattered onto the paper. His hand involuntarily rid his skin of its moistness and resumed its position on the desk, clenched in a fist. The composer continued to stare at the paper. His mind was occupied with its own emptiness, wondering where its thoughts had gone. Had the heat sapped them of their vitality? —An itch on the man's leg erupted from non-existence; he slapped it and it was gone.— Or were there merely too many distractions for him to concentrate? Either way, he cursed the force that held his creative inspiration in abeyance. The wailing child's entreaties grew shriller. Fleas congregated around the man's face. His foot chattered against the floor in impatience. His fist was white as it warred with his pen. His mind remained mere form divested of content: not a note sounded in it, not the whine of the oboe nor the caress of the flute. The gray infinitude of the wall was forgotten in his consciousness of artistic impotence. Frustration and boredom fought for predominance; frustration won the day. What had moments ago been intense impatience was now an ecstasy of rage at the whole of existence. The man crumpled up the paper in fury—hurled it into the trash—pounded against the wall to frighten the child into silence—rained upon the desk a flurry of blows—leaped up and paced the room—clenched his teeth to relieve his chest of pressure. Sweat streamed from his scalp and armpits. Fetid air from without wafted in. And the muse did not grace him.

At that moment he glanced outside in desperation....and beheld a remarkable sight. Standing alone on the street below was a vision of such fine workmanship that it could have been crafted only by God. It was in the shape of a woman. She was of ordinary height, but her sleek auburn hair cascading down her back gave her the appearance of a sculpted colossus. The contours of her face heightened the impression. Her nose bore the subtle aristocratic curve of Franz Liszt's; her cheekbones were taken from Michelangelo's "David". Her full, pursed lips, their corners upturned in an ironical half-smile, revealed her as an incarnation of the omniscient virgin Athena. From her eyes emanated both wisdom and innocence. There was nothing explicable about this woman. The composer gazed at her dumbly, soaking in her earthy yet spiritual presence. She smiled up at him knowingly; he beamed, proudly displaying his rotting teeth. The woman laughed gaily, and he felt

as if the two of them alone existed in the world.

Suddenly, rudely, a hunchbacked elderly hag caught his eye. He cringed in disgust, allowed himself a shudder, and quickly returned his gaze to the first woman. But she was no longer there. Apparently she had rounded the corner in haste as his glance had faltered. Why, though? And how could she have been so fast? Devastated, sure that he would never see her again, the composer sank into his chair. His chest transformed into a yawning cavity that swallowed him whole, consuming his desire to live. In the space of an instant he felt himself enveloped by a great weariness, a terrible apathy and hatred of life. But out of this inexplicable sadness rose the faint murmurings of a melody.

At first only a slight mental disturbance, it quickly developed into a piece partaking of necessity. Seizing upon the man's momentary dearth of psychic defenses, it emerged from deep within his body in a virtually complete state, forcing him to listen to it. He had no choice. For this music lacked the hardness of reality to the extent that it could be called unearthly. [...]

A single cello opened the piece. The whispered melody was born from the womb of heartache. It was in a minor key, but it was possessed of a yearning that is seldom heard except in D-flat or G-flat major. Periodically the melody grew agitated, fervent, climbed to the heights of passion....only to sink again into resignation. At last it succeeded in leaping to the major key, just at the moment when the entire string section began to echo the original theme. Soon the french horns and clarinets accompanied the strings, playing variations on the violins' embellishments, and then the oboes and flutes introduced the second theme before the first had run its course—and the piece acquired a contrapuntal air. Theme wove through theme; giddiness was entangled in sorrow; melodies were inverted and transposed; fugues appeared and vanished momentarily. A festive atmosphere pervaded it all. Trumpets and bassoons joined the fray—the first adding brilliance, the second humor. Trombones doubled the clarinets, flutes doubled the cellos, oboes doubled the basses. All remnants of heaviness were cast aside, overwhelmed by an irresistible compulsion toward comedy. Pianissimo was echoed by fortissimo. Instruments competed against each other, mocked each other. The halo of self-consciousness parodied itself, as it parodied everything in existence.

Throughout this fiesta, the composer was as a medium of overpowering forces. He listened with inhuman concentration to the ravings of his creations. Everything he heard made sense, even in its senselessness: there was a logic to it, though not the frigid logic of the philosophers. The festival of mimicry at length succumbed to its own logic, growing weary of itself. It was transcended by its antithesis, a glowing simplicity. Nature was affirmed. Birds twittered; wind conversed with waves; droplets of sound smattered against the wall of consciousness. Everything unrelated to music was denied entry into the composer's mind as he became the flute's flutterings and the horn's poetry.

Suddenly the original melody was heard from afar. The clarinet had remembered it. Coming from this instrument, the theme bathed in sweet melancholy: the notes were dipped in honey before being realized. Gentle ecstasy was the composer. Violin, then viola and cello, then oboe and flute and horn and bassoon, and trumpet—ever so smooth, inseparable from the horn—and finally the lofty bass....each instrument grazed the lips of Beauty. Each was integral to the cumulative effect. Each phrase grew organically out of the preceding, as the theme itself had emerged from the subtle celebration of nature. Tentatively, but with a sureness of purpose unsurpassed by Bach, the music flowed in and out of the major and minor modes, creating a dream-like atmosphere. Transience was all. Spirit was embodied in sound, even as thoughts lost their meaning and mind was overcome. The composer was possessed by the eternal. Powerless, he was engulfed in flames of timelessness and caressed by Existence. He withered. At once he was the universe, the spirit, and God. His will to live was snuffed out by music and its ineffable truth. In this crushing, eternal moment, as the orchestra climbed higher and higher to its climax, as the soundless affirmation of life reached its breathless peak, as violins and horns and cellos and flutes trumpeted their triumphant message to one who was able to listen—in this moment, the composer was one with the ocean of Being....and it killed him.

—His body could not withstand the pressure, and it evaporated whither it had come. Flesh and bone vanished. Chemicals and cells and electricity ended their stay on Earth. Nothing remained of the composer but his papers, his pen—and his music.

Need I assist the reader in exploring the themes? (Insofar as they're worth exploring.) Probably. Example: when the composer is *trying* to write, when he's focusing on his writer's block—when he's self-conscious—the notes don't come. Only when he's distracted (by the woman and the emotions she causes) can his instincts assert themselves—and, you know, artistic genius is instinct. The relation between self-consciousness and art is hinted at in other ways too. And obviously one of the points of the ending is that, when the music was flooding from the man's subconscious, he had effectively ceased to exist (because his self-consciousness had). What about dialectics? I illustrate its kernel of truth but also its inadequacy when treated as an *a priori*, three-pronged formula.

January 17

Last night Sofia and I went to a concert. Rachmaninoff's "Rhapsody on a Theme by Paganini" was played by a sensational pianist. I loved it. Dvorák's eighth symphony was also played, but I didn't like it much: it was boring, too long, and had few noteworthy passages. It didn't compare to Tchaikovsky's fourth and fifth. A Brahms piece was performed in the beginning of the concert, but it was excessively ponderous and plodding.

I found Sofia uninteresting last night. She certainly didn't have anything to say about the music. In general, for months, I've thought her conversations have been boring and shallow, but it was especially true last night.

This morning we said goodbye. She cried as we sat in silence in my room; I didn't know what to say. I told her I'd miss her very much. We exchanged e-mail addresses and she gave me a present—so tomorrow I'll have to buy a gift to leave with her roommate. (I was going to earlier but forgot.)

[...]

January 20

"The world is my representation" isn't strictly true—or at least, we can't know if it is. Rather, the world *as it appears to me* is my representation—which is a truism. Similarly, "the existence of the world hangs on a single thread; and this thread is the actual consciousness in which it exists" is either wrong or impossible to know on the one hand, or a truism on the other. Schopenhauer thinks that the world can't exist if there is no being to represent it, but surely the point is that even after I or you die the world continues to exist—for other people, to be sure, but outside of us all the same. *That* is just as inconceivable as the idea that there is existence outside of any subject, but we know it to be true.

"There can never be an existence that is objective absolutely and in itself; such an existence, indeed, is positively inconceivable. For the objective, as such, always and essentially has its existence in the consciousness of a subject." First of all, the Will is admitted by Schopenhauer to be objective "absolutely and in itself"—this is the premise of his whole system!—so he can't declare that it's inconceivable for the world to exist objectively in some form independent of appearance. In fact, the truth is that it's indeed impossible to imagine what the world is independently of us, but that the bare idea of such an *existence* isn't inconceivable. Moreover, two senses of the word "objective" must be distinguished: there is 'object for a subject' and there is 'outside of a subject'. The former is inconceivable without at the same time imagining a subject; the latter is perfectly conceivable even if there exists *no* subject *anywhere*.

It makes no sense to say that "it is just as true that the knower is a product of matter as that matter is a mere representation of the knower." This is equivalent to saying that each is a product of the other.

However, it does seem that Kant's antinomies suggest the untenability of any kind of realism.

Tuesday, January 22

[Boring deleted stuff. Back at Wesleyan.]

I've started reading Kierkegaard's *Concluding Unscientific Postscript*. The Preface is marvelous and entertaining.

[...]

I've read a couple pages past §1 ("Holy Scripture"). So far I find Kierkegaard's central idea interesting and original but vague and unsatisfactory. His belief that there's a yawning chasm between objective interest and infinite, impassioned involvement is wrong. For example, the following passage is an oversimplified account:

Anyone who as a believer posits inspiration must consistently regard every critical deliberation—whether for or against—as something dubious, a kind of temptation. And anyone who, without having faith, ventures out into critical deliberations cannot possibly want to have inspiration result from them. To whom, then, is it all really of interest?

But maybe someone can become inspired to alter his life after reading an interpretation of the scriptures. Maybe he suddenly becomes "infinitely interested" in Christianity—whatever that's supposed to mean—as a result of a lucid and brilliant interpretation by, say, Thomas Aquinas. In any case, it's only Kierkegaard's bizarre terminology that makes it seem as though there's a leap between the highest level of subjectivity and the one directly below it: it means nothing to say that an interest is "infinite". That just conceals the issue in a cloak of Hegelian sophistry. Besides, it's practically impossible and nonsensical to 'rank' subjectivities.

January 23

"The ludicrous aspect of the zealot was that his infinite passion thrust itself upon a wrong object (an approximation object [viz., the objective, historical truth of Christianity]), but the good aspect of him was that he did have passion." I thought that according to Kierkegaard the highest fulfillment of his kind of truth is infinite passion. Isn't that the reason for his eulogy on faith?—that it's the only infinitely passionate subjectivity? If so, how can the zealot be infinitely interested in objective truth? Or, if the zealot is infinitely impassioned, how can Kierkegaard justify his statement that it's the wrong kind of infinite passion? Doing so adds an extraneous element into the mix. *No* infinite passion can be wrong, for it is precisely the one thing that Kierkegaard desires. Hence, the object of one's infinite passion shouldn't enter into discussion; all that matters is that passion exist. (There can be no wrong object: there is either *no* object—because no infinite passion—or *an* object.)

I've spent much of the past two days copying my Europe-journal onto the computer. It'll be a long process. I know it's a waste of time, but I'm obsessed with making everything substantial in my life *orderly*.

Kierkegaard is right that uncertainty is inevitable in the sphere of objective truth. Even if we're 'certain', we're uncertain on some level. (That proposition itself is uncertain.)

As her farewell gift Sofia gave me a tape on which she described all the ways she'd miss me, read a poem that made her think of me, recorded us talking together (without my knowledge), and so on. What an unbelievable girl! It was the sweetest gift imaginable, but it was a little excessive. I felt embarrassed as I listened to the tape. There was nothing subtle about it: over and over again she pounded it into me that she would miss everything about me. Relentlessly! Entirely devoid of embarrassment! Her candor was astonishing. It's predictable that the first girl I find who's genuinely truthful isn't remotely my intellectual equal—isn't an other from whom I crave 'recognition'.

Why on earth does Kierkegaard repeat himself so often?

Anyone who wants to master anything of difficulty must be something of an autodidact.

Tonight I saw the new version of *Apocalypse Now*. I had never seen the movie before. Now that I have, I know to what heights film can reach. The idea behind Marlon Brando's brief speech at the end was identical to the idea behind the end of my February 2nd entry. The significance of the movie's end was that we have to accept the horror of which we are capable and yet repress it. It can't be eradicated, but it can be suppressed. Committing atrocities does, perhaps, require a kind of strength [as the film suggests] (and is thus, in a perverse sense, 'impressive'), but being human isn't being 'strong'. Being human is overcoming the animal inside oneself.

January 24

Today I had my first two classes: "Molecules, Microbes and Man" and "Murder and Adultery: The French and Russian Novel". [...]

I wonder if Kierkegaard's essential idea is similar to the one I tried to express in the second paragraph of the entry on January 6th. (For example, the third sentence implicitly contains Kierkegaard's distinction between direct and indirect communication.) My sentences were confused and erratic because I was formulating for the first time a thought that was full of apparent contradictions—the mere act of formulating which was a circular enterprise, since an important component of the thought was that all thinking is subjective self-expression (i.e. an "indirect" process of becoming), yet this was stated—directly—to be an objective truth. (That is, it was a thought that, if true, was false.) However, I'm pretty sure the paradox is sophistical.

January 25

Suppose someone wanted to communicate that the truth is not the truth but that the way is the truth, that is, that the truth is only in the becoming, in the process of appropriation, that consequently there is no result. Suppose he were a humanitarian who necessarily had to publicize this to all people. Suppose he took the splendid shortcut of communicating this in direct form in *Adresseavisen*, by which means he gained masses of supporters, whereas the artistic way, despite his utmost efforts, would leave undecided whether or not he had helped anyone—what then? Well, then his assertion would indeed turn out to be a result.

That thought, I think, is related to the one I addressed yesterday. Here's another:

The form of a communication is something different from the expression of a communication. When a thought has gained its proper expression in the word, which is attained through the first reflection, there comes the second reflection, which bears upon the intrinsic relation of the communication to the communicator and renders the existing communicator's own relation to the idea.

Another:

Ordinary communication, objective thinking, has no secrets; only doubly reflected subjective thinking has secrets; that is, all its essential content is essentially a secret, because it cannot be communicated directly. This is the significance of the secrecy. That this knowledge cannot be stated directly, because the essential in this knowledge is the appropriation itself, means that it remains a secret for everyone who is not through himself doubly reflected in the same way....

Another:

Every subject is an existing subject, and therefore this must be essentially expressed in all of his knowing and must be expressed by keeping his knowing from an illusory termination in sensate certainty, in historical knowledge, in illusory results.Nothing historical can become infinitely certain to me except this: that I exist, which is not something historical. The speculative result is an illusion insofar as the existing subject, thinking, wants to abstract from his existing and wants to be *sub specie aeterni*.

Another:

In connection with negative thoughts of the kind mentioned, an illusive form [of communication] is the only adequate one, because direct communication implies the dependability of continuity, whereas the illusiveness of existence, when I grasp it, isolates me.

That last thought isn't entirely true. Aside from the fact that it's impossible not to communicate directly most of the time (*Concluding Unscientific Postscript* is basically an example of direct communication, if I'm understanding the term correctly), such communication is permissible in this context because *words* and *meaning* aren't quite synonymous. This is evident when one spends time reflecting on a paragraph, trying to understand it—and suddenly its meaning 'clicks into place' in one's head. Therefore, though the words may be definite and 'dead', the intuition behind them needn't be. Direct communication can be a stimulus toward the same kind of intuition that Kierkegaard assumes to be a product of indirect communication. Perhaps this is the solution of the sophistical paradox I mentioned yesterday.¹

January 26

Existence itself, existing, is a striving and is just as pathos-filled as it is comic: pathos-filled because the striving is infinite, that is, directed toward the infinite, is a process of infinitizing, which is the highest pathos; comic because the striving is a self-contradiction. From a pathos-filled perspective, one second has infinite value; from a comic perspective, ten thousand years are but a prank, like a yesterday, and yet the time the existing individual is in does consist of such parts.

Pathos is from the perspective of subjective time; the comic is from the perspective of objective time. The second is infinite because there are no divisions in subjective time, subjective time is perpetual (yet perpetually fleeting); ten thousand years are but a prank because they're an arbitrary objective segregation that is not only unrelated to subjective time but vanishes subjectively as soon as it has begun. —Actually, the main reason they're a "prank" is that objective time consists of parts and is perpetual in a different way than subjective time is, rendering these parts meaningless and effectively infinitesimal (particularly when experienced by the subject—when the subject looks back on them after they have occurred and is nevertheless in the same moment, so to speak, that he was in *before* they had occurred (as if they had never happened)).

I read Chateaubriand's *Atala* and *René* for my class. They were gorgeously written but exhausting to read. In fact, they were annoying. Such a shameless profusion of sentiment, such intemperate milking-of-sorrow-for-all-it's-worth, such enraptured pessimism—yes, life is suffering, now get over it! I grew deadened to feeling, immune to all but impatience. Romanticism is self-defeating, self-caricaturing. (As Kierkegaard might say, it ignores the comic.)

¹ Actually, no it's not. The solution is that thoughts aren't always only "self-expression". Stated differently, there are various kinds of self-expression.

Judged by absolute standards, Chateaubriand is a mediocre artist. However, we shouldn't ignore the historical context in which he wrote. European civilization was bored and jaded around 1800, disillusioned with itself, thus giving birth to Romanticism. This movement was essentially a deflection from life, an outlet for alienation, a comfort and a caress. It was a plush velvet couch, purchased with the tokens of luxury and indolence.¹

Kierkegaard's ramblings about the "eternal" and the "eternal decision" as related to the historical are hard to understand. Section 3 of chapter 2 is all Greek to me. It's quite diverting, though—or rather, it's profundity in the guise of humor. ("Although results and accomplishments were otherwise plentiful in those days, no one was equal to putting an end to Lessing and having him world-historically butchered, salted, and packed in a paragraph. He was and remained an enigma."²)

January 27

I don't think Kierkegaard's arguments against a system of existence apply to *all* such systems. They apply only to systems that, like Hegel's, try to force existence into *a priori* categories that are supposed to be the only true account of existential development and leave nothing unexplained. A system, perhaps like Marx's, can be sufficiently vague to allow maneuverability within its perimeters—i.e., to allow for the infinitude of existence. Kierkegaard wrongly assumes that a system must explain *everything*. It's obvious that all systems can only be approximations. In fact, even if a system does the impossible—explains every little accident of existence—it can never be more than an approximation because it doesn't have the immediacy of existence.³ (Don't accuse me of plagiarism. That proposition is so self-evident I was aware of it before I'd read Kierkegaard.) Being is on a different order than thought, so thought can only be an approximation of being.⁴ But its approximation can be true. Even if it's impossible for us to reach such a perfectly specific and true approximation, we can achieve a *vague* one that's true as far as it goes. So a system of existence is possible.

On a different topic, the impression I get from Kierkegaard is that making false or meaningless statements is permissible if it leads to subjective truth (whatever that is). Christianity's objective truth is irrelevant, he says. However, the knotty point is that Christianity makes statements that it claims to be objectively true. So are we supposed to delude ourselves for the sake of passion?

"Passion is subjectivity, and objectively it does not exist at all." This doesn't mean we can't reconcile objective truth with passion. Kierkegaard goes astray in stressing the importance of the subjective decision, the leap. Forced beliefs do exist: for many of us it's psychologically impossible, or very difficult, to choose to ignore overwhelming evidence against a thesis. This is why truth and passion must be 'reconciled'.

"Aaaaahhhh".... The first movement of Chopin's second piano sonata is my home. The third movement is my heaven.

January 28

Continual association with the world-historical makes a person incompetent to act. True ethical enthusiasm consists in willing to the utmost of one's capability, but also, uplifted in divine jest, in never thinking whether or not one thereby achieves something. As soon as the will begins to cast

¹ I mean that in two ways.

² Technically that quotation is part of section 4.

³ 'Immediacy' not quite in Kierkegaard's sense.

⁴ Thought itself is being, but its objective, finished products are Ideal and hence not being. They're abstractions, as the activity of thought is not.

a covetous eye on the outcome, the individual begins to become immoral—the energy of the will becomes torpid, or it develops abnormally into an unhealthy, unethical, mercenary hankering that, even if it achieves something great, does not achieve it ethically—the individual demands something other than the ethical itself. A truly great ethical individuality would consummate his life as follows: he would develop himself to the utmost of his capability; in the process he perhaps would produce a great effect in the external world, but this would not occupy him at all, because he would know that the external is not in his power and therefore means nothing either *pro* or *contra*. He would remain in ignorance about it, lest he be delayed by the external and fall into its temptation.... The ethicist fears drawing a conclusion or making a transition from the ethical to something other than the ethical. He would, then, remain in ignorance about it through a resolution of the will, and even in death he would *will* not to know that his life had had any significance other than that of having ethically prepared the development of his soul. Then if the power governing all things would want to dispose circumstances so that he became a world-historical figure—well, that is something he would first inquire about jestingly in eternity, for not until then is there time for the light-minded questions of carelessness (Princeton edition, 1992, pp. 135-136).

That's inspiring but oversimplified. However, I have to read more before I can pass definitive judgment on it.

Kierkegaard himself articulates one reason for my skepticism regarding his position on the ethical:

The longer life goes on and the longer the existing person through his action is woven into existence, the more difficult it is to separate the ethical from the external, and the easier it seems to corroborate the metaphysical tenet that the outer is the inner, the inner the outer, the one wholly commensurate with the other. This is precisely the temptation, and the ethical becomes more difficult day by day....

Additionally, it seems to me that the arguments in which he invokes God are marred thereby. All his serious propositions are objective—aspire to some kind of objective truth, even the proposition that subjectivity is truth—so he's assuming that God really exists. His arguments are meant to be objective, *nicht wahr?* Direct communications. They have to be. He's trying to debunk existential systems, which necessitates that he keep at least one foot in their territory. Otherwise he and they don't even have a language in common, in which case he can't legitimately argue against them. At any rate, he manifestly does believe most of his claims to be true (like the impossibility of an existential system), so he should at least notify the reader when he alternates to his 'truth is irrelevant', 'all my sentences are untrue hypotheses aimed at increasing passion' mode. The fact that he doesn't suggests that he invokes God as an already-established truth. Which he isn't entitled to.

I fear that my senior thesis will have to be a primarily empirical investigation into the origins of civilization. I haven't yet refined any of my theories—hell, I haven't even arrived at them—so the most sensible option is to aid my future endeavors by getting the drudgery of research out of the way.

January 30

Much of Section II, Chapter I is essentially a vacuum of meaning. It's tedious to read. In any case, I've decided to start preparing for my thesis by temporarily abandoning Kierkegaard and reading instead *The Sumerians*, by Samuel Noah Kramer. My agenda is (1) to read detailed studies of the most ancient societies, (2) to learn about the progress of evolution from ape to man, (3) to educate myself on the existing theories of how mankind emerged from the primeval swamp, and (4) to confirm or revise the Marxist hypothesis. (4) is the purpose of my project.

January 31

I'm taking a break from Kramer: it makes more sense to begin at the beginning. Hence I'm reading an interesting book entitled *The Emergence of Humankind* (fourth edition), by John Pfeiffer. Topics like evolution and primate behavior stimulate me to a preposterous extent. I envy Jane Goodall's lifelong intimacy with chimps.

Late last night, in the throes of inspiration, I ran to the library and borrowed, among other books, Erik Wright's *Reconstructing Marxism*. I had been assailed by paralyzing doubts about my senior thesis and had decided it should be theoretical rather than empirical. But after skimming through parts of Wright's stupefying book I changed my mind. It's an almost maliciously tedious work; it's where enthusiasm goes to die. It raises questions and answers none of them. At best, it polishes off its 'solutions' with 'What I have just written is probably wrong.' Ambitious!

The contemporary cornucopia of theoretic cul-de-sacs cannot be sifted through with the sieve of the Academic's mental equipment. It's misguided to try to explain phenomena from one limited perspective, and then, upon apparent success—to trumpet triumphantly “Victory!” Inevitably some evildoer will explain the same phenomena using a diametrically opposed theory, and then he too will claim success. The process will continue indefinitely—scholar responding to scholar in those myriad scholarly journals—until at last the participants realize they've wasted a decade of their lives. The method to be used is simpler, though it assumes infinite patience, a renunciation of partisanship, acquaintance with all the relevant ideas, and genius. It is, in fact, surprisingly obvious. I'd outline it now if I knew what it was.

—Actually, I do have an idea. First, theorists can't plunge straight into complex societies like capitalism or feudalism: they'll invariably get confused or overwhelmed. They have to start at the beginning, with the simplest humans and the simplest tribes. They have to start with straightforward principles. For example, human biology can be taken as a given, a brute fact that hasn't changed in tens of thousands of years and thus can't be used to explain differences between primitive and modern cultures. It outlines the parameters within which civilizations vary as a result of less 'unchangeable' conditions than biology. In any event, the philosopher both accumulates and begins with these principles as he continues his empirical/theoretical analysis of history. By the time he reaches complex cultures like Sumer he has undertaken more intricate deductions (and inductions), and he then proceeds to examine these cultures with his new explanatory principles—and continues to discover others. Eventually, painstakingly, he progresses all the way through history and ends up with a multi-tiered theory as 'certain' as can reasonably be expected.

February 1

[...] Another of my principles will have to be that, even though psychology is based on biology, psychological theories are just as necessary—and have just as much explanatory power—as biological ones. The two correspond to two 'sovereign' levels of explanation, partly because the effects of social life are autonomous from biology. (Even if experiences are somehow recorded in cells, or in networks between cells, and it's *this* that directly (chemically, etc.) determines 'us', our social life—including its foundations—and our psychology need to be examined together (and independently of the 'intermediary', biology) because they exist on one plane and biology on another. That is, *de facto* they directly interact even if *de jure* they don't. Biology completes the picture and is necessary for technical accuracy, but in many respects it's superfluous in a general account of the interaction between society and the individual.)

The major problem with social theories is that it's impossible to know when they sufficiently explain the facts. How can they be tested? Anomalies can always be explained away.

Several days ago I read *Adolphe*, by Benjamin Constant. It was a perceptive psychological analysis of a tragic love affair, a book easier to read than Chateaubriand's. It was actually more an investigation than a real story, which is one reason I wouldn't consider it great art. Now I'm reading Lermontov's *A Hero of*

Our Time.

Are there innate ideas? Most assuredly: I can testify personally that children have an intrinsic fascination with the pubic area even before they know its function. They experiment (even engage in penetration) without having the slightest idea what it is they're doing. Therefore the question that ought to be asked is *which* ideas are innate.

Whenever you're taking people too seriously, for whatever reason and in whatever circumstances, tell yourself that they're naked beneath their clothes. This thought will chase away all traces of soberness.

The Adagio in Beethoven's eleventh piano sonata is sufficient. "The world is not enough", but the Adagio is.

February 2

For my microbiology course I'm reading a textbook (*Microbiology: A Human Perspective*), a mind-numbingly complex one. Maybe I'm exceptionally stupid, but I find its pages to be chock full of gibberish. How is it possible for people to understand, and remember, the details of anabolism and catabolism, of aerobic respiration and anaerobic fermentation? The stuff is fascinating, to be sure, but bewildering. I have unbounded admiration for scientists.

February 3

When I listen to the Molto Allegro e con brio in Sonata No. 4 (Beethoven, of course) I feel exhilarated beyond endurance. I feel as though connected directly to an adrenaline-pump. This is almost the way I feel when listening to Billy Joel's "Travelin' Prayer".

Another of my principles will be that the potential of each individual hasn't changed much in 20,000 years. If two newborn infants were exchanged between the prehistoric and modern epochs, they would grow up acting the same as the people around them. That is, our psychic structure (our 'potential') has changed imperceptibly if at all. This principle is desirable because it justifies my use of the method of intuition (imagination) in coming up with hypotheses.

I'm done with Pfeiffer's book. It was intriguing and entertaining, but I think I'll stop reading such books for a while and instead arrive at my own ideas. Most authors have little to offer me. My main concerns are to figure out a methodology and list axioms. [...]

[...] By the way, the amount of propaganda for America and "freedom" before and during the Superbowl was nauseating. Aside from its utter lack of taste and embarrassing self-congratulation, it reminded me that I'm an exile in my own country. I simply am not an American.

What am I? An intellectual sick unto death and an individual in love with life.

It bothers me that biology can theoretically explain all things human. It's terribly disturbing. I will not be reduced to chemical reactions. My moods are more than hormones. –Oh, but they're not! Life is unfathomable!

These are the halcyon years of my youth. This is the happy time that will be snuffed out for eternity. Soon I'll be a despairing creature bored of the world. Already I'm weary of thought.

[...]

February 4

The reason why extreme self-consciousness often implies the comic is that self-consciousness, in this form, is a type of emptiness and abstraction. It is itself not emotional or ‘full’ in any way, so—since it necessarily adopts the smug, superior and detached attitude of the observer—it looks upon that which is *immediate* as foreign and inferior,¹ and hence amusing. Why the inferior should be funny, I have no idea; but this question regards the nature of laughter in general, which I suspect we’ll never understand.

Unfortunately the issue is more complex than that, but I don’t feel like untangling my thoughts. (Even the footnote is begging for further distinctions. There are distinctions *within self-consciousness* that must be made.)

February 5

What I really want to understand are the dynamics of *modern* society, not of ancient societies. But I think my historical method is best, so I’ll stick to it.

[...]

Brief interruption: the reason for the increase in technological complexity throughout history isn’t really that the satisfaction of needs begets new needs, nor is it that technology has an autonomous tendency to develop. In the beginning of history it is that the biological needs of the body (survival, not power²—or power (over bacteria, etc.) only insofar as it ensures survival) are manifested in consciousness as a drive to attain ‘control’ over nature. As history progresses, the specific social reasons for technological advancement become more varied, and the bare need to survive becomes less important, but there remains the fundamental fact of the will to power—which is biology filtered through consciousness—in its original form of power over the environment. The difference between the primeval will to power and the later one is that the latter has been made ‘cultural’. It has become relatively autonomous from its original biological functions and more a phenomenon of consciousness. It has many manifestations: for example, an inventor may want to make an aspect of life easier, or he may want to create a source of financial profit, or he may want prestige, etc. Technological progress is predictable because (1) the will to power never dies (it’s only sublimated differently in various periods of history) and (2) on a societal level there is usually, from some direction, an impetus toward more power over nature because of the conveniences it affords. (That is, increasing power over nature remains a fundamental drive throughout history even though it becomes less necessary-for-survival than it was originally.) Of course, in capitalism there are many more *institutional* factors forcing technological progress, but the reasons for their influence over us are ultimately grounded in human nature (which means, on the most general (and sometimes meaningless) level, the will to power).

[...]

February 6

The last paragraph consisted of nothing more than hasty hypotheses, but I think I was onto something in the previous two paragraphs. I was trying to unite biology, Marxism, phenomenology and Nietzsche. (Phenomenology was primarily the invisible method.)

¹ Inferior (or deluded) because...self-consciousness knows it’s adopting a more considered viewpoint. Self-consciousness is, in a sense, inherently sure of itself; it is self-affirmation (though it needn’t be affirmation of oneself, for it can make the ego an object for itself and thus see the ‘ego’—oneself in toto—as contemptible even while it ‘affirms’ (unthinkingly) itself). By its mere existence it is a type of self-affirmation (and can’t be anything else because it is just awareness); and this affirmation becomes explicit when the viewpoint of self-consciousness is adopted vis-à-vis something unreflective. –That babble does make sense if you reflect on it. Incidentally, it may also contain the seeds of an explanation of the omnipresence of the drive for ‘ego’-affirmation.

² [Contrary to Nietzsche in his metaphysical moments. –I write that because otherwise you won’t know why I wrote “not power....” in the text.]

I'm reading a book by Charles Cogan entitled *Charles de Gaulle: A Brief Biography with Documents*. From the first two chapters it seems that de Gaulle was a world-historically deluded, pompous charlatan. He believed, absurdly, that he was the "true" French government during the war. Not only did he overestimate himself, but he adopted the medieval mentality in being obsessed with France's "honor" (which anyway no longer existed after 1870, 1871, 1918 and 1940). And what is all this about France's "destiny"? Its "destiny" is to wither away ignominiously along with every other nation-state. –France, poor France. Its people never tire of demonstrating their mediocrity.

February 7

Ohhh God.... Clairvoyance is disturbing. I can foresee humanity's destiny, and it's unequivocally tragic.

I can't conceive of higher phases of reflection. It seems impossible for there to be further momentous developments in this arena, *my* arena. History has played itself out: the curtain is rising on the last act, the fifth. Aeschylus has met his match.

The meaning of history has been revealed to us: it has been—its own negation, meaninglessness. We have arrived, my friend! We have reached the end! You and I have tarried in this death-trap long enough to witness the dénouement. The innumerable travails and triumphs of history have been for....this. Nothing still exists but wonder, and wonder has lost its nerve. Insatiable in its impotence, it has sapped the spirit's verve. Now in its death-throes it can do nothing but wheeze, "How...did...you...do...it?"

Self-consciousness is one of the reasons I'm aroused by female nudity. That is, in addition to the hormonal reactions—which are manifested as a kind of eagerness and excitement—there is my implicit awareness of the contradiction between the self and the vagina. This awareness augments my fascination with the object of my desire, thereby intensifying the desire itself. (Two levels of explanation.)

Friday, February 8

Is self-affirmation nothing but pride? No, it's subtler. Pride is slightly cruder, harder to achieve, rarely certain. More often than not it's based on achievements, whereas self-affirmation is nearly always present in some form. Often it's hardly noticeable.

I finished reading Lermontov's superb novel. (Superb for a 24-year-old.) I feel sympathy with the main character, Pechorin. We're not identical, thankfully, but I understand and pity him as well as anyone can. It would take but a nudge for me to become a Pechorin.

What'll I do tonight? Today I woke up at 12:30 and did nothing but read and go to the CSS social hour. Now it's 6:30, my day has just begun, and I'm bored. I'd planned to write down several revelations triggered by Lermontov's book, but I don't feel like it. I'm so bored I might as well have sex with someone I've never met.

All the paradoxical actions of women in regard to romance can be explained by the hypothesis in the second paragraph of my December 21st entry. Women fall in love with men from whom they want recognition (in the Hegelian sense). They implicitly judge the men [*certain* men] as in some sense superior to themselves [stronger, etc.], so they most effectively affirm themselves by being affirmed by the men.¹ Thus, they may like men who love or are loved by someone else because these men can less easily be possessed, they represent something less achievable and 'above' the women, something that must be 'conquered' and must succumb to love in order for the women to feel at peace with themselves and the

¹ [This paragraph is just an introspective phenomenological analysis, though a pretty awful one. I was trying to imagine what's implicitly in the woman's consciousness. It has nothing to do with the value-judgments about men and women that feminists rightly object to.]

world.¹ At the same time, in taking a man away from someone else they are tacitly raised above the level of the first woman. Then as the relationship continues, the woman is doted on and loved by the one whom formerly she judged as a sort of prince beloved by a competitor, and this further increases her self-contentment (happiness). [...]

That example was a pathological case, but its laws apply by and large to all or most women. Incidentally, I've just corroborated Goethe's/Hegel's/Nietzsche's idea that people with the highest power are tranquil and undisturbed rather than tormented and Byronic.

A woman wants a type of power over a man by being recognized by him, but if she's spirited and Faustian she'll quickly become bored and want new confirmations of her power. (Especially if she really possesses him like a toy will she get bored and feel gradually less 'affirmed'.) Similarly, a man wants to be affirmed/recognized by being loved or idolized by a woman. I'm not sure what the difference between the two cases is, but it must exist because women are seen as relatively passive and men as active. Anyhow, the greater bliss of actually *being in love* rather than merely *being loved* is due (1) to the hormones released during the former and (2) to the more powerful, immediate kind of self-affirmation involved in passionate and unifying emotions than in the mere abstract awareness of recognition by another. But the whole previous analysis is valid because people are *really* in love only when it's reciprocal—that is, when the other is possessed and oneself is affirmed.

Obviously I'm trying to unify Hegel's, Marx's, Nietzsche's and Sartre's approaches to the human condition while adding something of my own.

February 9

Today I finally practiced the piano. Didn't do much else. By the way, I've lost the CD that runs the screenwriting program through which I edit *The Moor*, so I can't access it. The agents are just waiting for me to send them the script and sign the contract. Damn. What'll I do now?

Aphorism 354 of *The Gay Science*, which I hadn't read until a few minutes ago, is important and suggestive. It relates to my thoughts on consciousness and language.

Occasionally I miss Sangeetha. Now is one of those times. Late at night I often feel tender and melancholy and muse on love. In former days I would have sent Sangeetha an e-mail describing my feelings, but her responses usually disappointed me. So what should I do now? Go to bed?

I've never understood the hullabaloo over Wittgenstein. The guy was a muddled thinker.

February 10

Yesterday I wrote the first page of a new story. I got the inspiration from reading *A Hero of Our Time*. In fact, the format of my novella will be similar to that of Lermontov's: it will consist of a series of entries from the hero's journal. The difference is that they'll be in reverse order, starting in April and progressing back to September. This makes my task more difficult but more fun—difficult because I have to take account of two directions of time (since the tale has to make sense and be suspenseful both chronologically and 'backwards'), and fun because....it'll be difficult! I'll arrange it in the form of a classical tragedy—with five acts that can be more or less differentiated from each other—but the twist will be that it's two tragedies in one. That is, the 'act' right after the prologue (in which he kills himself by jumping off a mountain) will be both the fifth and the first, depending on whether the story is read forward in time or backward. The next will be the fourth and second, the next the third, the next the second and fourth, and the final the first and fifth. Moreover, the tale read forward (starting from the end) will be the tragedy of

¹ Of course, the initial hormonal reaction may be what first attracts them to the men and stimulates them to the chase, but my ideas have a prominent place on another level. They interact with and intensify the biological reasons for love. See below.

one individual, and read backwards it will be a symbolic tragedy of mankind.

I'll clarify. 5/1: The hero saves a girl's life and resolves to kill himself—not in a fit of passion but in a carefully considered chain of disinterested reasoning./We meet the main character, the human essence (the self). This character has the peculiar quality of affirming the Other and denying itself. 4/2: His girlfriend breaks up with him. He despairs./We meet the second character (not quite the “antagonist” that it is in the classical drama, but nearly). The human essence loses itself completely in the Other. 3/3: The hero flirts with other girls, is unfaithful to his girlfriend, and tension develops in their relationship./There are ‘others’ all around us, and the self's automatic reaction is to assert itself (its independence) against them. It *has* to; that's how it survives. 2/4: We meet the antagonist (the girlfriend) at the same time that the hero is intensely engaged in philosophy./The self withdraws from the world—though not entirely severing all its connections—in response to its ‘identity-crisis’ in the midst of so many others. It's been so corrupted by foreign influences that it doesn't know who it is, so it tries to find itself in solitude and philosophy. 1/5: In a single entry we get acquainted with the main character, as well as with the thought that will eventually cause his suicide./The self is confronted with the final word of philosophy (aphorism 341 in *The Gay Science*). Its reaction is bewilderment and joy, but the tragedy is that it can never pass the test of Nietzsche's “ultimate eternal confirmation and seal”. It thinks it can, but it's wrong, for the human essence is self-denying, incapable of such eternal, overwhelming appreciation and rapture. So it's doomed to a death-in-life. —However, I may be wrong, so I leave open the possibility of salvation by finishing my story with the aphorism. The main reason we're drawn back to the theme of death is that the hero kills himself in the beginning. (The prologue is obviously the *very* end,¹ when humanity kills itself after realizing it can't affirm life, but because it's physically located at the beginning we're left at the end not with a bad taste in our mouths but with *inspiration*.)

I haven't yet planned the further complexities of the tale, such as the subtle interweaving of the two dramas, but these will come involuntarily as I write. Indeed, the idea of the double tragedy was itself an afterthought, something that popped into my head a couple of hours ago. Last night, after I had written the prologue, all I knew was that I wanted to write a story detailing the vicissitudes of self-consciousness in the form of a chronologically reversed diary.

Walter Kaufmann quotes a delightful dialogue in graffiti: “‘God is dead.’ Nietzsche.” “‘Nietzsche is dead.’ God.” “‘Some are born posthumously.’ Nietzsche.”

February 11

Poor Enron executives. What a heartbreaking happening. Unfortunate Mr. Skilling and pitiable Mr. Lay. I feel such sympathy for them.

Businessmen, businessmen, everywhere you look—businessmen! It's really too bad I can't take them seriously, for this means I can't take *humanity* seriously. But on the other hand, that adds an element of gaiety, of superfluity, to life. It's fun to see to the bottom of their prosaic ideals—their dingy dreams, their dusty souls.

I got a B+ on my first paper in History, surprisingly. Didn't deserve it. Grade inflation is a wonderful thing, *n'est-ce pas?*

I have to give de Gaulle credit. He was an impressive man in some respects, who accomplished a great deal. His strengths were based on his weaknesses (his delusions and simple-mindedness), but they were strengths nonetheless. His historical sense was almost as admirable as mine.

February 13

Sangeetha is hosting two radio shows. She's even producing them and writing the scripts. What an

¹ Of both stories.

incredible girl. I'm so proud of her!

Karl Marx was partly right that historical figures appear twice: the first as tragedy, the second as comedy. (The Kennedys and Bushes are an example.) The reasons are grounded in the nature of societal self-consciousness—which in turn is based on the nature of individual self-consciousness.

Related to that: merely alluding to historical events is far from demonstrating a historical sense. In 1989 Margaret Thatcher warned against German unification because of “what history has taught us”, but invoking her encyclopedic knowledge of history actually demonstrated that she *lacks* a historical sense. It's obvious that in this day and age Germany could never do anything remotely similar to what it did in the past. It has progressed beyond its crimes: the conditions that caused them are gone forever; Germany's collective consciousness has transcended them. One can retort that it's always *possible* for another Hitler to come to power, but this is true only in the sense that it's *possible* I'll combust into flames in three seconds.

[Deleted entries.]

February 19

I'm skipping my literature class: I feel as mellow and slothful as a hippo. Instead I'll do my favorite activity: kill my brain cells by overdosing on Kant.

We may regard *natural beauty* as the *exhibition* of the concept of formal (merely subjective) purposiveness, and may regard *natural purposes* as the exhibition of the concept of a real (objective) purposiveness, the first of which we judge by taste (aesthetically, by means of the feeling of pleasure), and the second by understanding and reason (logically, according to concepts).

The understanding, inasmuch as it can give laws to nature a priori, proves that we cognize nature only as appearance, and hence at the same time points to a supersensible substrate of nature; but it leaves this substrate wholly *undetermined*. Judgment, through its a priori principle of judging nature in terms of possible particular laws of nature, provides nature's supersensible substrate (within as well as outside us) with *determinability by the intellectual power*. But reason, through its a priori practical law, gives this same substrate *determination*. Thus judgment makes possible the transition from the domain of nature to that of the concept of freedom (p. 37).

Mull on that. By the way, asses who criticize Kant's premises as generalizing the Western mentality haven't the slightest understanding of his philosophy.

[...]

I suspect that according self-affirmation the foremost place in the phenomenological psyche has a hint of the sophisticated about it. It's misleading to reduce states of mind to “affirmation”. On the other hand, there's a grain of truth to it.

February 20

The pupils of our eyes are seen by us as substances, as our souls, as the lights in our faces. But this involuntary viewpoint is wrong. If you look intensely at your eyes in a mirror you'll realize that your pupils are *holes*, not *substances*. The biological sciences have confirmed this, but it's far more compelling and infinitely scary when you see it for yourself in a mirror. Pupils, the symbol of the personality, are nothing but empty black holes. How incapable we are of appreciating that truth! How strange but sensible it is that we interpret so many things—incorrectly—as more substantive than they are: lakes, shadows, pupils, *ourselves*. You know why we can't see the self in its true character? Because that would involve

transcending the self. Nature has ingrained in every animal an inability to peer over its horizons, for every animal must take itself seriously in order to survive. Such a revelation, such self-understanding, would be dangerous to life—not to mention useless. The most that thinkers can strive for is a detached, intellectual awareness of the devastating proposition; intuitively we'll never fully grasp it.

The agreeable, the beautiful, and the good designate three different relations that presentations have to the feeling of pleasure and displeasure, the feeling by reference to which we distinguish between objects or between ways of presenting them. The terms of approbation which are appropriate to each of these three are also different. We call *agreeable* what GRATIFIES us, *beautiful* what we just LIKE, *good* what we ESTEEM or *endorse*, i.e., that to which we attribute an objective value. Agreeableness holds for nonrational animals too; beauty only for human beings, i.e., beings who are animal and yet rational, though it is not enough that they be rational (e.g., spirits) but they must be animal as well; the good, however, holds for every rational being as such.... Of all these three kinds of liking, only the liking involved in taste for the beautiful is disinterested and *free*, since we are not compelled to give our approval by any interest, whether of sense or of reason. So we might say that the term liking, in the three cases mentioned, refers to *inclination*, or to *favor*, or to *respect*. For FAVOR is the only free liking. Neither an object of inclination, nor one that a law of reason enjoins on us as an object of desire, leaves us the freedom to make an object of pleasure for ourselves out of something or other. All interest either presupposes a need or gives rise to one; and, because interest is the basis that determines approval, it makes the judgment about the object unfree (p. 52).

Many things may be charming and agreeable to [someone]; no one cares about that. But if he proclaims something to be beautiful, then he requires the same liking from others; he then judges not just for himself but for everyone, and speaks of beauty as if it were a property of things. That is why he says: The *thing* is beautiful, and does not count on other people to agree with his judgment of liking on the ground that he has repeatedly found them agreeing with him; rather, he *demands* that they agree (pp. 55, 56).

If a judgment has *subjective*—i.e., aesthetic—*universal validity*, which does not rest on a concept, we cannot infer that it also has logical universal validity, because such judgments do not deal with the object itself at all. That is precisely why the aesthetic universality we attribute to a judgment must be of a special kind; for although it does not connect the predicate of beauty with the concept of the *object*, considered in its entire logical sphere, yet it extends that predicate over the entire sphere of *judging persons* (pp. 58, 59).

February 21

I finished *Père Goriot*. It's certainly a great work of art, but it's too melodramatic. The descriptions of Goriot's death were excessive; I found myself feeling not pity for the character but impatience with Balzac. It's a bad sign when a reader is forced to distance himself from the story.

Last night Bruce and I got into a brief but heated argument regarding political correctness. He thinks it's praiseworthy even in its most preposterous manifestations—e.g., printing world maps upside-down because of our subliminal association between 'north' ('above') and 'better', 'south' ('beneath') and 'inferior'—and I think it's often a waste of energy that signifies not open-mindedness but hypersensitivity, pettiness, impotent *ressentiment* against the abstract Oppressor, and is an excuse for self-complacency. ("We're open-minded because we're politically correct! We're better, etc.") [...]

Melancholy again. Tired of the great game. There's nothing irrational about suicide; people who take that path have my sympathy.

§9: *Investigation of the question whether in a judgment of taste the feeling of pleasure precedes the judging of the object or the judging precedes the pleasure.* If the pleasure in the given object came first, and our judgment of taste were to attribute only the pleasure's universal communicability to the presentation of the object, then this procedure would be self-contradictory. For that kind of pleasure would be none other than mere agreeableness in the sensation, so that by its very nature it could have only private validity, because it would depend directly on the presentation by which the object *is given*.[The] merely subjective (aesthetic) judging of the object, or of the presentation by which it is given, precedes the pleasure and is the basis of this pleasure, [a pleasure] in the harmony of the cognitive powers.

A *pure judgment of taste* is one that is not influenced by charm or emotion (though these may be connected with a liking for the beautiful), and whose determining basis is therefore merely the purposiveness of the form (p. 69). [Purposiveness without a definite purpose. Incidentally, perfection has nothing to do with beauty, for it has nothing to do with subjective purposiveness and everything to do with *objective* intrinsic purposiveness. On the other hand, see pp. 76 and 77, where Kant makes a distinction between free and accessory beauty.]

February 24

I feel better now. Finished the wretched paper I'd had to write¹ and can return to *Crime and Punishment*. (How did I read that book at the age of fourteen?!) Dostoyevsky is the most brilliant and insightful of the great Russian novelists. No one is more psychologically perceptive than he. I have to prove my ideas in the crucible of his intuitions. He challenges me; his analyses, like that of Marmeladov, challenge mine:

“....I need to be crucified, not pitied! Crucified! Crucify, O Judge, crucify, and when you have crucified, then take pity! If you do that, I will come and ask for crucifixion, for it is not merriment I crave, but tears and sorrow! Think you, publican, your bottle has been a sweetness unto me? It has been a sorrow. I have sought sorrow in its dregs, sorrow and tears, and I found and savored them....”

....“Where's the money?” she yelled. “O Lord, he's drunk it all up! But there were twelve rubles left in the box!” Suddenly she seized him in a frenzy by the hair and dragged him into the room. Marmeladov made it easier for her by meekly sliding after her on his knees.

“And I tell you I enjoy it! I tell you I feel no pain, but I actually enjoy it, my dear sir!” This he shouted out as he was being shaken by the hair, and once his forehead even struck the floor.

How can that man be explained? Certainly self-affirmation and the will to power can't explain such actions. ‘He wants to avoid responsibility’, you say? ‘He wants debasement because it makes life easier’? ‘Self-contempt is easy’? No, no, that won't do either. There's some fathomless masochistic undercurrent pulsing through his underworldly soul. –Dostoyevsky is unmatched in plumbing the depths of perversity.

February 26

¹ When I write papers the one thought continually on my mind is “How can I lengthen it? How can I lengthen it?”

I think Dostoyevsky is right: madness begins as a kind of intolerable feeling that you're blockaded from the citadel of rationality. Even the windows are shut: you can't peer in to get a glimpse of where you are relative to the cosmos (the external). After all, that's all that rationality is: a clear awareness of the relative positions of things. A depth of vision, a lucidity. Rational beings judge relative importance every instant of their lives—the importance of a state of mind as against another, the significance of a word vis-à-vis another, etc. They can look at the *whole* in one glance, see what's trivial and what's decisive, see *externality* (beyond the edges of things). They can look in from outside, as it were. This is precisely what the insane can't do; they have an *idée fixe* (as it were), or they can't judge consequences and see *outside* themselves (if you will), or their vision is somehow obscured (but only as it were). Essentially they're enclosed within themselves, they're not objective. (It's significant that objectivity is often equated with rationality.) After his crime Raskolnikov keeps forgetting to take things into account, to look at the whole picture: he obsesses over his fleeting torments and forgets that the stolen goods are bulging out of a hole in the wall. What makes his experience so terrifying is that he *feels* he can no longer view the world objectively; he feels imprisoned (within his mental torments, within himself) and yet cannot see the walls of his cell—so he doesn't know to what extent he has lost his sanity (because, again, in order to be able to do so he'd have to cognize the totality, which is exactly what he *can't* do on account of his madness). So he feels insane because he knows he can't judge the relative importance of things, and he feels more insane because he can't judge the extent of his insanity (which is a result of his inability to see *anything* relatively, including the insanity)—so his madness is a vicious circle from which he knows he can't voluntarily escape (for *nothing* is certain, there's no Archimedes' point). Ironically, everything in his mind has become 'relative', free-floating, groundless—even as (and *because*) he can't clearly see relativity. That's what insanity is: a retreat into oneself, an absolute and consuming relativity, a lack of certainty, perhaps an insight into reality (arising from the sudden intensity of experience).

Aha! I've inadvertently clarified an array of issues, a veritable spectrum! Now I know why strong emotions and emotional states of mind (like patriotism) are irrational, and that they're one step toward madness. I have a vague idea of how to define rationality. I know why geniuses, who so often are self-obsessed and uninterested in mundane reality, think of themselves as living on the fringes of madness. I know why I have such fear of relativism and such infatuation with certainty. I understand why some geniuses have no interest in the world and others are fascinated with it. (Their attitudes are opposite expressions of their same essential inwardness. The second type of genius is enthralled with something external to him *because* it's external.) I know why geniuses who *do* interest themselves in the world contribute so much to the study of it. (They either relate it to themselves or they observe it with the same intensity/passion with which they've come to observe themselves (or simply to live life). Not to mention the obvious fact of their higher intelligence.) I know how self-consciousness, which is awareness/knowledge of the unity of oneself, is related to rationality. (In most cases it's so intimately connected to rationality as to be the latter's precondition (because of its connection to a clear awareness of the whole and the parts of the whole), but in extreme manifestations it actually reaches beyond its partner (canceling it out) and undergoes a dialectical shift to insanity. It becomes pathological, shutting out the world (the all-encompassing totality, the true measure of rationality) as it concentrates on the micro-totality of the self. Raskolnikov's proto-insanity is an example.) I can even say that insanity is a half-return to an animal state. (You might not understand that proposition until I argue for it, which I'll do some other day.)

One of the reasons I tend to be quiet around people is that they more easily see *me* as annoying than they do *others*. I've had this feeling since middle school. When I act extrovertedly I'm ignored or I'm the target of odd looks, whereas when others do so they become more popular. I'm not sure why this is the case. Maybe it's because I'm seen as trying to fit into the crowd—so I come across as just a pathetic conformist who's not even witty. Maybe it's that my social presence has never been strong (a result partly of my skinniness and partly of my general introvertedness), which means that it's easy not to pay attention to me when I *am* outgoing. I.e., I'm not a true "other", a person whose "recognition" one desires. At any rate, I've learned the lesson well enough to conform to the role in which my peers prefer me. (Adults, on the other hand, seem to prefer me in the extroverted role, which is largely why I'm more comfortable around

them.)

February 27

Today I crawled out of bed at 3:00. I'm a lazy bum.

The *Critique of Judgment* is rife with brilliant phenomenological analyses of aesthetic judgments. Not one detail of our state of mind in admiring mountains or oceans escapes Kant's attention. However, I don't think his ideas are quite right. For one thing, his division of the mind into understanding, imagination and reason has an artificial and archaic flavor to it.

The summer after my first year of college was the most important summer of my life.

Whence derives our fascination with the grotesque and violent—with “sudden accidents” like Marmeladov's death? Why do they tend to inspire subtle pleasure? Does the explanation have something to do with our repressed animal origins?

I tell you, I try to appreciate life's magic as much as possible, but it's terribly hard! Life is nothing but a succession of miracles, but they slip by unnoticed. We build our homes on top of them and exile them from our minds. We forget about them because they're not practical. We need our own cozy cubby-holes in which to live, in which to be sheltered from the imponderable. I intend never to have a home for precisely that reason. I wish I could tap into my strength and funnel it, bypass all the manufactured red tape between me and my potential. I can feel my strength pining away from inactivity, atrophying irreversibly. I must harness it quickly! I need a rebirth! I need a paroxysm of inspiration! I need love!

...Raskolnikov is quite a character. I feel sympathy for him, though I suppose I wouldn't like him in person. Strangely enough, in spite of our differences, I can relate to him. I can see myself acting similarly.

February 28

I'm a bit irritated by my comical characteristics. From the bare fact that I was born at the end of the twentieth century, everything about me is comical. All my attempts at pathos are comical. My high self-esteem, my longing for love, my episodes of depression, my high ambitions, my inquisitiveness, my Faustianity, my friendships, my self-probing, my literary attempts—they're all comical! [...] I'm being held captive by my own intelligence!

What I love about *Crime and Punishment* is that it reverses our ordinary value judgments. It raises a murderer and a whore on a pedestal and lowers a respectable businessman into the dirt. More provocatively, it's *right* in doing so—at least in the case of this particular murderer and this particular prostitute. Raskolnikov and Sonia have an instinct for life in spite of what their actions might suggest. Peter Petrovich, on the other hand, is out for base material gain and incapable of spiritual impulses. All he cares about are appearances—and, in fact, that's all that Napoleon cared about too. (See below.) The possibility of his salvation is eliminated from the beginning for the simple reason that he doesn't feel the need to be saved. He doesn't suffer, he doesn't doubt himself; he's shallow. Raskolnikov and Sonia endure wrenching psychic conflicts, self-contempt, despair—and they survive it all because of their faith and passion. (That is, their souls—and everyone else's—are what interest them most. They don't give a damn about appearances.) Sonia has a simple faith in God, and Raskolnikov has a subtle faith in himself and fate. They're both strong human beings who will appreciate salvation solely because they were baptized in fire. Dostoyevsky's point, perhaps, is that the only people worthy of salvation are those who desperately want it. Those who don't need it are ordinary. On pages 249-253 (of the Signet Classic edition) Raskolnikov lauds extraordinary men, claiming they have the “inner right” to allow their consciences to transgress obstacles in the execution of their ideas; but Dostoyevsky alters this judgment to state that those who transgress the accepted limits of what's right or healthy and then *suffer* for it and *then return* to their original

state of abiding by their conscience's dictates—but on a higher level, not merely mechanical, a self-aware level in which they recognize the reasons for and the necessity of compassion and pity (=‘conscience’)—these people¹ are the *most* extraordinary, more so than Napoleon and *much* more so than Peter Petrovich. But the label “extraordinary” is actually irrelevant; what’s relevant is salvation. In fact, “extraordinary” is a product of delusion and hypocrisy: it’s a prejudice seized upon by arrogant, brutal men to justify their actions and hide their moral cowardice.

I haven’t even finished reading Part 4, but I think my ideas have some validity. I don’t know how to sort them out, though.

Incidentally, Dostoyevsky has a distinct fondness for melodrama.

March 1

[...]

What’s that you say? “What’s the function of Svidrigailov in *Crime and Punishment*?” Excellent question, and “quite, quite” relevant! I haven’t finished the novel, but I think Svidrigailov represents the danger of Raskolnikov’s ideas. He has no conscience and no shame, so he has the “right” to commit atrocities. Rodia would certainly disagree with that, for he introduces the notion of genius and the ‘execution of ingenious ideas’, but this is only a smudging of the issue. What’s the measure of genius? Why, cruelty! The capacity to inflict suffering and not let it bother you! (Ambition? What about ambition? Bah! That’s tacked onto the formula as an afterthought.) *L’Empereur* is an example. *Vive l’Empereur!* –Yes, of course, my friend, but only if he sacrifices *you!* Napoléon and Svidrigailov are birds of a feather. Birds of prey. The difference is that one got lucky—though not so much—and the other didn’t. In any case, the point is that Svidrigailov represents the dark side, the ordinary genius (if you will).

But on page 473 his role changes. In the midst of his passion, quivering with lust, just when you think he’s going to rape Dunia, he suddenly yields to his intellect! He crucifies himself and lets Dunia go (who had just been trying to kill him)! For a sensualist like himself this is indeed the ultimate sacrifice—and all on account of some flitting compassionate thought! ‘Go quickly. Quickly, quickly, before I lose my strength!’ You see, for a “genius” like him it requires strength to *care*, while it’s *easy* to *sin*. Napoleon deserves no credit for his callousness, since that came naturally; he would have been admirable had he used his intellect to overcome his heartlessness, as Svidrigailov did. (Therefore another purpose of the scene is to show that the intellect need not always be the instrument of evil, as it was in Raskolnikov’s case. And it disproves Svidrigailov’s dictum that reason must be the instrument of passion.)

....Well, I may have been wrong about Svidrigailov. I suppose he is capable of actually *feeling* compassion rather than merely *thinking* it. His purpose in the story is not only to provide a few shocking hints of what Raskolnikov’s nihilism can lead to, but also to suggest that a nihilist can overcome his “depravity” by conquering his own base egotistical impulses. He may remain a nihilist, but at least his actions and feelings (sometimes) indicate otherwise.

At this time of my life, for some inexplicable reason, I find it difficult to judge people. I just can’t do it! Every judgment I make I don’t believe. –A consequence of my perverted ideas, no doubt. Blasted philosophical perversion; it can drive a man insane.

Mindy and I went to a birthday party tonight for an international student. ’Twas mildly entertaining. I’m glad to be back here listening to Franz Liszt’s transcription of Bach’s Prelude and Fugue in A minor, BWV 643. (One day I’ll hold that tempest in the palm of my hand.)

—Ah, how would Kant classify that smoldering piece of music? Is it beautiful or sublime? Its form may be beautiful, but what about its content? Is it agreeable? Most definitely, but it’s more than that. It’s positively disturbing. Can it be sublime? “The sublime is described thus: it is an object (of nature) *the presentation of which determines the mind to think of nature’s inability to attain to an exhibition of ideas*” (p. 127). In other words, “No”. Therefore it seems that Kant’s theory of aesthetic judgments is inadequate.

¹ Among whom is Sonia, because she’s been degraded by her profession.

Beauty is a disinterested liking of form, agreeableness has a shallow ring to it, and sublimity is entirely inappropriate. If you're a Kantian, however, you'll say it's agreeable and I'm just being difficult. Maybe so. But I can't help thinking that "agreeable" is superficial, doesn't say enough, doesn't 'plumb the depths' of impassioned artistic interest. Besides, what does Kant have to say about tragedy? Is it, too, "agreeable"? Has he read Aristotle's treatise? Has he read Nietzsche???.Well, now that I've read up to page 140 I recognize that Kant would indeed label the Prelude and Fugue "sublime" (or rather, the state of mind it induces). For it causes an "affect of the vigorous kind (i.e., makes us conscious that we have forces to overcome any resistance, i.e., makes us conscious of our *animus strenuus*)" (p. 133). On the other hand, his example is anger, which isn't very similar to the state of mind induced by the piece.

March 2

Today Sangeetha sent me a lovely e-mail entitled "I miss youuuuuuu". Here are some excerpts: "Today while sitting at the office, I suddenly missed you really badly. I can't think of anything that brought it on so suddenly. I was just feeling lonely in a room full of people. I hate it when that happens, don't you? You know what I realised, however often we fought and crap like that, I was never lonely when you were around. Does that make any sense to you? I don't know—ahh whatever.I now realise that you are the nicest elitist I know. There is this one guy at work who is such a horrible elitist. The only way he makes himself feel better is by putting other people down.... I hate cars and I am never going to learn how to drive. I wish you were to teach me. Hell I just wish you were here. I miss you. Now I am really sounding corny, but it's true!!" Yes, I felt good after reading that.

Kierkegaard, in your extravagant elegies on subjectivity—your nightingale songs which take such pleasure in "divinely squandering" words—you forget one thing: maybe knowledge of world history can enrich the task of becoming subjective. Objectivity and subjectivity aren't sequestered from each other by a grand canyon of the infinite; each enhances and elevates the other in their mutual interaction. —Anyway, I'm finally about to read Chapter II of Section II of Part II, which promises to be more fertile than Chapter I.

I seem to recall that one of the aspects of *Crime and Punishment* that I found most exciting when I read it at 13 was Raskolnikov's theory of the genius. Imagine that! The plot itself didn't stick with me, but the abstruse theory did—for seven years.

March 3

I wrote another worthless history paper, on the causes of the Soviet Union's demise. Tonight I went with Bruce and his friend to a club in New Haven called Toad's Place; we saw the blues guitarist Buddy Guy perform there. If you're an ignoramus like me you've never heard of him, but apparently Eric Clapton considers him the best guitarist in the world. The concert started off pretty well, but as time wore on Guy turned up the volume to deafening levels and ceased playing good music. He had a lot of charisma and a strong stage presence, but the performance was still mediocre. It couldn't compare to the two Billy Joel concerts I've seen (and the time I heard him give a talk in Providence, when I was in eighth grade), partly because of the style of music itself: the blues chord progression is so simple it bores me. 1-4-1-5-4-1. Over and over again. On the other hand, as I was listening to the concert I recalled how fun and easy it was for me to improvise over the blues. I grew nostalgic. I want to play the vibes again. Vibraphonists don't deserve the respect accorded other musicians—because the instrument is so damned *easy*—but they look cool when they play.

March 4

It doesn't follow from the fact that we're existing individuals continually in the process of becoming that there are no objective, 'abstract' truths that describe the ways in which we exist. Heck, the middle part of that sentence proves there *are* such truths. Propositions are self-expressions, but they aren't *only* self-expressions. (I may be misunderstanding Kierkegaard.)

Comment on pages 194-196 of the Princeton edition: the point is that the objective *attitude* precludes lunacy and the subjective doesn't. Objective truths may be the *idée fixe* of a lunatic, but the lunatic's *attitude*, his *standpoint*, is always more subjective than objective.

"Viewed abstractly, everything *is* and nothing becomes." Wrong or misleading.

When the question about truth is asked objectively, truth is reflected upon objectively as an object to which the knower relates himself. What is reflected upon is not the relation but that what he relates himself to is the truth, the true. If only that to which he relates himself is the truth, the true, then the subject is in the truth. When the question about truth is asked subjectively, the individual's relation is reflected upon subjectively. If only the how of this relation is in truth, the individual is in truth, even if he in this way were to relate himself to untruth.

Let us take the knowledge of God as an example. Objectively, what is reflected upon is that this is the true God; subjectively, that the individual relates himself to a something *in such a way* that his relation is in truth a God-relation. Now, on which side is the truth? Alas, must we not at this point resort to mediation and say: It is on neither side; it is in the mediation? Superbly stated, if only someone could say how an existing person goes about being in mediation, because to be in mediation is to be finished; to exist is to become. An existing person cannot be in two places at the same time, cannot be subject-object. When he is closest to being in two places at the same time, he is in passion; but passion is only momentary, and passion is the highest pitch of subjectivity (p. 199).

—Food for thought. Incidentally, what he writes at the end reminds me of what I wrote in August before my sophomore year began.

"If someone objectively inquires into immortality, and someone else stakes the passion of the infinite on the uncertainty—where, then, is there more truth, and who has more certainty? The one has once and for all entered upon an approximation that never ends, because the certainty of immortality is rooted in subjectivity; the other is immortal and therefore struggles by contending with the uncertainty" (p. 201). Huh?? What do we mean here by "immortality"? The conventional meaning is eternal life. How can someone be immortal simply by having passionate inwardness? For that is what Kierky says: "the other is immortal". He states quite clearly and objectively that the guy is immortal as he struggles with the uncertainty of whether he's immortal. There's something fishy about this whole business. First, Kierky seems to be using "immortality" in a way that doesn't have the slightest thing in common with our ordinary understanding of it, and second, he's explicitly stating something to be an objective essential truth even as he declares that we can never know if it is! In fact, he says it's *because* we can never be certain of it that it's certainly true! What the hell is going on?! He thinks he's being profound, but he's really just losing himself in muddles and word-twisting. He's a Hegel clone, a willful obscurantist. Put more precisely, he appears to be hopping in and out of the objective standpoint he so deplures.¹

March 5

Something I've noticed about girls is that they're quite clever. Far more than most guys. The beautiful ones, at least, usually know how to escape gracefully from an uncomfortable situation; they're adept at sending subtle signals to guys; they often go to great lengths to avoid confrontations. With a word

¹ Why does he do this? Because it's unavoidable! Because there's no leap between the subjective and the objective! They mesh and meld together.

or a look they can shatter you, show you who's in control.

I finished *Crime and Punishment*. In class today it occurred to me that the real reason why Raskolnikov stakes everything on the extraordinary man is that he considers no one else to be a *person* in the truest sense. Everyone else is a cog in the machine, a being that is determined more by its environment and its *nature* than by its will. Only geniuses are autonomous, real individuals. (I don't agree, of course.)

I'm skeptical about the last paragraph of the January 8th entry. I'm not sure that humans will continue to evolve biologically, because in the past century we've overcome the law of natural selection—as Piero and Alberto Angela state in *The Extraordinary Story of Human Origins*. I haven't read that book yet, but its last page caught my eye. I found it inspiring and vaguely Hegelian:

One of the things that can be observed throughout the story of human development is the gradual increase in intelligence: from bacteria, to fish, to primates, this process has been relentless. The end result, the human brain, is the most complex and sophisticated object known today.

The human brain, composed of atoms emitted during the explosion of the supernovas, is basically a piece of universe that can look back on its history, ponder itself, and start to direct its own future.

This nucleus of intelligence has continued to develop by creating networks and supernetworks with other brains, that is, through culture. And now it is starting to spread to matter, for example, by putting together molecules of silicon and other minerals to build intelligent machines. Some of these intelligent machines (although still very primitive) are already leaving the solar system to travel through interplanetary space.

Furthermore, this brain is learning to “assemble” other molecules—those that make up the genetic code—in order to modify and (perhaps) construct new forms of intelligence: biological, bio-electronic, or other forms as yet unknown.

In other words, a very slow process that took 15 or 20 billion years has produced intelligent organisms that are now able to transfer new kinds of intelligence to matter rapidly, in a continuing and unending spiral. This fantastic ability to spread to other matter may accelerate in the next hundred, thousand, million, or billion years.

Where will it lead?

A science fiction writer might imagine an “all intelligent” universe, a thinking superentity, like a huge superbrain. But let's stop there. These fantasies could lead us off course. Certainly that prospect would bring some sense into the long and slow evolution of intelligence. But it would also have to be reconciled with the Second Principle of Thermodynamics, which calls for the progressive degradation (sigh!) of the energy potential of the universe and, therefore, calls for the death of all systems that consume energy, including intelligence. But then again, our present knowledge may be updated in this field, too.

I think it will be. The Second Law of Thermodynamics has always struck me as a somewhat unscientific, unsatisfactory hypothesis.

The implications of human evolution stupefy me. *At last*, through us, nature will cease to evolve blindly; it will control its own evolution! That is, we *will* continue to evolve biologically, but in a *planned* way. We are nature molding nature. We're the chosen instrument for nature's self-realization a million years from now, when we learn to govern the universe. One day we'll understand every secret of the universe, and eventually we'll apply this knowledge practically. By then we'll have learned how to construct humans of genius, who will themselves contribute invaluablely to the process of attaining control over nature, and the pace of all kinds of evolution will quicken exponentially. In millennia we'll colonize planets, learn how to travel almost at the speed of light, maybe learn how to teletransport. In the end we'll become God.

But I'm skeptical about the value of such developments. I realize that, short of mankind's collective suicide, there's no way to prevent them from happening, but they remind me of a dystopia. What will be the fate of culture and *mystery*? What Dostoyevsky wrote in *Notes from the Underground* about humanity's

inevitable will to freedom, even at the price of self-delusion, is true, but freedom might be the *only* vestige of magic. How depressing!

March 6

The relatively long footnote I wrote yesterday [which I deleted] was probably wrong. It's eminently possible that evolution has been thoroughly arbitrary in spite of appearances to the contrary. (It's dangerously easy to look back on history and see it as following a preordained path. Some of the greatest thinkers have fallen into this trap.) Eventually we'll become extinct; we'll never be masters of the universe. Besides, the "argument from design" for God's existence has been put forward hundreds of times,¹ and it's by no means *remotely* conclusive. Even if we couldn't conceive of other explanations, which we can, this wouldn't prove that there *were* no other explanations.

[...]

Returning to the subject of the previous paragraph, I must admit that I still have trouble believing that random variations in genes produced such developments as the following: "Human infants, who need to be able both to breathe and to swallow during long bouts of suckling, are born with the primitive mammalian vocal tract anatomy. The larynx only later descends to the low position in the throat, beginning at about two years of age [and it is this that makes possible speech]" (Ian Tattersall, *Becoming Human*, p. 167). Could random variation have created such perfect functional adaptability? Even if it could, how did it spread through the entire human species? Surely it's not that the descendants of a few lucky individuals with genetic mutations—which just so happened to be dominant alleles that continually reappeared—were the only ones who survived the long process of evolution?! Surely it's not that hominids without descended larynxes lost the evolutionary battle—because they didn't have descended larynxes?! In fact, I can't think of a more preposterous hypothesis than that *random variation*, together with natural selection, is the prime mover of evolution.²

March 7

Yesterday I may have been unjustifiably harsh on Darwinism. The truth is that I can't think of a theory that better explains the facts. Lamarckism is surely false, and Orthogenesis (which postulates an inherent tendency in organisms to evolve in a specific direction, independent of environmental adaptability) doesn't seem persuasive. It's too teleological.

Jorge Luis Borges has some screwy ideas on time. (See "A New Refutation of Time", most of which is confused.) They're wrong, but they've re-stimulated my interest in that useless topic. Subjective and objective time aren't clearly delineated. Subjective time is consciousness (not merely *self-consciousness*³); it applies to every animal, for it is intuition of experience; it's relative to each individual, so that no two individuals are ever in the same subjective moment (=no two beings have the same consciousness); it's seamless, indivisible, and in this respect 'infinite'—except when interrupted by unconsciousness (sleep), which however doesn't make a difference subjectively, only 'objectively'.⁴

¹ Hume's *Dialogues on Natural Religion* is one example.

² The problem with scientists is that they rarely question their basic assumptions. If they did, they'd realize how many flaws there are in the mechanistic, Malthusian Darwinian hypothesis. (Is "competition for resources" supposed to explain unremitting creative increases in complexity and intelligence?? My dad's friend Rich Pollak believes, with some justification, that such advances require a kind of "surplus energy" that has no place in Darwinism. Maybe it's surplus that explains evolution, not want.)

³ I'll get to self-consciousness in a moment.

⁴ My point is that for itself subjective time is seamless, but for an objective, self-conscious being that can abstract from pure consciousness and consider the matter from the viewpoint of self-conscious memory (i.e., of objective knowledge), subjective time is, a posteriori, seen to have breaks in it. These breaks exist only on a level abstracted

Humans are the only animals clearly aware of objective time, though perhaps apes can dimly perceive it. It comes with self-consciousness. Maybe it doesn't exist outside self-consciousness—in which case it wouldn't be *truly* “objective”—but I'm inclined to think it does. (Although, admittedly, I can't conceive of the *form* in which it would do so.) Anyhow, what's important is that subjective and objective time get muddled together in self-consciousness. From one perspective, no one shares this moment with me; from another perspective, *everyone* shares this moment with me. The second perspective isn't possible without presupposing self-consciousness, but the first *is* possible (because it doesn't presuppose a real awareness of others). Objective time is what we're counting when we count to 10; theoretically it ought to be infinitely divisible, but in actuality it can't be. What makes it seem as though it *should* be infinitely divisible is that we apply our knowledge of the divisibility of objective, countable time to the infinitude of the subjective moment, thereby conflating the two. We think, “I know it's possible to count discrete units of time; but from my inner perception it's obvious that time is so continuous that there are always units between the discrete units I count. Therefore, time must be infinitely divisible.” This reasoning, as I said, is based on a conflation of the objective and the subjective. The objective is just as divisible as we choose to make it; the subjective can't be divided at all. Self-consciousness is necessary for the former because it (that is, objective time) is based on relating ourselves to something else—which can even be *ourselves*, since we are our own other. But what *is* objective time? Is it a relation? One thing's for sure: it's an abstraction. It doesn't concretely *exist*, as its subjective counterpart does.¹

What role does memory have to play in this scheme? Memory isn't necessary for subjective time, which exists only in the moment and doesn't presuppose self-awareness. Even a fish, which has scarcely any memory at all, lives in subjective time. But it *is* necessary for objective time; and to explain why, I have to inform you of a modification I've just made in my idea of self-consciousness: memory, be it of the previous instant or of the past ten years,² is necessary for self-consciousness. I used to think not because self-consciousness exists purely in the *moment*, in every moment; but now it seems intuitively obvious that memory is fundamental. An inane thought-experiment can establish this. Suppose a man is in a coma from infancy to the age of thirty; suddenly he wakes up. Will he be even remotely self-aware the first moment of consciousness? Certainly not. In any event, the point is that because memory is necessary for self-consciousness, it's necessary for objective time. (We don't even need that logical link to establish the connection, for how could it be otherwise?) The logical and chronological orders of the four factors are: subjective time, memory, self-consciousness, objective time. The latter two are essentially simultaneous. (By the way, don't think that memory is anything more than a *necessary* condition of self-consciousness.)

Incidentally, humans can (probably) never experience subjective time the way animals do. For them it's intensely immediate, as solid and impenetrable as a brick; for us it has an aura of transience and nothingness—a consequence of the overwhelming presence of *self-consciousness* at the expense of ‘pure’ [more primitive] *consciousness*. However, it mustn't be thought that consciousness is subjective time and self-consciousness is objective time; rather, self-consciousness includes both the subjective and the objective. It *is* the subjective, but it's *dominated* by the objective. Stated less cryptically, in humans the subjective element of time includes awareness of the objective; i.e., the subjective is aware of itself (and this automatically ‘posits’ the objective). So the subjective is the only really existing aspect of time, but an important part of it is awareness of the objective. And the objective is, somehow, an abstraction or a relation, an emptiness, a *void*. Hence the subjective feels ephemeral.

See how it all ties together in a circle? That's a sure sign of a perceptive theory.

from (or more considered and ‘rational’ than the immediacy of) experience, because they exist only when experience doesn't. (So we become aware of them after experience, when reflecting on it.) In short, experientially, subjective time is indivisible.

¹ Recall my belief that self-consciousness doesn't “concretely exist” in the way that consciousness does. It is but a modality of consciousness.

² Whether of one or of the other depends on what kind of self-consciousness we're talking about. Immediate self-consciousness, consciousness of the past self, consciousness of the body, etc.

March 10

Spring vacation. I'm reading the Preface to Hegel's *Phenomenology* and the *Divine Comedy*. I started the latter last night as a respite from philosophical drudgery. The archaic translation by Henry Cary is magnificent; the poem itself is easy to read.

Last night I dreamed of Sangeetha. Now I miss her more than ever. Never in my life have I come close to missing anyone as much as I do her. [...]

March 11

In a few months I'll have to apply to graduate schools. I'll have to take the GRE. I'll have to go through the whole shit all over again. How can college have sped past so quickly and cruelly? It seems like it never happened, like it was a dream. It doesn't exist and never has. Even had I achieved feats of immortality and genius, I would feel this same sense of fleetingness. –If I'm not careful, I'll be polished in the manufactured tumbler that smooths one's rough edges. I must retain my individuality at all costs! I must not cravenly submit to time! I'd rather be abject than ordinary.

The great paradox from which I cannot extricate myself, the paradox that gives rise to all the confusions besetting the idea of meaning,¹ is that words are the meaning of intuitions and intuitions give words their meaning. On the other hand, maybe it's paradoxical because it's sloppily expressed.

I've decided to change the subject of my thesis. My earlier idea required too much erudition. Instead I'm going to discuss time, the self and—probably—truth. These are my main obsessions, and I have more experience with them. Nevertheless, there's a great deal I have yet to read; therefore I began *Being and Nothingness* tonight. The first section of its introduction was woefully inadequate: Sartre naïvely subscribes to phenomenism without considering counterarguments. He's wrong to reject the concept of potency. He hasn't indicated an awareness of the glaring incompatibility between phenomenism and science.

March 12

It seems to me that philosophers can either believe there are things in themselves [i.e., mind-external things] or be phenomenists. There's no compromise. Logical word-twisting is a vain pseudo-outlet for pseudo-philosophers; it adds nothing of substance to the debate.

The song "Light as the Breeze", sung by Billy Joel on his Greatest Hits album, is remarkable. It's intensely poetic and melancholy. It seems to grow out of an exhaustion with life—a terrible all-knowing sadness—but it exalts love as the final resting-place of the soul. When all else fails, we have the pure serenity of Woman to revitalize us. It is Woman that is our last buttress and our caress, our justification and our object of faith. Woman is what's left of God.

March 14

I've read most of a book by Magda King called *Heidegger's Philosophy*. At first I was impressed with Heidegger's thought, but now much of it seems like empty gibberish. I won't even take the time to critique it. I admit that some of his ideas seem profound, but on the whole he doesn't have a great deal to offer me. Neither does Sartre. In fact, there's a risk in reading books by those two thinkers: I might get distracted from my own original insights. I might approach problems with a subtle bias toward their

¹ And perhaps, indirectly, most of the confusions in logic.

perspectives, thereby undermining my own intuitive abilities. If I am who I think I am, I should be able to arrive at truths from my own independent introspection, severed from all existentialist umbilical cords.

What are the basic reasons for the human interest in dramatic situations? Why do people love to watch sleazy talk shows and dating games? The explanations I can think of are superficial.

March 15

“‘Beauty is truth, truth beauty’—that is all ye know on earth, and all ye need to know.”

I agree. There’s an ineffable symmetry and perfection in truth. There’s nothing inessential or ornamental; everything is integral to the whole, all ‘parts’ being organically intertwined. There can be no flaws in truth, although of course the object of which it is true may be flawed. Truth just *is*; and when it’s existential truth, with which Hegel, Kant, Kierkegaard, Marx, Nietzsche, Heidegger and Sartre were occupied, it has all the necessary qualities of beauty.

The converse is the case as well: beauty is truth. Conventional beauty like nature, music, poetry, love and the womanly figure gives life its meaning. It is our own humble human truth. It is the one thing that makes life bearable and joyful; it is that which inspires man to realize himself and understand himself. Were it not for beauty I’d have little or no reason to live.

Another (?) expression of Keats’ poetic equation is that truth is “agreeable” and ennobling, while beauty is life’s meaning (pinnacle) and inspiration. It isn’t a coincidence that beauty and existential truth imply each other: they both exalt the human being and elevate his vision. I won’t even argue for that: it’s obviously true.

[...]

March 17

I may have already mentioned my admiration of *The Truman Show*. The movie is incomparable. I could write a multi-volume essay on its philosophical, psychological, social and moral themes. It could be the starting-point of a semester-long course investigating the history of, and relations between, its diverse critiques of the modern world. ‘Which critiques are most fundamental? What are the causes and symptoms of the maladies it diagnoses? What are its proposed remedies? Summarize its symbolism. What are the adverse and beneficial qualities of extreme self-consciousness (social and personal)?’ Etc., etc. The movie asks whether sincerity is still possible in this spectating, cynical, bored, Other-obsessed age, and it answers with a resounding Yes! When Christof says in the beginning that the public is bored with actors, he’s referring not to professionals but to the spirit of the time. He’s referring to our pathological desire for an audience and, contrariwise, our thirst for unaffected passion in life, for *meaning*, for an outlet from our stale, jaded selves. We need *spontaneity*, the forsaken Godhead of genuine living. This is what Truman represents; he is the side of us, rapidly fading, that *lives* in the full sense. Christof is the dominant melodramatic and manipulative ‘evil genius’ in all of us¹—the poison which, ironically, attempts to concoct its own antidote. In its morbid mania to overcome itself, all ethics is ignored as a superfluity: the demon has its own standard of morality—its compulsion toward self-transcendence. But sadly, even this compulsion is rooted not only in the demon’s self-dissatisfaction but in its desire for Other-recognition.

I could go on and on, but I don’t have the discipline or time to order my thoughts. I’ll add only a few comments relating to the movie’s end. Acute self-consciousness (Christof), which is our demon and evil genius, our satanic God,² thinks it can fathom the depths of the psyche and thereby make predictions,

¹ Or at least those of us who keep pace with the march of history.

² In the end, Christof is a satire on God—a gauntlet thrown down at God’s feet. Not even God understands humanity, the species capable of spontaneity. And when Truman says, “In case I don’t see you, good afternoon, good evening

but it's wrong. Humans are fickle, inscrutable beings; and this is their saving grace. It is what makes sincerity possible—or at least what ensures the eternal *possibility* of sincerity. It can be the only source of our redemption. Thus, in a quintessential dialectical magic trick, the precipitant of our fall is indirectly the means of our redemption. For it is self-consciousness which insists that we can never know ourselves! (Let's pray that mankind *never* understands itself.)

Of course, there are many more obvious themes in the movie; but in proportion to their obviousness they're less interesting. (Example: at the end, Truman touches the sky. Man can touch the sky. The sky's the limit. Etc.)

March 19

I read *The Sorrows of Young Werther*, which wasn't bad. I wouldn't say it's truly great literature, but it's touching. I felt sorry for the hero, though occasionally I doubted that there wasn't exceptional exaggeration in his descriptions. Extravagant writing is undesirable mainly because it's less-than-honest, unsophisticated and it distances the reader from the text. Nevertheless, when the feelings are genuine I can forgive their "sentimental" self-expression.

It's easy to overlook the radicalness of Hegel's break with the past. Earlier philosophy had been interested only in a fixed absolute truth divorced from the conditions of consciousness and social development. It had said, "I am right; all others are wrong!" *Hegel's* truth, on the other hand, *was* development; every false philosophy partook of truth by virtue of existing. Hegel didn't even stop to consider the truth of philosophies on their own merits; his focus was infinitely broader than theirs, so he was incapable of operating on their level. His system was in fact a translation of history into philosophy. His approach was even more similar to Marx's than is usually realized: he not only recognized the fact of dialectical development, but he took it as axiomatic that philosophies are nothing but expressions of temporary stages of consciousness, mere parts of a whole which (parts) cannot, by Hegel's definition, be true in isolation from history and the rest of reality. That is, for Hegel as well as Marx it's axiomatic that all previous philosophies are wrong both on their own terms (since they pretend to describe reality) and because they approach the issue in a spirit contrary to the way it should be approached. (It has to be axiomatic because in choosing a 'different' reality to describe, Hegel and Marx practically eliminate their ability to argue 'on the same level' as their predecessors.) The difference between them and Kierkegaard is that K. carried some implications of their position to their logical conclusion, viz. that everything objective is false. For in critiquing other philosophies as 'mere' expressions of a moment in existential/historical development (as results of limited knowledge, etc.), they were tacitly exposing their own philosophies to the same criticism. Maybe Hegel would retort that his system is 'grounded in' Absolute Knowledge, but this is a specious defense.¹ Kierkegaard applied Hegel and Marx's revolutionary approach, which concentrated on existence rather than abstract, objective, static truth, more consistently than they did, thus showing its untenability. (Hume apparently did something similar for Locke.) The only solution can be a compromise between the extreme represented by Spinoza and the extreme represented by Kierkegaard. But what does it involve??

Consciousness bereft of self-consciousness² is similar to dream-consciousness, though more concrete.

March 20

and good night", he (mankind) leaves God behind. He denies the need for God (this vain Being who has created him for His own entertainment) and sets out on his own.

¹ Marx might accept the criticism and reply that objective truth isn't his goal; conforming to historical laws is. But this is an awkward position: with one hand he offers objective truth and with the other he snatches it away.

² [In other words, animal consciousness.]

Truth expressed in language is forced to be static by the nature of the medium. That's the source of Hegel's inconsistency. If it's static it's objective and 'finished', which is both against the spirit of Hegelianism—because Hegel is a confused Kierkegaardian—and opens it up to its criticisms of other systems.But maybe I'm engaging in those sophistries I mentioned many weeks ago. In fact, I undoubtedly am, in that Hegel does *substantively* recognize development while his opponents don't. (The implication is that it's not his fault that the form of communication is inconsistent with the content of his ideas. Content should occupy us, not form.) But I'm *not* insofar as Hegel's belief in the omnipresence of spirit implies that propositions are an existing thing, a part of existence (of "spiritual substance"),¹ and an existent can't be objectively 'true'. So Hegel's system rules out objective truth and leaves room only for subjective truth. (Of course, this subjective truth supposedly isn't of an individual but of spirit. And it has nothing to do with passion but rather with the 'correspondence of spirit with itself'—which I consider to be a misleading or meaningless idea.) Anyhow, we necessarily look upon propositions objectively, in fact as ideas that can *in themselves* be false or true, so Hegel is wrong. (I think spirit is meaningful only as it applies to humans, not as a reified being that exists over and above us, so I consider Hegel's inevitable defense against the preceding sentence meaningless.)

Ah, shit. I don't know what the hell I'm saying. I've been thinking for four hours and haven't got anywhere. I'm not sure of anything now.

March 21

I'm having unprecedented difficulty understanding and criticizing the foundations of Hegel's system. Part of the problem is that I've read only half of the Preface. An intolerable cacophony of thoughts is assaulting me.

I might as well outline the mundane events of my life at home. For a week I've been completing summer music-camp applications; I'm going to be a counselor. Two days ago I got a duplicate driver's license and went to an eye-doctor, who said in no uncertain terms that I need glasses. That's fine with me: Sangeetha thinks I'll look sexy in them. Besides, it would be nice to see clearly.

Saturday, March 23

I'm reading a little book called *A Critique of Pure Tolerance*, by Wolff, Marcuse and Moore, Jr. It addresses modern American political theory; i.e., for me it serves as a vacation from thought. The real purpose of my reading it is to get ideas for my 30-page government paper due in seven weeks.

March 28

Here's what is bothering me. I don't understand how reality can be *anything* "in itself". (I mean "in itself" not necessarily in the Kantian sense but in the way we all presuppose when deciding upon the truth-value of a claim—which is precisely why my doubt is contradictory and absurd.) How can there be a way that reality *really* is? Is time *in fact* both subjective and objective?—truth *in itself* developmental and never finished?—the economy *really* determinant of culture? No! Nothing is anything outside of our interpretations! Not only have we no 'direct access to reality'; not only must we subjectively interpret it: in fact, truth *cannot apply* to it. By the nature of the case it cannot. Truth is a human invention, a caprice spun in our ethereal self-conscious world. It has no relation whatever to anything outside of our self-consciousness and the objects in our self-consciousness. How could it? By analyzing and describing reality

¹ That position is actually nonsensical.

we appropriate it and thereby change it.

But that can't be right. How could it? For example, the world outside of our consciousness (i.e., of our interpretations)—the objective world, the world to which statements such as “the self is self-consciousness” apply¹—is either somehow ‘differentiated’ or it’s not. Right?

I don’t know. Let me begin from a different angle. Plato’s allegory of the cave is a striking expression of what I’m trying to say. Every philosophical and scientific truth—indeed, *every proposition*—is indirect and an approximation, a shadow cast by the self and the historical moment in which it exists. It’s an expression of a particular point in ‘existential’ development. Even everything I’m saying right now applies to my critique—which is unnerving, because it means I’m doing what I accused Marx of doing: offering truth and snatching it away at the same time. But in my intuitive understanding that philosophy is circular, I see that as corroborating rather than opposing my argument. But am I saying only that truth is never absolute?—that there’s always an element of uncertainty? [Those statements aren’t equivalent!]

I don’t know. Who gives a shit?

March 29

I’m not motivated and haven’t been for a long time. I write and read philosophy because I have nothing better to do. My two friends, Rebecca and Sangeetha, are not here to keep me company. Jessica never calls me and rarely talks to me in spite of my efforts; Kanchana is distant and unfeeling; Bruce doesn’t consider me a real friend. I admit it’s all mostly my fault: I’m lazy, I haven’t tried hard enough to meet *other* people. Tomorrow night, though, I’m going to a movie with a girl named Mariam.

I just sent a philosophy professor an email to convince him to be my thesis advisor. I’ll include an excerpt here because it addresses the overall conception of my theory.

Basically I want to define the self and outline its characteristics. This will necessitate that I address the problem of self-continuity, which means I’ll have to discuss time. Very briefly, I want to argue that the self—the active self, the “I”, not the “personality”, which is only a sum of qualities that *apply* to the self—is self-consciousness. I.e., consciousness of consciousness. It’s not a substance and it “acts” only insofar as it is *aware*. It’s responsible for “a person’s” actions and thoughts only to the extent that it’s aware of them and ‘expects’ them² and accepts them as its own. To explain why it does this I introduce the notion of the objective self, which is a hodgepodge of things less subjective than self-consciousness: the body, the personality, the subconscious, bodily desires, emotions, thoughts, the past self, the future self, etc. All these things are seen by self-consciousness as its own, for in early childhood it is compelled to ‘attach’ itself to them (because it learns from experience that it’s integrally connected to them). However, in asserting that the objective self includes the past and future selves I’m presupposing self-continuity. (Incidentally, the subjective and objective selves are *fused together* in the “past and future” selves, for self-consciousness doesn’t distinguish between them when projecting itself into the past and future.) At this point I introduce my division of time into a subjective and objective aspect. The subjective is the private moment inaccessible to anyone but the individual himself. It is the ‘framework’ in which a being experiences life (the ‘mode’ of experience); therefore, for humans it is essentially self-consciousness (because that’s what makes our distinctively human experience possible). However, by stating it that way I’m being misleading, for there are degrees of self-consciousness

¹ Even if the proposition applies to self-consciousness, we believe it to be true outside of our own self-consciousness. Its form is objective, so it posits objective truth.

² [By “expects them” I meant that whenever a person does something—for instance, a bodily movement—in the instant in which he is about to do it he ‘expects’ that it will happen. He anticipates it, and only insofar as he anticipates it is it ‘his’ act. This is all that intentionality, as applied to physical actions, really is. It isn’t causation; it’s anticipation.]

corresponding to the many situations in which a person can find himself. But since I believe there is always a slight residue of self-consciousness in even the most "other-oriented" situation, it's convenient and not wholly wrong to say that the human 'mode' of being is self-consciousness. Anyway, the subjective aspect of time is entirely relative to each person and not at all divisible. It is, to put it obscurely, constant and continuous. The objective, on the other hand, is what we count and divide; it is that which 'passes'. They're both inner senses, but the first corresponds to the purely experiential, immediate part of our consciousness, and the second to the objective orientation of self-consciousness (that is, to its self-abstracting, self-aware function). I still haven't entirely figured out how to explain self-continuity, nor have I ironed out the kinks in my theories or developed them, but to help you better understand what I've said about time I'll copy an entry from my journal into this email....

March 30

[...] I've read part 1 of Robert Paul Wolff's *In Defense of Anarchism*. I agree with Wolff that political philosophy is a fraud and that anarchism is the most sensible position, but not for the reasons he gives. I'm inclined to disagree with the claim that we have a moral obligation to be autonomous whenever possible;—or, more precisely, I don't like the Kantian, moralistic phrasing of the statement. If it's removed from the domain of morality—i.e., stated nonmorally—then I'm more likely to agree with it.

April 1

The circularity of epistemology, which, as you know, has been bothering me, really isn't worth losing sleep over. (Believe me: I've lost plenty of sleep over it.) Essentially it means only that certainty is never possible. But who cares? A preoccupation with certainty is pathological, *sickly* and confused. How were we to measure certainty in the first place? How *could* we have? We can't rely on a feeling of absolute conviction, because it is the *object* of 'certainty' that determines truth, not a state of mind that accompanies the judgment. (By "certainty" I mean the objective kind, the kind that refers to an object, not Kierkegaard's "subjective truth"—which in any case has nothing to do with "certainty" properly so-called.) And we can't rely on our experience of the object (which means we can't rely on the object itself), because experience is, after all, subject to doubts, ambiguities, improvements, and so on. As I've said all along, the best a person can do is to take account of as many positions (=propositions+intuitions) as he can think of, and thereby to contribute to the Faustian evolution of truth.

By the way, I still think that the possibility of a truest system is logically necessitated by the nature of language and its abstraction from reality, but this system is in the same awkward situation as is infinity. They're both necessary, but they can never be completed.

April 2

The Melancholic

Forlorn, the black pitch swallows me,
Engulfs me, miserly.
Alone, I am its company;
I share its misery.

It grips me, hugs me, smothers me,
As, terrified, I flee;

It lulls me, fondles, kisses me:
I yield willingly.

This cool breeze of deathly night
Blows sightless shadows nigh:
They muffle me, stifle the light;
My glowing embers die.

The pitch as black as dark midnight
Seeps into my grey mind;
United, these two lonesome wights
Together, as one, shine:

I am nighttide, blackness am I;
I give the moon her sheen:
Were 't not for me, her gleam divine
Would seem common and mean.

I am the gloom, the needed grief,
I am the darker side;
I am the one we like to hide,
Happiness's relief.

Eternally from death's demesne
I rule the universe.
I am its star, its self, its curse—
Its pleasurable pain.

Forlorn, the black pitch swallows me
Cannibalistically.
Alone, I am its company;
It and I are—*Me*.

April 3

These are hard times. I'm still unsure of my identity. I'm insecure. I feel burdened all the time. It's upsetting that I can tolerate life only by basking in the thought of my potential greatness. All my social disappointments, my frequent boredom, my philosophical doubts and obsessions, my dislike of the modern world, my knowledge of Meaninglessness, my contradictory and disturbing awareness of basic human equality—all this is offset by my naïve faith in the future and my hope that I'll exalt myself. This hope is sacrilegious to every rational neuron in my brain, but it overpowers reason because I'm not a rational being. Even if I wanted to I couldn't renounce it. [...]

April 5

This is one of those rare special occasions when I bring out the big guns—when I commune with God: when I listen to the Ninth Symphony. I'm in a grandiloquent mood. Things are falling into place. I'm

fitting together the jigsaw puzzle of my world. I spent the last hour at the gym, pumping iron. Felt *tight, manly, Davidian*. Hitherto I've been too lazy to lift weights (except in my room), but from now on I'm doing it every other day. My self-confidence will increase, my attitude toward life will improve, my boredom will wither on the vine, my posture will straighten.... No longer will I be only a thinker; I'll be a proto-athlete as well. Maybe I'll attract females. [Ha. Good luck with that.] I'll get involved in organizations and clubs. I'll *seize the day*—all because of my higher self-confidence! If only the semester weren't almost over!!

Ryan and Andy are interested in my joining them for housing next year, so I won't be alone in a house with people I don't know. - Tonight I'm going to a party. - I've thought of a good topic for my government paper. - I was a central part of two fun debates in class today. (I successfully defended Marx and attacked gender-based theories of history.) - I haven't obsessed over philosophy for *days*.

I'm in a dreamy mood. The Arietta is lulling me, rocking me to sleep. The passage in which time stops, in which bass and treble converse in whispers, is breathing into my ears.

Aphorism 276 of *The Gay Science*: Why does Nietzsche want so much to be only a Yes-sayer? Mediocrity and ugliness that are unnecessary should be attacked and destroyed. If that doesn't work, *then* they should be ignored—but not before. Isn't it impossible to love fate for its own sake? What would such love mean? It would be a love of the ugly only inasmuch as one *abstracted* from the ugly, which then wouldn't be loving the ugly! It would be a love of the world in abstraction from the world (*especially* in abstraction from the mediocre in the world). Any way you look at it, *amor fati* is either not feasible or not desirable.

April 6

When I went home in March I found the screenwriting CD, so I edited the script. I then applied to more agencies, and one has sent me a contract offer. This agency isn't trying to scam me like the last one; it's more professional. I've sent the contract to Mom and Dad for approval.

Went to the weight room again.

April 7

I just finished *Madame Bovary*, a shockingly tragic novel. Maybe *blatantly* and *obnoxiously* are more accurate. At the end of the novel the world ends and the forces of darkness triumph. Even the innocent little daughter is forced to work in a factory! What a disillusioned and bitter man Flaubert must have been! He wrote gorgeously, though.

Damn it all, I'm dehydrating into a dustcloud! I understand *Madame Bovary* all too well.

(What's most peculiar about me is that my distinctive identity is my lack of a distinctive identity. I can understand—and *be*—everyone.)

April 8

I'm having difficulty coming to grips with the ideas of the noble person and the noble action. The more 'self-aware' an action is, the less noble it can be. A spontaneous, dumb offering of charity is noble; a self-conscious offering can be a whole variety of things, least likely of which is noble. It has been corrupted, it's no longer purely from the goodness of the heart. Charles' kind actions are noble; Emma's are ambiguous at best, even when they're the *same actions*! Therefore Emma isn't "noble" because she was cursed with intelligence, while Charles is because he was blessed with stupidity. —That may be an oversimplification. I

suppose that an intelligent, self-aware person can have pure motives. But the point is the same: one's motives, over which one has very little control (because they're based on one's character), should be *simple* in order for an action to be noble. Therefore it's difficult for us sophisticated people to be noble! How unfair is that!

Went to the weight room again. For the first time in my life I have a muscular body. I feel like I'm finally entering a community of equals—a *human* community, in which I am *self-confident*. It's grand.

Kierkegaard is right that we sometimes judge a true proposition to be false when a particular person says it (202). That is, we feel sure the person understands it incorrectly, so what *he* means is wrong even though the proposition *can* be true. This implies that the meaning isn't contained only in the words; it's contained also in the intuition, or the intention. (Again, I'm trying to compromise between objectivity and subjectivity.)

April 17

Here's the rough outline of my government paper:

I. Introduction. Statement of the question: "Is political philosophy an example of 'false consciousness' in the Wrightist-Marxist sense?"

II. Definitions.

A. *Political philosophy*: the normative attempt either to justify/criticize a political system or to outline an ideal one.

B. *Ideology*: a chosen set of normative, legal, economic, social and political principles integral to the organization and consciousness of a collective (and large) social entity. The principles need not be explicit (though in the modern world they usually are)—and not every member of the entity need be aware of them—because they can be inferred from the institutions and consciousness of the 'body' in question. They need not be consistent or coherent either. Not every relevant social entity has an ideology. (Serfs in the 12th century did not, though the society as a whole did.)

C. *Collective consciousness*: the general ideas and attitudes of most of the members of a social entity (and not necessarily of the entity *in abstracto*—though such may be the case because usually the abstract 'body's' dispositions result from those of the individuals who compose it). It includes the ideology but is not limited to it. For example, cynicism is part of America's collective consciousness but not of its ideology.

D. *False consciousness*: unawareness of one's true relation—and the relation of one's beliefs—to one's psychological, social and biological 'determinants'. This definition presupposes, what I consider obvious, that social conditions, psychology and biology are the major immediate causal forces with regard to who we are and what are our beliefs. (It applies not only to individuals but to collective social groups.)

E. *Freedom*: self-control.

III. Preliminary critique of moral and nonmoral values 'on their own terms', i.e., from within the perspective of false consciousness. (The transition to morality is implied in the definition of political philosophy.)

A. Classification of values into three divisions, the first two of which are conventionally assumed to be "morality".

1. Values that it is obligatory to follow under all conditions because they are intrinsically right. They are categorical imperatives.

2. Values that ought to be adhered to under most circumstances because they are considered "good". Instead of being intrinsically right, they have *nonmoral* justifications *external* to them.

3. Nonmoral values, such as pleasure and happiness. These are supposed to be distinguished by not containing the imperative "ought", but in fact there is no clear division

between (2) and (3).

B. Demonstration of the impossibility of (1).

1. To be inherently right they must be *necessary* and *self-evident*. However, such transparency is impossible—or irrelevant—in this case because of the fact of freedom. (This fact is not only immediately evident from our inner perception of consciousness, but is actually a presupposition of morality. For morality implies responsibility, and responsibility implies freedom.) Freedom is the basic datum of experience, the foundation of all states of mind, the fundamental quality of self-consciousness. No conceptual distinctions or ‘inherently right values’ can get ‘underneath’ it or ‘behind’ it: we are always free to ignore a deduction or an imperative simply because we choose to ignore it! Therefore categorical imperatives cannot exist.

2. What would a value to be followed for its own sake *look* like? The most obvious model is arithmetic, which is known to be right based solely on itself. However, there is no ‘ought’ in arithmetic; there is only an ‘is’. This has three implications:

- a. An element of freedom absent in mathematics is introduced in morality.
- b. Values cannot be as necessary or ‘obvious’ as arithmetic, for the ‘ought’ implies that they are not a part of reality, as arithmetic is.
- c. In short, because a categorical value implies the absence of ‘ought’, and yet this ‘ought’ is the one necessary component of values, the thought of a categorical value is a contradiction.

C. Reduction of (2) and (3) to relativism, and hence to nihilism.

1. The values under the heading of (2) are conditional, in that they are supposed to apply to *most* circumstances. They are allowed to be qualified, amended, suspended, etc. Because there is no necessary point at which this ‘qualification’ ends, it can logically continue forever—even until the value is effectively ‘amended’ out of existence.

2. A nonmoral basis can be found for any value. If someone thinks that adversity is good because it strengthens people, then he can consider it a moral imperative to make everyone’s life difficult.

a. However—as is in fact implied by the preceding—this moral imperative cannot strictly be called an *imperative*. For we have freedom in a double sense: it is ‘morally acceptable’ that we choose whatever nonmoral value we like, and therefore, indirectly, any *moral* value;¹ and we have freedom in the abovementioned sense, viz. that freedom is ontologically, logically and empirically prior to any kind of obligation.

b. In other words, an implication of the (2) under C is that moral imperatives cannot exist (and thus, incidentally, that the person in our example is wrong).

3. The foregoing leads directly into nihilism, i.e., into the position that no values are “best” or “good” because all are based on subjective inclination.

IV. Critique of values as false consciousness.

A. Believing in any kind of value means that the believer pays more attention to the *reasons* for it than the *causes* of it [i.e., of his holding it], whereas the reasons are actually derivative and the causes fundamental.

1. When we ‘live by’ a value we necessarily think it’s better than alternatives. We need not *consciously decide* it is, but when asked to defend it we take as axiomatic that it’s the best and then defend this judgment with reasons. We always invoke *reasons* rather than *causes*, over which we have little or no control, because we like to think that we are sovereign over ourselves, and the process of reasoning is what we have most control over. Indeed, it is practically *synonymous* with control, for it is nearly synonymous with freedom.

¹ If morality declaims against the latter statement, this is only because it misunderstands itself. It doesn’t recognize that moral values are based on nonmoral values, and therefore that what applies to the latter applies to the former.

2. However, the psychological, social and biological causes of our choosing particular values are what induce us to have them in the first place. (The scientific spirit has rightly arrived at this conclusion.) Subsequently we add reasons to justify our preexisting inclinations, for we like to rationalize the world, but the inclinations and their causes are clearly more essential.

3. Therefore, by holding values we are in false consciousness. (To repeat: we think we control what we believe, but we're largely wrong.)

B. The *exact* psychological and social causes¹ need not concern us here, but we can suggest what they might be. Primarily they include the conscience, the need for self-affirmation (which is similar to self-contentment, and is a cause of derivative explanatory factors like conformism), and social tradition (or collective consciousness). These are three examples of why we hold the values we do.

V. The relation of political philosophy to the foregoing ideas.

A. Normative political theories are all erected on such values as right, duty, equality, liberty and utility. Nevertheless, they can be distinguished into two classes, each corresponding to one type of morality.

1. The kind that claims to be categorical. Kantian political theory is the classic example. It declares, as an *a priori* postulate of reason, that we are *obligated* to organize society on the basis of rights and duties. This theory succumbs to the above criticisms.

2. The kind that is conditional, i.e. that provides consequentialist arguments for its premises (such as describing desirable nonmoral effects (of living by the values propounded by the theorist)) if it expects us to subscribe to it. Bentham's utilitarianism is an example. As was explained above, the freedom intrinsic to humans undermines these political theories to the extent that the values they try to actualize seem virtually arbitrary.

B. The second criticism is that political philosophy, insofar as it is normative, is false consciousness. The more normative it is, the less factual or explanatory it is; i.e., the less aware is it that it is a byproduct of social conditions and not an autonomous or ahistorical creation of 'free' reason. This is because there is a radical break between unfreedom and freedom in the gap between facts and morality.

C. There are two important causes of, or restrictions on, the genesis of a particular political philosophy in its author's mind.

1. The collective consciousness and ideology of his society or social 'class'. In other words, the ideas that are already current in his day. He borrows from them or reacts against them; he cannot exist in a 'disinterested', ahistorical, purely objective and rational position.

2. The facts of his psychology and the circumstances of his intellectual-psychological maturation.

3. Insofar as the philosopher does not take into account these and similar causes, he is in false consciousness.

D. Nevertheless, it is when a political theory becomes an ideology of the masses that it represents a false consciousness most inevitable and acute. It becomes oversimplified, is accepted blindly, etc.

VI. Objections. How is 'not-false consciousness' possible? Aren't philosophy and science themselves—and even *freedom*—false consciousness?

A. The scientific spirit (which is not limited to science) uses reason to search for causes and explanations. It necessarily does this from the standpoint of freedom, of self-control. It even looks for the neural processes governing consciousness and reason—but, again, from a *free* standpoint. In other words, it contradicts itself: it (reason) takes as axiomatic that it is caused by biological and psychological processes over which it has no control, but it investigates its own causes *freely!* Therefore its activity contradicts the stated purpose of the activity.

B. This is true of all endeavors to explain the factors that influence the self. The activity of reason posits reason's self-control, which means that an objective, independent, 'free' point of view is

¹ For the present we can ignore biology.

adopted.

C. However, one of the basic tenets of science, which we must accept, is that nothing is autonomous. Everything has a cause. Therefore freedom is nonexistent, and we—who in our unceasing activity of self-consciousness live as though it *does* exist—are always in false consciousness.

D. If this is so, not only morality (and political philosophy) are delusions, but our very consciousness itself is. And because this means that every conscious activity we engage in is false consciousness, we have to conclude either that science is in the same situation as morality (and is therefore equally culpable) or that there are *degrees* of false consciousness [the implication being that science is somehow less falsely conscious than morality].

VII. Replies to objections.

A. Science has indeed demonstrated that there are so many unknown determinants of our behavior and our thoughts that we really do not “control” ourselves. On the other hand, because of the intentional (and therefore free) structure of consciousness, it is intuitively obvious that we *do* have control in some way.

B. The simplest solution to this dilemma is that we are free within an area whose boundaries are determined by external factors. This area coincides more or less with the activity of reason (or intentional thought). Scientific axioms notwithstanding, it is intuitively obvious that *somehow* we have control over our intentions and are therefore partially free. Hence we are in false consciousness only if we believe that we are *completely* free.

C. Moreover, though partial freedom may be contrary to the principles of science and philosophy, as human beings we are forced to believe in it. We may be wrong, in which case (B) is incorrect and we always live in false consciousness—but this kind of false consciousness is different from morality and political philosophy, for the following reasons:

1. Freedom is in the nature of consciousness (particularly of reason), whereas morality and its derivatives are ‘*post facto*’ human creations.
2. Morality can be clarified and partly transcended. In its current form it is an *unnecessary* false consciousness.

VIII. Conclusions.

A. Necessity of morality.

1. Most people have, for thousands of years, had a need to live by a personal morality. It is a way to impose some order on their lives. In the foreseeable future this urge will not disappear; i.e., morality will continue to be psychologically desirable.
2. Socially too it is necessary. A society cannot avoid chaos without an accepted morality (and thus a political philosophy).

B. However, if we can understand what causes it and realize that it is not ‘eternal’ or ‘true’, we can without self-delusion reason our way toward a more sensible and less contradictory system of values. We can achieve a compromise between blind moral certitude and outright nihilism. This applies also to political philosophy. In short, we can both live by (better) values and recognize that they are not inviolable, and thereby mitigate our moralistic false consciousness.

C. We can base an improved political theory on these values—these values that take account not only of *reasons* (as do our contemporary values) but of their own *causes*.

April 22

After 150 years of radical social transformation, the relations between men and women remain fundamentally the same. Romantically, nothing but the inessential trappings of our attitudes have changed, and domestically the major differences are only that men often take an active role in household duties and women sometimes pursue careers. Excepting certain disproportionately vocal radical feminists, no deep

psychological revolution has occurred,¹ as is evident from comparing many nineteenth-century novels with current attitudes. Instead, *external duties* and ‘social rites’ have evolved. In any case, the main point is that romantic attitudes haven’t changed over centuries, and romance is the definitive relationship between the sexes (and therefore....).

April 24

To alleviate my ennui I’m reading a book called *Inside Relativity*, by Mook and Vargish. It’s so lucidly written as to border on the childish, but it’s informative. I’d also wanted to refresh my memory of calculus, but I couldn’t find a good textbook in the Science Library.

April 27

The second movement [do you mean the fourth movement?] of Schubert’s Trout Quintet is one of those pieces that make me feel unreservedly glad to be alive. I feel as though I’m bathing in waters of purity, of eternal youth! The music is so leisurely and unceremonious, so in love with its own easy charm, like a picnic on a spring day, that the Enlightenment springs to mind when I listen to it.

....General relativity is awe-inspiring. It’s a phantasmagoria of divine revelations in the guise of mathematics. What a way of interpreting the world! Newtonian physics is comparatively sterile. Discard our common conception of gravity! What a bold move! Planets actually travel along a *warped straight line!* Now *that’s* a stroke of genius. And it’s simpler than Newton’s idea. Can *no force* really be acting on those objects? Is invoking non-Euclidean spacetime and inertia a truer way of explaining planetary motion? Presumably it is. Moreover, it advances us ‘light years’ in the search for a unified field theory (which I’m sure potentially exists (i.e., can and probably will be discovered)). –I rather resent having been taught an incorrect theory all these years.

April 29

The revered academician teaching my Government course wrote the following suggestion on his copy of my outline: “Make sure you find scholarly support for your arguments, so that even if the reader disagrees, she can see that the arguments have strong adherents.” Of course; I stupidly forgot that scholars can’t think for themselves and that the quality of an argument depends on how many famous people agree with it. Unfortunately, I can’t think of any famous people who agree with my arguments. Even if I could, I doubt I’d reference them in the paper. It would be entirely extraneous and slavish to do so.

I’m reading a complicated and badly organized textbook called *New College Algebra*, by Marcus and Mink. It’s an introduction to modern algebra. Eventually I hope to work my way up to tensor calculus, the language of general relativity.

By the way, the theme of *Monster’s Ball* can be stated as “the tradition of all the dead generations weighs like an incubus on the brain of the living”.

May 1

I’ve written five pages of the government paper. For the first time in months I feel relatively inspired. This paper will, hopefully, clarify the nature of morality once and for all, at least in my own mind. The actual process of writing it is exciting not only for that reason but for another more wonderful one:

¹ Even in their case it’s not a revolution but an example of the fact that there are exceptions in every age.

without my planning it, the exposition fits together perfectly. Sometimes I find myself at a dead end in the argument, so I write in an exceptionally ad hoc manner “We shall have to return to this issue after we have further analyzed the nature of moral judgments.” This translates as “I haven’t the faintest clue how I’m going to resolve this issue, but hopefully it’ll come to me after I’ve analyzed the nature of moral judgments.” Lo and behold, after a couple paragraphs down the line I realize that the course of the argument has clarified the problem for me—and that it *could not* have been clarified until those paragraphs had been written. The solution has emerged of its own accord, and the exposition has unwittingly taken the form of a “dialectically articulated artistic whole”. It’s miraculous!—as if some impersonal intellectual force is working through me.

(Some of my opinions have similarities to Kant’s, but I’m trying to use different arguments from his. I don’t want to appeal to “form”, as he does. So I’m not rereading *Foundations of the Metaphysics of Morals*.)

I’m sick of going to the gym.

May 2

For Literature I have to write a paper this weekend and then do a take-home exam next week. This is bad enough, but what makes it worse is that I severely *do not care* anymore. There’s not a particle of motivation in me. I’m fed up with all the manure that my life partakes in. I can suffer it no longer! It’s shit—all shit! Boredom has become my universe, the “steady state” from which I sometimes sneak away only to be catapulted back again. Everywhere I turn—boredom! Utter continuous unrelenting monotony. I’m so sick and tired that I might as well die. How am I going to finish this semester? My will is dead. I don’t care about anything. “Wonder”, that rare sublime intellectual emotion, yields only confusion and a sense of intellectual impotence. It’s with me *at all times*, so often that it exhausts me and I’ve lost my fascination with it. Nothing ever comes of it. It just makes me feel ashamed, ashamed that I lack the brilliance to appreciate and understand nature. I wish there were a God. Maybe there is, but—there might as well not be.

I read Byron’s “Beppo”. Odd little poem, that. Entertaining, but seemingly rather barren of meaning.

May 3

I don’t deserve the pleasure I derive from listening to the Emperor Concerto.

She Lay in Loveliness

She lay in loveliness, star-gazing
 In the ghostly air of night,
 Breath still, chest calm, thoughts chasing
 Foggy tendrils,—eyes soft and bright.
 Her hair lay thickly on the grass
 All wet with dew and black with mud,
 And sleek and shiny as a mass
 Of torn entrails or clotted blood.¹

¹ [In other words, she was murdered.]

May 9

Wonder bleeds into metaphysics.

May 11

I've finally finished the government paper. Upon rereading it I've noticed just how flawed it is—how furious-paced is the argument, how imperfect is the exposition, how many side-issues are left out—but I'm too exhausted to work on it more. It is in fact so condensed that its profound claims can slip by unnoticed or seem empty. (That's what comes of writing philosophy in a vacuum, in a dialogue with oneself and no one else.) Nearly every paragraph could be expanded, though not by me, into pages of implications and further arguments. I'll leave that task to the people who read this journal.

Freedom, determinism and values

Since antiquity, philosophers have debated the merits of all conceivable political systems. The Athenians saw it as axiomatic that dictatorships were evil and democracy good, while the Spartans, in organizing their city-state on a rigid social structure approximating totalitarianism, believed democracy was contemptible and weak. Aristotle extolled the virtues of an aristocracy; Cicero longed for a free republic; Hobbes wrote a treatise in defense of monarchy; Rousseau passionately advocated an intimate direct democracy; John Stuart Mill upheld the rights of the private individual. Scores of thinkers have borrowed arguments from the domains of ethics, religion, metaphysics, history and science to support their political philosophies, but in the end the great debate has proved perpetual. Reason will never resolve it. Societies will continue to evolve and political philosophies will evolve with them, never reaching a consensus, Faustian in their compulsion to 'better' themselves. How can this eternal self-dissatisfaction be explained? Is there not one truly 'just' society waiting to be born? If there is, how can we decide what it is? If there isn't, what is the value of political philosophy? Is it only a moralistic delusion and an indirect byproduct of objective social conditions? Is Karl Marx right in believing it to have no intrinsic value and to be instead a type of "false consciousness" that mobilizes the masses and has no other worthwhile function? This question is momentous and imperative to answer, particularly for philosophers who want to understand the nature of values. Answering it may be the gateway to a better understanding of the human condition. Our paper intends to do precisely that—to answer the question "Is political philosophy an example of 'false consciousness' in the Marxist (and Wrightist¹) sense?"

Before we embark on our examination of the topic, it is necessary to define some relevant and problematic terms:

Political philosophy: the normative attempt either to justify/criticize a political system or to outline an ideal one. This is narrower than the common definition in that it is limited to normative claims, whereas typically the term is applied also to non-normative critiques of political ideologies and 'philosophical' analyses of how political systems function. I dub these analyses "philosophical" to distinguish them from political *science*, which is typically more limited in scope, less critically oriented, more concerned with classifying and characterizing political phenomena than seeking fundamental *causes* of them. Thus, Marxist political philosophy has nothing in common with normative positions but instead examines why and how political structures are a certain way; and it does this by 'functionally' explaining their purposes within a given society and investigating the overarching causal mechanisms of their existence. It would be inappropriate to call such an enterprise political *science* because the latter is generally more ahistorical and concerned more exclusively with the political realm in isolation from the totality of society. At any rate, we have

¹ As will be seen below, I have modified the traditional Marxist conception of "false consciousness".

defined the sense in which “political philosophy” will be used throughout this paper.

Ideology: a chosen set of normative, legal, economic, social and political principles integral to the organization and consciousness of a large social entity. The principles need not be explicit (though in the modern world they usually are)—and not every member of the entity need be aware of them—because they can be inferred from the institutions and consciousness of the ‘body’ in question. They need not be consistent or coherent either. Not every relevant social entity has an ideology. (Serfs in the Middle Ages, arguably, did not, though the feudal society as a whole did.) Lastly, ideologies tend to be illusions or false consciousnesses (which terms are not quite synonymous) in that they are rarely arrived at through the rigor of science.

Collective consciousness: the general ideas and attitudes of most of the members of a given social entity (and not necessarily of the entity *in abstracto*—though such may be the case because usually the abstract “body’s” dispositions are an extrapolation from those of the majority of individuals who compose it). It includes the ideology but is not limited to it. For example, cynicism and communal arrogance are parts of America’s collective consciousness but not of its ideology.

False consciousness: unawareness of one’s true relation—and the relation of one’s beliefs—to one’s psychological, social and biological ‘determinants’. First of all, this definition is grounded in the scientific attitude that has dominated the West since the 19th century—the attitude that emphasizes *causes* over the rational *reasons* that people invoke to justify their traits, their actions and their beliefs. Scientists, psychologists and philosophers (at least those who keep pace with the times, such as Friedrich Nietzsche) tend to ignore freedom and rationality when explaining why we are a certain way. This will be elaborated later. Secondly, the definition presupposes that social conditions, psychology and biology are the major immediate causal forces in regard to who we are. Thirdly, it is a modification and generalization of the traditional Marxist definition, which is adumbrated by Friedrich Engels in this quotation: “Ideology is a process accomplished by the so-called thinker consciously, it is true, but with a false consciousness. The real motive forces impelling him remain unknown to him.... Hence he imagines false or seeming motive forces.... He works with mere thought material, which he accepts without examination as the product of thought, and does not investigate further for a more remote source independent of thought.”¹ Incidentally, Engels’ notion of ideology is confused; it is not ours.

Freedom: self-control. This definition includes also the negative conception of freedom, viz., absence from external constraint. Depending on the context, it can mean self-control vis-a-vis (1) other people, (2) one’s emotions, (3) one’s animal appetites, etc. Clearly in order for the definition to be purged of all ambiguities we must define the self, but this task is beyond the scope of the essay. However, because we cannot proceed without having *some* idea of what the self is, we shall be obliged to claim dogmatically that it is consciousness of consciousness, i.e. self-consciousness. It is not a ‘substance’, not an aggregate of thoughts, not the personality, but simply one’s immediate awareness of oneself.² It is purely intentional.

Preliminary critique of moral and nonmoral values ‘on their own terms’, i.e. from within the perspective of false consciousness

Political philosophy as we have defined it applies to theories that presuppose, or base themselves on, values. These values can be either moral or nonmoral. Therefore, in order to critique political philosophy we must first critique moral and nonmoral values. To do so thoroughly, however, it is not enough to explain why they may or may not be false consciousness; it is necessary also to examine them *on their own terms*. (We shall argue later that this is in fact to critique them from within false consciousness, because values themselves *are*—or, to be precise, exist *in*—false

¹ Robert Tucker ed., *The Marx-Engels Reader* (New York: W. W. Norton & Company, 1978), p. 766.

² Inasmuch as we have included the word “oneself” within the definition of the self, the latter may be thought circular. But logic cannot be trusted in an analysis of consciousness—for reasons it would be inappropriate to delve into now.

consciousness.)

The very broad category of “values”, as we said, can be divided into the classes moral and nonmoral. Conventional wisdom divides the first into its collective and personal manifestations, although we shall see later that this division is largely scholastic. Nevertheless, because (1) it is convenient and (2) we cannot show it to be inessential until later, we shall temporarily make use of it. Under the heading “collective” we include, on the one hand, the values of a society—as vaguely embodied in its collective consciousness—and, on the other, the values of a relatively independent portion of society with its own distinctive identity (such as orthodox Jews or the Amish). When people expect others to adhere to the same values they do, it is usually because the morality is collective. “Personal” refers to the values of a single individual. Generally an individual’s values are essentially the same as those of the social group he identifies with (whether it be his country, his class, his religion, his ethnicity, etc.)—and therefore he ‘unthinkingly’ expects others to abide by the values he does—but occasionally people *choose* their own morality. In such cases they (probably) do not unconsciously expect others to follow the values they do (though they may consciously think people *should*). At the moment our task is to outline the essence of collective moralities, for these have an epistemological priority over personal value-systems. (The latter are always either copies of or reactions against the former.) Eventually we shall see that, on the whole, what applies to one applies to the other.

Preliminarily, we can suggest that collective moral values are distinguished from nonmoral ones by translating into commands that are *duties*. The definition of the term “duty” is highly elusive. One finds oneself stumbling over meaningless, circular statements like “A duty is something we have an obligation to do” or “A duty is a moral imperative” or “Duties are commands—strongly supported by good arguments—relating to how we ought to treat others”. None of these statements addresses the main question, which is “What does it *mean* for something to be a moral imperative?” It is not enough to suggest that whatever our conscience dictates is a moral imperative, for this does not inquire into the meaning of the word “imperative”. In fact, if the term “duty” (or “moral imperative”) is to have any meaning at all, we must define it as a command that we follow for its own sake, because it is intrinsically right. It is a categorical imperative. If we follow it for the sake of something external to it, then the decisive factor is the external thing (for it is this that determines why it is a duty), which means that we are again ignoring the question of what it means for something to be an imperative. I.e., we are saying that only those commands are duties which are based on good reasons, which statement—aside from introducing extraneous problems—leaves unexplained the intrinsic meaning of “duty”. Therefore to salvage the notion of a “duty” we say that it is not adhered to for external reasons but solely for itself. This is an explanation both of why we abide by a duty and of *what it means* to abide by a duty.

We have defined the word, but we have not argued for our claim that it is the definitive characteristic of morality in all epochs and cultures. To do so we shall first observe that almost all people who frown upon lying, for example, do so because they see it as a duty not to lie; that is, they adopt (perhaps unbeknownst to themselves) the viewpoint that lying is intrinsically wrong. To provide arguments for this statement is not easy, for it is grounded solely in an intuitive examination of the psychological state that obtains when one condemns liars. The best we can do is to suggest that when someone flares up in righteous indignation after discovering a lie, his reaction is explainable only by supposing that he considers lying to be intrinsically wrong. He does not investigate the circumstances of the lie nor remind himself dispassionately why he thinks lying is so bad; he simply exclaims, “She *lied* to me!” Similarly: “He *murdered* her!” or “They had an *affair!*” or “He disobeyed a *direct order!*” These ejaculations are ‘immediate consciousnesses’ of astonishment and disgust that appeal to no reasons. They judge their object to be wrong for the single ‘reason’ *that it is wrong*. However, it must not be thought that if a forceful exclamation is absent, so is the belief that truthfulness is a duty. Rather, we should interpret these exclamations as intense manifestations of our ordinary consciousness. Ordinarily, during our daily affairs when we’re not examining the reasons for our moral convictions, we take our (collective) values so

seriously that we treat them like duties. We abide by them blindly.

Conversely, values which few people in our culture would claim to be duties—such as acting compassionately as often as possible—are not typically included in the domain of morality. From the perspective of our culture, it is absurd to say that acting coldly is immoral or that acting kindly is moral. Because they are not considered duties, they are not considered relevant to morality.

Before continuing we must highlight a distinction between immediate, unreflective consciousness and people's self-conscious understanding of morals. On the level of the former, most of us—that is, those of us who have a morality—cannot but look upon moral values as duties. It is a psychological fact that we shall explain in the critique of morals as false consciousness. On the other hand, it is very possible to *believe* that such values are not duties. Often people suspend their values in certain situations without feeling shame or guilt—a phenomenon that seems to indicate that the moral commands are not perceived as duties. Nevertheless, they are, though on a more unconscious and involuntary level. The self-conscious temporary repudiation of them—and even the disinterested judgment that they are not duties—is a superficial reaction against the underlying consciousness of their being categorical imperatives. (In fact they are *not* categorical imperatives, but we shall address this later when we discuss the distinction between our obscure consciousness of duty and the exact philosophical definition of it.)

Of course, feminist philosophers sometimes defend an “ethics of care” and denounce an “ethics of duty”, but they do not inquire into the conventional meaning of the word “morality”. If they did, they would recognize that an ethics of care and an ethics of duty need not be mutually exclusive. Certainly a system of values can exist and has existed (in Confucianism, for example) that relies more on the notions of care and filial love than on the notion of abstract Kantian duty, but our point is that these values are effectively cognized as duties.¹ The only time that duty- and care-ethics are mutually exclusive is when we invoke the distinction mentioned above—when we understand “duty” not in the sense of a vague immediate consciousness but in the sense of a *formal declaration* integral to—or rejected by—an ethical system.²

The other side of our argument is that definitions of morality that do not judge the concept of duty as fundamental are bound to fail. For example, it is inadequate to say that the term *ought* distinguishes moral from nonmoral judgments, for the statement “You ought not to kill people because it might land you in jail” is not considered morally relevant. Nor can we say that only commands appealing to the intrinsic dignity or rights or even the instinctive ‘fellow-feeling’ of a living being are moral, since not all cultures have based their values on these ideas. Confucianism based its doctrines of compassion and paternalism on the natural order of the universe, which is quite contrary to modern Western notions. In short, if we looked at every definition of morality aside from the one given in this paper, we would see that it is not universally applicable. (It is possible that philosophers in the tradition of Wittgenstein would proceed from a different direction and assert that there is *no* essence of morality, but the burden of proof is on them.)

We should note that social norms and mores are not what we mean by a collective morality. We are referring to what is ‘*felt*’ by people to be right and wrong or good and bad—what is sometimes called a “moral sense” (though not necessarily an *instinctual* one). Laws and conventions usually abide by the common morality, but they are logically distinguishable from it. Hence they are not included in our discussion.

The category “personal morality”, implicit in all the foregoing ideas, differs from collective morality by being a translation of it into the consciousness of the individual.³ This translation can

¹ Therefore it is misleading to say that in Confucianism the notion of care was more important than that of duty. In fact, it is wrong, because Confucius explicitly stated that care is a duty! This technicality obviously corroborates our main argument, which is that duty is the definitive characteristic of morality in all cultures. Incidentally, the term “abstract Kantian duty” is redundant, for in order to have meaning duty must be Kantian (i.e., for its own sake).

² See below.

³ Orthodox Marxists might say “reflection”, but I prefer “translation” because it allows for differences between the

result in three general scenarios. In the first kind (by far the most common), personal moralities are based unthinkingly on the common system of values, which means that their adherents basically see them as duties. Of course, as mentioned above, they may choose to ignore them in many situations, but this indicates merely that they don't *care* whether they're duties (or that on a considered and self-conscious level they believe they're not duties). A second class of people includes those who do not *have* a personal morality. They do not respect nor follow any values in a dutiful, 'morally sensitive', 'conscientious' way.¹ The third class includes those rare exceptions among humanity who invent their own morality. They pick and choose their values based on *reasons*, which as we saw earlier is incompatible with the notion of duty. Nevertheless, sometimes they do learn to follow their values as if they were duties—particularly (and inevitably) when the values cease to be abstract intellectual ideas and become 'ingrained' in consciousness—which is a contradiction we shall address when we discuss the problematic phenomenon of *degrees* of 'duty-consciousness'. At any rate, the main point is that the classification of value-systems into collective and personal should not be taken as more substantive than convenient, because the two share the same essence and most of the same characteristics, and they imply each other. ("Collective" logically implies "personal"—in that it supervenes on many personal moralities—and "personal" epistemologically presupposes "collective".)

Now we shall finish the drudgery of classification so as to proceed to the critique. A second conventional division of moral values is into the following two categories: (1) those which it is obligatory to follow under all conditions because they are intrinsically right (or self-evident). In the form of commands they are duties. (2) Most values are not *consciously* thought of as 'inherently' right but rather base their moral status on arguments (generally consequentialist ones). (However, as we have already stated, they are '*half-consciously*' treated as being inherently right.) If compelling arguments are adduced against them they may lose their moral force; that is, they are not fixed moral truths. Moreover, it is theoretically permissible for them to be suspended sometimes. For instance, though under most conditions we consider it wrong to lie, we consider it eminently justified if it will save a person's life. Hence lying is not intrinsically wrong.

In fact, none of the values we half-consciously treat as being intrinsically wrong are objectively so. This is easily established by looking at the example of murder. Even though we generally assume that murder is intrinsically wrong, it obviously is not. For it is meaningless to say that it's wrong because it's wrong, or that refraining from murder is right for its own sake. Neither is it 'good' for its own sake. Therefore it is not a duty. Generalizing this example, we arrive at the conclusion that all values of the form "___ is right" or "___ is wrong" or "It is right to ___"—i.e., all values expressed in the form of linguistic sentences—are not duties, simply because it is meaningless that a repetition of the proposition should be the justification of the proposition! Adding "because (original proposition)" or "because that's just the way it is!" after a proposition is *never* a reason for *any* proposition. However, this being so, we seem to have invalidated the concept of the categorical imperative. Therefore we should ask ourselves if there is a model in any sphere of human endeavor that can show us what a duty might look like. Fortunately, there is a very simple example: arithmetic. Such mathematical sentences as $2+2=4$ are 'intrinsically right', based on no reasons whatsoever. When asked why they are right, we have no option but to say, "Just because—that's the way it is!" Granted, this is not a *reason* for them, which implies that they are not their own reasons (one way of expressing our definition of duty), but they nonetheless *essentially* correspond to the criterion for duty because we intuitively know them to be right, without appealing to reasons.

Obviously it will be objected that we're using the word "right" in two senses, but this is precisely the point. The only model we can find for what a duty might look like is one that has (from

original copy and the derivative one.

¹ The reader may criticize the use of "dutiful" in this sentence because it seems to presuppose an identification of duty with morality, but I literally can't think of a better way to describe my feeling when I act morally. This in itself suggests the equation of duty with morality. In any case, from now on I shall take it for granted that duty defines morality.

another perspective) nothing in common with duties! There is no “ought” in arithmetic; there is only an “is”. There is not the element of freedom that exists in morality; in other words, arithmetic is a part of reality that *forces* itself on us, whereas morality, in logically implying freedom, cannot belong to reality in this sense. Therefore, because from our example we have decided that a categorical imperative cannot contain an “ought”, and yet this “ought” is integral to the notion of a moral value, the very thought of a categorical imperative is contradictory. This means that the idea of morality, in the strictest sense, is contradictory.

Now we shall critique duty (morality) from the *subjective* standpoint. Our first argument is that there is a continuum between the consciousness of duty and the consciousness of nonmoral values. Suppose a person chose to live by the moral value of self-cultivation. He would consider it an imperative that he cultivate himself in a variety of ways. However, if he also lived according to the judgment that murder is wrong, it is very likely that he would consider this a more compelling, ‘absolute’ duty than the first. Now suppose, on the other hand, that he saw self-cultivation as a *nonmoral* value: he considered it a ‘worthy’ thing or ‘advisable’ or ‘good’ to cultivate himself. But if he suddenly decided to make this nonmoral good a moral good, where would we draw the line between the two kinds of values? Would the second be *more* ‘worthy’ or *extremely* ‘good’? Would it be an *imperative*, i.e. *right*, as the first was not? This, however, is not as clear-cut as it sounds, because we saw that it’s possible for him to judge restraint from murder as a more unconditional imperative, which means that the word “imperative” is subject to degrees—which in turn suggests that there is not a clear division between (moral) *imperatives* and (nonmoral) *goods*. Nevertheless, it only *suggests* that; it remains logically possible that there can be a sharp division between imperatives and nonmoral ‘goods’ even if imperatives are not all of the same intensity. Hence, to support the argument we shall note that one’s consciousness when philosophizing is different from one’s ordinary state of mind. The ordinary mentalities of cultivation-as-moral and cultivation-as-nonmoral are identical, for they treat both as inherently right. That is, they are utterly ‘immediate’, taking account not of reasons but solely of the commands themselves. It is only when we dissect these two consciousnesses that we notice that the first command feels more ‘for its own sake’, more like a categorical imperative, and the second feels less urgent or ‘obligatory’. Therefore in our ordinary consciousness there is indeed (in this case, though not always) no distinction between duty and nonmoral preferences. Furthermore, someone with a particular nonmoral ideal—and with a rather authoritarian strain in his personality—may *demand* that everyone else follow his value simply because he thinks it makes the most sense, without appealing to morality whatsoever. The implication of all this is that, in spite of the effort we made to delineate precisely what can be called “morality”, normally in consciousness there is no leap between it and nonmoral subjective preferences. Or, at any rate, there certainly *need* not be a leap, which is itself devastating to the concept of morality.

In our second argument we make use of the second set of classifications. It will be recalled that the first category, duties, was the only category that adhered to the definition of morality; i.e., the second class—values based explicitly on reasons—was excluded from the domain of morals. We shall now provide two additional arguments for this while at the same time critiquing them in their true role as ‘nonmorality’. These values sometimes derive from nonmoral ones and sometimes from moral ones, and sometimes from perceived truths. The injunction to love one’s neighbor can, in a sense, be derived from the metaphysical tenet that the thing-in-itself is an undifferentiated whole, or from the basic moral value that interpersonal harmony is intrinsically good, or from the nonmoral value that harmony is pleasant.¹ We have already shown that nothing is intrinsically good, but to

¹ The ambiguity between good and right should be clarified. Saying that something is inherently good and saying that it is inherently right are essentially the same thing, with the one difference that “right” has a slightly more ‘forceful’ sense to it than “good”. This difference, however, in the context of morality amounts to nothing. Moral rightness and moral goodness are identical. The only reason they might seem not to be so is that “good” is also used in the context of nonmoral values—while “right” isn’t—which confuses its meaning for us.

avoid mixing our arguments we'll ignore that. The point is that a logical derivation of values from *anything* is invalid. This is a logical consequence of freedom—a notion that we shall address fully later on. For the time being, in defense of the assertion that freedom exists, it is enough to remark that (1) freedom and responsibility are presupposed by the “ought” logically present in all values, and (2) our freedom is immediately present to us in self-consciousness. It is in fact (a component in) the basic datum of self-consciousness, for *intentionality* is the basic datum and intentionality is essentially freedom. Or—if that is denied—intentions certainly *presuppose* freedom. Therefore, because “ought” implies freedom and is the defining characteristic of values in the form of commands, freedom is the basis of values. Logical necessity and determinism are inessential to the understanding of values; we need only recognize freedom. Thus a logical derivation of morals relies on an operation foreign to the essence of morality, which means it cannot be the way to arrive at a value. This shows that moral values based on reasons (external considerations) have no foundation. Hence they are not part of morality; or, expressed differently, morality deteriorates into ‘arbitrary’ (non-coercive, non-‘good’¹) subjective preferences.

To state the preceding in another way: believing in a value is an outcome of a subjective leap. No matter how many reasons are invoked in support of the value, ultimately the believer makes his decision based only on his inclination. An equivalent statement is that an argument can be found for any value. An example can establish this. Schopenhauer thinks that compassion is moral because behind appearances is a unified thing-in-itself, a One, and by treating people compassionately we are acting in conformity with the knowledge that we are all part of the One. On the other hand, a central notion of Schopenhauer's is what he calls the “principle of individuation”, which is meant to explain how individual beings can exist even though essentially they are all the same thing. The principle of individuation is space and time; it is these that allow for the fragmentation of phenomena in our world. Therefore, a response to Schopenhauer's morality could be that the principle of individuation makes *true* compassion/love impossible, so instead of deluding ourselves we ought to ‘intensify’ every experience—*savor* every experience, whether it be love or contempt—simply because such affirmation is the fulfillment of individuation, i.e., of the conditions of life that the thing-in-itself's mode of manifestation forces us into. Schopenhauer, of course, would continue to insist on his viewpoint. In the end we would have to choose our value—i.e., which ‘truth’ to ‘emphasize’ (individuation or inaccessible unity)—entirely on the basis of our subjective inclination, for there is no other way to decide between the two. This is always the case. There are always arguments for both sides of a moral value, and neither is better than the other, for they either (1) state good and bad consequences or (2) infer the values directly from ‘opposing’ truths or values, in both of which cases we must rely on subjective preference to resolve the contradiction.

To sum up, we have suggested that moral values must be duties, but duties do not exist. For the reader who disagrees with the first claim, we have argued that values cannot be based on reasons and are instead arrived at through a subjective leap from objectively oriented arguments to the adoption of the value. Hence there is no such thing as morality [in the strict sense]: all values are subjective, ultimately arbitrary choices, and cannot be “good” or “the best” vis-à-vis other values. Nihilism is the philosophical truth.

Incidentally, if the Wittgensteinians are right that morality has no essence, this claim would surely *support* our conclusion rather than argue against it. The only difference is that the process of reasoning would have nothing in common with our own.

Critique of values as false consciousness

The preceding section investigated values without questioning their assumption of human freedom. This assumption must now be challenged; but first we'll clarify it. Believing in any kind

¹ Judging something as morally ‘good’ implies either intrinsic goodness or external reasons, both of which concepts we have rejected.

of value means that one pays more attention to the *reasons* for it than the *causes* of one's belief in it. It cannot be otherwise: in the act of belief we unconsciously 'take ourselves seriously'; we *intend*, and it is in the nature of an intention to feel free. Furthermore, in holding a value we think it's better than alternatives. We need not *consciously decide* it is, but when asked to defend it we take it as axiomatic that it's good or the best and then defend this judgment with reasons. We do not defend it by saying, "My brain is wired in such and such a way, and the precise neural mechanisms are so and so, and I grew up in this kind of an environment....and therefore this is a good value."

However, science, psychology and philosophy have in the past few centuries done everything in their power to demonstrate that living beings have little or no freedom. Everything in nature is determined by external [or internal] causes; nothing is self-determined. The veracity or falsity of this mechanistic hypothesis will be examined later; for the present we shall merely examine its consequences with respect to freedom and values. When applied to humanity it means that social, psychological and biological factors are the explanations of the personalities, thoughts and attitudes of individuals, and therefore that the rational *reasons* we use to explain ourselves to ourselves are themselves the product of factors entirely outside our control. Thus we are nothing but effects. We, who are self-consciousness, do not cause events; we and our intentions are just inserted between the relevant events and their causes. The reason why we are an exception to the universal law of causality—i.e., why we do not cause anything even though other phenomena do—is that the only way we can cause events is through our *intentions*. Saying that we do is not only synonymous with the false postulate of self-control, but it is contrary to the *mechanistic* nature of causality. Even social tradition *mechanistically* (impersonally, automatically) influences how I act. Besides, it is intuitively obvious that intentions cannot cause anything: it is not my intention that causes my finger to wriggle, since the intention can exist in my mind well before the finger actually wriggles. Hence intentions are not causes.

An observation slightly off the topic, but important nonetheless, is that there are different kinds of causes. Social tradition ought to be distinguished from biological mechanisms. But how are they different? Surely the difference is that the first is a product of human action and the second is a natural, 'unchanging' determinant of our actions which we are unable to influence in the way we can social tradition. What this amounts to is that tradition is a *constraint* and biology a direct *cause*. (Psychology must either be somewhere in between or be a 'mental' expression of biology. The latter makes more sense.) This suggests that there are degrees of freedom, which is problematic for the hypothesis that all freedom is equally deceptive. However, it is not appropriate to address the objection at this point; we shall do so in the last section of the paper.

To return to the question at hand. In having values we exist in false consciousness because values are grounded in freedom and freedom is nonexistent—i.e., because we necessarily do not adopt the standpoint of determinism. But values and freedom stand and fall together: if values exist in false consciousness, so does—or *is*—freedom. This is a repugnant conclusion, because it means that humans are always in false consciousness; but from the scientific viewpoint it is true. On the other hand, because we have not established that the scientific viewpoint itself is true, it is conceivable that its implications are false. We shall, again, return to this issue shortly.

In the last section we left open the question as to why the 'immediate consciousness' of moral values is that they are duties. The reason for the postponement was that the question could not be answered without presupposing the concept of false consciousness. The answer itself, however, is quite simple and obvious: during childhood, when the personality is still forming, people learn their behavior from their environment (primarily their parents), and because the environment includes—and is composed largely 'on the basis of'—values, the latter are internalized by the children. Over the course of years some of the values become more ingrained in consciousness than others, for the children learn by trial and error that some things are *very* frowned upon and others less so. The first give rise to an inner 'check' on actions (sometimes called the conscience, but the overtones of this word are slightly too narrow to cover the whole phenomenon) which is more or less adhered to, depending on the individual's psychology. In other words, the result is the formation of moral

values.

—That simple hypothesis serves as an example of what is meant by a critique of values as being false consciousness.

Critique of political philosophy

Political philosophy can be subdivided into two categories corresponding to our second division of morality. The first includes theories that claim to be categorical. Kantian political theory is the classic example. It is based on the ideas of right and duty, which Kant considers moral in the extreme sense of inherently right (*a priori*). Such philosophies succumb to the same criticisms we directed against the concept of duty. The second class includes those that have as their foundation the (nonmoral) values in the corresponding class.¹ Bentham's utilitarianism, which uses extrinsic reasons² (primarily its utilitarian conception of human nature) to justify it, is a good example. As was explained above, the freedom intrinsic to humans [or to humans' self-experience] undermines these political theories to the extent that they lose their status as "good" or "the best". They are essentially arbitrary.

Nevertheless, we ought to keep in mind that logic does have a place in a discussion of values despite the "subjective leap" which leads to the adoption of a value. For example, people who agree on a general value but disagree on a derivative one can debate either the 'moral' implications of the first or the logical basis of the second in order to reach a consensus. This doesn't conflict with our earlier argument because it is highly unlikely that either interlocutor will suddenly choose to ignore the claims of logic³—though he may say that opposite logical derivations of the second value can be found (as they surely can), in which case the argument is moot.

The second criticism is that normative political philosophy is false consciousness. The more normative it is, the less aware is it that it's a byproduct of social, psychological and biological conditions rather than an autonomous and ahistorical creation of 'free' reason. This is because, even when abstracted from consciousness, values have freedom as their condition, while *truths* do not. (They *cannot*, since the hypothesis of freedom is false.) On the other hand, a political philosopher can be aware that he and his values are determined by objective factors and thereby mitigate his false consciousness.⁴ It is otherwise when a political philosophy becomes an ideology. In this case it enters the masses' collective consciousness as a simplistic ideal and nothing else. It is dogmatically assumed to be correct, when in fact values can *never* be 'correct'.⁵ Hence it is in this sense that political philosophy is a most acute false consciousness.

Objections, replies, conclusions and implications for action

Throughout this paper there has been a vacillation between the positions of freedom and determinism. This confusion must be cleared up. From the perspective of science, freedom—and therefore our very consciousness—is a delusion, but our inner perception indicates that we *are* free. Before we decide which is right, we should remark that science investigates causes and effects through the activity of reason, which means that its activity posits self-control—because it is

¹ Recall our conclusion that these supposed moral values actually cannot be distinguished from nonmoral ones.

² Of course, all reasons are extrinsic to what they argue for.

³ These claims do exist in the realm of morals; it's just that they can be ignored or disputed. There is always an element of uncertainty in them because of the "subjective leap".

⁴ We shall later elaborate on several of the points made in this paragraph, including that one.

⁵ It should be kept in mind that our preliminary critique of values was unrelated to their being false consciousness. Therefore it has nothing to do with why I say—in this context—that values can never be correct. (Maybe it was inappropriate to include the preliminary critique in this essay, but I felt compelled to clarify my own ideas on the subject.)

intentional—which in turn means that the activity of science contradicts the axioms of science. For example, science searches for the biological mechanisms that control thought; i.e., thought *freely* seeks out its own causes, and therefore its activity contradicts the purpose of the activity. Moreover, this is true of *all* endeavors to explain the factors that influence and determine the self. It is simply in the nature of intentionality—or “reason”, in this case—to posit absolute self-control. In short, if the axioms and purposes of these endeavors have validity, not only is ‘value-consciousness’ false consciousness but so are the activities of engaging in science, philosophy, psychology, etc. (These disciplines themselves (as opposed to the *activities* of them) are not because they are abstractions that do not partake of—nor presuppose, as does morality—freedom.)

When faced with the immediate datum of freedom, the question arises as to why we should trust science. There are at least three reasons. First, another ‘immediate’ datum is that causality is applicable to all experience. We *know* that when there is an event, there is an effect and a cause. This is both testified by experience and intuitively self-evident. Second, science has in the past few centuries had immense success. It has been ‘proven’ again and again that thoughts are based on neural processes, personalities are influenced by the environment, and so on. This in itself demonstrates that our immediate perception of freedom is wrong or only partly correct. Since the logical conclusion of science is that we are *wholly* determined—and, moreover, this agrees with our intuition of causality and our irresistible feeling that the world must be composed of continuous series of causes and effects—we conclude that our consciousness of freedom is entirely deluded. This seems absurd because we *feel* ourselves choosing and intending, but—and here is the third reason—we already know that our immediate experiences are not always trustworthy. Sensory experiences are sometimes deceiving, and consciousness is an elusive phenomenon. (This is why after thousands of years there remains a debate on something so fundamental as the definition of the self.) Logic, on the other hand, when supported by meaningful intuitions, and *especially* when supported by observed facts, is more reliable. Thus we can conclude that freedom does not objectively exist.¹

We qualify that statement with “objectively” because it is necessary to explain how our inner perception can be as wrong as it is, and the explanation involves a distinction between “subjectively” and “objectively”. Nature has made all animals subjective, which in this context means that they interpret everything in such a way as to judge (consciously or ‘unconsciously’) their own subjective/biological needs as most fundamental. Nature considers the continuation of life far more important than the imparting of objective truths to us poor creatures. Objectivity is at best superfluous to this goal and at worst harmful to it. It’s superfluous in that ants do an excellent job of surviving in spite of their limited appreciation of objective truths; it’s harmful in that humans have a tendency to react *against* life the more objective they are. (Religions, which are ‘objective’ in that they offer insights into the nature of the world, tend to devalue life on earth. This is true of Christianity, Buddhism, Judaism, Islam, even paganism, though for different reasons. Philosophy, another quintessentially objective pursuit, has a tendency to do the same thing.²) They see it as flawed and meaningless, and this can have only adverse effects on the continuation of life—nature’s own “categorical imperative”. It is not surprising, then, that freedom is ingrained in our consciousness, for without such an *a priori* knowledge of self-control what motive could we have to continue living? Would we want to live if we felt continually thrust between a cacophony of causes over which we had no control? I, for one, would certainly choose to end such a miserable

¹ As was remarked earlier, the facts that (1) we are conscious of degrees of freedom and (2) it seems necessary that there be these ‘degrees’ appears problematic to my hypothesis, but I don’t think it’s fatal. It boils down to my not having indicated the relations between the many factors that influence us. Unfortunately, I haven’t yet discovered a way to resolve the difficulty, so it will have to remain as a lapse in the paper.

² The major exception is when philosophy has progressed to such a stage that it can critique itself in this way. Nietzsche is the best example.

existence.¹

The point, poorly expressed, is that animals are organized in such a way that, as we stated earlier, they take themselves utterly seriously. They are not meant to peer over their horizons; such objective knowledge would have no purpose. In the one animal that is half-way capable of it, rationality has led to disaster time and again. Therefore there is a practical reason that freedom subjectively exists even though it objectively does not. –Mother Nature is engaging in her usual tricks. Though she no doubt had reasons in mind when bestowing a degree of rationality on us, she was wise in being niggardly in her gifts.

The implication is that we always exist in false consciousness. But is it the same as the kind involved in dogmatically believing particular values to be (nonmorally) good or (morally) right? No. We have to distinguish between active *beliefs* and the unavoidable nature of *self-consciousness*. Dogmatically believing in particular values is an unnecessary false consciousness—unnecessary because people need not always believe that their values are right or the best, false because values are not only subjectively (as intentions) but *objectively* based on freedom [since morality logically implies it]—whereas freedom itself is a comparatively ‘unconscious’, constant, essential (subjective) condition of human life, of rational, self-conscious existence. Science and philosophy, in turn, do not *in the abstract* presuppose freedom, though their *activity* necessarily pretends to be free. Thus, (1) disciplines partaking of the scientific spirit are *correct*, unlike morality, and (2) with regard to freedom itself, it cannot be transcended, while morality can—to an extent.

Admittedly, for thousands of years most people have felt compelled to live by a personal morality. It has been a way to impose order on their lives. (Ordering one’s life makes it easier to live. The ‘will to power’, the drive toward ‘self-affirmation’, is the explanation of this, but we shall not discuss it now.) This compulsion will not disappear in the foreseeable future. Moreover, in the form of social norms, ideologies, laws and *collective* morality it is necessary because it prevents society from sinking into chaos. Nevertheless, it need not exist in the form of morality properly so-called, viz. compulsory, autocratic values grounded in blind certitude. It can be light-hearted, self-skeptical, self-mocking, more a *dance* than a *funeral*. Values can allow for their own inevitable evolution, can respect our critique of them, can even acknowledge that freedom objectively does not exist. It will always be awkward that mankind is a bridge between crude animals and exquisitely rational beings, that we have been endowed with powers sufficient to appreciate that there is a mysterious world beyond our ken but insufficient to *understand* this world—that therefore we are fated to embark on philosophical excursions into the Great Unknown only to recoil back, as on a spring, into our merely subjective human realm of being—but as a resourceful species we can learn to live with and even to celebrate this state of affairs. We can, for example, judge when to take lightly the claims of reason and when to abide by them religiously. In the case of values we do the former, for we can do no else. But by being *intellectually* aware of truth we mitigate the false consciousness endemic in holding values.

Aside from such vague suggestions, what are the practical implications of our investigation? We have discovered that it is ‘philosophically’ neither good nor bad to kill a person. This conclusion is unacceptable within the bounds of our imperfect human world; pure philosophy is not necessarily a guide to action. (Life is richer than philosophy.) What we ought in fact to do is to respect the fundamental intuition of 99% of humans and affirm our species in the noblest ways possible. There seems to be biologically ingrained in most of us not only an aversion to actively harming our brethren but a concern for the well-being of the species. Many people do act against these involuntary feelings, but they can rarely eradicate them. We unconsciously hope for a continuation and glorification of mankind. From the perspective of nature’s mundane goals, this makes sense. Thus ‘it makes the most sense’ for us to abide by our life-affirming intuitions, to cultivate ourselves in lofty ways, to give life a positive meaning.

¹ This discussion obviously is rather nonsensical because it keeps presupposing freedom. But a complete lack of freedom is unconceptualizable, so we have to proceed within this limitation.

No doubt the critical reader will object to that, find logical flaws in it, provide compelling arguments against it. But we have already stated that we're temporarily forsaking lifeless philosophy—and that no matter what values we have, they will be vulnerable to criticism. Reason will always find ways to critique the subjective animalistic limitations within which we operate—values being one of them—but sooner or later we have to make a leap of faith. Otherwise we'll live forever in a state of suspension, a fantastical levitation above reality that precludes *action*. Admittedly, it's stupid not to preface certain actions with considerable reflection, but it's naïve not to suppose that at a certain point we break off thought and proceed in spite of objections. Therefore in spite of objections we can use the last sentence of the previous paragraph as a foundation for the truly human morality of the future—simply because no matter how many arguments are adduced against it, the irresistible feeling that such values are *best* will never be crushed.¹

Unfortunately the details of a value system are more problematic. Is political liberty with cultural stagnation a higher good than an enlightened despotism with cultural flourishing? The question has no sense because it tries to be objective, which as we have seen is not permissible. We can only examine the respective arguments, ponder our own inclinations, and make a leap of faith. And then live on the edge of a precipice for the rest of our lives.

Prescriptions for *collective* 'morality'—in its modified, loose, seemingly contradictory meaning of 'nonmoral imperatives'—cannot be the same as those for personal morality. A social entity, aside from not technically *existing*, is less subtle than an individual; its consciousness vacillates from extreme to extreme and rarely exists (as one) in the interim. Moreover, it is composed of the rabble, who are incapable of rarefied thought. Hence its morality is necessarily dogmatic. Reasoning has no effect on it; the only way for it to fundamentally change its character is for a social revolution to transpire. This would alter the objective conditions of society, which are what ultimately determine the mindset of the masses, and would thereby revolutionize the subjective conditions as well. The resultant morality would correspond to the resultant objective conditions, so we shall not attempt to outline it. Nevertheless, we can suggest that if the resulting society were communist—in its Marxist, anarchistic sense—morality would shed its current mendacious definition as *duties* and would instead consist of the nonmoral 'suggested imperatives' (or 'imperative suggestions') that characterize our own more sophisticated conception of it.

Good luck sorting out that semi-“Bacchanalian riot”. It would take a Jürgen Habermas to appreciate its ideas. (Not even I appreciate them.)

“Wherefore hast thou ignored the concept of rights in your paper?” Rights are the other side of duties. There are no duties, so there are no rights. In an extended critique of morality I'd have to address them in detail.

Notice I didn't mention God even once, though he's commonly associated with morality. It would have been undignified. In fact, now that I've mentioned him I feel silly.

By the way, I had a hell of a time writing the “preliminary” critique of values. It was not easy, nor was it fun.

¹ That seems to suggest that there are in fact 'objective' gradations of how 'compelling' reasons are vis-à-vis one another, but this is just because the reason I've invoked corresponds with our inclinations. So it seems (objectively) compelling. The point is that people who don't have similar inclinations need not accept it, i.e. that it's not 'valid' outside of an individual subjectivity. Nevertheless, in frowning upon disagreement with our basic moral value (expressed in the sentence above that starts “Thus ‘it makes the most sense’....”)—‘moral’ in a looser sense than its strict definition, though still meaning a kind of imperative (see the discussion of people's subjective perception of a continuum between moral and nonmoral values)—we automatically think that the reasoning and the value are both 'objectively correct'. This is a false consciousness whose inevitability I have already implicitly noted. But I've suggested that we can at least be intellectually aware of its untenability. We can walk a tightrope between objectively-oriented belief in our values and knowledge of their objectively indefensible status. (Hence the “dance” metaphor.)

May 12

I might as well paste into this journal the parable and the little description I wrote several months ago.

The willow tree wept.

“What ails you, my friend?” cried the wind to his brother.

“I’m old and tired,” sighed the tree.

“Time has caught up with you. That’s no reason for sorrow.”

“But I have one last wish which cannot be fulfilled.”

“What is your wish?”

“Brother wind...” said the willow, “I long to see the world! I long to break free from the shackles of the soil and to see all that life has to offer!”

“Yours is an admirable wish, and I shall help you. But I warn you, there is much of little value in the kingdom of animals.”

“Freedom, be it of the basest kind, must be nobler than my slavery.”

“So you’d think. I shall grant your wish.”

“With these words, the wind gathered his strength and burst forth in a gust. The old willow, helpless and weak, was uprooted and carried through the sky.

“This is marvelous!” gasped the tree in delight. “I finally understand the glory of freedom!”

Cradled by the wind, the willow sailed above mountains and oceans. He soared over lakes and forests and greeted the lofty eagle. Animals grazing in the fields below gazed in wonder at the flying tree; he waved to them and laughed. But then the willow and his friend the wind came in sight of monstrous collections of cement. Structures of glass and concrete rose high into the air, almost touching the clouds; round their bases congregated thousands of bustling little animals.

“What is this place?” asked the willow tree in horror. “What are those animals doing? Are they praying to those big cement blocks?”

“No, my friend,” answered the wind. “They live in them.”

“Are they being punished?”

“No, they choose to live so.”

“Why do they live in this desert when an oasis surrounds them?”

“Because, my brother, they have forgotten the power of the wind.”

“How can one forget such a thing?”

“Freedom breeds forgetfulness.”

“I don’t believe it! I can’t!”

“And they have invented something called ‘money’—”

“Enough! Tell me no more! Take me away from this place! Return me to my home!”

“As you wish.”

“I should rather spend each day weeping than live in such folly!”

So the wind deposited the weary tree into his old prison in the soil. And the willow spent the remainder of his days in sorrow, weeping for the poor souls who lived in freedom.

The Afghan woman lay on the shattered sidewalk in a shimmering lake of her own blood. Another explosion was heard from a distance. Her hair, knotted and greasy, was meticulously arranged in a tumbled mass to conceal her mutilated face. Screams emanated from the broken landscape. Her left leg was fully extended in its frozen sprint from oblivion. Nearby a building rumbled and fell. Four fingers of her right hand clawed at the red-soaked dirt, shuddered, and were still. Rapid fire speckled the road. The upper half of her left arm had fused to her torso, preferring warmth to cold amputation. Far off, a house was riddled with shells. Her breasts had shrunk to two wrinkles; the bone of her chin jutted into the air. A fourth explosion shook the mountains. The

cartilage of her nose had melded to her pale hollow cheeks. Two machine guns rattled their message to the hills. Her sunken eyes prayed for the last time in their black loneliness. More planes appeared on the horizon. Her child lay across her chest, sleeping peacefully, dreaming, the crown of his head severed gracefully from his body.

Across the world, on the other side of the chasm between life and death, stood Mr. Donald Rumsfeld and his superior, George Bush, before a crowd of their admirers: two paragons of righteousness in a world gone mad.

I'm starting to feel superficial again. Who the hell am I? *What* am I? Above I suggested that my contempt for modernity is a burden, but that's far from true. It may indeed weigh me down, but that's not unpleasant. I savor it! I'm too shallow, too weak, to want to overcome it.

I'd like to experience a spiritual upheaval every few years, as a way to keep me in touch with life. The time is due. When will be my next, or my first, mystical revelation? Maybe this journal is a crutch, a brace I must break free from in order to venture outside my cozy little nest. In fact, I'm sure it is, but I still lack the courage to walk without it.

[...] Regarding the Middle East...the fat-witted Ariel Sharon won't accomplish a damned thing until he and his countrymen move out of the occupied territories. If he thinks he's going to stop terrorism by inciting Palestinian youths to hatred he's an even bigger fool than he looks. His strategy can work only if he takes it to its logical conclusion and murders the entire population. However, being a compassionate, forgiving old man, he won't do that, so the upshot of all the shit will be that Israel agrees to a gradual withdrawal from the territories it illegally holds. How stupid do you have to be not to see that the way to pull the rug out from under terrorism is to *help* the population! Help them economically and end the repression. [Idiot, Israel doesn't care about ending terrorism. Violent Palestinian resistance is *useful* for Israel.]

May 13

I don't recall recording my impressions of George Sand's story "L'Orco". The translation may have been to blame, but I thought it was atrocious. So nauseatingly Romantic as to be disgusting. I was actually enraged. I felt corrupted as I read it. Here's a sample: "...And what a death! The greatest sorrow of this age of sorrows! And her life!—what a life! So full of beauty and contrast, so mysterious, so brilliant, so sad, so splendid, so enthusiastic, so austere, so voluptuous, so complete in all points of resemblance with all human beings! No! No life and no death have ever resembled hers. She alone, in this prosaic age, has been enabled to suppress all the common realities of life, and to leave nothing but its poetry...." Can writing be *more* cheap?

I don't understand how anything can travel at the speed of light. How is it possible for light to travel the circumference of Earth seven-and-a-half times in one second? Surely it would have to be 'dragged' rather than 'pushed' in order to go so fast. But what would it be dragged by? Space itself, somehow?—like it's filling a vacuum? Or maybe the key to understanding light lies in the fact that it gets sucked into black holes. Those structures are denser than anything else in the universe—maybe they're *infinitely* dense—so, according to general relativity, they must be the greatest 'warps' in space and time. Light's straight path curves around the sun and heads directly *into* black holes. This suggests that the reason why light radiates in all directions from its source is that it's heading into something infinitely dense, something that must be everywhere and nowhere, something beyond the edges of space perhaps? Does the universe exist in an enormous black hole, and the little ones that pepper it are tears in the 'fabric' and portals to the Great One, the deepest thing-in-itself, the Mother of all black holes? This would make some sense. It wouldn't explain the actual *speed* of light, but it would mean that the universe exists in a gargantuan spacetime warp that

draws light into it just as black holes do. But we have to avoid the ‘attraction’ metaphor, because Onestone has proven that the *attractive* force of gravity, properly speaking, doesn’t exist. So I’m still not sure what makes light go so fast.

Anyway, I’m sure that understanding light is the key to understanding the nature of the world.

Husserl’s book *The Phenomenology of Internal Time-Consciousness* is an impressive jumble of gibberish. It can have no meaning except for the author, who, fortunately, is dead. Therefore it’s meaningless. The pretentious schmuck obviously *wanted* to be imposingly obscure, for he doesn’t define his invented terms and he cockily waltzes on while stubbornly refusing to acknowledge that he’s writing nonsense. “If the presentification of the succession lived and experienced yesterday implies a presentification of the temporal field originally lived and experienced yesterday, and if this field manifests itself as a continuum of primordially associated phantasies, then what we now have to do with are phantasies of phantasies.” I’m not going to waste my time.

May 15

Finally writing the play about Ivan the Terrible. Its main purpose is to explore the nature of “evil”. Today I was offered a job at a summer music camp called Blue Lake.

Guess what! I just realized I can print music off the internet! How incredible is that! I should have been doing it all semester! God damn, I LOVE the internet! Private property is obsolete now that the world has an internet! [...]

No one appreciates as well as I that man is composed of schisms. The Great Schism is between animal and ‘spirit’, subjective and objective (approximately consciousness and self-consciousness). It’s the origin of the confusions about freedom, the ‘objective’ validity of value-judgments, and ultimately everything else of moment. Every value-judgment pretends to be objectively true, but it can be true only ‘subjectively’. As I said in my essay, for thinkers this poses a dilemma: we can’t help but judge things, yet we know that no judgment is *true*. Therefore the thinker must be a dancer. (As Nietzsche said.¹) The problem of freedom will never be ‘resolved’ in the extreme way people have hoped: it’s ingrained in the human condition, in the contradiction between consciousness and knowledge. Reason extends too far; it can’t reconcile itself with the subjective facts. I doubt that I’ll ever even *intellectually* solve the problem, though I’ll keep trying. –On the other hand, I relish the paradox. Certainty would make life banal.

May 16

As I suggested once before, the way you can tell who you are is by deciding which actions and thoughts and attitudes feel natural and which feel forced. Reading books can make you feel “double” if you adopt the book’s attitude, but if you can’t sustain it then probably that’s not who you really are. So I guess sustainability is what matters most.

May 17

It’s significant that guys never think of girls as creatures that defecate. It never occurs to us!

If you don’t have an intuitive understanding of the way I use Hegel’s “Other”, you may think that by using it to explain such things as why certain girls don’t take me seriously I’m introducing an arbitrary and shallow concept that doesn’t get us further to the solution. *Aber das ist ganz falsch*. On the phenomenological level I don’t see how an explanation can be much more fundamental than that one. Nor

¹ It annoys me that he discovered that metaphor before I did.

do I arbitrarily, ‘externally’ apply it to situations; I base it always on *feeling*, which is not as meaningless as external reason.

On the 15th I should have made it clearer that the ‘antinomy’ isn’t between a subjective awareness of freedom and an objective fact of unfreedom. Rather, the very application of the word ‘freedom’ to our subjective experience brutalizes the latter, because ‘freedom’ is just an artificiality that, moreover, doesn’t have an obvious definition. It both adds to and subtracts from the essence of our inner perception. Subjectivity can’t be encompassed in the word ‘freedom’—in *any* words, actually, for they carry too much conceptual baggage with them. (They *are* conceptual baggage, as subjectivity is not.) There’s a leap between the two (though this doesn’t mean that there’s a leap between an objective and a subjective *orientation*, as Kierkegaard thinks). Nevertheless, ‘free’ is far more accurate than ‘unfree’ as a description of how our inner being feels.

—Only a hypothesis, probably a mistaken one. For the overtones of concepts are integral even to our subjective, immediate interpretations of ourselves. They’re unconsciously tangled up with ‘pure’ self-consciousness. So our knowledge of the concept of freedom somewhat determines how we actually *feel*. Therefore, in our “real life-process”, subjectivity and objectivity, which are logically distinguishable, play off against each other and become essentially a Substance with two modes.

May 18

This quotation is so intense it brings tears to my eyes: “*Carcasse, tu trembles? Tu tremblerais bien davantage, si tu savais, ou je te mene.*” Said by a French general to his body as he was preparing for battle.

May 20

I’ve been home for two days. The arrangement [of the Toccata and Fugue in D minor] I downloaded off the Internet was infantile—nothing of excellence is free in this world—so today I bought the transcription by Ferruccio Busoni. It’s abominably difficult. I can’t learn it in one summer, so instead I’ll play the Prelude and Fugue in A minor.

I’m reading *The Development of the Modern State*, the CSS book I never finished in my sophomore year.

Nietzsche says we aren’t entitled to the thing-in-itself because we don’t know enough. This has some validity, but we might as well say that we aren’t entitled to quarks and black holes because we don’t know enough. My point is that, for humans, the thing-in-itself is a necessary concept—and not only because science presupposes it, but because it is an involuntary assumption of human consciousness. Insofar as the world is an object for us, we automatically see it as a perpetual thing ‘out there’. It’s subjectively necessary, even if it’s objectively wrong. —But that, too, assumes a thing-in-itself, an objective, true world! The noumenon is an *unavoidable* concept.

I was just reading a journal I kept at the age of nine. My writing skills have certainly improved a little. What a philosophical quagmire is self-continuity!

It reflects poorly on girls that few of them have been romantically interested in me. They prefer popularity over substance, and they’re bad judges of character. But they’re angels, so I don’t care.

For many months, and until I write my thesis, I’ve been following a simple strategy as regards philosophy. It’s been implicit at all times. I’m letting an array of thoughts percolate in my head, periodically ignoring them and then aiming glancing blows at them, feeling them from various angles, tip-toeing toward a coherent *Weltanschauung*. Hitherto I’ve been *forced* to do this, for it was only a couple years ago that I awoke from my dogmatic slumber. But now the embryos are hatching: I’m starting to see the outlines of my philosophy. If I harnessed my latent willpower and sat in solitude for weeks and systematically thought about everything, the product would be a long essay painting in broad strokes the framework of a new ‘system’. However, I’m waiting until next year, when I’ll have enjoyed a restful, energy-collecting summer

spent at a music camp far away from serious thought and when more ideas will have finished their incubation in my brain—and I'll be *ready*. My thesis will be my tribute to the passion of youth and the fortitude of philosophy in its decrepit old age *and*, above all, to the union between the two, whose consequence is: adding spring to the step of philosophy and a *goal* to the 'sprint' of youth. The most sublime partnership is that between the quest for knowledge and a giddy joy in life.

May 21

Johann Sebastian Bach: with the exception of Mozart, the supreme composer in history. With the exception of Beethoven, the most *solid* and *weighty*. You can *chew* on his music; it's like eating a well-done piece of steak—but juicier and tastier. In fact, ignore the qualifying clause about Beethoven.

I love that the music of Bach, Mozart and Beethoven is called *absolute* music. Or: absolute *music*. Talk about wisdom in language!

Freedom vs. determinism.... Surely the "levels" of freedom I mentioned in my paper aren't incompatible with my hypothesis. Our periodic subtle awareness of unfreedom is merely a leaking-into-consciousness of the objective causal world. I.e., factors that influence us become subjectively present, so we feel unfree. It's never the case that everything determining us is all at once filtered through consciousness; therefore we can be aware only of *partial* unfreedom. But something still feels wrong. My thoughts haven't 'clicked'. Maybe I've misunderstood the paradoxes.

May 22

Remember those obsessive-compulsive journal entries from my high school years? They grew out of the fact that it was hard for me to operate unless I was utterly clear on my "resolutions". My mind would feel 'cloudy' if I wasn't exactly certain of the path I'd take to improve myself. The way I felt then is similar to the way I feel now, when the paradox of freedom is plaguing me. The main difference is that I'm more successful at ignoring the obsession now than I was five years ago.

May 23

Consciousness doesn't control anything. It could do so only by intending, and intentions aren't what cause bodily movements (which are what cause events outside us). Consciousness can only 'immediately consent to' actions. (Does consciousness control itself? = Do thoughts have control over themselves? I'll get to that later.) Biologically it makes sense that intentions almost always coincide with actions, for they are both products of neural activities that are coordinated together. Now, when a person's actions don't coincide with his intentions we say he is unfree. I don't know if that ever occurs, but if it does we're justified in saying, for example, that a criminal 'subject' to it isn't responsible for his actions. What about criminals with severe psychological disorders? They usually aren't considered free because their intentions are products of factors over which they have no control. But according to biology, so are the intentions of everyone. Do those criminals have *less* control over their intentions (and, by implication, their concomitant actions)? In a sense, yes. Their illnesses make them less capable of 'pure' rationality than normal people are, and reason is freer than less intentional things like passions and schizophrenia (and therefore—).

It's a *fact* that productive forces, especially in this day and age, demolish all obstacles impeding their development. Cloning and genetic engineering will conquer all artificial devices invented to regulate them. I explained why in an earlier entry. A second *fact* is that private property rights will grow progressively more incompatible with the distribution (general usage) and further development of the

productive forces. Capitalism hasn't yet exhausted its potential, but, as I've already noted, in certain spheres it's coming close. It'll be in grave danger fifty years from now. I'm sure of it!

Some people think that Marxism's influence has been a testament against its central ideas. They couldn't be more wrong. In fact—as I noted long ago—the eclipse of Marxism and the communist countries was an eloquent *confirmation* of the theory (and refutation of the objection's premise). Lenin, Stalin, Mao, Castro and others based the revolution on *will*, and in the long run they failed ignominiously. They inserted themselves into the historical process and thus, as it were, threw a wrench between the hitherto smoothly functioning gears of historical logic. Objective conditions weren't right; the opportunity for revolution had to emerge involuntarily, from the inner workings of the economy, in order not to be specious. That's a vague hypothesis, but in a refined form it would be correct. (How will I arrive at the refined form? What will it be?)

May 24

That thoughts and actions are directly determined by cellular processes we don't control is irrelevant to the problem of freedom. Though we are effects, we can still be free. In the beginning of yesterday's entry I forgot to make the point that, even though science has left to us nothing but the ability to 'affirm' actions (and not to control them), we *are* nonetheless free. This is because...—well, damn it, we're *obviously* free! = We obviously have a measure of control—which admittedly is objectively false, but in our intentional world it's true. Moreover, subjectively we and our actions are an immediate intentional unity, and therefore we 'effectively' control them. It's because they're intentional that they feel just as free as our intentions (thoughts) themselves. We're less free under the influence of passions and mental illnesses because we feel less in control; i.e., the 'mental structure' is less intentional.¹ (We feel most in control when we're most self-conscious.) By "less intentional" I mean that we feel...less in control! Since that's circular I have to introduce a third synonym, viz. *rational* (or lucid; see the relevant entry). Rationality, or objectivity—in a particular sense unlike the one I've been using—is the highest realization of freedom, because we can *choose* more easily, we feel like we have a better grasp of a situation. But that has nothing to do with intentions per se: there are no grades in intentionality. Human consciousness consists of intentions—and that's the end of the matter. I got confused because the notion of control seems implied in the notion of intention, while it actually isn't. (I thought that "intention" suggested "control over intention", in which case intentionality *would* be subject to degrees because the alternate presence and absence of lucid objectivity means that we don't always have the same control over our intentions). However, all this means that there are two relevant senses of "freedom": that relating to intentions and that relating to control. The first is constant, never more nor less, because humans have intentions in every waking moment; the second fluctuates because objectivity isn't constant. (The first is concerned merely with the abstract fact of our intentionality. It's far less meaningful than the second, but it's not empty.) Self-consciousness, in people for whom it doesn't evolve to a pathological *idée fixe*, is associated with objectivity (control) to an even greater extent than pure reasoning is, so it's freer. Insane criminals are less objective than the rest of us, so they're less responsible for their actions. People sometimes say that it's because of their illness that these criminals are unfree—i.e., they leap from objective involuntary causation (which is, after all, applicable to everyone) to the unwarranted statement of "therefore, unfreedom"—but they fail to provide the link to *subjective* unfreedom, which is the only kind that matters to humans. They fail to say, "The illness causes criminals to lose their 'rational lucidity' or self-control, and *this* is the direct cause and symptom of their unfreedom." Without that connecting link between the objective and subjective realms we confuse the two types of unfreedom. The objective kind is made neither more nor less by the presence of a mental illness, while the meaningful subjective kind is made to exist in a big way.

Okay, *BABY!* This time I *know* that my analysis is meaningful. To make it seem so to you I'll have to expand on it, but I'll save that for another day, when it's not 2:30 in the morning. I think I'm *finally* on

¹ I'll explain what I mean by that after I've figured it out. —For even schizophrenics and the insane have intentions!

the way to a solution of the paradox of freedom. The main thing to keep in mind is that analytical distinctions are absolutely imperative—are, indeed, the solution itself. Yet they always have to be reconciled with the immediate unity of experience.

By the way, yesterday and today I wrote the rough outline of my play. It was frustrating, but I'm pleased with the outcome.

May 25

[...]

I hope that by the time you read this journal the Ozzy Osbourne show will have disappeared from society's collective memory. On the off-chance that that's the case, I'll inform you that Ozzy and his family have let cameras invade their home; the result has been a wildly popular MTV "reality" show. It mislikes me to mention it; I do so only to point out that reality TV is the newest fad. More and more movie stars want to have their private lives blatantly exposed on television. The *Truman Show* mentality has become the definitive characteristic of our culture—with reality TV as only one of its manifestations. What will be its long-term evolution?

We shouldn't confuse *dispositions* with real unfreedom. I may have a disposition to be shy, but I remain free to do as I choose.No, no, ignore that. I have to do a lot more thinking before I make statements like that.

—Let's try another approach. Because humans aren't perfectly objective beings—aren't omniscient, omnipresent and omnipotent—they can never be perfectly free. If we were omniscient we could, for example, survey an infinity of linguistic possibilities before choosing one and then speaking; or we would never be subject to the unfreedom of absent-mindedness, for instance. If we were omnipotent we could choose to turn emotions on and off; we could act however we wanted at any time; we could even control others. Notice that omniscience applies only to thought and omnipotence properly applies to everything outside of thought. Hence there is another analytical distinction in freedom (which I've perhaps implied a few times): control over 'intentions' (thoughts abstracted from any emotional content) and control over actions, passions, dispositions and so on.

Before I continue I'll tell you one of the things that's bothering me. Namely, from one perspective it seems that shy people should be able to talk if they just decide they're going to, but from another perspective....they can't. In fact, they *can* do it (obviously)—but something's blocking them, so in a way it's 'difficult'. What does this difficulty consist in?.... You probably don't understand why this is causing me trouble; on paper it seems simple, but it *feels* paradoxical.

May 26

Several days ago I read the second book of Samuel. Now I'm reading as much as I can of John Richard Green's four-volume work *A Short History of the English People*. It's engaging and well-written, though the author uses vain poeticisms.

It may be wrong that the brain is the sole cause of thoughts. However, at this point in history there is (1) no evidence against the purely biological hypothesis and (2) no obvious theoretical lapse in it. It does seem paradoxical and uncomfortable to people, but that's far from being an argument against it. Even our inability to understand how neural processes can produce consciousness isn't a valid objection. The theory is simple, logical, and explains the facts. [...]

May 27

The use of the word “reduction” to mean “conquest” is strikingly poetic. “Wallace reduced Stirling castle”; “Edward reduced Llewelyn’s army”. He *reduced* it! Isn’t that wonderful? It’s like “absolute music”. So simple and matter-of-fact, yet so pregnant of meaning.

In what way are independent people like Nietzsche freer than the typical American, the herd animal?

....There’s a chance I remarked on the following long ago, in a land far, far away. Karl Popper was an ass to rant and rave so often, in such banal moralistic vehemence, about the totalitarianism of Plato’s *Republic*. What was he thinking?—the intellectual thug! It’s like attacking the Bhagavad-gita for sanctioning war, except that it’s even *more* irrelevant and demented. What can be more obvious than that the *Republic* is totalitarian? The stupidest peasant could see that—and only the stupidest peasant would thus flare up in righteous indignation at every chance he got, ignoring the philosophical originality and fecundity of Plato’s masterpiece (as well as the historical context!). Popper even had the mindless audacity to say that reading the work turns students into “little fascists”. (“Open Society”, eh?) “[Popper’s] attacks on dogma, authoritarianism, and historical inevitability, his stress on tolerance, transparency, and debate, his embracing of trial-and-error, his distrust of certainty and espousal of humanity—these today are beyond challenge.” [From *Wittgenstein’s Poker*.] Yes, as are the profound ideas of diluted liberalism and the hallowed canon of common sense. Only a genius could have been so completely derivative and obnoxiously boring. But let’s not forget the greatest discovery in the history of the philosophy of science, the grand doctrine that can be summed up in that one sacred word to which all scholars and everyone with half-a-brain pay obeisance: falsification! Falsification! It’s the new gospel, brethren! Hallelujah! [...]

May 29

[...]

Most philosophers and scientists have been stunted human beings. They have let the search for knowledge control them. At this time of my life I feel dismal when I continually focus my energies on knowledge—and I feel dismal when I don’t! The second feeling is connected closely with my acute awareness of the Other—as is, I suppose, the first. I can’t separate my ‘intrinsic’ desires (if they exist) from what I do for the sake of “recognition” (or just from Other-awareness).

May 30

By “Other-awareness” I didn’t mean real people—or only indirectly. I meant my own self-consciousness, or a kind of vague, universal, abstract Other. It’s hard to distinguish the two.

[...]

June 2

Today I finished writing the second scene of my play. I also read more of Green’s book, of which I’ve almost finished the second volume. On the other hand, I’ve already forgotten most of it. Why does that always happen?! My memory is a sieve. –Be that as it may, reading about history is more thrilling than reading an epic novel.

June 3

I want a creature other than man to recognize mankind’s accomplishments—preferably an immortal being. That way, our achievements will themselves be immortal. Incidentally, the human desire for any

kind of immortality isn't a psychoanalytical but a phenomenological....phenomenon. It's a species of the genus "desire for Other-recognition".

Today I wrote a couple more scenes of my play. I'm trying to write as much as I can during a few lucky hours of inspiration. Of course, when I reread it in the fall I'll think it's shit.

June 4

Mother Nature knows her work well: the people who are bothered only occasionally by life's meaninglessness are the ones who don't have the capacities necessary to overcome it, while those who are obsessed by it have been blessed with talent. What an exquisitely refined system of rank has been devised by our creator! It's so fair and humane! (All of Mother Nature's edicts are wise beyond human comprehension.)

Yesterday and today I read the delicious play *A Midsummer Night's Dream*. The last time I read it I was nine years old and living in Cambridge. Shakespeare's self-mocking sense of humor is all the more delightful in that it's aware of its own value and the value of its "frivolous", dreamy creations. "You have but slumb'ed here while these visions did appear", says Puck at the end, reminding us of the significance of sleep in the play. In other words: watching the play has the same regenerative effect on the spectators as sleep has on the characters. If sleep is necessary and healthy, so is Shakespeare's comedy. It's an idyllic, refreshing recess from real life.¹

In the past few months I've noticed that I get shivers down my legs and tears in my eyes over the most trivial cultural experiences. Puck's last speech—and my realization that Puck is intended as Shakespeare himself—had that lovely effect on me.

June 6

I call Goethe's arrogance (or pride) unenlightened because it isn't indistinguishable from a self-critical, self-deprecating approach to life. (Analytically pride can always be thus distinguished, but subjectively, in one's immediate consciousness, it needn't be (though it usually is because most people aren't very self-knowledgeable, i.e., self-"critical"—so their pride, if they have it, is more naïve)).²

Long ago I remarked on Karl Marx's prediction of the Russian revolution. For you willful ignoramuses who still have doubts, here is proof of his remarkable prescience (from a letter he wrote): "What the Prussian jackasses do not see is that the present war is leading inevitably to a war between Germany and Russia. And such a war No. 2 will act as the midwife of the inevitable social revolution in Russia." America too will experience an inevitable social revolution—though it will almost certainly be comparatively gradual—but I can't say for sure what will act as the midwife.

....My play is brazenly mediocre. It's far too short and I haven't planned it out well. As I was writing it new themes kept popping into my head. Moreover, in general it's amateurish. So I'm indefinitely postponing writing it. In the meantime, I read tonight Henrik Ibsen's play *The Master Builder*. I would use two words to describe it: surreal and thought-provoking. I could think of several possible interpretations, but I'm not in the mood to think analytically. Music has temporarily blotted out my analytical streak.

I can think of no more perfect heaven than for a girl to sit on my lap as I gaze into her eyes, our souls embracing, and we listen to the last movement of Op. 109. That final variation, when you feel yourself engulfed in an ocean—and the theme itself, and the first variation, and the whole movement!—is Passion.

¹ Alternatively, it *is* real life, and everything else is the illusion. I prefer this to the other.

² My pride too is unenlightened sometimes. In other words, rather than being proud of my relentless self-criticism—which pride would, ironically, be coexistent [you mean coextensive?] with the critical attitude itself—I might be proud of my achievements, my mind, my abilities, etc. The distinction is very subtle, especially because pride can be a result of both the former and the latter at the same time. In my case I think it generally is.

Nothing more nor less than Passion. Beethoven, Beethoven, *I love you!*

How odd it is that what I consider to be my very *core*, the key to my identity, the glue that holds me together, the comfort that nips identity-crises in the bud, enjoys scant expression in this journal. Maybe because it's so ever-present, nearly coextensive with my consciousness, that I take it for granted and hardly even notice its existence much of the time.

June 7

I have little doubt that readers will criticize my reflections as not exact enough, nor boring enough. "Precision is the measure of knowledge", they'll say. "You can't know anything unless you're precise, for a lack of preciseness is obscurity, and obscurity only clouds the issue." I say, on the other hand, that a ready-made reliance on the criterion of "preciseness" is a sign of the philosophic philistine. Precision is good, but it shouldn't be pursued at all costs—because it tends to castrate the potent intuitions of the true philosopher.

I read part of Windelband's *History of Ancient Philosophy*, but it doesn't interest me much.

....I've always found it singularly amusing that, when having a conversation, one has to choose which of the other person's eyes to look at. I find myself bouncing from eye to eye, sometimes pausing in the middle, losing track of what's being said because the situation is so hilarious. We're talking so seriously, nodding gravely, grunting in agreement, while at the same time we're deciding which eye to focus on! 'Which facial feature should I favor? The lips, the left eye, the hairline.... Hurry up, I must decide!'

....What I've never been able to understand is why self-mastery should be such a great thing. I admit it has a nice ring to it, but if someone doesn't care about 'controlling' the directions in which he cultivates himself, why is it nevertheless a 'better' thing for him to do? Besides, the term itself is practically meaningless, except in the vaguest senses. It literally has no definite philosophical meaning, i.e., no *sensical* meaning. How are we supposed to know when we've achieved self-mastery? What's the difference between him who expresses his nature by being a "universal" man and him who does so by perpetually writing music? For all we know, both are expressing characters¹ that they hadn't the slightest influence in forming. Maybe Goethe had in this sense as little "self-control" as Mozart. Furthermore, we obviously can't proceed a single step in clarifying the word until we clarify the self and freedom. I'm not surprised that Goethe didn't attempt such an elucidation, but I am surprised that *Nietzsche* didn't. What could be more fundamental?

Supposing that I can give a meaning to the word, one can meaningfully argue against another person that self-mastery is "better" only if both agree on something more fundamental (which the value can be based on) and if they ignore the objections relating to the subjective leap (and the corresponding 'right' we have to hold whatever values we like even if they're logically inconsistent). In other words, I'm killing the pretension to objective validity that tends to be inherent in value-judgments when not qualified in the ways I've qualified them. Both Nietzsche and Goethe assumed their ideal to be objectively good (in a particular sense of "objective", having nothing to do with "independent of humans" or "eternally absolute"—a sense which is, in fact, not entirely meaningful; hence my inability to describe it adequately).

June 8

Girls are *achingly* fresh beings. Everything about them—their weaknesses, vanities, frivolities—I adore. That they're the passive, unwitting medium for the greatest miracle of life almost makes me weep with love. (If their role were somehow more conscious or intentional I'd love them less. It's because of their *weakness*—their *involuntary* participation in the mysteries of the Unknown—that I cherish them so.) Weakness, albeit of a specific, perhaps indefinable kind, will always typically attract men to women, and strength will always attract women to men. It's the unavoidable dialectic of the mutual affirmation of the

¹ Or: are expressions of characters....

sexes. –Eat that, feminists!

[...]

In Marx's attempt to leave philosophy he must have understood by that vague word only metaphysics and ethics, for otherwise his position isn't even plausible. I don't agree with his rejection of metaphysics (as you already know) because humans aren't merely a reflection of conditions, and therefore reason has a degree of autonomy. (Ultimately we can't consistently deny that. I suppose *intellectually*—i.e., ignoring reason's *activity*—we can, but this is futile as a justification for rejecting metaphysics because it means we'd have to 'reject' every other doctrine arrived at through reason. They'd all be mere reflections of [psychological, social, etc.] conditions!)¹ On the other hand, if Marx thinks that metaphysics is *irrelevant* in the way that God is, I disagree. (Depending on how we define the term, I agree that it's *less* relevant than science etc.)

June 9

The Prelude and Fugue is fun to play, highly satisfying. It fits the hands perfectly, like Chopin. The tempestuous ending—oh, what an ending!—calls for such murderous fury that I worry I'll break the piano's strings.

June 11

I suggested that reason can have validity in spite of the many irrational [no, you mean *non-rational*] factors that influence it because it can be considered in itself. It can be abstracted from them. In fact, that's what the act of reasoning involves: immediate subjective ignorance of, or 'abstraction from', its own causes and constraints. It applies objective measures to itself and thereby reaches conclusions that it considers true. The critique of reason under consideration yields nothing, because it undermines itself. That's why I wrote in the footnote that we can apply the critique only to things outside the domain of reason, like religion and values. It's not self-contradictory to criticize them in this way because they don't partake of the rigorously logical, rational, truth-seeking spirit of the criticism, as do science and philosophy (the two general categories of strict reason).²

Ohhh, I'm in philosophical despair. I don't even know what I'm arguing for anymore. I'll have to begin again when my mind is clear.

....We unpractical self-centered people have, perhaps, a greater potential for acute sadness than ordinary people. I'm listening to Scott Joplin's bittersweet song "Solace", which should suggest to you my state of mind. I'm not rejoicing in my existence. It's always the little things that upset my delicate equilibrium—things like an email Sangeetha writes, or an evening spent at a picnic, or philosophical confusion, or boredom. Or a day in which I accomplish nothing. All in all, I feel trapped within my rational irrationality. I'm a seething mass of contradictions: in every direction I turn I run into conflicting desires, conflicting attitudes, conflicting thoughts. An example is the war between, on the one hand, my intellectual integrity and, on the other, my weariness of questioning everything and my tendency to judge and ridicule people. When I obsess over philosophy I'm frustrated and unsatisfied, but when I don't I have a guilty conscience. I always have a craving to express myself through writing, partly because this is the best way

¹ In a similar situation in my paper I failed to appreciate that science and philosophy would thus, by their own ideas, be groundless. I saved the day by saying that we should 'bracket' the conclusion of self-contradiction, i.e., go halfway by simply accepting the idea in question and recognizing that it's the (incomprehensible) paradox of freedom that makes the contradiction inevitable. But for one who wants to be strictly consistent, as Marx did, the self-contradiction is indeed fatal. (I didn't write any of that, but it was implicit.)

² [That paragraph is directed against, among other things, postmodernist critiques of reason and science. Science is criticized as only an expression of social conditions, a product of power relations, etc. A stupid criticism.]

to be judged an impressive person by—whomever. So my guilty conscience is in part a result of subtle vanity. Maybe it's *entirely* such a result; I can't tell. I'm moved in so many ways that I don't know which are imaginary and which genuine. I don't know what my real motives are; my mind is so far from being translucent that it's indistinguishable from mud. Sometimes I think that if I really wanted to I could renounce philosophy altogether for months and instead pursue love or hedonistic pleasures. But philosophy is still a 'needed' crutch, almost as much as this journal is. —Nevertheless, the intellectual side of me is daily growing more impatient with itself.

June 12

'Science' is a better method of pursuing truth than religion and mysticism because it focuses all its energies on impartially investigating the object, whereas religion is more a projection of the individual's state of mind—his desires, fears, awe, etc. Science does as much as it can to suppress the subject, which is preferable when we're making statements that claim to be true of the object!¹ (Mysticism can be more sophisticated than religions like Christianity because it's usually metaphorical: it doesn't pretend to be literally true, as do science and Christianity.) It's this which distinguishes that critique of reason from religious thought and so on, and is therefore the reason why the critique isn't circular when applied to religion etc.—i.e., because they're more subjective—while it *is* when applied to science and philosophy. Of course, there's no real dividing-line between the two spheres, so ultimately this critique of certain spheres as "false consciousness" applies to *all* activities of thought. I'm merely saying that in the case of scientific reason it can result only in the injunction to examine positions from all possible standpoints (because every standpoint is subjective, caused and constrained), while in the case of all less objective thinking it (this thinking) *is* essentially nothing but psychological dispositions etc., which can therefore be more effectively criticized as false consciousness (or simply as....)² Of course, to be thorough it's always necessary to examine the claims of this thinking on their own terms—so I'm not sure why I expended so much energy writing all that at such a furious pace. I had to get those thoughts off my chest, I guess. (So 'vanity' isn't the only reason for my concern with philosophy, or even the most important one. Duh.)

Maybe the essential 'criterion' isn't scientific objectivity but the degree of orientation-to-an-object. Science and philosophy are most objectively oriented, religion less so, lyric poetry even less so (or equally). In other words, this objective orientation adds something that's absent from purely subjective pursuits, which means it can't be exhaustively analyzed by invoking conditions that cause and influence it, as lyric poetry and anything else that's 'in-itself' or 'for its own sake' can.

These considerations, however, are so hard to grasp and problematic that they may be only fragments of my imagination, resulting somehow from language and nothing else. Well, the fact that they don't correspond to some 'real' world doesn't mean they're 'unreal' problems. They're invented by us, but they needn't therefore be illusory. They're illusory only if they can be solved by clarifying ambiguities in language.

June 13

At the end of *Les Préludes*, when the piece is coming to its magnificent conclusion, the horns blare a single note as the rest of the brass section continues its climb to the final triumphant chords. The effect is hair-raising and tear-jerking. Nothing could sound more heroic and inspiring. It's both a call to battle and a signal of victory. The reason I'll never lose myself in hopelessness is that this piece of music exists.

¹ I'm including philosophy in 'science'. Philosophy is impartial and objective even when investigating the 'subject' (which then becomes the object).

² I was conflating the two critiques, because they're very similar. They're almost identical.

June 16

The camp has a rustic flair, and the people are quite friendly. At a campfire last night I met my fellow counselors: a few cute girls, but most are somewhat homely.

Breakfast is at 7:00 everyday. That pleases me not.

....So far I've made the acquaintance of several angels. Two of them I've already recruited to play Dvorák's Piano Quintet in A with me; another is from Scotland and plays the harp; a fourth is a beautiful sophomore named Catherine who plays the french horn.

June 17

Woke up at 6:15, took a [freezing] shower (shivering uncontrollably) and spent the rest of the day in meetings and workshops. Also played soccer with Maureen and Ryan. Now I'm going to a restaurant with everyone, where we'll sing karaoke. (I actually enjoy karaoke, believe it or not.)

June 19

I'm about to go to a restaurant/bowling alley. Today I spent in meetings and workshops, most of them commonsensical. I received my schedule: I'll be the pianist in a jazz band, which is ironic, because...I've never played jazz piano. I'll also help supervise a camper band and play in another ensemble. I'm still trying to start that chamber group. The early mornings are as unpleasant as ever—it feels like my life consists of one long day with moments of darkness interspersed, whereas formerly my life was an eternal night with moments of daylight added for effect—but at least the showers are no longer a problem: I take them at night, when the water's scalding.

....I talked to an enchanting girl tonight. She is the personification of the Good. Gorgeous, tall, sweet, friendly, funny. Laughs all the time. She's interested in philosophy, psychology and writing. Plays the violin. Has a lovely smile! She followed me around tonight; I could feel the chemistry between us. Her name is Kristin. I'd better not be imagining everything again!

June 21

I've never been so busy in my life. Today I have a few hours of spare time because a canoe trip was cancelled.

Kristin, the potential model, doesn't seem romantically interested in me. She's friendly, but she's always around four other girls, so I can't talk with her in solitude. It's making me lonely, even though I'm so busy I don't have *time* to be lonely. All other girls here pale in comparison with Kristin.

June 23

That was an exaggeration. Kristin isn't "ideal", though I still really like her. Last night we and some friends saw a movie and went to a restaurant. The evening started off well, but as it wore on, the other boy with us (Brian) monopolized the conversation and K. stopped paying attention to me. Luckily, Brian isn't much of a competitor: though every word out of his mouth is hilarious, he's neurotic and annoying. Still, by 11:00 I felt pretty dejected. I'd planned to make a 'move', but an opportunity didn't present itself.

Today wasn't much better for a while. I had no energy to do anything, nor did I care. But in the afternoon I happened to meet Kristin alone (the first time ever); after innocuous conversation I broached

the topic of our relationship. We both professed to “like” each other etc., but she said she just wants to “go with the flow”. Be friends now and see what happens. —I felt better afterwards even though I hadn’t reached anything akin to ‘closure’.

Have to play in a talent show now.

June 24

It went well. I’m always intimidated by talent, though I have it myself. Sometimes I actually wonder why girls would be attracted to *me* when other guys have such skills. I know it’s absurd.

Afterwards Kristin and I sat on the beach together, an orange moon above us. It was romantic; if I hadn’t talked about our relationship the other day I might have tried something. But Brian and Amy showed up.

....Opening day is tomorrow. I won’t be directly in charge of campers because I’m a Unit Counselor, which is essentially a glorified name for: not Cabin Counselor.

This past week has lasted a short lifetime. My former self is a memory. I literally feel as though I was born last week: that’s how radical the break has been between my two lifestyles. I haven’t thought about philosophy once, except superficially. Sociality has been my one concern. My self-continuity feels external—but oddly (and inevitably) internal at the same time. Who can understand it?

I don’t have high hopes for my friendship with Kristin. I can’t see myself wanting to be involved with her except romantically. In fact, it’s hard to see myself wanting to be involved with *any* girls unless there’s at least a *tinge* of romance. Friendships with guys I tend to value even less. Therefore it seems that pure friendships scarcely exist for me.... I’d better shut up before I coax myself into depression.

June 29

I like most of the boys in our unit. They have a lot of personality. One of them, a 13-year-old, plays the sitar, meditates whenever he has the chance, and reads about Eastern religions during dinner. Another is convinced he has telekinetic powers. A third is a funny, adorable, precocious boy who unfortunately stutters. They all apparently are fond of me. I’ll miss them when they leave.

June 30

The Pleasant Dream
A Romance, by Chris Wright
(Outline)

Act 1: Chris, Kristin and three other girls have their night off, from 7 to 12. They go to Ruby Tuesday’s. Chris is terrifically bored as he listens to the three uninvited guests gossip and complain about various counselors. He and Kristin say little.

Act 2: At last they leave. They drive to the shore of Lake Michigan and wade in the water. Kristin and Chris go off together, preferring to have a private conversation. After struggling for a while with his shyness, Chris gets the nerve to tell Kristin he’d like to kiss her. The tension has been building to a heart-pounding peak in this moment; the two kiss passionately. But Kristin is self-conscious (her friends are nearby), so they sit on the wet sand and have a confused, halting conversation. Then they kiss again, etc.—until their friends say they want to go back to camp.

Act 3: They arrive at 11:00. Kristin tells her friends she wants to take a walk alone, so they part. Then she and Chris walk to the camp’s beach, sit on a bench, and take advantage of the solitude. [...] They hold each other in a cacophonous silence. [Oh, come on!] [...]

—Yes, that all happened last night. I needn't tell you how overjoyed I was. [No, you needn't.] When I awoke this morning I couldn't believe it hadn't all been a dream. It had all happened to *me*! [Very impressive, Sherlock.] How was that possible?! [Good question.] [...]

[...]

July 4

Well, apparently, at this time of life Kristin “want[s] to have friends rather than a boyfriend”. Sound familiar? She didn't give a better reason, and I didn't press her. I smiled and said, “I understand. It's okay.” I just didn't *care* enough to talk about it. Besides, by now I'm used to rejection.

...Fortunately I'm absurdly fickle. My sadness lasted a few hours—and will no doubt reassert itself soon—but at the moment, sitting alone in my cabin, I don't care about disappointments. I like my campers, and some of them *love* me. I never lose my temper with them, I'm stern only when I have to be, I treat them like adults, I'm patient, I never ignore them,¹ and on the whole we have fun together. I'm like a favorite uncle to the ones who interest me. We even discuss our love-lives and give each other advice. It's stupid to mull on misfortune—though tempting.

July 6

A few days ago I conducted a band for twenty minutes. The real conductor was worried he was about to have a heart attack, so he left the rehearsal to me as he went off to the hospital or somewhere. The kids were justifiably amused by unique style of conducting: waving my arms about and making frantic gestures when I wanted them to stop playing. They made fun of me, but we had a good time.

I just read aphorism 301, “The fancy of the contemplatives”, from *The Gay Science*. Now I feel like myself again. I will not be bogged down by social disappointments; I'll accept them or ignore them and continue my lifelong trek toward that most ambitious of all goals:—death! (Yes, I'm *choosing* death. I could reject it if I wanted to.²)

...Tonight we saw a concert. (There's one every night.) Kristin sat in the front row of the orchestra, so I was able to gaze at her from afar. The other players didn't exist for me; she and her golden hair leapt out from the stage. She was the foreground, the others the background. I watched her long, slender fingers maneuver the bow in its fluid strokes and reflected that if her personality were a little more open and easygoing I could love her. I was happy as I watched and listened tonight, but it was a bittersweet happiness full of yearning. —Incidentally, Nietzsche is right that I generally don't distinguish between happiness and unhappiness. They blend together. When I'm happy I'm often sad on some deeper level, and when I'm unhappy I tend to feel subtly and inexplicably happy. Maybe it's hope that sustains me so, or maybe it's the ‘tenderness’ that seems to be a part of me. Either way—I don't care and I'm going to bed.

July 7

Loneliness, sadness. The campers are leaving today, and I won't miss them. They're too similar to my peers: mean, loud, malicious and dull. I'm sure the high-schoolers will be even worse. Why must people be so petty?

¹ I know all too well what it's like to be ignored.

² Existentialists would approve of that sentence's pointless obscurity.

July 8

“I’ve lived too long on my knees”: praying and meditating and loving and begging and crying and dying. With my hands clasped and raised to the heavens. I’m not in touch with myself and I never will be.

July 9

Met a girl named Christy, a friend of Kristin’s. Our conversation revolved around sex, our past lovers, etc. Christy obviously likes me a lot, but—since fate doesn’t, I wasn’t attracted to her. She ain’t pretty enough. Damn! I finally find a girl who wants a guy like me, but *I* don’t want *her*! Could my life be any more ironic? It’s like an elaborate practical joke, or a Seinfeld episode. The only sensible reaction I can have is to laugh and shrug my shoulders.

Reading *Guy Mannering*.

July 13

Not much has happened lately. One word describes my life here: ‘puttering’. Everything is repetitive and easy, though not necessarily boring. I was far more bored during the months preceding this job. Today something out of the ordinary occurred: Christy told me that I treat her better than any guy she’s known¹ and that she likes me a lot. She even thinks I’m a great conversationalist. I don’t have feelings for her, but I couldn’t bring myself to say that. Instead I said that, while I enjoy talking to her, we hardly know each other—and that therefore I can’t say anything definite about our prospects. We talked awhile; I was relieved when she had to go to a rehearsal.

Kristin and I haven’t had real conversations lately. I don’t think she cares. She’s a less exciting person than I thought a week ago—so *I* don’t care either. I’ll let her be as bland and detached as she likes. Good riddance, Kristin! No hard feelings; we’re just different people.

[...]

July 18

Talked to Chris again—a friendly, chatty conversation interrupted by card-games. On the night of the 16th I went to a restaurant with ten counselors. It was fun only because I was in a good mood. I had to listen to a pretty girl talk about herself and her jumbled religious beliefs. She thinks she has psychic powers and considers Ouija boards dangerous temptations of fate. She’s an active Christian, though; she spent much time complaining about her Christian friends’ condemnations of her devil-worshipping practices. [...]

After dinner I lay on the beach with the others. It was beautiful. The lapping waters lulled me almost to sleep even as the infinite sky moved me to tears. I felt overwhelmed. The view and its implications were shattering. Just as my sanity was about to explode in a cloud of stardust we drove home. I rode with a boy who’d taken the liberty of stealing a “Park Closed” sign and stashing it in the trunk.

Yesterday Chris was at her uncle’s funeral, so during the rec. period I talked with Robin. An attractive blonde with strangely dark eyebrows who laughs so often she seems ditzy. But she isn’t. She’s more intelligent and perceptive—and fun—than both Christy and Megan (the devil-worshipping Christian), and maybe even Kristin. She gave me a nice massage as we sat by the pool; all in all, I got very good vibes

¹ Men are brutes.

from her. She actually *asked personal questions!* (the first time I've encountered such a weird phenomenon in months).

July 20

Yesterday I had a great conversation with Robin. We sat on a beach by the lake and talked about everything under the sun. The last half-hour was devoted to Marxism; she was open-minded and a wonderful listener.

Next session I'll probably play the third movement of Dvořák's Piano Quintet in A with her string quartet. (She plays the violin.)

Trying to read a jazz voicings book by Frank Mantooth, since I'm tired of ignorance, but it's confusing. Maybe I'll stick to jazz theory and avoid the praxis. (I would, however, like to unite the two.)

July 22

Went canoeing today. Last night I spent on a beach under a storm. Fluorescent red and orange lightning lit up the sky. My awe was at once emotional and intellectual.

Nothing's going to happen with Chris. Nor, in all likelihood, with anyone else. Kristin has a new romantic interest named Liam. I wish them neither the best of luck nor the worst—though I suppose that if I had to choose, I'd choose the worst. I'm not bitter, but I have no great love for either. In fact, I'm not bitter towards a single person on this planet, in spite of everything.

July 24

[...]

The expression "I'm coming" for "I'm having an orgasm" is beautiful and poetic and aristocratic. It's simple, un-melodramatic and profoundly meaningful—precisely because it seems meaningless. 'Where am I going? Where am I coming from? –No; I'm just *coming*, pure and simple. I'm entering the infinite.' When did that expression originate? *How* did it originate?

July 25

Reading the *Te-Tao Ching* [a new version of the *Tao-Te Ching*], not because of its impressive philosophical fecundity but because I want to understand all Eastern philosophies. Taoism interests me as a cultural phenomenon rather than a potentially 'true' doctrine. However, I expect that one day I'll attend to it on its own merits (an act symptomatic of my inevitable spiritual crisis).

July 27

Mike is still successfully fulfilling his role as the most likable guy at Blue Lake. I'm truly lucky to live in a cabin with him: half the time I'm doubled over with laughter, and the other half I'm asleep. He can have serious, intellectual conversations as well, but his main talent is as a comedian. –Actually, his main talent is as a marimba player. Last night he played "Marimba Spiritual" in the staff recital, and it blew me away. He was the star of the night—which is saying a lot, since another piece performed was the Sibelius violin concerto. What an all-around great guy!

July 30

Something out of the ordinary has at last happened. Eli quit yesterday and I've taken over his cabin. No more luxurious living in Moe with Mike; I have responsibilities now. This session is almost over, happily, but there's one more after it. I'll have middle-schoolers, which will hopefully be more fun than difficult.

Finished the *Te-Tao Ching*. Now I want to learn about the society in which it was written.

....There are nine ballet dancers in my cabin; three of them are little shits, and the others are cocky and loud. I can tolerate the others, but Brent and Thad drive me insane. Every word out of their mouths is profane; they like nothing better than to cause trouble. Thank God they're all leaving in three days!

[...]

August 5

Not reading *Guy Mannering* anymore. Instead, Suetonius's *The Twelve Caesars*.

I miss Sangeetha.

Even when I don't think about philosophy I can't escape confusion and restlessness.

August 13

Reading *The Sound and the Fury*. The first part is brilliant portrayal of a "retard's" (nonexistent) inner consciousness. It's also very poignant. And hard to follow. I'll have to reread it later.

August 16

I've finished it. What an extraordinary work of art! It calls for detailed analyses on many levels, but I won't attempt that until I read relevant literary criticism and then reread the book itself. I was impressed not only with its intensity but with its perfectly self-contained circular totality. What happens in the end happens in the beginning, and vice versa. Its artistic craftsmanship is unbelievable. In short, it's a haunting work that demands weeks of study. And I treasure Faulkner's pithy style of writing. It's exhausting to read, though; I'm going to return to the charming, gorgeous *Guy Mannering*.

Two days left! Then campers and counselors will be gone! I'll miss some of them—and my campers were obedient and respectful—but I'll get over the loss. Quickly.

August 19

I've moved into my temporary new abode. I'll stay here for a week to help lifeguard at the pools, since there's a band camp until the 25th. My cabin is, compared to the former, decadent in its spaciousness and furnishings. It's like a little apartment, in fact. I'm alone, which is a pleasure I haven't known for three months.

Speaking of pleasure: yesterday was its quintessence. 'Twas a glorious day, like unto Paris's liberation from the Germans. The campers' departure was wonderful enough, but the *counselors'* farewell nearly induced orgasm. I couldn't believe the day of deliverance had finally arrived. Brian, Moises, Ben, David, Eric and Jason are gone from my life forever!

....I like Scott's book, but because I value knowledge over bare amusement—and nothing stimulates me more than perusing history—I'm going to read Balsdon's *Life and Leisure in Ancient Rome*. I don't know anything about how Romans spent their days, and I have only a minimal knowledge of their culture.

August 23

One gets the impression from reading books written before the 20th century that people didn't have sex back then. At least not the aristocracy. They were far too refined, delicate and subtle to insert penises into vaginas. Indeed, they were so "scandalized" when conversations came within a mile of the forbidden territory that—how could they *not* have been ashamed of the dark crevices in their minds and bodies?! I simply cannot imagine Colonel Mannering engaged in the sexual act. (How does one 'hump' in a dignified manner?) What a ridiculous charade and conspiracy of silence those people were consumed by! No wonder Freud considered civilization unhealthy.

August 27

Today I spent hours thinking about my senior thesis, trying to get back into the groove. Thought about topics like truth, language, time and the self, but ended up no wiser than when I'd begun. The experience was distressing. I felt intellectually frigid. I wanted to piss all over philosophy and move on with life. To have an inclination and no talent—especially if an inclination arising from both desire and *necessity*—is a torture.

I'm at Bob and Betty's house. (Jay and I drove here yesterday.) My grandparents are remarkable and amusing people. I appreciate their help in distracting me from existential ambivalence.

August 28

Picture to yourself an ocean. There's not a fleck of land on the horizon. Waves ripple methodically, to and fro. The water's depth cannot be fathomed. There's no hint of life anywhere—except directly in the center, where there is a bobbing figure, a soul twisting in the wind. It rolls and sways with the breeze and the waves, flitting as a seagull's shadow. It thirsts, yearns to be still, but stability is nowhere on the horizon.

Thoughts conceived in weariness: Immense differences in outward activity correspond to *slight* variations in consciousness. - If you adopt the point of view of a higher being while watching human behavior, you'll see how animal-like our behavior really is. - I seem to have lost all powers of thought and self-clarification.

August 29

I feel normal today. Perfectly ordinary. Life is very easy if you don't try to make it difficult.

Bob and I had some conversations about Russian history and literature. He loves to talk with his 'scholarly' grandson—and, for his age, he's an impressive and intelligent talker. More so than I am. Being the product of an excellent old-fashioned education, he uses words like "gentrified" as frequently as young people say "cool". Yesterday he admitted, jokingly, that he particularly enjoys our conversations because he doesn't want his grandson to forget him after he's gone. There's no need to worry about that: all my memories of him are pleasant and permanent.

August 31

Once upon a time I was self-confident. Sure of myself and my abilities, and my destiny. No longer. The two-month intermission outlasted its purpose—to be a respite—and became instead a bottomless pit. My delusions of grandeur will now spend an eternity careening through temporal space. The basic reason for my self-doubt is that I'm aware of how *difficult* it is for me to think. Sustained concentration is virtually impossible—particularly if I'm not writing on a computer at the same time—and, when it occurs, it achieves very little. (Maybe I have mild ADD.) I can never attain the comprehensive, all-knowing perspective—the sufficiently distanced viewpoint to see all connections between phenomena—that I require. My mind simply isn't as fertile as Nietzsche's, Marx's, Goethe's, and so on. Hopefully it will at least reacquire its former meager capacities.

Now when I read my journal, I feel revulsion. I see myself as having a narrow, petty nature that craves its own exaltation. I lose sight of who I am and wonder whether I actually have an identity. So much self-mocking self-congratulation! (Sitting in front of a computer hours every day, writing an autobiography, causes one to lose a grasp on reality.) I live through my pen—which is not, indeed, a deflection from life but an abjuration of its quotidian aspects; and this can result in an addiction to perversity. The prospect of the journal's falling into Mom's hands horrifies me: she'd misunderstand it and leap to conclusions about me. Why have I written so many cruel sentiments? Why haven't I expressed my *sympathetic* side more often?

September 1

Returned to Wesleyan yesterday. As you know, I'm living in a house with Ryan, Andy and Eric. They're good guys: intellectual, funny, responsible, and popular. I'm looking forward to this year.

[...]

My thesis will be an intensely personal work, a therapeutic dissection of my identity—of the *possibility* of my identity. I'm tired of writing disjointed reflections on the subject; I want to settle accounts and move on.

Isn't it surprising that, states of consciousness being as subtle as they are, we nevertheless usually consider them easily distinguishable? Only when we analyze them do they lose their individuality.

September 2

I've been working on my thesis. It's a frustrating process. Sometimes I have a brief flash of insight, but if I take a break—talk to somebody or watch TV—and then return to the task a while later, it's insufferable. The inspirational insight seems threadbare, my sentences desolate. At such times I wonder why in the hell I lose my composure over philosophy. What a charmless activity it becomes!

[...]

September 6

[...]

I'm happy to tell you that a certain whim of mine is no longer a whim; it's a newly acquired disposition. Namely, I'm sick of writing maliciously and contemptuously. I'm bored of it. It's easy to ridicule people, but—"we're not entitled to it because we don't know enough". Besides, I feel less

‘constrained’ now that I’m writing as I *act*; I feel expansive, accepting, peaceful and humane. Less petty and prejudiced, more *myself*. Like I’m too noble-minded and disinterested to concern myself with mean-spirited trifles. Eventually this attitude will lose its charm and I’ll return to the former—and then again to the latter, and so on—but I’ll enjoy it while it lasts.

September 9

I sympathize with Rousseau: I tend not to be witty on the spur of the moment and am a bit intimidated by those who are. If I can *think* for a few seconds the odds are higher that I’ll be entertaining, but in high-energy social situations (such as the party we had tonight) I don’t have the luxury of time.

[...]

Good ol’ sexual frustration. Ain’t it grand? I’m trapped between a rock [my brain] and a hard thing.

September 11

I wanted to preface my thesis with an examination of linguistic meaning, but I’ve decided to nix that project. For one thing, I can’t conceive how I’d justify such a digression within the larger context of my work. Secondly, I’m having difficulty addressing all the issues. The further I delve into them, the more questions arise. Thirdly, I don’t think the problem is as substantive as it seems. Fourthly, I’m more or less convinced that the most relevant and immediate sense of “meaning” is “intuition of use”. That is, through processes we’ll never fully understand, the uses of words are ‘conditioned’ into us, and the resultant ‘intuitions’ (or ‘states of consciousness’) are not only *concomitant with* but *part of* the words. I don’t really care anymore, though, whether that idea is, in some form, correct. I can’t imagine that the answer bears much on the rest of philosophy. [...]

September 15

With this journal I have painted another me, a self blossomed in the meadow of a barren imagination, a flower vibrant with color from which I feed modestly. [...] I ‘throw my voice’ and am cast along with it, into a whirlwind of divine imperfections. My daring, Gray [cf. Dorian Gray] self-portrait has blemishes, but it is not bland. So I try to lose myself in it and flee what’s real....but inverted Platonism is the physics of the mind and honesty the gravity of the soul. Life cannot be without pretense; *my* life cannot be without art:—but my honesty reveals my art as pretense.

It’s all pretense. When I read Nietzsche and then read—myself, I compare myself with myself and shrink from the realization that I am a mere imitator. He has too great a sway over me. I have to stop reading his books and arrive at my own ideas. I know that many of his thoughts and ideals are right and admirable, but unless I adopt them through my own independent experience I’ll be derivative. I care less about knowledge than self-cultivation and originality.

....Despite my professions of life-weariness—which, it must be said, correspond to parallel moods and are not empty words—I am in the bottom of my soul grateful for it all. All the “marvelous uncertainty and rich ambiguity of existence”, all the lavish suffering and frivolous aspirations, all the temperamental giddiness and gaiety riddled with doubt—it all radiates an overabundant glow. It is a flame, and I a moth. Perhaps my contrary moods are oxygen for this flame, or wings for this moth.

September 16

This is my judgment of Schopenhauer’s philosophy: practically every idea is wrong, unfounded or

confused. (His achievement was impressive, but that doesn't make it any less ludicrous.) This is my judgment of the man himself: comical. His resentment of Hegel and his willful misunderstanding of him are hilarious. The scurrility he indulges in betokens a worm-ridden soul. The tacit reasoning is obvious: I don't understand him; therefore, he's wrong and a charlatan. At bottom, Schopenhauer couldn't tolerate competition, for he wanted to be exalted above every other philosopher of his era. Vain man. Why couldn't he at least stylize his vanity and bitterness?

[...]

To say it again, I consider astronomy and cosmology spellbinding. The universe entrances me like nothing else—not history or philosophy or psychology or even the human brain. More than anything else it induces in me *awe* and *infinite wonder*.

September 21

Humankind. I don't know whether to lament for it out of pity or out of hatred. How could things have gone so horribly wrong? How could affairs have been allowed to come to such a pass? I'm so sad right now. I feel such love for my species but such *disappointment*. We're on a one-way road to Doomsday.

People are fond of saying that technology has power over us. But *why* does it? Because we *let* it. The fault lies with us. We hold our fate in our own hands, but we're too myopic to know what to do with it. Why are we so unutterably stupid?

September 25

Slices of the Spheres: Liszt's Love Dream No. 1, Tchaikovsky's Romance No. 5, Grieg's Lyrical Piece No. 21.

The overture to Mendelssohn's *A Midsummer Night's Dream* is so magnificent—overpowering—rapturous—life-giving—that I hope I'm listening to it as I die. How could I have spent twenty years of my life in ignorance of it? How could God have permitted it to have gone unwritten for countless millennia?

....It's humbling to know that squirrels have a greater power of concentration than I do. Imagine how much concentration is required to leap from limb to limb without hesitating!

September 29

I've never attempted anything as difficult as my thesis. Today I worked sedulously for seven hours (pondering the nature of truth), and the product was a single paragraph that I'll probably discard. Four days ago I thought I'd investigated the issue sufficiently—not exhaustively—and was prepared to move on to ideas more relevant to my thesis, but I couldn't stop myself from ruminating on the inadequacies in my treatment. Finally I yielded to the inevitable and decided to rewrite most of it....but so far I've succeeded only in giving myself headaches.

October 3

Poor Bertie Russell. Had to make a fool of himself in reading Nietzsche literally. How obtuse must a man be not to see that Nietzsche wasn't trying to be "consistent," that he didn't take himself seriously, that his self-glorification was always tinged with self-mockery? You can learn a lot about a man through his interpretation of a thinker, for in some measure he projects his own qualities onto the other.

There's a fine line between intelligent conversation and sheer pretentiousness. Andy leaps over it. Generally I'm of the opinion that most rules find an exception in me. Life would be so easy and pleasant were I not nature's guinea pig!

[...]

Oh well. If I didn't have music it would be unbearable. That's my edifying conclusion. But I'm trying my hardest not to bear resentment toward anyone or anything, nor to feel thereby superior to people. Surprisingly, I'm succeeding. I'm usually able to stop myself when I start thinking the way I used to in moments of gloom and inspiration. Probably because I'm so disinterestedly certain of my own worth that to exaggerate it is superfluous. (And, of course, I have confidence in the future.)

Wednesday, October 9

My mind is usually empty. That's why I talk less than others. *That* is the main reason.

...Oh, my friend, *ich bin so fröhlich!* I just met the sweetest, cutest girl imaginable. Denise. A recent graduate who lives one minute from my house. [...] Have you, dear reader, heard Schumann's Concert Piece for Piano and Orchestra in G major, Op. 92? It contains a musical phrase repeated once, ten seconds long, introduced by horns, that is quite possibly one of the most emotionally satisfying musical ideas I've ever heard. It is otherworldly. It has no counterpart in reality—*excepting* my mood at this moment. Thanks to Denise.

...I finished the Introduction yesterday and submitted it to a professor today. He isn't my advisor—I don't have one yet—but he'll suffice.

October 10

Crestfallen. I ate dinner tonight with Mindy, and she mentioned that Denise has a boyfriend. Of course! For some idiotic reason I got it into my head last night that since I've been unhappy for so long, this girl could not possibly have a boyfriend. It would be such a slap in the face, such a tasteless joke on the part of Existence, that it seemed virtually impossible. Ha!

I'm too jaded to languish in sadness. I don't want to flatter life's ego. Life isn't worth a second thought. I have to apply to graduate schools and take the GRE and drown myself in the mundane.

October 11

I don't get much pleasure out of corresponding with people. It's boring and I have little to say.

...I could write a paragraphs-long jeremiad lamenting my present situation, but I'll spare you. Except to say that...I am superhumanly lonely. My loneliness has assumed transcendental proportions. At night my mind feels poisoned and rotten and maggot-ridden.

The structure of my being is oriented toward living in a symbiotic relationship with a girl. That is my destiny, the one fact that coheres my personality into a whole. Nothing matters as much. I might as well die if I'm to live without love. Negation seeps into my veins if I live without love.

Byron's *Don Juan* has again lightened my load. Its lively humor is invigorating. Even its many bittersweet stanzas have a trace of jollity; for example, number 213 in Canto 1:

But now at thirty years my hair is gray—
 (I wonder what it will be like at forty?)
 I thought of a peruke the other day)
 My heart is not much greener; and, in short, I

Have squander'd my whole summer while 'twas May,
 And feel no more the spirit to retort; I
 Have spent my life, both interest and principal,
 And deem not, what I deem'd, my soul invincible.

What fresh verse! What limpid language! It trips along lightly, interrupting itself yet continuing unmarred, charming and touching. The next stanza is less droll, but its beauty lends it an affecting serenity.

No more—no more—Oh! Never more on me
 The freshness of the heart can fall like dew,
 Which out of all the lovely things we see
 Extracts emotions beautiful and new,
 Hived in our bosoms like the bag o' the bee:
 Think'st thou the honey with those objects grew?
 Alas! 'twas not in them, but in thy power
 To double even the sweetness of a flower.

...Changeability is the token of the higher human being. He is more spiritual and exists on a rarefied plane of whimsies.

October 14

I cherish the English language. It is dazzlingly expressive and (supposedly) has about 600,000 words, as contrasted with German's 185,000 and French's 100,000. The words that nobody knows are the best. Our language has a word denoting the act of throwing somebody or something out of a window! *Defenestration*.

The past few days have seen me continue my hermitic existence, though I've tried to organize trips to the movie theater among favored CSSers. Fortunately I haven't felt as lugubrious as I did on the 11th. No more ululating for me!—at least temporarily. As you know, I'm truly the opposite of a lachrymose person. Tomorrow I'm having dinner with Denise. Abdullah confirmed that she has a boyfriend, so I won't be able to indulge my randy, concupiscent desires. Damn my mansuetude! If I had opportunities—and if my speech weren't so laconic—I'd be a veritable lecher. (On the other hand, I'd rather be laconic than a blatherskite.) My sexual fantasies tend to be blatantly lubricious and horribly salacious. (Not really.)

My thesis is turning out to be quite a gallimaufry of subtle ideas to which I can hardly do justice. – But I'm tired of writing euphuistically. Excessive use of sesquipedalian words leads to turgid prose.

October 15

People who know me think I have Multiple Personality Disorder. They're right.

Dinner with Denise. Fun, though not glorious.

...It's impossible to argue with religiose Christians, Jews and Muslims. Arguments are founded on logic, refutation and so on; the religious ignore logic and resort to dogmatism about God. "This is what God wants"; "That may seem unfair to us, but God existed long before we invented our notions of justice"; "If you believe in Christ you'll go to heaven"—"But what if I believe in Him only because I want to go to heaven?"—"It has to be a *genuine* belief"—"How do I know if it's genuine?"—"Bah! Technicality!"—"So if a murderer repents and genuinely believes in Christ he'll go to heaven, whereas a Buddhist who devotes his life to charity will go to hell?"—"Yes"—"Does that seem fair to you?"—"God existed before we invented fairness." The Judaic tradition is so fatuous it can barely be called human. I never argue with Ryan

about Christianity because it's a charade. Not an argument. He's a fairly intelligent kid, but when the subject of religion is broached he becomes an anile, doddering old illiterate serf snatched from the Middle Ages.

October 18

I've hit another roadblock in my thesis. I'm suddenly in the midst of a host of inextricable confusions. When doubts assail me from ten directions I always have difficulty addressing even one of them. It's too bad I can't make an outline for a thesis like this. All I can do is follow my thoughts where they lead me—and the result tends to be a labyrinth of loose ends. Actually, I can describe my method for you fairly well (a method *imposed* on me): I start writing thoughts with little or no idea where they'll end up. Often they have their own momentum, but nevertheless I'm lost in the dark for a long time. After a while I start to perceive the overarching plan and direction of my ideas, and I can focus my meditations more closely. They acquire a coherence, a *purpose* they didn't have before. But soon after I am thus enlightened I realize that a few of my earlier statements either contradict my new plan or skip over many issues that, according to the logic of my vague mental outline, should have been addressed a long time ago. So I'm forced to return to the beginning and tweak or slash or rewrite. This process is always maddening—at least, it has been in my thesis and was in my government paper—partly because it demands that I whittle my thoughts to analytical precision.¹ And *that* is hard. A single word can make a world of difference. Because I try to temper philosophical exactitude with literary elegance (a virtual impossibility when analyzing the self in depth), it's not unusual for me to spend twenty minutes rearranging a sentence or groping for *le mot just*. But the *really* hard part is overcoming my proto-ADD and forcing all my ideas into consistency—and at the same time *believing* them! Eventually I fix everything and can forge ahead with renewed confidence. Right now I'm in the middle of the whole process, when everything falls apart.

October 26

I'm reading Philip Roth's masterful novel *The Human Stain* for a CSS class. Three days ago, after I had read the first half, I wrote the following short analysis on our web-board.

I'd like to defend Coleman's murder of his mother. I haven't decided what Roth is trying to express in this episode, but one possible interpretation is inspired by Nietzsche. In *Thus Spoke Zarathustra* (and other writings) Nietzsche declares that the Übermensch, the man who is most free and most creative, must be "hard with himself". He has no pity; he will inflict suffering on himself and others in order to cultivate his latent genius. All is sacrificed for freedom. Do you think it's easy for Coleman to renounce his family? Does it not rather require a self-brutality as ruthless as the brutality he displays toward his mother? Coleman's ambition is to sever all umbilical cords to his environment, to mold himself and achieve autonomy. Tragically, this is impossible. His destiny is determined not only by him but by the forces that impel him to act in his eccentric, perverse ways. Perhaps Roth's point is that self-creation and freedom are unrealizable: if it isn't the social forces determining us, it's the sex instinct. But we are not necessarily doomed to slavery. Coleman, in carrying the Nietzschean ideal to an extreme, demonstrates his misunderstanding of the human condition and the limitations inherent in it. He should have recognized that there is a type of freedom not incompatible with a lack of autonomy: there is a 'beauty' in filial devotion and a beauty in sex, and if we artistically integrate these most pleasant manifestations of 'bondage' into our lives we can achieve a kind of psychological liberation, a triumphant affirmation of ourselves and our 'unautonomous' lives. Perhaps, like Nietzsche, we should adopt as our model not the self-governing Lord Jesus Christus but the "extraordinarily ordinary" Goethe, who found his own

¹ Of course, this is a constant necessity. But its difficulty is enhanced when I have to backtrack.

freedom in loving the conditions imposed on him by existence. *Amor fati* was his freedom. Coleman tries to escape from the human stain, but in doing so he succumbs to it all the more disgracefully. His wisdom is of the life-denying kind; real wisdom isn't ashamed of itself.

Roth is a writer in the grand tradition. There aren't many left nowadays. His book is so complex that I don't completely agree with the oversimplified account of it above. (However, I noticed today that on page 243 are two sentences relating to Zeus and Christ that support the last few lines of my critique.)

I wonder when I'll attain a degree of emotional maturity.

October 29

I can't wait to write the preface to my thesis. It will be sheer mischievous joy translated into written characters. It'll be my first really public attempt to challenge the status quo. And it will set the tone of the rest of the work.

Sangeetha emailed me today. Receiving a message from her always perceptibly improves my mood. I've never fully 'gotten over' her. My memories of that summer are almost unequivocally fond, in spite of the unpleasant incidents.

...Rebecca's eyes are deep and sultry. I saw *Smiles of a Summer Night* with her tonight; afterwards I had a craving to kiss her, seduced by those eyes and that smile. Our walk home wasn't nearly long enough. We bade good night and now I feel strangely unsatisfied.

November 3

Happy Birthday, me. The big 2-2.

I think I've finally liberated myself from the chains of writer's block to which I referred earlier. I wrote and rewrote until I'd made enough analytical distinctions within the concept of identity so that I no longer felt burthened with paradoxes. I still don't feel satisfied, but I'm less mentally ill than a week ago.

November 7

After reading my introduction Dad was right to wish me luck in my "life as a salmon". The swimming upstream started two days ago, when I had a meeting with that prick Eric Schliesser to discuss my thesis. It lasted an hour, during which he attacked my work and basically insulted me. Not a single compliment or piece of encouragement was interspersed in the barrage of criticism, and when I tried to defend my arguments he either interrupted me or didn't listen. An acrid tone of subtle *ad hominem* underlay the whole episode, as though Schliesser was offended that I had tried to be ambitious. At one point, after I mentioned that I had read part of an essay by Tarski two days earlier, he smirked and said he had noticed similarities between my views and Tarski's. The implication was that I had plagiarized. I reiterated that I had read the essay *after* I had written the introduction, but he ignored me and moved on to another topic. In other words, he was willing to draw attention to parallels between my views and a famous philosopher's only if he thought it would belittle what I had written rather than compliment it. I was so infuriated afterwards that I wrote him an angry, though restrained, email, and he responded defensively. Asshole. (As luck would have it, he's the professor of one of my classes.) He was never my advisor, but now that I've broken with him I *really* don't have anyone. The chair of CSS has offered to step in if I can't find anyone else.

November 20

Death elevates illustrious men to greatness. If Hegel were alive I would see him as just another man. I might admire him tremendously, but I wouldn't revere him as the virtual philosopher-god he has become for me. I wouldn't worship him, nor would I worship Marx. But because they're dead—they're spirits. Until recently I thought Jürgen Habermas was dead, so I respected him greatly. Now that I know he's alive (teaching at one of the schools to which I'm applying), he's just another contemporary philosopher. In fact, my having seen a photograph of him has ruined everything. Not only does he live, but he has a face! I'm so disillusioned!

(Actually, the more I read of that obscurantist, the less I respect him. Several nights ago, moreover, Andy told me that Habermas once submitted an article to a journal, the argument of which was decisively refuted the following week by a graduate student who wrote a response to Habermas. So of course Jürgey immediately wrote a letter to the editors of the journal, threatening that if they ever printed another such essay in response to one of his he would never again do business with them. "Communicative rationality", eh? What a hypocrite. A pompous charlatan, like all other contemporary philosophasters.)

C'est incroyable how deep is the human need for attention. Everywhere I look I see it.

[Deleted entries.]

November 29

Jay and I went to Mom's friend's house for Thanksgiving. I'm glad I'm back. Last night Josh and the two of us drove to Montreal to gamble at the casino; it was a comical experience. I played "video blackjack" nearly the whole time, desperately bored and amazed that people enjoy this sort of thing. Throngs of human geldings, money-scavenging hyenas, hovered about me smoking and cursing and yelling at the slot machines. Just sitting there, staring blankly, blind to all but their lust for cash, living their utopia of unbridled greed. Lights beating down on them, pollution streaming from their mouths, cigarette-residue caked to their lips, obsequious attendants waiting on them, coffee-dregs at the base of each cup, jingling coins in plastic containers, machines rigged to lose once every fifth turn. Ostentatious luxury—oriental rugs, oak banisters, marble stairwells, cascading fountains—gilded decadence—it all coaxed us into ignorance of the passage of time. The three of us left after a few hours and drove to the heart of the city, the Rue St. Catherine, brimming with excitement and character.

I suppose we have God to thank for the slow section in the middle of the first movement of Schumann's piano concerto—and, of course, for the beginning of the *Konzertstück* in G major.

I'm reading Hayek's *The Road to Serfdom*. It ain't a bad book. In fact, it's well-argued, well-organized and, well...well-done. (Repetitive, though.) But he neglects to appreciate that the thrust of his argument isn't contrary to Marxism. Marx's point is that when competition ceases to be efficient it will give way to planning—not that planning is *always* more effective than competition. As for the supposed loss of freedom: we don't know what forms planning might assume in a hundred years.

...I cannot believe that I'm a Salieri and continue living at the same time.

November 30

Goethe was lucky. He was born at the perfect time and in the perfect place, and lived among the perfect people. Herder and others molded Goethe into what he became. Instead of having to assert himself against his environment he simply absorbed it, for it happened to be one that could recognize and would lavish hero-worship on genius, or anything high-cultural. What a time to live!

It's thrilling to reflect that when Mozart wrote the first movement of his 25th symphony he was composing the score for a future movie about him (*Amadeus*). He was scratching notes on a piece of paper, lost in his music, unaware that he was writing a eulogy for himself. Isn't that a striking image?

December 3

I'm in an oddly, happily melancholy mood. Listening to the second movement of the Coronation piano concerto. I spent most of the day completing graduate school applications; now I want to slink into a repose, a sweet homecoming. Steal a moment for myself. Bow before an image of Platonic beauty, an imaginary idyll. Margaret is a blossom on the stem of life—a pointlessly lovely gift, superfluous but desperately necessary. Such a girl, such a body, such a face, such a *nose!* That nose is so jutting it's a model-mountain! But she's all the more charming for it. Margaret. She looks like a Margaret. Quiet, kind, sophisticated, deceptively wise. Vernal eternally. A Gretchen, with wisdom hidden in her innocence, of which she herself is unaware. The wisdom that exists in not 'existing'.

December 4

Eight years until I turn thirty! Christ Jesus, where has it all gone??! *Thirty*, that magic number after which middle age is right around the corner, and then death. This cannot be. I'll never become an adult, I swear it. I'll hold onto youth with a ferocity born of fear. I will *not* grow up. I will *not* have a career. The prospect terrifies me. —It's damn near miraculous that I'll be thirty in eight years.

I shade myself under the bower that is *Clair de lune*.
 The sun-dappled canopy, leafy and recessed,
 sheltering me from coarse daylight,
 on and through which snowflakes trace their involute paths to my recumbent soul.
 The drowsy sleep that enfolds the beholder.
 The blanket of soft white enwreathing this nook of hermitic bliss;
 The sky-streaks cascading to the crisp frozen earth;
 The dancing child dallying in the chill;
 The window through which I observe and absorb;
 The muffled, awesome tranquility enveloping all.
 The silence textured by lunar song-play.
 The skylarking youths, the flowing music, the sweet deep melancholy,
 The sadness, the tears, the beauty, the longing,
 The joy in sorrow.
 The grace.
 Ecstasy in grace,
 for which I strive and to which I am devoted.
 Doubt made shallow by my "love of loves",
 self-doubt smothered under snow and Liszt
 —but living all the same!
 But shaded.
 But shriveled.
 But shallow.
 But "blessed death" washes over me and cleanses and restores me
 to a rude insanity.

And I return to the tasks of living, forgetful of the task of dying.¹

Tonight I had my thesis workshop. What a sham. [One professor], an academic *par excellence*, attacked it just as Schliesser had. Except *this* guy's criticisms were even more preposterous—criticizing the moral implications of my ideas on the self, and my use of phenomenology, etc. What a waste of time.

December 6

When I listen to Bach I hear logic and mathematics translated into sound. That's why he's a genius: an impersonal force of which he is unconscious speaks through him. [...]

December 14

Mozart was meant to be played in New Zealand, where natural beauty is second nature. He is, as it were, an extension of the countryside; it is incomplete in his absence. The mountains are comparatively flat, the foliage less colorful. This isn't to say that I need the spirit of Mozart beside me if I am to appreciate nature; it is to say, however, that his living soul imparts enthusiasm to mine. I live on a higher level when accompanied by him, and so have a greater appreciation of perfection.

Jay and I reached Dunedin yesterday, after a thirty-hour trip. My parents drove us around the city, the architecture of which is modeled after Europe's. The downtown area is quaint and full of character, with steeply sloped, narrow streets lined with small shops and cafes. It's situated around a harbor in a valley, rolling hills hemming it in on all sides. I say 'rolling' because their slopes are gentle and their aggregate is a horizontal waterfall of meadows, one atop the other, tumbling into the ocean. Thousands of sheep speckle the blanket of lush green, nestled in its folds against the harsh wind. From a height one is overwhelmed by the proud beauty of the scenery and humbled by the knowledge that it required many millions of years to reach its present state. This land used to be a mass of churning lava, bubbling in fury and smoking from its collisions with the sea. Gradually it settled down, hardened with age, matured and grew weary of its youthful passion, and today it remains as a tribute to the power and wisdom of nature. The construction of a town within the cradle of these hills is its own special kind of wisdom.

Today we hiked along the peninsula, our destinations the soldier monument, Lover's Leap and a precipitous chasm nearby. The wind whipped our faces into a pink rawness, but that made the experience more invigorating. Unfortunately my allergies asserted their will to power, so I enjoyed the afternoon less than I might have. Tonight we're seeing a play, a farce ("Noises Off"), which I'm sure to like.

Though I've only been here one day, I truly love Dunedin and New Zealand. Dunedin for its location and its charm, New Zealand for the reckless sublimity of its environment. Too bad I don't live here.

December 17

Nothing exciting has happened recently. The weather has been awful. I've been thinking about my play on Ivan the Terrible, planning it out, researching his life, inventing historically inaccurate subplots. I've shown myself to be a phlegmatic thinker when it comes to conjuring stories out of thin air. I wish I were a Shakespeare.

December 18

¹ [The words in quotation-marks are the names of pieces by Liszt.]

Today we began the Milford Track, which is a four-day hike through a mountain region on the south island. The weather has been ideal so far—which is a fluke that probably won't last through the night. We reached the first hut at 2:30, having walked for two hours on flat land. The next three days will be more strenuous, since we'll be hiking up- and downhill six hours each day. But the views will be worth the effort (and the back pains). 'Majesty' is what comes to mind when I look at the snow-peaked glacial remnants.

Tonight I played cards with two Aussies and two Texans. The game was '500'. The Aussies just graduated from high school; one of them is a lovely girl who's a good conversationalist. But the two are a couple, so that's that. I also met two Wesleyan graduates.

December 19

To paraphrase Bill Watterson (the *Calvin and Hobbes* guy), this day was not only seized but throttled. At 9:30 we were underway. The first few hours offered the usual spectacular vistas, but I found them [i.e., the hours] otherwise uninspiring. Because the ground wasn't hilly it wasn't interesting. I was hungry, my shoulders ached, etc. But lunch rejuvenated me. We walked through an enormous valley, the sun hammering at us and sweat soaking us, until we saw a little pond fed by a 200-foot waterfall. We jumped in. Due to the gelid water I spent the first minute gasping for air, but as I became numb I could tolerate it better. I swam to the base of the waterfall and gazed upward—a beautiful sight. Thus far it was the best part of the day. After an hour we resumed our march, refreshed and ready for more challenges. Jay walked so far ahead that we didn't see him again until the evening, but I—I took the road less traveled by, and that made all the difference. More precisely, I got lost. Wandered ahead of my parents and accidentally took a detour from the main path, which consisted in climbing a long, steep stairway of loose rocks in a swiftly moving river. With my heavy backpack it was by no means an easy task, but it was the highpoint of my day. The challenge forced me to concentrate all my mental energy on not slipping into the stream, which caused me to stop wondering whether I was experiencing appropriate emotions. It was immediate and intense. I loved it. But when I was halfway up, my parents reached the base and, seeing me hiking on relatively dangerous terrain, yelled at me to descend. For a moment I ignored them: I was screeching coyote calls at the sky, enjoying my 'animal spirits'. But when I realized they had a good point, I decided to continue the climb to the top and then hike down a smoother path to the main trail. It turned out to be not as smooth as I had thought—my boots were drenched by the end—but by the grace of God I survived. Felt glorious afterwards. The last hour featured the steepest climb in all four days, and it seemed to go *on and on*. I kept thinking the hut was right around the corner, the next bend in the trail, but another stretch of rocks always emerged. Fortunately most of it was shaded by the walls and ceilings of boscage around and under which the trail weaved. Eventually I passed into a trance, a peculiar zombie-consciousness in which I was aware only of the need to *trudge on*, and the contact of my boots with the ground was the lodestone of my thoughts. In moments of lucidity I picked moss off trees and inhaled the earthy smell. Finally I reached the hut, the promised land, unpacked my bags, exchanged boots for sandals, and lounged until my parents arrived. In a few hours we were all eating dinner with the other hikers and conversing with Erin and Matt. Fun to talk to—Erin because she's an adorable girl with a lisp and a pleasant personality, Matt because he's enthusiastic and witty. They live in Sydney, where we're heading in two weeks; Erin seemed amenable to the idea of accompanying us for a day or two, which—would not bother me in the least.

The forests we walk through are enchanted. Spidery, luminescent tendrils of moss dangle from tree-limbs; ferns blanket the ground; brooks bubble over pebbles and boulders; ribbons of sunlight pierce the tangled canopy above. This is the kind of setting that Shakespeare intended for "A Midsummer Night's Dream". It's a temperate rainforest.

December 21

Yesterday was not easy. I slept restlessly during the night and woke up at 7:00, my entire body aching. The day began with a two-hour climb to McKinnon Pass, though I reached it in 90 minutes or so at my forced-march pace. Precipitous ascent. Incredibly tiring, but the more exhausted I was the more alive I felt. The magnificent scenery heightened the impression: as when listening to Mozart or Chopin, I was cleansed of every impurity, everything inessential and animalistic. The view from the promontory was even more unbelievable: a feast of boundless natural delights. For example, cirrus cloud-impostors that were level with us continually appeared from behind a cliff and floated away on a curved path that followed the contours of the land—for they were only a few feet above the peak. They were a perpetually regenerated marshy mist whose source seemed deep within the earth. That sight was itself striking, but it was made even more so by the presence, several hundred meters away, of clouds that were *frozen* in space. In over an hour they didn't move at all, even as the others were propelled very quickly from creation to dissipation fifty feet above us. We also saw a Kea bird, which is an intelligent and mischievous parrot that knows how to unzip bags and snatch food before anyone is the wiser.

Our next stop was a small hut nearby, from which one could see the long, lush valley we had traversed the day before. (For the third day in a row, miraculously, the sky was blue and the sun shining.) From there we descended a thousand meters in three hours. *That* was hard, since the descent was not what you'd call smooth. Every step was a jolt. Nor could I slow down, with gravity pulling hard at my backpack. Jogged the whole way, the heat strangling me and wringing out rivulets of sweat. I also had the one obligatory fall, the result of which was a mere scratch. Somehow my ankles remained intact the whole day. My thighs, calves, feet, knees, back and shoulders were the parts that suffered. But I loved it.

We ate lunch in a shaded alcove in the woods, next to a stream and a huge boulder. It was an ideal location, well hidden from the scorching heat and colored with several layers of a glowing phosphorescent green. I felt as though I had traveled back in time to Middle Earth. Afterwards Terry and I continued walking together. As the day wore on, our trek grew more tiring and I found myself stumbling and my vision blurring. The experience ceased to be as perversely pleasurable as it had been. At last we reached an open field, swarming with sandflies, whence there was a detour to Sutherland Falls. We grabbed our swimsuits and walked the half-hour to the roaring waterfall, I not realizing I had forgotten to grab my sandals. When I did realize it, it was too late. Because I wasn't eager to get my boots as sopping as they had been the day before, we didn't venture behind the falls, as we'd planned. Instead we crossed the river and walked into the thick of the mist...which resulted, of course, in the soaking of my boots. Soon after, we returned to the building housing our bags, attempted to dry our shoes in the sun, failed, donned our packs, and continued the forced march to the hut. This last segment was pure misery—an hour of something approximating hell. Because it was already (“already”?!) after 6:30 I didn't want to stop to rest, so the whole walk was essentially a postponed fall, a pitching-forward. Finally we reached the hut, only to be consumed alive by sandflies. Three hours later I was in bed; fifteen minutes after that I was asleep.

Today was less than pleasant as well. I'll describe it for you tomorrow, when I'm not groggy to the point of mental torpor.

December 22

At 8:00 yesterday we set out on the trail with another family we had met the previous day. There were two daughters, Jemma and Georgia, aged 12 and 8. We all liked the parents, who were personable and had great senses of humor, and the daughters were of course ‘darling’. Georgia is a Goldilocks with a mirthful personality, Jemma a soubrettish young lady with a pointed wit. But in the beginning of the day I wasn't thinking about any of that; I was reflecting on the prospect of walking for six hours over such ground as I had endured the last three days. Fortunately the land was flat, so the morning was tolerable. But only because we took three long breaks and walked at a worm's pace. I spent much of the morning in silence, neither talking to anyone nor thinking about anything. Didn't even talk to Jemma, for I'd gotten the impression earlier that she was shy. But at one point when I was walking directly behind her I must have said something about books—maybe I muttered that in 24 hours I would be sitting on a sofa, reading—

because I remember she whirled around to discuss all the authors she'd read. In the span of two seconds she was transformed from a reticent child of 12 to an outgoing adolescent of 16. She lost all inhibitions and treated me like a friend. Apparently she's an avid reader: last week alone she read eight books; her average is two. Though I'd heard of none of her favorite authors—they were all contemporary writers of romance and mystery and such—I was impressed. I recommended Art Doyle, Nietzsche, Hubbard (she likes science fiction) and a few others. [...]

At 1:30 we ate lunch. That may not have been the smart thing to do, because when we got moving again my feet were subjected to an exquisite pain that lasted until we reached the boat. I thought they were bathed in blood. Felt like a victim of *bastinado*. [...] My mental and physical torment together made the experience wonderfully surreal. Finally arrived at Sandfly Point, aptly named. Then the boat transported us to a bus that took us to our car, whence we drove to our luxury hotel where I took a shower. And that was the end of our four-day abandonment of the comforts of civilization.

Considering that I was in the worst shape possible for a healthy young man when I began the track, I'd say I did a darn good job of surviving.

December 23

Yesterday, Queenstown. The first thing that Jay, Terry and I did was luge down a mountain twice. That was as fun as could be expected. Because the weather was gorgeous—again—we were able to savor the sight of the Remarkables, which is a jagged range of serrated razor blades silhouetted against the sky.¹ In the evening we checked in at a hotel and learned that Erin and Matt were staying there too. Quite a coincidence. After our delicious dinner we went to a Maori concert downtown. The Maoris are the indigenous people in New Zealand; their importance for tourism is immense. An industry has developed around them, of which their music is a significant sector. The concert was smashingly entertaining. Six half-naked men provided the background music, most of which involved ear-splittingly loud grunts and foot-banging. They tried to look as fearsome and ugly as possible—for instance by sticking out their tongues and grimacing—and succeeded marvelously. The women provided the melody and most of the harmony. Some of the songs were surprisingly lovely. During the intermission the men in the audience were called to the stage to be taught the basic moves and noises of Maori music—which are, of course, squatting and grunting. Jay and I participated; we were among the most boisterous of the fools onstage. Great fun to contort my face into the ugliest expressions I could manage, especially when the audience responded with laughter and applause. After the concert we ate ice-cream and toured the blithesome streets of this tourist haven.

Today we wanted to raft down the Shotover river, but since the water level had risen during the nocturnal torrent we had to cancel our plans. Maybe we'll do it tomorrow. Instead my brothers and I spent an hour on a jet-boat. It was an excellent ride: fast, wet, rocky—every time we hit a wave we might as well have hit cement—and damned exhilarating. Fantastic views, as always. Now Jay and I are about to 'go out on the town' with Erin and Matt.

December 24

It's sometimes hard for me to 'appreciate' natural beauty.² In an effort to remedy this situation I've devised several alternate methods to experience the environment. The common thread through most of them is to increase the number of senses that partake in the absorption of relevant stimuli. For example, I'll bury

¹ I write that last phrase not because I want to add an artificial poeticism to the sentence but because the mountains, when they're viewed from a distance, look like a two-dimensional cutout superimposed on the sky.

² The reasons are that I have mediocre eyesight and I forget to wear glasses. But I'll be less absent-minded now that I remember how much more attractive the world is when I can *see* it.

my nose in dirt as I gaze at a valley, or I'll listen to the second movement of Chopin's E minor concerto as I look at snowcapped mountains. Another method is to close my eyes, imagine that I'm about to see hideous concrete skyscrapers, and then open them to witness the 'surprising' sight of New Zealand's phantasmagoric natural effulgence.

Last night my family and I ate ice cream next to the lake as we waited for Erin and Matt to meet us. Eventually they arrived, Erin dolled up in makeup and tight-fitting, sexy clothes. Terry didn't accompany us, though he certainly wanted to on account of his 'crush' on the fine specimen of young womanhood whose presence graced us. By the time we were underway it was quite late and I was quite tired, but since one never knows what will happen at nightclubs—whom one will meet and whether one will get laid—a part of me was eager. Our first stop was a pub packed to the brim with screaming Kiwis, so we quickly left. "The World" looked more promising—it had a dance floor and was sufficiently empty to allow for movement—so we stayed there. Erin is an amazing dancer, and Matt a lucky bastard. Jay and I made sure to down a few beers before subjecting ourselves to tomfoolery.

At 7:30 today we woke up to raft the Shotover river. The weather, yet again, was incomparable. We struggled into our wet-suits and rode in a bus along Skipper's Road, which is a winding avenue across sheer cliffs, constructed by gold miners long ago. I can't fathom how they were able to build it. (Greed conquers all obstacles.) Our raft was occupied by seven people: us and two Israeli men. The experience wasn't wholly satisfying, since much of it consisted in paddling over long stretches of glassy, boring water. Moreover, all the rafts frequently had to land on beaches to deal with an inordinate number of accidents. One woman scratched her hand badly, several people lost their oars, one raft capsized—that was pretty cool—and so on. But there were some thrilling moments. When the guide yelled at us to "Get down and hold on!" we squatted in the center of the raft, held our breath, bowed our heads and yielded to fate. That moment of uncertainty was exciting, and one couldn't help shouting gleefully as the waves crashed over us.

In the afternoon we left Queenstown. Staying now in a cute little backpacker's place in Wanaka that reminds me of Paros: sun-soaked, whitewashed, laid-back, friendly, decorated with flowers. Attractive girls, too.

Prejudice against individuals and groups is akin to the tendency of some animals to segregate themselves. It is a fundamentally animalistic activity. –I suppose that my emerging worldview gets some of its inspiration from Nietzsche.¹ "Animal, all too animal" is its motto. ("Tierisch, allzu tierisch.") It is a systematic rebellion against every human pretension to godliness; its purpose is to put us in our place in the vast scheme of things, yet in such a way as to avoid the temptations of nihilism and the unrestrained revolt against human dignity. It accepts Nietzsche's central theme, even expands on it, while recognizing that it folds back on itself and thus makes inevitable a perpetual hovering between two positions, one of which we must courageously choose in order to have integrity. Nihilism or a delicate balance between the animal and the ideally human. They are both difficult; I have chosen the latter because it permits me to live a noble, 'driven', sublimely insecure human life.

December 26

Christmas did not feel like Christmas. No snow, no awful cold, no slushy streets, no garnished tree, no mountain of gifts. But it's okay; at least the sun wasn't shining. We went to "Puzzling World" in the afternoon. Entertaining, even fascinating—holograms are cool—but the cynosure was a shockingly sexy French girl traveling with her family. She was practically a force of nature. A glamorous, mascara-masked moviestar. That night we ate a tremendous potluck dinner with everyone at the hostel. I talked to a rotund

¹ That isn't to say that Nietzsche was the impetus for it. His writings merely stamped a seal of approval on my own inclinations.

Swiss girl with an appealing face for over an hour; she was delightful and friendly, but after our conversation lost momentum we floundered for a while and then I went to bed.

Today we took a ferry to Stewart Island. It was a remarkable ride: a virtual gale tossed the boat up and down, making me nearly seasick.

[Deleted entries.]

December 29

Dunedin again. Yesterday, *weil das Wetter schön war*, we trekked around Ulva Island, hoping to see a variety of birds. We didn't. Stewart Island was disappointing too: it doesn't offer the breath-depriving vistas that the mainland does. One doesn't have the opportunity to admire flecks of fuchsia tastefully arrayed along a stretch of mottled verdure. Why visit a part of New Zealand that suffers from a dearth of splendor?

December 31

Went to the Octagon downtown to celebrate the new year. A band was playing to a throng of Dunedinites. Hundreds of delectable girls in sexy outfits milled about the square—tasty morsels to a ravenous wolf like me, with lips dripping saliva and fangs eager to be sunk in flesh. But the devouring was left to my eyes rather than my mouth. One girl in particular caught my attention, an angel who works in the hair salon I visited at the beginning of my trip. She is gorgeous. I was '*gobsmacked*' when I looked upon her supernal countenance. Strands of russet hair dangled below her left eye, hiding it behind a stringy veil of deliberately casual beauty. A Crawfordesque mole marked her cheek beside her lip, a couple inches south of her aristocratic nose. Her eyes were brown, deep, spirited. Her firm buttocks were traced by her skin-hugging skirt; as she walked they jiggled with the confident buoyancy of the self-assured object of lust. It pained me to watch her walk out of my life forever.

January 1, 2003

Two days ago Jay and I toured the peninsula on a bus that took us to an albatross nesting site on a hillside bordering the Pacific. It is one of only two such sites in the world. For an hour we learned about these amazing birds and ogled them in their natural-artificial habitat, taking pictures, intruding on their privacy behind glass panes and, on the whole, behaving like paparazzi. But I think we had just cause. Albatrosses are unlike any other bird: they live for forty years (one we saw is still breeding at 62); they're behemoths relative to their cousins, with a wingspan of three meters and a height of 1.5; during flight they have a majesty unmatched by other birds, *gliding* before the distended jowls of the wind; they have a nuanced language, a complex culture and a sharp intelligence. Their behavior has affinities to our own: they're usually monogamous—I suppose in this respect they're different from us—they have quarrels arising from a lack of reciprocity in the relationship between mother and father; teenagers attend 'parties' for three or four years, in which they jabber and show off,¹ with the purpose of finding a suitable lifelong mate—and sometimes these youths are so roisterous that the grumpy adults holler at them to shut up. Albatrosses are essentially seafarers, spending most of their lives circumnavigating Antarctica at speeds of 500 kilometers a day. No one knows how they find their way around it, for they don't go within sight of

¹ We witnessed one of these gatherings from behind the window. I might as well have been watching humans transformed by Circe into birds.

land even once. Yet they always return to the same nesting area in the same week of the year! How is it possible?

Later we observed yellow-eyed pigeons, but that was anticlimactic. They're comparatively stupid, though mildly attractive, and they don't have the human interest of the albatross. Yesterday we meandered through the Botanic Gardens—an excursion marred by the presence of Terry. I would have enjoyed myself had I been alone and able to write. Maybe to poeticize on my surroundings, thus intensifying the experience. Schade.

I'm intrigued by the relativity of all things in nature. We see mountains as intrinsically large, but to a giant they'd be molehills. Trees would be fungi covering the ground, as what we call fungi are trees to an ant. Earth is unimaginably large to us, but to the galaxy it doesn't even exist. How odd! —I'm sure there's some deep insight to be gleaned from this, but I'm not the one to glean it.

The problem of morality has been distracting me lately. Some of what I wrote on June 5 doesn't hold water. ("We can't hop from one world to another.") If there's really no such thing as morality in its strict sense [maybe I meant that realism about values is false], how does it show a lack of integrity to act on this sometimes? Even if we usually abide by particular values and only *occasionally* transgress them, we're being honest by consoling ourselves in such cases with the thought that nihilism is ultimately true. At the same time we can recognize that in order to live a good life it's necessary to act on the basis of certain values most of the time—so we're not being cowards by oscillating between the two extremes, because there are good reasons for both and therefore the oscillation is a symptom of honesty. On the other hand, it's easy. So...what? Where do I go from here? Where has this reasoning led me? Which option will I arbitrarily choose? It's easy, but it's honest. Bad yet good. I won't fall back on the assertion that a desire for ease rather than honesty is my real motive, and hence that the vacillation is to be rejected, because I don't know what my real motive is. "Real motive" is probably an untenable concept. So—I'm lost.

January 3

Yesterday we left Dunedin. It was sad to say goodbye to New Zealand, but I intend to revisit this land in the future. Its wilderness is one of Earth's treasures, its towns are among the 'coziest' I've visited, and its people are as friendly as any Eastern European I met. I'm annoyed that I didn't see the north island.

We traveled the whole day, flying first to Sydney and then to Cairns. Though we reached our hotel at 11 p.m., the weather was muggy, hot and oppressive. 'Twas an ill omen. Today was the same quality with more quantity: unpleasant at 8:30, stifling at 2:30. But whatever. In the morning we rode in a shuttle to Kuranda, which was once an aboriginal village and is now an aboriginal tourist attraction. Our first order of business was to walk along a "Jungle Walk" beside a river. It was 'of interest', but not 'of excitement' or 'of gratuitous beauty', like New Zealand. It was jungly, though. Terry and I hunted for exotic insects, making several discoveries that are sure to have a far-reaching impact on entomology. For example, we learned that ants need not be black, red or brown, but can be green instead. We also observed a glittering fluorescent beetle in its unspoiled home on a railroad track. At one point I picked up a diminutive toad hopping across the path which we all dutifully admired for a moment, unaware that it was poisonous and we were flirting with temporary blindness. At last we returned to the village and the joys of aboriginal tourism, manifested in this instance as a marketplace where one could buy thousands of goods hand-carved and hand-painted by authentic real live dark-skinned natives. We bought a didgeridoo. Our next stop was Bird World. The flighted and flightless creatures on display were dazzlingly colorful. We were especially taken with a gigantic bird called the Cassowary, which seemed to have been teleported from the Jurassic era. It is supposedly the largest land animal in Australia—which sounds far-fetched. It is also one of the most awkward-looking: on the crown of its head is a jutting brown leathery helmet whose purpose I cannot fathom; the folds of flesh at the base of the back of its neck look like blood-red wrinkles in the brain; its head is arbitrarily attached to a disproportionately bulky body covered in hair rather than feathers, seeming to belong to another species altogether. The other birds made more sense.

We sailed along a sky-rail back to Cairns, which allowed us to view the jungle from above. The trip ended at the Tjapukai cultural center, which is a museum of—the aborigines! It was a damn letdown. We saw six pathetic dancers, an embarrassing attempt to create fire aboriginal-style in front of an audience, a boring film explaining the outlandish autochthonic theories of creation, and a disturbing movie outlining the history of British barbarism as it affected the natives. I felt such rage as I watched it that I wished a Spartacus had led a wholesale massacre of the colonizers. “British justice and fair play”? What a revoltingly disingenuous phrase.

January 5

Yesterday was a life-experience. It’s not every day that one swims in the waters of the Great Barrier Reef. Early in the morning we and sixty other explorers boarded a ship that carried us to a designated portion of the reef. The sun tyrannized over the sky: its beams held dominion over all creation, electrifying the air, scorching the skin and slicing through waves to become spectral shards igniting corals. A prismatic world teeming with life was revealed to me when I dipped my face in its lucency. Underwater luminaries swam and swayed with the current: fish of flaming blue, green, red, yellow, orange, violet and the iridescent derivative colors with names worthy of them; finger-like anemone, tentacles undulating so as to be nearly liquid themselves; coruscating coral of chiaroscuroic neon tones seemingly unnatural. Muffled swishing and munching, mesmerizing and potentially soporific, perpetually resonated through an undersea Eden. My pores drank the ‘warm waters of Lethe’ and my mind grew drunk, as my body ceased its thrashing to partake in the blissful, tranquil isolation of the reef. I was in a magical and unreal world.

I snorkeled in two distinct sections of the reef, once in the morning and once in the afternoon. Initially it was an uncomfortable sensation—the forced breathing, the large mouthpiece, the leaky goggles, the sore salty throat, the cumbersome flippers, the constant need to empty the headgear of water and cough out gobs of mucus—but with time I grew accustomed to it. I learned to flap my feet efficiently and could eventually swim for extended periods without raising my head. [...]

In the morning I scuba-dived for half an hour. It was an eerie though wonderful experience. For the first few minutes I was a bit afraid—and came close to panicking at one point. All the elements of scuba-diving seemed to hem me in and oppress me: the deep breathing that was necessary to have enough air; the sluggish movement of my limbs; the irresistible urge to free my mouth of that damned device and really *breathe*, and the awareness that I’d probably drown as a result; the rasping sound of my breaths reverberating in my head; the difficulty in maneuvering. I was in a ghostly realm where everything occurred in slow motion. But I got the hang of it quickly. I felt some slimy soft corals with my hand and caused the hundreds of beady little eyes to shoot inward. Unfortunately it was hard for me to ‘appreciate’ such beauty, concentrating as I was on *survival* and the remarkable nature of the diving itself. Nor were the colors as resplendent as they are in photographs (though they approached that intensity when I snorkeled, since the water was shallower, brighter and clearer). —Be that as it may, during the course of the day, from 8 to 5, I was taught to cherish the reef as one of the world’s great wonders. Its treasures are miraculous; you have to see them to believe them. If it’s allowed to wither out of existence, as it will if global warming continues at its present rate,¹ civilization will be deprived of one of those rare natural formations that help make life worth living. I want to save animals not for their own sake but for ours.

Ogling the sleek tanned bodies of half-naked women was an added pleasure. I felt quite hircine at times—had an overwhelming impulse to carry some of the girls into a bathroom. But I ended the day alone with my frustration, as usual. How long will this last?! Zeus must have it in for me, or Aphrodite. Whenever I see a pretty girl I see a mysterious fleshy cleft beckoning me.

¹ Higher water temperatures have already killed much of the reef—and the fish feed on the corals, so they’re dying too.

January 7

The last three days haven't been eventful. We drove to Port Douglas on the 4th to live in a hostel for four nights; on the 5th we went to a Sunday morning market and roamed around the countryside for the rest of the day. Yesterday we traveled to Cape Tribulation, a peregrination I didn't think was worth its tribulations. We were confined in a car most of the time but took frequent breaks to look at the rainforest. They became wearisome quickly. I wasn't impressed with the tangled mess of green I saw wherever I looked and which wasn't even as pretty as the Milford Track's 'rainforest'. Nor was I in the mood to be patient and contemplative: I felt, and still feel, spiritually claustrophobic around my family. A trip in a twelve-person boat along the Daintree river was the one really pleasant incident of the day. It was a quiet, electrically powered boat, and our guide was entertaining.

Today we went to Mossman Gorge and frolicked in the swimming hole. Spent the afternoon at "Hartley's Crocodile Adventures", which features not only crocs but birds, snakes and marsupials. The koalas were perhaps my favorite animals, being huggable sleepy teddy bears. But the crocodile feeding was a tad more exciting than watching those balls of fur take naps.

January 8

We're in a small town called Yungaburra. We spent most of the day driving here; our journey took us through a part of the Outback, which is the desolate expanse constituting most of Australia. The land was spattered with immense termite mounds that rose four feet off the ground and were rock-hard. Incredible. I was dumbfounded that such tiny creatures had built these crudely beautiful works of modern art. The achievement of Stonehenge not only *pales* but *blanches* in comparison. The power of 'mere instinct' lay crystallized before our eyes. The complexity of the termite and ant hierarchy is, of course, another example of nature's fine-tuning itself to create an uncannily human organization. How can one account for these phenomena? Surely no existing theory of evolution is wholly adequate.

We also admired a volcanic crater and a towering fig tree—the "curtain fig tree", named for its appearance. In the evening we looked for platypuses in a river near our hostel, but not a single one surfaced. It probably wouldn't have been an orgasmic experience anyway.

January 11

Like all cities, Sydney radiates a magnetic charge—both positive and negative. Unlike all cities, its architecture and its scenic background and its harbors and its plazas are magnificent—and so its 'charge' is primarily positive. It has a European, Old World flair with an exuberance approaching Paris'. While it lacks inimitably charming cafes, marble palaces and the Champs-Élysées, it has a spirit of ebullience that draws sustenance from buildings like the Town Hall, boulevards like George Street, harbors like the Darling, and street-performers like the comedic juggler we saw yesterday. It would take more than four days to tap the riches of this city. Unfortunately four days are all we have.

We arrived on the afternoon of the 9th. After unloading our bags at the Sydney Central YHA we ate dinner at a restaurant in Chinatown. A singer regaled us with Neil Diamond songs the whole time; after hearing one, we had heard them all. (Dana Carvey: "This is every Neil Diamond song you've ever heard...") We then walked to Darling Harbor, where a Latin band was playing to a crowd of thousands. It was part of the Bacardi festival, which is part of the Sydney festival, which lasts the whole of January.

On the 10th we didn't get started until 1:30, for reasons I've forgotten. The only one I remember is that Terry had to go to a doctor for his sore throat. When we finally got our act together we went to the Sky Tower, the view from which extends to the Blue Mountains when they aren't shrouded in fog, as they were yesterday. Later we walked through the Queen Victoria building—old-fashioned, "the most beautiful shopping center in the world"—the Strand Arcade and Martin Place. In the evening we saw the juggler on

the Circular Quay, which is on Sydney Harbor. The Opera House, a masterpiece of modern architecture with some of the best acoustics in the world, is on the harbor as well. Everybody has seen photographs of this unique building; it's world-renowned. The mere sight of it is memorable—but Jay and I saw an opera in it! And the opera was none other than *Don Giovanni*! It was a minor coincidence that this particular one was being performed, for I had remarked offhandedly the previous day that I should like to see *Don Giovanni* here. We had no idea it was playing: we went into the lobby to check the schedule for upcoming events and noticed that Donny Johnny was set for that night at 7:30. It was 7:15 at the time. At 7:25 we learned that no more tickets were available, but at 7:28 we learned that that wasn't true: two partial-view seats were left. Mom and Dad bought the tickets and then returned to the city with Terry, while Jay and I enjoyed three hours of Mozart. The singers were superb, especially the lead—Teddy Tahu Rhodes—whose voice was as mellifluous and sonorous as Josef Spacek's, and Ali MacGregor (or Lisa Russell?), who played Zerlina. The set and costumes were in the style of the eighteenth century, which was a relief and a respite from the misguided trend to 'modernize' operas. It was a spectacular production, from start to finish. One theatrical flourish will be etched in my memory for years: when the Commendatore appeared behind the tall window at the beginning of the climactic scene and chillingly intoned the name of his murderer, the window collapsed into the stage at the moment that the two columns crashed down on either side of the Don. He cowered in the shadow of the spirit, hugging the road to perdition lined with the palatial ruins of his own rakish existence. The symbolism was both dramatically compelling and meaningful in its own right. Then the scene began in earnest, as demons from hell gallivanted around the set, Leporello leapt from corner to corner in sheer terror, Giovanni vied with the embodiment of doom through his heroically impious refusal to repent, the music grew increasingly impassioned and chaotic—though only on the surface; Mozart is never chaotic—and finally the trap-door gaped to swallow the evildoer in flames. It was a moving climax, but it would have impressed me even more had our seats been closer to the action and afforded a view of more than two-thirds of the stage. My chief bone of contention, however, was not with my seating but with myself: I couldn't leave self-awareness by the wayside. I had to bear the burthen yet again, and my enjoyment was not uncorrupted. –But 'be still', my über-meditations and hypochondriacal delusions. Be still, my stuttering pen. You are as fertile as the Sahara desert.

January 13

Tonight I had a rare intellectual conversation with my family during dinner. I asked them whether they thought that humanity's loss of innocence was a reasonable price to pay for scientific progress; the ensuing debate led me to question certain beliefs that have in the last three years become ossified assumptions. Obviously 'innocence' is a word that desperately needs a definition before it can be used in a philosophical discussion, but because I've sensed that it signifies *something* I haven't felt an urgent need to define it in my half-poetic digressions. But tonight's conversation may have changed my mind. Perhaps the notion of innocence, which relies much on that of collective consciousness, really is too imprecise to be of use. Perhaps humans haven't experienced a 'fall' as dramatic as I thought. There are still frontiers beckoning us; the spirit of exploration still thrives, though it has been sublimated into technical/technological strivings. The loftiest minds, which "outrun their tardy ages", are still enthralled by the unknown—in spite of the dull apathy and quotidian preoccupations of the masses, which however predominate in all eras. The absence of worthy ideas in postmodernity may be an example of the tendency of unique people to be born posthumously.

Those are comforting ideas, but they aren't the whole story. This age is unlike any other. Its malaise can be *felt* but is hard to diagnose. I have trouble pinpointing it, but it exists. I've just neglected to appreciate that *every* age is in its own way unhealthy. I'll have to compare many cultural illnesses to shed light on our own.

January 14

On the 11th we went to The Rocks, which is a colonial district in Sydney. It has a large marketplace; we dawdled there for several hours and then walked along the Sydney Harbor Bridge. At 5:30 we took a ferry to Manly, a city near Sydney. Its beach offered a superb view of the Pacific and its tumultuous waves. –I forgot to mention that our first activity of the day was to see the lovely Chinese Gardens. They're secluded from the hustle and bustle of city life; they feature rivers and streams, rock gardens and traditional Chinese architecture. I saw a dignified lizard perched on a large stone—an Eastern Sea Dragon, I believe. Terry and I attired ourselves in the regalia of a Chinese emperor, which meant that we had to pose for a hundred pictures. My colorless Western outfit was distasteful afterwards.

In the evening we sailed back to Sydney to meet Erin and her friends at a jazz festival in the Domain. The park was huge and jam-packed, but Erin somehow found us as we stumbled across the narrow grassy strips between picnic blankets, lost and despairing at our chances of seeing her again. The music wasn't wonderful, the singer fairly atrocious, but I had an engaging conversation with two of Erin's pretty friends. Surprisingly easygoing girls. After an hour one of them left, along with my parents and Terry, but the rest of us lingered until almost midnight to hear the band, which played music a good deal more exciting than the preceding. [...]

Finally we all trekked across town to a nightclub called Gas. I was by then tired and quiet, bored of these people, but I conformed like a good American. Luckily I wasn't allowed in to the 'classy' expensive club wearing my shorts.

On the 12th we toured the Opera House. The guide was informative and likable, partly because he shared my respect and sympathy for visionaries. Jørn Utzon in particular. Utzon was the original architect of the building; he was, and is, an inspired dreamer. He's currently overseeing renovations in the opera theater, but it has taken him forty-five years to be even partially reconciled with the Australians. He hasn't returned to Sydney since his resignation of his commission in the '60s, for the controversy surrounding his project created a lot of bad blood. Sydneysiders hated the way the building looked, thought it was a waste of money, didn't understand the need for a grand arts center, etc. One of their complaints was mildly reasonable: the original projection of the cost was \$7 million, while it eventually skyrocketed to \$102 million. This was outrageous to philistines. Utzon finally quit because his vision was unacceptable to the yahoos in Sydney—who have now, predictably, realized that his original plans were superior to the end-result, and have asked him to supervise changes that have much in common with what he wanted initially. For example, he wanted the opera theater to be blue and silver and the concert hall to be red and gold; instead the first was painted black and the second neither red nor gold. Now the first will probably be painted gold and acoustics will be improved in the second. –It's yet another instance of a genius's work being first grudgingly accepted and then becoming a source of pride for the very people who fought against it in the beginning!

After the tour we walked through the Botanic Gardens. I wasn't in the mood to try to enjoy scenery, so I sat and sulked. A Jewish wedding occurring nearby raised my spirits, but I could watch for only five minutes. We had a schedule to keep; we couldn't pause to share a sweet moment with lovers. We had to race down McQuarry Street, admiring the hoary government buildings that exuded nobility-of-purpose, and walk through Hyde Park. We saw the fountain commemorating Australia's alliance with France in World War I, the ANZAC memorial and the canopy of trees shading the long promenade from one end of the park to another. In the evening we watched two IMAX movies: a documentary about the international space station and a history of Ernest Shackleton's attempt to traverse Antarctica in 1914. They were both inspirational, but the latter was astounding. Shackleton's journey was not only epic; it was the stuff of legend, of myth, of ancient Greek hero-worship. Hercules would have loved Shackleton as a brother. While watching the film I might have felt like a contemptible sybaritic coward had I not been convinced that in the straits in which he and his men found themselves I would have behaved similarly. Most people with an iota of hardihood would have. It's human nature: we grow accustomed to situations and learn to accept them; when our lives hang in the balance we can even behave like intrepid explorers battling the elements and daring nature to inflict her worst. It's a pity we aren't tested more often, for extreme conditions offer the best opportunities to show our mettle and live heroically.

January 15

This morning we flew in a seaplane from one of Fiji's two main islands, Viti Levu, to a tiny paradise named Nanuya Lailai. Its neighbor is Turtle Island, which is where *The Blue Lagoon* was filmed. The water here is liquid glass, cooled to body temperature after melting. We're staying on the side of the island that faces the ocean rather than the lagoon, but the atmosphere is the same: laid back and sheltered from the world. Outside events have no significance here; the natives live according to their own rhythm and routine, which is tranquil to say the least. Virtually no hint of Westernization taints their lifestyle, excepting the tourists who provide them with their livelihood. The burrees, or (thatched) huts, in which we and they live have few modern conveniences. The small community neighboring ours (called Sunrise) has electricity and a radio, but Seaspray lives more primitively. After 7:30 we have to carry lanterns into the shower, into our huts and to dinner. The food isn't wonderful; tonight's supper included some kind of meat that wasn't. But most of it is edible. The friendliness of the Fijians compensates for the inadequacy of their meals. The two young ladies who are the nieces of the couple that runs the place, Maria and Katarina, are shy but extremely kind. They perform their duties diligently and spend the rest of the day giggling and whispering. Apparently they think Terry is cute: whenever he talks they laugh and chatter delightedly in their own language. Their aunt and uncle are personable hosts.

This environment in which one lounges and swims in the sun all day long is so foreign and provincial that I don't understand it. How can people live here? Don't they get restless? Don't they crave something new? (Maria does, from what I gather.) There is no Other to impress! My obsessions and ambitions would dissolve away if this island were my home, and my mind would probably lose its inquisitiveness. Or, more accurately, if I had been born here my mind would never have had the chance to mature. But I'd be incredibly bored nonetheless. —Yet to *visit* this island is an eye-opening experience. It makes me feel as though my usual thoughts are petty and miss the point of life. I suspect that Levin's fascination with the peasantry, typified in the mowing scene, springs from the same source. Such a life is simple, rustic and *real*.

January 16

At 5:00 yesterday we walked along the coast to the Blue Lagoon, guided by Daniel, who is the head honcho's husband. The sand on the beaches is so fine as to feel like clay squishing through your toes. At one point Daniel shimmied up a palm tree, knocked some coconuts down and expertly carved two for us to eat. I didn't relish the taste of either the soft or the hard meat, or the milk, although the soft meat was a *tad* more sapid. We reached the lagoon at 6:30, admired the cloudy sunset, and climbed a lot of hills back to our base. The journey was as beautiful and uplifting as we had expected, with one exception: Daniel showed us a site on which a resort will be built in a few years, marring the lagoon's unspoiled appearance.

After dinner all the tourists watched a show performed by the natives, which featured them dancing and singing Fijian-style. The songs were surprisingly euphonic, with proper melodies and harmonies and a festive 'joi-de-vivre'. After the concert they taught us two traditional Fijian dances—one involving couples, one not—and then we played 'follow the leader' in a thirty-person chain. I doubt that anyone present didn't enjoy the evening. A halo shone around the near-full moon.

I didn't sleep well. Not only was the heat muggy, but at 5:30 a crowing rooster woke me up. I chased it away, but the sunlight streaming into our room didn't permit further sleep. Hours later I half-ate a mediocre breakfast of oatmeal and tasteless donuts, then sat in the shade until noon to finish yesterday's entry. We were eager to visit the Sawa-i-Lau caves, an hour away by boat, but we had to wait until the waves grew less choppy. At last we embarked, slathered with sunscreen in the intense heat (shielded by clouds). The ride was scenic. Upon arrival at the beach we snorkeled, seeing razor-thin fish as spectacularly colored as those near Cairns, and then entered the dank caves. Their reputation is well-deserved. We jumped

into the cool water (10 meters deep) and admired the colorful walls around us, which apparently a volcano had carved. After swimming through a narrow channel we found ourselves in another chamber, pitch-black. Fortunately Daniel had a flashlight; he shined it on the high smooth ceiling, causing Mom to gasp with pleasure. After returning to the main area we watched the fifty-year-old Daniel climb its walls as though wearing suction-cups on his fingers and toes—and then from a height of fifty feet leap into the water. Jay and I attempted the climb, but it was impossible. The exercise was so strenuous that my limbs quivered uncontrollably. At 3:30 we puttered back to Seaspray, stopping twice at tiny villages whose material wealth was comparable to that of a shantytown. But their inhabitants seemed carefree. Before dinner I bought some remarkable shell-jewelry for Rebecca; after dinner, we all discussed Fijian politics together by the fire.

January 17

It was sensible of Byron to write his letters and journals in that halcyon jargon using incomplete sentences and dashes between every phrase. Not only is it more economical and easy to write, but it's oddly poetic, compelling and fun to read. Less pretentious, too, and a better reflection of how thoughts work. I might adopt his style at the end of this year, if and when I live in India. It's a damned hassle to waste time composing fluid sentences when I'm traveling.

I slept restlessly again last night because of the heat and the rooster. Today I'm not doing anything to speak of. Just walking, swimming and sitting.

—What a life these people lead! You have to see it to believe it—or rather, *disbelieve* it, for you can believe anything abstractly. Stranded on this isle—idyllic for a vacation but devilish for a home—they're lazy and hardworking at the same time. Their drudgery lasts a good portion of the day, but it's an unambitious, mechanical drudgery. (That's not necessarily redundant, by the way. Drudgery need not be unambitious or mechanical.) The rest of the day they idle in the shade or the water, playing the guitar and singing love-songs. I don't blame them: the heat is unforgiving. I wonder if they envy the ambassadors from the West who visit them continually.

January 18

In a few minutes we'll leave the island to fly to L.A. 'My heart is aching': there are two incarnations of poetry here whom I'll never see again. I'll miss Fiji itself as well. When I sit in the shade it is heaven on earth. If I were here with a girlfriend my happiness would be indescribable. Nanuya Lailai is possibly the most romantic place I've ever been to.

We're back in the Nadi Bay Hotel. At 11:00 p.m. we'll board our flight. In the meantime I'll relate to you what we did on the 14th: we drove along the Coral Coast. Drove and drove and drove. The dirt road to Natadola beach extended into infinity but its preposterous underdeveloped convolutedness was amusing rather than annoying. We ate dinner at a restaurant whose dusky atmosphere was fertile soil for the seeds of love. But I was with my family, so my pleasure was asexual.

I'm fed up with the lie I live. It's time to tread the primrose path of dalliance, recking not my rede. I should sip from the hedonism residing permanently in the dregs of my soul, conjure it to the level of appearance, tempt it with the succulent promise of raw pink flesh—transmute myself into a peripatetic libertine who fritters away his hours in profligacy refueled by a diet of literary and philosophical nourishment. (A daily soupçon of such sham saintliness ought to be sufficient to humor my deceived spiritual desires.) [...]

What struck me about the villagers was what strikes me about some Asians: they're easygoing, trusting, and they don't adopt airs as often as Westerners. They're almost naïve. I suppose that the more worldly one is, the 'harder' one (usually) is. A social carapace grows, an exoskeleton that isn't needed in village life. Many obvious reasons explain this phenomenon. It's lucky that Fiji in the 1870s elected to join

the British empire instead of the American. Had the latter country gained ascendancy over Fiji, the land would by now be partitioned into thousands of private properties, the islands forbidden to common folk and owned by Richard Evanson clones. (Evanson owns Turtle Island, on which no one is allowed except fourteen couples who pay \$1000 a night.) England was fairer and juster.

The beauty of this world is devastating. Millions of sterile scientific facts cooperate to form a unity that includes such details as the blazing full moon sitting in the armpit of the palm tree in front of me. The moon revolves around the earth, a gray dusty object obeying dry Newtonian physics flavored with a pinch of Einstein, floating in the desolate vacuum of space two hundred thousand miles away, and it looks like *that!* What sheer spontaneous perfection! If I squint my eyes, everything but a circle of light is blotted out.

—If you pry open your eyelids while rolling your eyes back into your head and looking at the sun, you can see the veins in your retina from the inside.

January 20

The traditional equation of the Good Life with moderation in all things is imprecise and wrong. Moderation = ‘morality’, propriety, the ‘good’ life. Intoxication = the Lived Life. Both are prerequisites of the Good Life, which consists in moderating intoxication such that it is distributed through all facets of being. Breadth is as necessary as depth, because life’s potential is as broad as it is deep. Great passion with many outlets, tempered by worthy values: that is my formula for the Good Life, much as I may not always abide by it. This awareness constitutes one side of my torment; the other lies in my uncertainty as to which values are best.

January 21

Bach’s Prelude in C minor, BWV 999, as transcribed for guitar, has a wavering, wraith-like, waif-like, lonely, dreamy quality, as though it doesn’t quite exist or is an outcast from the world. It’s a musical vignette, a story of sweet sadness, a slice of the higher life, with a quiet wisdom lulling from behind the plucked tones. The repetitive pattern so exquisitely Bachian, ebbing and flowing in the minor key for eighty seconds, prepares the partaker for the unexpected major third—and the following three chords—as a pregnant woman is prepared for the birth of her child after nine months of waiting. That single note is the rustling of the silken undergarments on a teary-eyed virgin deep within the soul of her lover. It is the soundlessness of Venice at dawn. It is the surcease of strife and the end of history.

January 22

Had two classes—Greek Drama and History of Traditional China—first professed by an effeminate probably gay likable young man, second by a stodgy old Israeli dude on leave—but subject interesting, so I’m keeping it—must know more about China, ‘broaden my horizons’ or some other cliché.—Met cute girl, junior named Sarah back from Italy, James Grossman’s friend—but she’s dropping the class. Lunch with Bruce—not easy to talk to him, reserved—him, that is, but me too because. Dilettantic, or just pseudo-intellectual, conversation with housemates—more of a spectator sport on my part—didn’t know what to say about world affairs, their choice—unacquainted and uninterested—so sat and watched and thought of quietus. Reluctant mental masturbation at the moment—thesis, namely—no orgasms yet—don’t know what to write, scarcely care.—Thought of prick philosophaster Schliesser and that unpleasant meeting—should have called him a dick after his reference to my “*attempts* at metaphysics” and left the room—“I’m being deliberately patronizing” said he—what the fuck?—fuck you. Thesis—how am I the same self?—self-identity = can of worms, slipping through my fingers ADD-style—*hasse es*—think of Vonnegut’s (Vonnegut’s?) short story about a futuristic 1984 in which people aren’t permitted to think—when thoughts

creep in, a noise blasts in their ears (they wear permanent headphones) to distract them and they forget the thought—well, *c'est moi*.—I am my own Big Brother. Return to Paxil?—panacea for social ills—what ills?—introvertedness—'tis tempting but I'm a romantic, must evolve through willpower, not dastardly mechanistic reintegration of bodily chemicals. This writing-style exalts charlatanry as highest good—no wonder Byron preferred it—'I am the Great Charlatan, no. 2'—no, no. 3—Goethe number 1—*ich verstehe ihn wie mich selber*—iconoclast, I.—Couldn't record daily events in erstwhile style, would have been cumbersome and tantamount to taking them seriously—in short, infantile—but now they can be seen as what they are, as jokes.

Sor's *L'encouragement*, Op. 34, *Cantabile*—the whole piece, actually, but especially the coda of the first movement—makes me happy, a happiness deep—and shallow—but sweet in its essence.—So much music to laud, so little time.

January 23

Stayed in house all day—it was bitterly cold, frosty, required thick coat—and that was *inside*—outside can't be described, air is frozen—"global warming" my arse. [Joke.] Making headway with thesis, chapter on time, wrote two paragraphs—referred to journal entry on Borgesian time—was illuminating, surprisingly. Read Andy's humongous book on history of architecture, took copious notes on Greece, words like *trabeated*, *megaron*, *cella*, *peripteral*, *prostyle*, *entablature*, *entasis*, *echinus*, *architrave*, *metope*, *triglyph*, *abacus*, *cornice*, *crepidoma*, *stylobate*, *volute*, *torus*, *spira*, *plinth*—yes, I know their definitions too.

January 24

Detest the way I write philosophy—parched, dead sentences condensed into black holes swallowing all light—not pretty or gripping—reminds me of Greek columns lacking entasis—even Hegel more interesting—depresses me considerably but don't know how to rectify it. Went to three parties until 2:00, met Lily, Hispanic model, and others—wanted to invite her to my house—drank much vodka, got tipsy—talked with Andy and Ryan in house until 4:00—a *human being* when drunk—ambition to become an alcoholic.

January 25

Read Byron's dramatic poem *Cain* three weeks ago; ingenious, of course, but a smidgen monotonous—too philosophical—question after question—why this? why that? what meanest thou? enlighten me, Lucifer!—one long overblown expression of doubt—through ravishing poesy that portrays Cain's anguish well—but life ain't all *that* bad—which is Byron's point, perhaps?—Goethe's article on *Cain* is hollow as ever, barely scratches the surface, speaks in windy platitudes—as a literary critic Goethe isn't worth much.—He's nothing but a poet, not even a dramatist—his plays can't really be *acted* like Shakespeare's—have no *meat*, no dramatic character-development—pleasant-sounding pseudo-thoughts with rounded edges.—Constant embarrassing gesticulation (though subtle) toward himself—'Look at me, look at me, what I've done!'—'I am whole, be like me!'—'I teach you the Superman'—obtuse—no wit, no magnifying lens on himself—sails through life on the crest of popular approval (with occasional half-exceptions).

January 27

CSS party tonight (Monday), a few beers—drunk—still drunk at 2:30, had fun—came perilously close to kissing a sweet junior, Beth; earlier ate dinner with Rebecca at Russell House and played piano, recounted trip, made fun of Schliesser together—and then saw him suddenly, quite a fright—he complimented my musical talent (had heard me from upstairs)—seemed shy and lonely, I felt sorry for him but wasn't friendly. Must cram into one semester the lost fun of seven.

January 28

Skimmed a moment ago the maudlin email I sent Rebecca in sophomore year, painful to read—embarrassing—‘one wonders how one is capable of writing such schlock’—former self = worm burrowing in the muck of bathos. Reading about architecture everyday—weird effects on mentality: I *see* buildings differently now, hidden details pop out and I can *name* them, to have power over them. Listening to the quiet resignation of M.'s P.C. 24, 2nd m.—bewitching—I'm tired of struggle, of need for destiny, of need for appearances and for genius—and cult of experience, and no love, and people I know—and myself—but would rather be me than anyone else in history—and that's the tragedy, for what does it say about others?—and me especially?—I am an illusion that's outlived its day, died a hundred years ago, nothing left but the charred contemplative mockery writing these words, lost in its sham loneliness, confused, wasting time.

January 29

At a loss again regarding my thesis, not surprisingly; tormented by thought-experiment involving implications of MPD for self-continuity—thought I'd solved it, but was wrong. Last night reread Schopenhauer, “On Genius”, vol. 2: uplifting, though silly—recalled former joy at reading it (two years ago): everything described fits me perfectly, so it seemed to confirm my sui generis and thus intoxicated me—in bygone days—though I could never escape doubt that *I* was a ‘genius’ (partly because that label turns me into an object, which objecthood I can't conceive—can't even accept that I'm *talented*—but, on the other hand, my fascination with such ‘objecthood’ was also a reason for the occasional *opposite* of my doubt)—anyway, now it just amuses me, though pleasantly and ego-caressingly, for part of me still believes in myself.—But the happiness it induces is a fart compared to music's effect on me.

A Lover's Lament

The poetry of yore is dead and gone,
 Its beauty peregrine in modern life,
 Its rhythm—romantic, steady, classical—
 Too orderly to coexist with us.
 ‘Artistry is foolish, behind the times,
 Can offer us wise moderns nothing more,
 For we have seen too much of history
 And learned that chaos is the deepest truth,
 That “meter” is a hoax, a sham, a fraud
 Distracting us from scientific knowledge—
 The Irrational is the Deus, and we are pawns.’
 Thus speaks the spokesman of a proud despair
 Unconscious of its essence in its proud conceit.
 Between the lines one reads, ‘I hate you, life,
 You great betrayer, derailer of my dreams;
 You reek of shattered hopes and long-lost loves,
 Visions of the future wreathed in velvet

But now relics of a sanguinary
 Celebration of barbaric bloodlust.
 Nothing remains for me but death ignoble,
 Anguish imperishable, faith's antipode,
 And science lusterless. —Because of you,
 Life, Knowledge, History, Mankind and "*Beauty!*"
 Such is the curse of the postmodern Zeitgeist,
 Ignorant behind a veil of wisdom,
 Weak behind a mask of stoic courage,
 Vulgar when attempting to be noble.
 —The spirit's dead, mimesis is abortive;
 Poetry has made its bow: we're doomed.

January 30

Read *Prometheus Bound* five days ago, a mediocre translation (David Grene)—prefer Shakespeare to Aeschylus, predictably; don't fully understood the purpose of the Chorus—represents propriety?—captures the mood of a scene?—and the thoughts of the audience?—seals emotions in an airtight package of music and words—purged of ambiguity, thus inviting catharsis?—Dionysian versus Apollonian is intuitively obvious, Greek culture all but screams it: Aristotle's "catharsis" is Dionysus (intoxication), the god of tragedy—*content* of the tragedies—the Chorus, the plaintive recitations, the droning music—but then the self-evident need to impose form on everything—what theory could be more uncontroversial? Reading *The Persians* now, prefer it to the other, partly because it portrays the sorrows of real people during recent events—every line gushes compassion and a deep humanity—Aeschylus's genius is nonpartisan, he is a human, in the way Shakespeare was: understands suffering, understands human weakness, understands the folly of hatred, understands the necessity of understanding.—Here's something to ponder: I'm reading a play written 2500 years ago in the Mediterranean, in a city whose citizens were so humane as to mourn the losses of their enemies in a war seven years past—and this play is so sublime as to move me in the year 2003, to leap over the vicissitudes of circumstances and remind me what it means to be human, that there is still and always will be hope—that out of disaster is born greatness, that struggle is salvation.

...Here's a version of what's bothering me about the thesis: reincarnation means that in the future, after I've died, I exist once again, which is equivalent to 'this self-consciousness exists again', which seems bereft of meaning, for what can make the two self-consciousnesses the same if not memory and the moment's extension?—which is lacking here.—Self-continuity can have no other meaning; one cannot say, for example—as I have in the thesis—'it consists in the same personal, private existence—same perspective, as it were—displaced in time', because of course that's just a garbled version of 'same self-consciousness', which begs the question. (Maybe that's wrong.)—But it *feels* like it should be possible, conceivable, for there to be life again after death—'for me', thought not for this identical self—i.e., if existence is perceived *I* must perceive it, or someone from my 'perspective' (which is the same thing), because if someone else does it won't exist *for me* = it won't exist.—You see that language doesn't permit of my confusion's articulation; but the crux is simply...too labyrinthine for me to describe, so I won't.—But part of it is that even if one 'imagines away' memory and the continuous moment (so that there is at one point an abrupt break), my consciousness of ten minutes ago *must have been* intimately related to this one, an exact copy—*me*, in fact—yet the meaning of self-continuity can only be the two ingredients I've discarded, because other definitions are *petitio principii*-ies—and therefore the forgotten consciousness is as 'intimately related' to me as *someone else's*—i.e. not at all—which seems ludicrous because ten minutes ago I existed (there was existence)! So where have I gone astray?

January 31

Birthday party at Kanchana's; drank too much, ended up vomiting multiple times in her toilet—maybe 20 fruitful heaves all told—then went outside, hid behind a corner for an hour and a half (until 2:30) wearing no jacket on one of the coldest nights I can remember—sat on the ground shivering, huddled, felt infinitely alone, encouraged myself to cry, wished Nietzsche were there beside me—Mr. Compassion, in spite of his writings—so I whimpered and waited for the waves of nausea to ebb, then sat in silence seemingly forever. When vision was less blurred I returned to grab my coat—guests were gone—and walked home, teeth chattering like a typewriter—long walk—peeled off clothes and fell into bed; woke in the morning, threw up and was sick the whole day—tried to lie perfectly still because movement triggered sickness—felt abject—couldn't do anything, not even read or think, so lay there zombie-like—at 9:00 I ate soup tentatively, was able to keep it down, and now it's 2:30 a.m. and I feel mostly better.—One question for myself: Why? Before the party I called Mom, talked for a while; she told me how much she misses me and enjoyed our time together, thinks I'm really “funny”, keeps “replaying images” in her mind—it left me feeling happy, only to walk headlong into a night of misery. I shudder to think what my future judgment of myself will be. Just remember, Chris, that the sad truth of isolation from oneself and everyone else demands we adopt at least a semblance of understanding.

February 2

Best part of college is the freedom; never again will I be so free, unfettered by responsibilities—can do whatever I want all day long—but don't take advantage of it, as few students do—“college is wasted on the young”—though not entirely. Have finally, I believe, moved past those thesis-perplexities, namely by embracing my original idea. Talked with Andy last night until 4:00 about our Wesleyan experience, and girls, and *Hamlet*—asked him what was the justification of Hamlet's faked insanity—his intentions—To buy time? No. To know the truth? Madness didn't help. To portray the turmoil of self-consciousness and doubts? No, that was *Shakespeare's* intention. So then *why?* Andy's (inadequate) answer: artistic license.

Looked at the Tufts Philosophy department website—applying there—part of mission statement is “to provide students with the skills necessary for Ph.D. research, as well as to foster the independence of mind required for genuinely creative philosophical work”—depressed me to read that: life felt picayune suddenly, perniciously unambitious, scholarly—training people to think!—and denying philosophy even as they preach it!—well-oiled parts of the machine—functioning smoothly—cooperating with contemporary ways of doing things.—What philosopher has ever cooperated? Philosophy is rebellion, war with the status quo; it is a *way of life*, not ‘tidy thinking’ or scholarship or a specialty.—Spartacus was a philosopher; Dennett is not.

February 3

Seven Against Thebes is tiresome, too heavy at times, like *The Persians*, though it probably fulfilled its cathartic purpose well—and besides, I'm “imposing my cultural standards” on it!—the monstrous crime condemned by all relativists—who don't know how superficial is their judgment. Greek class a waste of time: professor does nothing but summarize plots and genealogy—so I might as well read the plays on my own—would have chosen better translations anyway—must learn ancient Greek! Chinese class not much better, but history awe-inspiring. Met with Don Moon, who wants me to rewrite the thesis eventually to make it accessible, user-friendly.—Fat chance: all that work so two mindless readers can understand me better?!—I don't think so!—Is Hegel reader-friendly?—does it matter?—is he less profound on that account? *Could* (the mature) Hegel have written lucidly, with sentences *unpacked?* *Sicher nicht—und ich auch nicht.*

Reading *Agamemnon*, translated by Robert Fagles—this play best of all, Aeschylus' art honed to perfection after a lifetime of experience. Line 222 is significant; here's the context:

And once he slipped his neck in the strap of Fate,
 his spirit veering black, impure, unholy,
 once he turned he stopped at nothing,
 seized with the frenzy
 blinding driving to outrage –
 wretched frenzy, cause of all our grief!
 Yes, he had the heart
 to sacrifice his daughter,
 to bless the war that avenged a woman's loss,
 a bridal rite that sped the men-of-war.

“Wretched frenzy, cause of all our grief.” Dionysus is frenzy—and Dionysus is god of tragedy, of catharsis—catharsis is a kind of frenzy—frenzy is thus the *cause of* and *remedy for* grief.—Greeks knew this, knew the contradiction, knew the absurdity of life—hated it and loved it—their wisdom knew no bounds.

February 4

A major advantage of living at this time, so late in history, is that the past is a kaleidoscope of cultural achievements across the world, or rather a cornucopian buffet whose fruits I can sample—a kiwi here, a mango there—a few papayas—and then choose which are my favorite delicacies—which are healthiest, which savory and sweet—and invent my own diet tailored to my needs. History can be appropriated by each person as he chooses, selectively employed in the service of his self-creation. The individual can be more complete than ever in the past. —The goal of humanity *can* lie in its end, if we make it such. (Its highest specimens are merely *another type* of goal.)

Gym with Ryan—satisfying—no nausea for once. When reading *Agamemnon*, having trouble concentrating—don't know why;—Fagles' style too flowery, too turgid, too metaphorical.

February 6

Miraculous that conversation is possible, that meaningful sentences can be extemporized, ‘blurted out’: double supremacy of the subconscious. Woke up at 11, as usual, worked on thesis—wrote a page—didn't do much else, ate dinner alone at Campus Center, watched part of a special on Michael Jackson—rather freakish-looking man with freakish lifestyle, but maliciously misunderstood, a tragic figure. Finished *Agamemnon*, last 700 lines compelling with a powerful momentum—Cassandra a superbly crafted character, piteous, an innocent caught between the spokes of fate—in the wrong place at the wrong time—whose undoing is through no fault of her own, and courageous till the end, nobler than all others in her godlike but poignantly human acceptance of her doom.

February 7

Sangeetha emailed me after a five-week silence; I was overjoyed, was beginning to think she didn't care if we ever communicated again. Reread some comp papers from sophomore year, was startled to discover how well I had learned the art of bullshitting: intelligently written, in some cases brilliantly, especially considering I didn't believe a word of what I wrote—successfully pretended to have great erudition—and *did*, compared to now—my ideas were not sufficiently argued, of course, but they were at least interesting and complex, and are good starting-points for finding the Truth.—Truth? What of it? Who

cares? I just want a girl. Opening of the *Eroica* is *hilarious*: two brutal chords, violent, murderous, and then off we go into the main theme. Ha! It's one of my favorite symphonies, every movement a masterpiece.

I was lonely today; housemates played video games from dawn till dusk, laughing it up, but I didn't want to and so felt like the outsider I am, almost friendless. But a reversal of mood has transpired—adrenaline rushes—it's 10:30 and I'm going to the gym.

February 8

Nothing eventful today: got a haircut, wrote on freedom, read about Schelling and Fichte—(Schelling a pitiful thinker, such hero-worship of the Absolute!—all nonsense; Fichte insightful but confused)—then watched a movie with Andy and his friend.

Sunday, February 9

Brunch with Rebecca at O'Rourke's; watched *Gladiator* with Andy on our new sound system; wasted many hours; wrote thesis. While enjoying *Les Préludes*, which involved thrashing my head around like a maniac, I smashed my nose against my knee. Listened to the whole of *Les Misérables* with Andy as I tried to read Aeschylus—cathartic musical, Eponine my favorite character—idealistic, innocent, an unrequited lover, alone, downtrodden, wise beyond her years (“suffer into truth”), strong, the Victim who manages to stay human in the most slummy conditions—“A little fall of rain” makes me weep oceans, “Bring him home” is another, and “I dreamed a dream”, “Who am I”, “Come to me”, “Drink with me”, and many others. *The Libation Bearers* is not as good as *Agamemnon*. —Greek tragedies' constant emphasis on suffering is wearisome—reminds me of Wagner's Music of the Past, though it's more pristine than the latter.

February 11

Music videos are incomprehensible to me. What kind of person wouldn't view them as comic relief?

Rejected from Cambridge, predictably; I wonder if I'll be accepted anywhere else. *The Eumenides* is my favorite Aeschylus play.

February 12

This has been my happiest year at Wesleyan—which says more about the previous years than it does about this one. It's nice to have the comfort of a house.

What is the psychological function of names? In my own case I can testify that having a name counteracts my solipsism, reminds me that I live *in the world* and am a being like all others, possessing a face that people can see as I see theirs. It reassures me that I am part of a community. It sharpens self-consciousness and sustains the myth that I am *one substantive self*. Why else would we find it so essential to learn a person's name upon meeting him? “Hi. What's your name?” Who cares?! A name doesn't tell us *anything* about the person! But we've identified ourselves so utterly with our own names that we know it is an integral part of *his* self too. It coheres him. “I forgot to ask what her name was! Damn! I don't even know who she is!”—even if I know her personality quite well. Her name is her self, so to speak.

...Avid devotees of science fail to comprehend the *sine qua non* of human existence: wonder. Science can try all it will to solve the riddle of Being, but after a certain point its labors become Sisyphean. Understanding cannot pass beyond a predetermined boundary. Mankind will never really know how, for

instance, the brain produces thought, no matter how much information scientists accumulate. Our own complexity is simply beyond our ken. The universe is frightful, but *under our noses* is the infinitude of the noumenon.

Had a test in Greek Drama today; researched Italian architecture; thought about freedom, got nowhere.

February 13

Parents stopped by tonight on the way to Bob and Betty's, gave me a comfy chair and some wall decorations. Room looks *lived in* now, has *character* finally. Had dinner at Thai Gardens with them. Went to Senior Cocktails, met a cute girl—Julie—now I miss her, hope to see her again soon.—My present bittersweet joy betrays just how lonely I am. I've seen Julie many times but never thought I'd meet her. Such a pretty girl (by Wesleyan standards)...not for the likes of me!

February 14

Ate at an Indian restaurant tonight with Ryan, Andy, Jason and Mike—unpleasant experience: service was two hours late, meanwhile I listened to a conversation on politicians and the like, secure in my status as the fifth wheel. Andy intolerably supercilious as usual—truly a conceited brat who has a desperate love of 'looking down' on people, ignoring them or acting like they're not worth his consideration. But all four, and others, habitually ignore my comments because of who has spoken them rather than because of their content. —The signature of the snob. But as long as I remember that most people are not Wesleyan students I'll stay sane.

Today I mailed the Tufts application and read *Oedipus Rex*. Sophocles is easier to read than Aeschylus, but Aeschylus' writing is more ravishing. It is also sometimes over the top. I remember an entertaining dialogue between Xerxes and the Chorus in *The Persians*—toward the end, when everyone is lamenting the downfall of Persia—that goes like this:

Oh alas, woe.

Woe, O gods
Who brought these unexpected woes!
How baleful gleams the eye of doom.—

Struck by woes perpetual.

Struck by recent—

A recent woe.

Woe, alas,
They met the men-of-war without success:
How luckless was the Persians' war.

[...]

Greeks stand firm in combat.—

Alas, too firm! I scan an unexpected woe.

You mean the host, routed and broken?

My garments I rent at my woe.
 Alas, O woe.
 And even more than woe.
 Double and triple the woe.
 [...]
 Weep, weep, weep for the woe, and homeward depart.
 Alas, O woe, misery.
 Shout antiphonal to me.
 To webegone woeful gift of woes.
 Raising a cry, join together our songs.
 Alas, O woe, woe, woe upon woe.

You get the point. I lost my composure at the line “Double and triple the woe.” It may just be an awful translation, though.

Sunday, February 16

Called Julie this afternoon, talked for a few minutes somewhat awkwardly—she sounded shy; on Friday we’re having dinner at the Tuscany Grill. [...]

...A few minutes ago I ate dinner with Mariam in the C.C. At first we colloquied on such mundanities as theses and graduate schools; then we reminisced about Cocktails. I told her I’d met a cute girl and was having dinner with her on Friday. In the midst of this Julie-chat I heard a delighted voice behind me exclaim “Hi Chris!”; my about-face revealed the visage of...yes, Julie, live and in the flesh! I was so *happy*, not only to see her but to see how pleased she was at seeing me. The remainder of the dinner was fun: I can be my exuberant self around Mariam, for she reciprocates. I love that girl! She reminds me that there are plenty of people in the world who aren’t schmucks.

Finished *Oedipus at Colonus*; have nothing to say about it—too tired at the moment—and it didn’t make a strong impression on me anyway.—I wonder what it would be like actually to believe in paganism; can’t comprehend it. Must have been an awe-full world in Greece.

February 17

Blizzard conditions; no classes today; no work either, except for a few sentences in thesis—mostly just thoughts. Zeus damn this thesis!

Two poems:

Sadness
 Prolific in tears
 Euphonic in sensation
 Stonily silent in expression

Dissonant in perception
 Rich in self-comfort
 Sadness

Cello
 My consolation
 So proudly self-sufficient
 Loving passion apollonian
 A lonesome Dionysus
 My musical self
 Cello

2-5-7-9-7-5-2: peace-conflict-resolution.

February 19

Watched *Requiem for a Dream*: shattering movie—I feel like dirt, so filthy that I’m incapacitated, catatonic, haven’t energy to do anything—and can’t go to bed feeling like this. What’s worse is that I have the sense that I’ve experienced an insight into the nature of life—which I can’t dissolve in an acidic solution of antiseptic artistic creation, because I’m creatively impotent—an impostor—the most delusional sane person in history—unsure of everything, insecure, an actor so talented as to fool myself more than anyone else—acting even in my acute self-dissatisfaction—even while being sincere—even then, when I seem bared to myself and naked for all self-consciousness to behold—even now—even now!

...Cleansed myself by reading about Carolingian architecture.

February 20

Wrote a page of the preface—was incredibly fun—but now when I reread it I’m disgusted—it’s so hubristic. Judge for yourself:

This is a dark age for a thinker. If he lives up to his name he can find no sympathy from the public. They frown on his endeavors, not understanding them nor caring to. He is a benighted, unpractical, puerile cloud-dweller, at once a laughing-stock and a menace to society. Dreamy and frivolous, whose ideas might have—and have had—a pernicious impact on the world. Perhaps he’s even *malicious*, intentionally perverse and disruptive of the status quo. Just look at his godless attacks on religion! He wants to do away with morality! The communist! *Anarchy* would result if the Thinker’s teachings became practice. —Such fear and contempt are understandable, for none of these accusations is unjust. The thinker is guilty as charged! He has assigned himself the task of being an antidote to political correctness and American liberal-democratic nihilism. Is it any wonder, then, that he is universally ignored? Of course, that is merely a convenient *justification* for such; the real *cause* of his current irrelevance is that he no longer exists. There is no place for him in the contemporary scene. What cultural sector craves inspiration from the philosopher? In past centuries, movements among the elite demanded and were enriched by contributions from men who had elected the *vita contemplativa*; the bifurcation, or trifurcation, of culture permitted thinkers to cavort in the aristocratic arena and snub their noses at the populace. Postmodernity knows a like ‘-furcation’ to the nth degree, such that there are a thousand nooks and crannies in our civilization, but *none* of them affords delight or comfort. How could it? Even a philosopher thirsts for applause; even *he* wants to influence society—yet what applause can he receive from a splintered, chaotic

world in thrall to the spirit of the Quotidian? The late-capitalist *Zeitgeist* is not a home for him; it does not reflect his consciousness or aspirations; it is a miasma that suffocates him.

Academia appears to be a haven for him: it provides security, ease, a close-knit family—nearly incestuous, in fact—mutual respect and a permanent audience. Intellectuals, surely, have sympathy for each other. But he is ultimately foreign to most of them: he cannot abide the dull *gravitas* and obtuse self-satisfaction of the philosophaster. He can identify with the latter as little as Faust could with his assistant Wagner. Where is the mischievous joy in the unfathomable, the profound and sparkling *joi-de-vivre* of the self-consciously savage noble human being, in books by sophists like Daniel Dennett and Derek Parfit? Their blandness stems from a habit of thinking discursively rather than intuitively. This preference for negotiating and compromising between *words*, for bandying names about, at the expense of *experiencing* truth in the mode of the philosopher—this equivocal diplomacy of the mind, with its policy of appeasement in the proud tradition of Eduard von Hartmann (who tried to reconcile Hegel and Schopenhauer in his *Philosophy of the Unconscious*, unaware that he was brutalizing the *spirits* of both systems by doing so)—this strange verbiage-fetish is a cause and symptom of philosophy's postmodern decrepitude, an anarchy in the 'superstructure' parallel to the fragmentation in the 'base'. Philosophy is sick, if indeed it isn't dead. It has a severe case of osteoporosis:¹ it hobbles along, limping painfully. Its past vitality has been sapped; it is now only going through the motions in all those scholarly journals that cater to professionals. One is gravely concerned about its future. What will be left of this ancient *way of life* in a hundred years? What is left of it now? Philosophy is *rebellion*, ruthless destruction of everything that exists and erection of a new world order. Its spokesman is Beethoven. But Beethoven has been smothered under the cloak of pop culture.

Nor is all that the whole story. Our world is so labyrinthine that to become proficient in any discipline requires extraordinary technical knowledge. Hence scholars and scientists have retreated into narrow spheres that permit of being mastered but do *not* permit of achieving the all-encompassing vision that was the goal of the philosopher in times past. This ambition could perhaps be pronounced an obsolete relic of an age of innocence, inappropriate to our wiser, more cynical era, and thereby be happily discarded on the dust-heap of history, the entrance to which bears the inscription "Good riddance!"—such visions, after all, have been known to hold an evil sway over the masses—were it not that the ideal of a *Weltanschauung* motivates an essential type of self-cultivation. Self-creation is the be-all and end-all of human existence, and philosophy is but a means to that end. However, it occupies a privileged location in the pantheon of Higher Pursuits, for it functions as a glue that unites and coheres them and can bind them into a single worldview. Or it can critique them with the uncompromising intellectual integrity of *honest* nihilism. Either way it has a breadth that does not exist in the academic world today, implying that intellectuals are in some respects more stunted than they were in the golden ages of thought (antiquity, the Renaissance, the Enlightenment, the nineteenth century). The onslaught of technology is turning us into automatons and *appendages* of human beings; the real thing, the ideal, is now not even *that*. Is there no way to be both a complete individual and an original thinker? Is philosophy doomed to succumb to science and *business*, of all things? What an ignominious demise, to perish at the hands of the philistine after such a glorious history!

As I pondered these unfortunate truths I began to question the value of writing such an essay as this. Its wildest ambition could be but to share the fate of all scholarly works, namely to float around in the world for a while until the few in Academia grew bored of it and it was consigned to the vacuum of recognition in which it had, anyway, *effectively* spent its five seconds of fame. And that 'lucky' fate would itself be a miracle! [...]

February 21

¹ Yes, "truth is a woman".

If I think about it deeply, intuitively, imaginatively, I'm kind of amazed that Julie wants to have dinner with me tonight. She has *thought* about me—*me*—thought “I want to have dinner with Chris”—*Chris*—a date—she talked to Ally about me—*Chris*, a person, here in the world, ‘one of us’, an other, a boy with romantic potential, who must have *something* going for him in order to interest Julie—an actual human being like all others, corporeal and spiritual, an *object*!

...Well, I've always known it, but now it's been confirmed, indubitably and indelibly: I'm a fool. A fool without peer. An idiot beyond comprehension. Dinner went well, Julie was wonderful—friendly, funny, easygoing—I was apparently entertaining and it couldn't have gone better. But when we arrived at her doorstep I told her that “I guess I'll head back now” to avoid the awkward moment when I would look at her and she would look at me and I would think “May I kiss you?” and she would think “No you may not” and I would shuffle my feet and she would shuffle hers and so on. So I said “I guess I'll head back now.” And she said “Okay.” And I asked if I should call her again and she said yes. And it occurred to me that she had for a split-second looked surprised at my first declaration, so I thought “What the fuck have I done?” but what was done was done, so I walked away and she went inside. And then I stopped walking in stupefaction at my own stupidity and to think of an excuse to knock on her door again but I couldn't think of one in time, so I stood there dumbly contemplating what had happened. I felt oppressed with disappointment. Had she planned to invite me in before I opened my big mouth? Of course! She hadn't said anything to the contrary: she said she was looking for her key and I said it was time to leave and she said “—Okay.” And the long lonely walk home was painful, I felt ready to explode and could do nothing to vent my rage but speed-mutter again and again, pressure-cookerly, “How is it possible for someone to be so stupid? Who would believe it? Who can conceive it? [Etc.]”

[Deleted entries.]

February 24

Dinner at Campus Center with Julie—fun, but we're not right for each other. Made no plans. I'd hoped for ‘friends with benefits’, but that looks unlikely. Skipped Greek class, but Chinese was rewarding. Learned about the unfortunate language, which has a mere 40,000 words, no tenses (wen-yen doesn't, but bai-hua may; I forget), no singular or plural (likewise), only monosyllabic words (which implies many homophones; there are even *homotones*, making comprehension difficult—as if it weren't already hard enough between the mutually incomprehensible dialects!), and so on. Thank God I speak English! My language is incomparable.

February 26

It *pisses me off* that I can't write my preface in the old style, the energized, galvanized, passionate style of the rebel. The new version is *tame*, contemptible. Fucking sallow. ‘This is what I'm attempting, and this is how I'll attempt it. I apologize, by the way.’ I was not made to conform. But it's ‘inappropriate’ to be overly provocative in a college thesis. Screw conventions! My last hope for inspiration has been whisked away; this thesis is shit and I don't care.

Lately I've been saddened by my age. You already know that, but the mood is choking me again. There's no sorrow like that which can but remember the past and regret...no oppression like that from the knowledge of *what might have been*. It is *finished*; to yearn is as fruitless as to wish for immortality. “If only...”—ah, *if only!* *If only* I had made more friends or known more lovers! *If only* I had lived Byronically

and not eremitically! *Freely*, not hermetically! Philosophy and youth are oil and water. It is unhealthy to desire wisdom before one's time. Summer is for *living*, *winter* for thinking. Introversion is a disease.

February 27

I've managed to retain *some* of the spirit of my earlier preface in the new. It is sufficiently arrogant and unapologetic, though not so defiant and disdainful of the modern world.

Philoctetes is a good play—sympathetic, piteous main character with an impotent and tragic hatred of his betrayers, and noble Neoptolemus, idealistic young man who rejects un-Greek guile for honesty and friendship with the 'enemy'—Odysseus not seen in a favorable light (very different from the conciliator in *Ajax*): crafty, callous, inhumane.—It's intriguing that only after Neoptolemus has chosen to abandon the Greeks and save Philoctetes that the *deus ex machina* makes its appearance—when Heracles orders the two to sail to Troy—seems that N. had to prove his worth, prove he was the antipode of Odysseus, before the conflicts could be resolved.—Strange phenomenon of unconscious guilt haunts the Greeks—e.g., Oedipus, Ajax ('unconscious' slaughtering of animals), Philoctetes—perhaps related to their obsession with the dichotomy between fate and free will.—The most human among them recognize that guilt is not really such unless *intended*.

I had a discussion with Ryan tonight about morality. I argued that it degenerates into relativism and hence nihilism; he argued the contrary. I wish a third party had seen us! It was a fun and exciting conversation, and I was unnaturally brilliant. Battered him with all the ammunition from my paper on political philosophy and with arguments from Kant. He was less than perceptive, but my enjoyment outran my frustration.

February 28

Approximately seven minutes and ten seconds into the third movement of the ninth symphony—if the tempo is about 110—a clarinet plays three notes on the fourth beat of three consecutive measures, 'hidden' behind the horn, flute and pizzicato strings. It's nothing but decorative harmony, but it's an embellishment of unparalleled genius. As necessary as any decoration can be. The conductor should try to focus all attention on these notes, even go so far as to treat them as a secondary melody—like the ravishing bassoon, and the oboe that accompanies the (vocal) bass, in the fourth movement.

I can't begin to comprehend the happiness that Beethoven must have felt when he stood on stage watching the premier of his masterpiece. It is the godlike, resigned joy of one who has suffered only to be purified.

...Denise and I saw *The Life of David Gale*. Powerful movie. Death penalty: bad.

March 1

Zerlina's aria "Vedrai, carino" is one of my favorites in *Don Giovanni*. For most of the song she sings coquettishly about her magical salve for Masetto's pains, a medicine that will surely cure him, hinting at its power and effectiveness, and you're *convinced* she's referring to sex. Thus you listen to the enchanting music with an amused grin, charmed by its translation of a lover's flirtatiousness into the most sublime beauty. Yet there remains a *slight* doubt in your mind as to whether you've guessed the remedy correctly, and you wait for the libretto to confirm it somehow. But suddenly there's a pause in the music, followed by a pulsating cello that heralds an event of excruciating serenity. A flute is fused with it, pianissimo and legatissimo, whetting your anticipation. Gently Zerlina places Masetto's hand on her chest and says to him "Feel it [i.e., the medicine] beating"—and you realize that you were mistaken; she was referring not to sex

but to her love, her heart. In an instant the aria has been transformed from a fetching exercise in innuendo to a pure expression of undying love.

...Mariam and I attended a concert at Crowell that featured a Schubert and two Beethoven sonatas. I was acquainted with the latter but not the former: B-flat, D. 960. I adored the first two movements and loved the last two. (I wished the first and second would never end. In the former, the periodic trill in the bass was as captivating as the opening melody itself. The second movement cast a spell over me.¹) The laughter exuding from it was contagious: I had to smile every time the key changed—which was often—or when there was a sudden contrast between quiet lyricism and bombastic chord-hammering. It's imperative that I buy more Schubert CDs. There's so much great music I've never heard! I find it comforting that I could spend a lifetime expanding my collection, constantly hearing new works. A moment ago I bought four CDs online: Schubert sonatas, Bach piano concertos and two guitar albums.

March 2

Lately I've been exercising in my room every day in lieu of lifting weights.

The Women of Trachis surely measures up to Aristotelian standards, with its tragic ending, flawed hero and heroine, unified plot, etc.

March 3

Reading *The Tempest*.

March 5

It's hard to believe I've never asked my grandparents what it was like to live in the twenties, thirties and forties. They experienced that momentous time of history; they're living resources—and I haven't taken advantage of them! I wrote them a letter today in which I noted my lapse.

Had my last two classes today before spring vacation. Easy Sophocles-test in Greek Drama.

When people ask me what it was like to live in the 1990s, my answer will be "I *didn't* live in the 1990s."

March 6

Weight room. Ryan's departure. Shakespeare. Progress on free will—giddy for ten minutes after meditating in my armchair for an hour—fluttered about the room, giggling—thought I had outlined a solution in my mind—maybe I have—but I hope I don't forget it overnight (it's 4 a.m. now).

I wonder if my journal will survive the eventual holocaust and make it to the new world. I wonder if *I* will survive it. I wonder if global warming will precipitate our fall.

Congenital myopia: the birthmark of mankind.

March 9

I admit it's a superhuman feat to justify the war in Iraq. And I know it's perverse that a homunculus like George Bush is deciding the future of the Middle East and, by extension, the world. But good *might*

¹ If it had been written by someone like Yannì I'd have thought it sentimental, New Agey and artificial.

result from Iraqi reconstruction. As I said earlier, that's why I don't completely oppose the invasion. I'm a consequentialist.

March 13

The cheerful arpeggiated and dignified solid-chordal passages in the second movement of D. 960 are good make-out music. I'm picturing myself kissing a girl while listening to them. It's a nice image. But it's hilarious. I suppose the music is too heroic, or too evocative of long-lost lovers finding each other after a lifelong search. I'd explode in laughter in the middle of a kiss.

The dedicatory page of my thesis will read, "This book is dedicated to my parents, who raised me in such a way that I could 'become who I am'." The last four words hint at Nietzsche's influence on my philosophy.

March 15

Today was the first spring day. It felt like the first one I had ever really *experienced*.

Saw *Fight Club* for the second time tonight. Spectacular movie. Genius. On the same level as (or better than) *The Truman Show*. Diagnoses Generation X expertly. The scores of critics who criticized it were mindless twits, anachronisms out of touch with the Timespirit, conservatives in denial. Some of them had the astounding insipidity to project their own obtuseness onto the artists by thinking that the movie was meant to be taken seriously. It is, but on a more profound and ironic level than critics have the capacity to appreciate. I'm amazed that some called it "fascist", when it *obviously ridicules* that mentality. It rejects its own proposed solution—which was, of course, never really proposed—leaving the viewer with little but an awareness of my generation's illness and the categorical imperative to begin anew from a *tabula rasa*.

Gym yesterday. *Coriolanus* today.

March 23

My sojourn in the house of my aged betters is over. In my absence I read Moliere's *Tartuffe* (translated by Curtis Hidden Page), part of Benvenuto Cellini's autobiography—a braggadocio, that man—and Euripides' *The Trojan Women*. The latter is little but an elegy on the fall of Troy, sung from the perspective of...the Trojan women.

I like this maxim: "The best iron is not to be used for nails, and the best men are not to be used for soldiers." But I think Einstein went overboard in saying something to the effect that 'he who joins an army has already lost my respect'.

Reading *Principles of Literary Criticism*, by I. A. Richards, because I haven't a firm grasp on what makes literature good. If I've ever written anything literarily valuable it has been through instinct, not knowledge.

On the 19th I received a box of chocolate candies made only in California, from Rebecca. That made my day.

March 24

Got up at 11:30; showered; brushed teeth; smeared zit-cream on face; took thirty milligrams of Paxil; ate at WesWings with Ryan; returned to house; walked to Olin. Richards' book is too philosophical, so I checked out Pritchards' *Training in Literary Appreciation*. That one's better. I searched for a spare bench in front of the Campus Center, but the surging mob intimidated me and I sat down on the grass near

Olin instead. The weather was too pleasant to permit of schoolwork, so I skipped my classes. Jake Roberts, a ‘cool’ CSSer in my Greek course, deigned to converse with me. I used to dislike him—considered him a typical arrogant popular druggie-jock—but our conversations this semester have enlightened me. He’s friendly, at least, and less aloof than his friend Andy. After he’d left I resumed Project Tan till Rebecca arrived. [...] (I told her the good news, viz. that I was rejected from Stanford.) Continued Operation Albino-Freedom, while pretending to read Pritchard, but within ten minutes Anna walked by. “Hi,” I said. She paused and we talked for several minutes. [...] After she left I went home to read. Later lifted weights. Now I’m gonna read again.

—Typical day.

Last night gave Don Moon the rough draft of the final draft of my thesis. Also continued reading *Coriolanus* and a history of China.

March 25

I’ve read most of Pritchard’s book, and I’m sick of it. Makes some good points, but by the tenth chapter it gets tiresome. Ultimately knowledge can take you only so far; instinct has to take over, or you get bogged down in all the axioms and dogmas and arbitrary preferences and subjective judgments of literary critics.

Eminem is extremely talented. I don’t like his music, but I won’t begrudge him the recognition he deserves. It extends only so far, though: he’s also mean-spirited, arrogant and spiteful.

March 26

I read *Hecuba*, which bears obvious similarities to *The Trojan Women*. Hecuba sure had it tough. From rags to riches to murder to transformation into a dog. I don’t blame her for blinding Polymestor and killing his sons. What would *you* do if placed in her position? Forty-seven of your fifty children have been killed, and in quick succession your second-to-last daughter is sacrificed to the spirit of Achilles and you discover the body of your last son washed up on the shore, murdered by his treacherous host out of greed. You’ve already become a slave yourself, so you have nothing left to lose and nothing worthwhile to live for. Your one thought will be for *revenge*, will it not? I hope I never experience such suffering.

...Finished *Coriolanus*. It’s an incomparable play: brazenly, shamelessly, nakedly ingenious. Shakespeare partook of the divine. My eyes and mouth gaped, my heart paused in respect, my fists beat against my temples as I read the conclusion of scene V.3, wherein Coriolanus abandons his plans for revenge due to the entreaties of Volumnia. His humanity is salvaged, his hatred smothered under love—and his *true* nobility shines forth. His martial glories are not why he is great; he is great because is human (1), as Napoleon was not—because he can *overcome* his ‘strength’, his militant disposition and ambitions. He is an authentic person in every way. (His earlier refusal to kowtow to the masses (2) ties into that central theme.) Twice he is killed for this authenticity: first exiled (2) and then murdered (1). He always acts as his ‘heart’ bids him, and this is both an aspect of his greatness and one of his flaws, the other of which is his hubris. The point is that it is socially and militarily unacceptable to be authentic, in the first case because society demands artifice and in the second because war demands callousness. Coriolanus flouts convention in two senses, demonstrating that he is unfit to live in this world and must be destroyed.

The play deserves more recognition than it has, but because it exalts a man who despises commoners it will never receive its due.

March 28

No one will ever appreciate the richness of my thought. It synthesizes elements of Indian philosophy, Marxism, Kantianism, Hegelianism, dualism, monism, phenomenology, existentialism, Nietzscheanism, ‘Bergsonism’, psychoanalysis and other philosophies I’m forgetting. The system isn’t yet fully worked out, but it’s progressing.

If I existed in the happy medium between an intoxicating fame and an utter lack of recognition I wouldn’t need to subsist on self-congratulation in this journal.

Today I wrote most of the conclusion to my thesis. I also started reading a mammoth book entitled *The Rise of Modern China*, by Immanuel C. Y. Hsü. I learned yesterday that I wasn’t accepted to Northwestern. Not that I really care. Too many Blue Lakers live in that area.

March 29

It occurred to me today that I can use the internet to research anything. So I read essays on the French impressionists.

The reason I strive is to fight self-doubt.

Philosophers who completely reject the correspondence theory of truth have implicitly rejected their own rejection.

Weight-lifting on an empty stomach is not recommended.

March 31

It’s amazing how happy I am not writing papers. I don’t have to write a single one this semester! No more busy-work for the rest of my college life!

...Skipped my classes, read about China and lifted weights. It’s startling to what extent a bulky body increases one’s self-confidence. I’ll always be skinny, but I need not be *skin and bones*.

[...]

April 11

Today I read *Hippolytus*, *Iphigenia in Tauris*, and *Rhesus*. Also went to the gym, tossed a frisbee with John, bathed in the sun, and rejoiced when Jason told me he had arranged a blind date for me. Ate dinner with him and Ryan. It was entertaining: Jason and I argued passionately over the merits and demerits of Marxism/communism. Two weeks ago a similar argument occurred, wherein Jason was profoundly obnoxious, constantly resorting to name-calling. He so disgusted and enraged me that I indulged in personal attacks as well. Ryan supported me—for, even though he’s a Christian opposed to most Marxist doctrines, he can recognize defensible arguments when he hears them. The discussion tonight was tamer, though Jason’s criticisms of communism were backed up more by emotion than reason. “Marxists are idiots! Human nature is greedy! Will there be gargagemen in communism? Who will do the menial work?! What kind of idiot would be a Marxist?!” Whenever I feel ‘passionate’ my brain and tongue work at lightning-speed, so I bombarded him with counter-arguments—many of which he accepted and then ignored. Finally I told him that even though communism seems implausible (because it presupposes an abundance of goods), I *have* to believe in the possibility because otherwise I can see no future for mankind except catastrophe—and I need hope to live. When he attacked hope I just laughed and gave up. [...]

April 15

CSS banquet last night. At the pre-party I got sufficiently drunk to enjoy myself for most of the evening, but the speaker was a bore. He even admitted it. I sat next to Lauren, who was as amusingly patronizing with me as always. I almost mentioned it to her, but my gaucherie doesn't extend that far.

Finished Hsü's thousand-page tome on China. Now I'm reading an interesting book by Michael Werth Gelber entitled *The Just and the Lively: The Literary Criticism of John Dryden*. [...]

April 16

The tragedy of Karl Marx is that he was a hundred years ahead of his time. This led him to confuse capitalism's "birth pangs" with its "death throes"—yes, in spite of what I wrote two years ago—which led him to think that the social order would necessarily end in a dictatorship of the proletariat. The basic theses of historical materialism can be revised and separated from that one. The fate of Marx's ideas was the greatest perversion in the history of thought, so much so that it's more akin to a comedy than a tragedy. Marxism, being a universalistic philosophy, is appropriate to an era *after* nationalism, but because its founder was a genius it was conceived *before* nationalism, which made inevitable its misuse at the hands of people like Mao, Stalin and Castro. [...]

It astounds me that in twenty years I'll look back on myself *now*. This time of life will be over and I'll *look back* on it. It exists now, but it won't exist then. It'll be an abstraction. *I'll* be an abstraction. That's scary! It doesn't make sense! I partly untangled the conundrum in the third chapter of my thesis, but to really understand it is impossible.

April 17

Tired of the book on Dryden. It's too detailed and academic. Instead I read Aristotle's *Poetics* today.

April 18

Academicians are so predictable! I knew all along that I wouldn't get Honors on my thesis. Today I read the reviews from my three readers. They were impressed with my ambition and intellectual liveliness but thought my arguments deficient and my style too personal. One of them wrote a particularly mean-spirited critique; it was either Scheisser or Arash Abizadeh. Were it not that a number of great philosophers have been reviled by their contemporaries I might care what judgments these professional sophists render on my work. Their minds have been molded by their teachers: had they read Nietzsche's books in the 1880s they would have denounced them as polemical, unphilosophical, confused, disjointed, empty gibberish. Even more so had they read Wittgenstein's *Philosophical Investigations* as an undergraduate thesis submitted to them when the author was 22. Think of the scathing criticisms they would have leveled at it! These nihilistic people make me sick. They tell you to "think outside the box" and then attack you when you do. They hate anyone who isn't as intellectually tame as they are. The *pettifoggers* don't even know how *irrelevant* are their life-pursuits, how *useless* they are as thinkers, and how *diseased* is a society of whose maladies they are a symptom.

Some criticisms were possibly valid: I may have misinterpreted Husserl (though from what I read of McInerney my interpretation seemed the only correct one);¹ my writing is dense; I didn't always address

¹ Indeed, I did nothing but regurgitate McInerney's analysis.

possible objections. However, in certain places I didn't think that would have been worthwhile.¹ My goal was never to impress professors or be awarded Honors. (That's why I *laughed* rather than *fumed* when I read their comments.) My goal was to know truth—to convince *myself*—and I answered objections only to the extent that it was necessary to clear my mind. I *know* that the 'self-as-narrative' theory is a threadbare fabrication of intellectual worker-bees, so I merely dubbed it an "inept metaphor" and moved on to more important topics.² Posterity will be my judge. While I lack Schopenhauer's ironclad faith in the 'inevitable revelation' of truth, I know that people tend to be more objective and charitable when reading the works of dead renegade thinkers than when reading such books while the author is still alive—and still young!—because in the former case they don't have to 'compete' with him. Few people give due consideration to a contemporary who opposes propriety (= everything they stand for), but if the rebel is dead³—and they are generous—he can be judged more objectively. Anyway, the value of my intuitions ensures that intelligent thinkers will continually arrive at them, or similar ones, in which process my thoughts are bound to be rediscovered sometime.

[...]

Reading *Rameau's Nephew* (Diderot) and *The Decameron* (Boccaccio).

Francisco Tárrega's "Recuerdos de la Alhambra" makes me think of a Venetian gondolier. It consoles me whenever I feel like a tumbleweed in the middle of a desert.

Went to the gym this evening.

I think that one of the reasons I'm so vehement in my vitriol against 'thinkers' who criticize me is that I'm not absolutely positive of my self-worth, even relative to other people. My skepticism extends *everywhere*, as you know. How could intelligent middle-aged professors be wrong and a 22-year-old be right? I am, however, *fairly* certain of my merits,⁴ so I'm usually able to laugh off such criticisms as products of deluded minds or insufficient acquaintance with my thoughts.

...Rameau reminds me of Svidrigailov and Johannes the Seducer: he's a sensualist, a cynic, a skeptic, an actor. (He's sincere, but at the same time he's acting.) Diderot successfully lampooned the modern mentality, while acknowledging its insights, even before the French Revolution had happened.

April 19

Sunbathed and read. Finished Diderot's ingenious dialogue (which 'ages well')—essentially a critique of the artificiality of the Enlightenment, though not a *rejection* of its values. Foreshadows romanticism in some respects. [...]

April 21

Boccaccio's stories are somewhat less than exciting to read. I ain't gonna peruse all 100 of them. I'm also reading Erasmus's *The Praise of Folly* (Norton edition) and Aristophanes' *The Frogs*, translated by B. B. Rogers. It's much more beautiful and interesting than the translations chosen by my insipid Generation-X professor. I hate the modern, colloquial, dumbed-down style of David Grene, William Arrowsmith and their ilk.

¹ More often than not I addressed counter-arguments in my head (not on paper) and subsequently revised my paper accordingly.

² [It is a metaphor, of course. I was right about that. And it fails to get to the root of the matter, the *active* nature of the self.]

³ Or has already established a reputation.

⁴ I'm also incapable of comprehending that my ideas may be baseless. Whenever I've examined them from alternate perspectives the result has (usually) been my renewed belief in their worth.

...’Tis marvelous that the Greek sense of humor was not much different from our own. Some of the exchanges between Xanthias and Dionysus are laugh-out-loud funny. If I saw the play performed I’d fall out of my seat numerous times.

April 22

As I reread the evaluations of my thesis, written (I believe) by Moon, Rouse and Abizadeh, I’m amazed at how superficial they are. Moon’s is at least open-minded. That he misunderstands most of my ideas is comforting, for it means that his only valid criticism is the one I was always aware of: my writing is so personal that the thesis is essentially a dialogue with myself. Rouse opines that the single best page of the essay is my exposition of McInerney—which opinion was to be expected, since Joe himself spends his life studying other people’s ideas. He says I get Husserl’s view wrong on precisely the point at which I criticize him. “Husserl does not hold that the present is an instantaneous ‘now’, indeed the denial of that claim is the centerpiece of Husserl’s conception of time.” Since I don’t hold that Husserl holds that the present is an instantaneous ‘now’, the objection is the result of a misreading (of myself *and* McInerney). Another careless complaint is the following: “When one appeals to privileged first-person authority on conceptual and evidential matters, there seems to be no basis for distinguishing understanding or justification from the semblance of understanding and justification.” Ingenious. Unfortunately he has misread me again. In the introduction and conclusion I suggested additional criteria by which my thoughts could be judged. I also contended that, because intuition is the best method by which to ‘understand’ the problems I address, every thinker ultimately *must* rely on his own “privileged first-person authority” in dissecting such issues. There’s no way around it. You can mouth Wittgenstein’s methodological qualms all you want, but in the end you’ll have to march onward in spite of them because personal experiences are the data most relevant to these problems.¹ The reason it isn’t futile to communicate private intuitions is that it’s possible for open-minded readers to experience the same intuitions as the author’s if he writes clearly and they’re patient. They can then critique his ideas intelligently, and he can revise them accordingly, and so on. Rouse’s evaluation ended with these misguidedly condescending remarks: “I know from prior encounters with Chris...that he is moved to think about challenging issues, with a passion to understand. I was therefore very troubled and saddened at the extent to which his considerable intelligence and hard work went so badly awry in his attempt to work out this project. Had he focused his efforts on a smaller part of the project, taken more seriously the need to articulate his claims in relation to prior discussions, and made more effort to respond to those readers for whom his conceptual leaps were not intuitively clear, this thesis undoubtedly could have resulted in a much more satisfying achievement.”² I have a burning desire to write an email to that man. [...]

My advice to you when criticizing my ideas is to take it as a provisional assumption that you’re wrong. The odds are that I’ve already considered your objections and satisfied myself that they were specious or unimportant. *At least* try to imagine how I’d *respond* to them. That’s how I read Marx: when I notice what seems to be a flaw in his argument I assume I’ve misunderstood him. I reread the problematic passage many times, imagine counter-arguments to my criticism, and only if I see *no way out* for him do I conclude he’s wrong.

¹ Besides, whatever I’m guilty of, Hegel, Nietzsche, Husserl and the existentialists are as well. Yet *somehow*, miraculously, their works are full of insights. –But here Witty (or his Roustaboutish mouthpiece) might retort, “How do we know they’ve reached *understanding* and not mere *semblances* of understanding?” This is the kind of folly that deserves no praise.

² [Written by 29-year-old Chris: There’s something contemptible about those remarks, in light of the fact that Rouse made no effort whatsoever to guide me as I wrote the thesis. He and everyone else passed on the project until Don Moon had to take it up by default. Nobody referred me to specific books, nobody tried to convince me that I had to spend much more time discussing other authors, no philosophy professors gave me any *specific* input. These people are not teachers; they’re commentators on old philosophers.]

...The first movement of Beethoven's seventh symphony is a suitable piece to listen to as you read Erasmus's winsome encomium of folly. It enables you to savor the experience more fully.

April 24

Gym. Finished Erasmus's eloquent but repetitive 'mock-encomium'. (What a loquacious goddess is Folly!) The style calls to mind Kierkegaard's. The content revolves around two theses: that folly is *inevitable* and that it is *good*. The latter is qualified by Folly's malicious ridicule of many of her own disciples: the pompous, scholastic, hypocritical ones. Clearly Erasmus loved the humanistic, vibrant varieties of folly (such as sex) but loathed the lifeless or hypocritical types (such as over-subtle and -effete theology).

I'm applying to work at a summer camp.

Reading the extant fragments of Heraclitus and Parmenides. I'm also reading a rhymed translation (Gilbert Murray) of *The Bacchae*. I don't know if it's an accurate reflection of Euripides' style, but the verse is almost as puissant as Dryden's. I suppose it's unwise to read versions other than those selected by the instructor,¹ since the final exam will include passages from the *mock*-translations, but I refuse to sacrifice the quality of the poetic experience for a *grade*.

Here are two versions of the same passage (starting on line 177), the first rendered by Murray and the second by Arrowsmith:

True friend! I knew that voice of thine, that flows
Like mellow wisdom from a fountain wise.
And, lo, I come prepared, in all the guise
And harness of this God. Are we not told
His is the soul of that dead life of old
That sprang from mine own daughter? Surely then
Must thou and I with all the strength of men
Exalt him.

Where then shall I stand, where tread
The dance and toss this bowed and hoary head?
O friend, in thee is wisdom; guide my grey
And eld-worn steps, eld-worn Teiresias.—Nay;
I am not weak. Surely this arm could smite
The wild earth with its thyrsus, day and night,
And faint not! Sweetly and forgetfully
The dim years fall from off me!

My old friend,
I knew it must be you when I heard your summons.
For there's a wisdom in his voice that makes
the man of wisdom known. But here I am,
dressed in the costume of the god, prepared to go.
Insofar as we are able, Teiresias, we must
do honor to this god, for he was born
my daughter's son, who has been revealed to men,
the god, Dionysus.

Where shall we go, where

¹ I won't dignify him with the title 'professor'.

shall we tread the dance, tossing our white heads
 in the dances of god? Expound to me, Teiresias.
 For in such matters you are wise.

Surely

I could dance night and day, untiringly
 beating the earth with my thyrsus! And how sweet it is
 to forget my old age.

The first rendering is masterful: rhythmic, fluid—consistently iambic pentameter—sumptuously metaphorical, brimming with striking images (though less so than other passages), tastefully rhymed. Each line ends on a weighty word, a conclusion of a ‘phrase’ or a group of adjectives that are sturdy enough to stand on their own for a split-second (the time it takes the reader’s eyes to travel from the end of one line to the beginning of the next). The second version has little in common with the first. It is admittedly somewhat rhythmical—many of A.’s passages are not—but only if the reader slurs together consecutive unaccented syllables (or accented, as the case may be). The number of accents in each line is erratic, varying from five to seven. Nor can A. decide whether he likes iambic or trochaic. There are only two metaphors, no memorable images, no indications of an instinctual poetic sense. “Expound to me”?! The contrast between “Sweetly and forgetfully the dim years fall from off me!” and “How sweet it is to forget my old age” is comparable to that between poetry and prose, or traditional art and contemporary, or genius and...no, not even talent! The lines sometimes end on inappropriate words: for example, “untiringly / beating the earth”. As far as I’m concerned, an adverb shouldn’t modify a word on the next line (unless it’s necessary to complete a rhyme). In short, the whole thing is a hack-job!

I know there is such a thing as *vers libre*. I can’t say I understand it, but I recognize its value in the hands of masters like Eliot. However, when translating classics it is surely meet to versify in the manner of the old poets.

April 25

The Bacchae is quite an appalling play. I prefer Aristophanes’ Dionysus to Euripides’—the fool to the tyrant, who deprives a man of his reason and then has him killed for it.¹ (He manipulates Pentheus into spying on the sacred Bacchanalian rites and subsequently orders Pentheus’ own possessed mother and aunts to tear him limb from limb, after which his severed head is borne proudly by his still-senseless parent.) It’s doubtful that Aeschylus would have so vulgarized his poetry by describing in detail a murder and then having the murderess carry the victim’s head onto the stage.

April 26

Alcestis is one of the few Greek tragedies that ends happily. (Apparently it occupied the place of a satyr-play when it was performed.) I was perceptibly relieved when Heracles brought the heroine back from the dead. *Medea*, on the other hand, is not so uplifting. It chronicles the story of a woman who, because her husband has married a young virgin of royal blood, kills the bride, her father and her own (Medea’s) two children. Her one goal is to ruin her husband’s life. The play left me feeling ‘gross’.

[...]

Eleanor is visiting Wesleyan this evening, so she and Kaitlyn came to my house tonight. We had a lively conversation, wherein I described for them some of my recent social faux pas-es. They were highly amused. Afterwards we went to Tom’s party across the street. Eleanor and I spent the whole time talking about philosophy, my thesis, the psychoanalyst Lacan and so on. I was an avid conversationalist, for it’s

¹ And for his earlier defiance of the god.

rare that I talk to an easygoing girl who's interesting enough to care about the subjects I like. Most of the time I live under the impression that I'm a terrible talker, for I'm not the greatest chit-chatter and I don't know *anyone* who is, on the one hand, enthusiastic about philosophy, history, art and psychology and, on the other, easygoing and willing to get into a spirited argument. Andy satisfies the first criterion but not the second—though he would probably say the same of me. He's too sophisticated and self-conscious to be as animated as I like to be in intellectual discussions. Eleanor is not, so we had fun.

April 27

I don't like *Helen*. The fault may be Richmond Lattimore's, but the dialogue is stilted and awkward—*ridiculous* at times. I've noticed that Euripides has a few odd fetishes, traces of which are evident in many of his dramas: he has an unnatural fondness for cold, formal reunions between pining lovers or relatives, and he likes to end his plays with the trite message that the gods are unpredictable.

April 28

To 'console' me for not getting Honors Sangeetha told me that I'm still one of the smartest people she knows. "I know it's not much but I wanted you to know anyway." That was sweet. She's mistaken, of course—for if *I'm* all it takes to be intelligent, what an overrated thing is intelligence!—but I appreciate the compliment.

Perfect weather. Foss Hill. Heraclitus. (Excellent book by Dennis Sweet.) Pumped iron. Called Julie. Napped.

I repudiate most of the analysis of self-continuity I gave in the thesis. I've spent the last hour struggling for an understanding of what went wrong in my arguments, but the topic is more perplexing than any I've ever considered. There's something terribly inadequate about the concepts with which I'm forced to work. They're not sharp enough to penetrate the essence of the matter: however I use them, they lead directly into paradoxes. As a result, the outcome of my Sisyphean labors was the following balderdash: "It doesn't work to say that if there is existence (for 'this' self-consciousness) at a given time in the past or future then that self is *this* one, because obviously the existence in the past or future is 'for' none but *that* self-consciousness, and in the absence of memory there is no way to relate the two selves to one another (except to say that they occur in the same body, etc.), so there is no way to make sense of the statement that they're the same. Or rather, either they're *obviously* the same (because *all* selves are) or they're obviously different (because they exist at different times)." I was preparing to restate that in simpler language, after which I would elaborate and so on, when I realized that...oh, forget it. I'm too tired.

To refute the dogma of the equality of the sexes it is necessary only to consider that while men find sexy a naked woman standing next to a Porsche, women are turned on by a fully clothed man driving a Porsche. It must be infuriating for feminist philosopher-activists (unnatural hybrids of estrogen and testosterone) to be constantly reminded of the 'weaknesses' of their sex.

April 29

Heraclitean philosophy bears obvious similarities to the Upanishads, Buddhism, Schopenhauerian idealism, some ideas of Tung Chung-shu (e.g., social order and justice should be founded on the cosmic order—though Tung is far more explicit about this) and elements of Nietzsche's "military school of philosophy". ("War is the father of all"; "War is common and justice is strife, and everything is happening according to strife and necessity."¹) Regarding the first three: (50) "Listening not to me [to my empty *words*]

¹ The emphases on strife and necessity exist also in Schopenhauer.

but rather to the *logos* it is wise to agree that all things are one.” (8) “What is in opposition is in agreement, and the most beautiful harmony comes out of things in conflict (and all happens according to strife¹).” (6) “The sun is (not only) new each day (but is always continually new).” From the motive of self-apology I enjoy his elitism: (29) “The most noble people choose one thing against all else: ever-flowing glory among mortals. Most people, though, have sated themselves like sheep.” (28) “The most esteemed man knows only imaginings, which he guards.” (97) “Dogs bark at those they do not know” (i.e., only abject souls fear new ideas). (87) “A stupid person tends to get aroused by every word” because (19) “they know neither how to listen nor how to speak”. Heraclitus’ elitism is virtually identical to Schopenhauer’s in the chapter “On Genius”. Aristotle’s distinction between form and content is implicit in such fragments as “One cannot step into the same river twice” and “Upon those who step into the same stream ever-different waters flow”. H.’s ideas may be internally interconnected within each of his three categories (universe, politics and theology), but I think the interdependence of the latter is tenuous at best.

I hope David Gallop isn’t right that Parmenides makes the following argument. (I fear he is.) “Where ‘N’ is any name of mortal speech with a determinate sense, we may say neither that N exists nor that it does not. Any attempt to say either of those things will prove to be incoherent. [Example: “In holding that hot exists here and now, mortals are committed to the belief that cold does not... But in saying of cold that it does not exist here and now, mortals are implicitly treating it as existent. For it has already been argued that the non-existent cannot be spoken or thought of. Hence in speaking of cold at all, mortals must be presupposing that it does exist, even in the very act of maintaining that it does not. Hence they are treating the non-existent as if it were existent.”] N cannot be meaningfully spoken or thought of at all. Given such stringent criteria for what *can* be spoken and thought of, it follows that nothing in the sensible world is a possible object of speech and thought. There can be only one such object, and that is the unique reality (whose description occupies most of fragment 8).” Can you think of a more sophisticated argument?

Gym.

Wednesday, April 30

Gym again. Sun again. Foss Hill again. Alone again. Parmenides again. Skipped classes again. That may not have been wise, for I learned afterwards that my Chinese take-home final exam was distributed two weeks ago and is due on Monday! It was by sheer luck that I learned this: I happened to ask a girl if she had gone to class, and she told me about the test.

I preface most of my activities with thoughts such as these: in spite of my desire for sex, I’ll read Heraclitus. In spite of my desire for sex, I’ll write in my journal. Because of my desire for sex, I’ll go to Foss Hill. Because of my desire for sex, I’ll work out at the gym. Lust is always at least *implicit* in my consciousness. –It’s lucky I’m an expert at making myself laugh. Otherwise...who knows? I might be a misanthrope. Or a depressive.

...Now that I’ve read the first eight fragments of Parmenides’ poem I can tell you that Gallop’s interpretation is wrong in places. In fetishizing logic, he misses the *spirit* of the work. I’ll start at the beginning.

The poem is unimportant, being more literary than philosophical. P.’s first claim is that there are only two ways available for thought: either there is existence (there is *necessarily* existence), or there is nothing (and it is *necessary*). He doesn’t use the word ‘existence’, but it’s clearly what he means: in the first line of fragment 6 he states that “it must be that what is there for speaking and thinking of *is*”, and in fragment 3 he says “the same thing is there for thinking and being”. The latter quotation means that thought is of nothing but what exists, so in the first quotation one can substitute ‘existence’ for ‘what is there for speaking and thinking of’. Therefore, because it’s obvious that the focus of P.’s inquiry is on ‘what is there for speaking and thinking of’, the relevant topic is existence [or the existent].

¹ Buddhism: suffering (strife) is inevitable and, in this world, perpetual. (?)

In fragment 2 he says that the proposition ‘there is only and necessarily nothing’¹ is “wholly unlearnable, for you could not know what-is-not (for that is not feasible), nor could you point it out”. That’s true, but it doesn’t establish that there is something—or, conversely, that there *isn’t nothing*. It states only that we couldn’t *know* nothingness, not that there *isn’t nothingness*. The first line of 6 seems to make it self-contradictory to deny that there is being—for the phrase “what is there for thinking and speaking of” already presupposes that there is something—but that’s because P. uses a clever little device to trick the reader. In making ‘being’ synonymous with “what is there for speaking and thinking of” and substituting the second for the first, he indirectly forces us to agree that there is being. But what if speaking and thinking are illusions?² If they are then there need not be anything for them to be of. The next line, however, contains a better argument: “nothing is not [there to be]”. Fragment 7 repeats the point: “...never shall this prevail, that things that are not *are*”. In other words, nothingness cannot exist, because then it would be something. Therefore, if nothingness doesn’t exist, there must be existence. At first sight the argument has an uncomfortable feel to it, as though it’s tautologous or sophistical, but I think it’s sound. Its simplicity is profoundly elegant, especially since it demonstrates that there *must be* existence. The alternative is self-contradictory. In fact, the idea of nothingness is meaningless. The only reason it seems not so is that when thinking of it we usually picture in our minds a vacuum of space. But a vacuum isn’t nothing. –If we reject the validity of concepts and logic as guides to discovering the nature of reality then the self-contradiction doesn’t matter, but for now I’ll follow P. in accepting them.

Where Parmenides goes astray is in rejecting negation, as well as the idea that things can evolve from being to non-being, on the basis of the recognition of nothingness. For I assume he does so when he refers disparagingly (in fragment 8) to the idea that things are able “to come-to-be and to perish, to be and not to be, and to shift place and to exchange bright color”. He conflates the *absence* of something with the *existence* of nothingness. Because the sensory world is constantly changing, he is forced to deny *its* reality too. It is therefore appropriate that he describes ‘true’ being in absolutes like “ungenerated and imperishable, whole, single-limbed, steadfast, and complete”. It also makes sense that it be timeless: “Nor was [it] once,³ nor will [it] be, since [it] is, now, all together, one, continuous; for what coming-to-be of it will you seek? In what way, whence, did [it] grow?” Immediately following is an argument against the possibility of its birth, but I’ll insert my own first—not against its genesis but against its temporality. Gallop interprets the lines as meaning “it is not the case that it once existed (but does so no longer), or that it will (one day) exist (but not yet)”, but I would pose to him one question: ‘Since the passage of time requires that the past be no longer and the future be not yet, how could Parmenides consistently hold that being is temporal? On his understanding it would entail the existence of nothingness.’ Against the possibility of its genesis P. asks why it would have arisen (from nothing) at *one* time rather than another. He also adduces his earlier arguments.

In lines 22 to 24 he makes statements that lack, I think, logical justifications: being is indivisible (“since it all alike *is*” or “since it is all alike”); it is not “somewhat more here, which would keep it from holding together, nor is it somewhat less, but [it] is all full of what-is”. They’re intuitively attractive, though. His next idea is remarkable and foreshadows both Einstein and Hegel: “...strong Necessity holds [it] fast in the chains of a limit, which fences it about. Wherefore it is not right for what-is to be incomplete, for it is not lacking...” That anticipates the Hegelian contention that the “false infinity”, the one that extends in every direction limitlessly, is incomplete, while the ‘true’ infinity is an enclosed totality. “Since, then, there is a furthest limit, [it] is completed, from every direction like the bulk of a well-rounded sphere, everywhere from the center equally matched; for [it] must not be any larger or any smaller here or there; for neither is there what-is-not, which could stop it from reaching [its] like; nor is there a way in which what-is could be more here and less there, since [it] all inviolably *is*; for equal to itself from every direction, [it] lies uniformly

¹ I’ve rephrased the sentence “there is nothing...”

² One could invoke Cartesianism here, but because Parmenides, of course, doesn’t I’ll ignore it. [What I meant, I think, was that the existence of speech and thought *for us*, however illusory they ‘really’ are, means that there *really* is *something*.]

³ Or “Nor was it ever...” Two possible translations.

within limits.” That anticipates (sort of) general relativity, namely the idea that the universe is an unbounded finite space. The claim that every point is equidistant from the center is another way of saying that there is no center, which is similar to the general relativistic theory.

Gallop notes some contradictions in P.’s endeavor. First, he is explaining truth by means of speech, a medium of communication that he apparently thinks is nonsense. His decision to speak through the mouth of a goddess is therefore wise, for it allows him to retort that her language is divine and perfect. The objection that he denies temporality even as he uses terms like ‘continuous’ and ‘now’ can be answered (sophistically) in the same way. However, I’m having trouble settling accounts with the notion of the existence of nothing. I’m beginning to doubt what I wrote above: maybe P.’s argument *is* sophistical.

Well, it’s 4:15 a.m. and I’m tired. *Bonne nuit.*

May 2

Reading Kreeft’s *Summa of the Summa*, which is, briefly put, a summa of the Summa. Aquinas’, of course. It’s a translation of and commentary on the most important parts of the work. Kreeft’s writing style is one of the most immature and annoying I’ve encountered among scholars, but his footnotes are useful.

Notes. Aquinas distinguishes between philosophical theology and revealed theology, the latter of which is necessary if we are to achieve salvation (because reason is fallible). It’s a science because it’s established on principles, as are all sciences. The difference is that its own are revealed by God (or the science that only God knows)—which means also that it’s derivative in the way that the sciences of perspective and music are, which are based on principles revealed by geometry and arithmetic.

Although the principles of theology are known by faith, “sacred doctrine makes use even of human reason, not, indeed, to prove faith (for thereby the merit of faith would come to an end), but to make clear other things that are put forward in this doctrine.” The only people whose doctrines are to be accepted by authority are the apostles and prophets.

The existence of God need not be self-evident to us, though it is self-evident “in itself” (because His essence is His existence, and thus the predicate is contained in the subject when one proposes that God exists). His existence—but not His essence—can be demonstrated through His effects,¹ though it can also be accepted on faith.

The speculative part of my mind keeps returning to the questions of the validity and foundations of logic. I don’t trust what I wrote in the thesis on the Law of Excluded Middle.

May 3

Aquinas rightly rejects the ontological argument. His five proofs are cosmological. As Kreeft summarizes them, they’re as follows: (1) since no thing can move (change) itself, there must be a first, Unmoved Mover, source of all motion; (2) nothing can cause its own existence; if there is no first, uncaused cause of the chain of causes and effects we see, these second causes could not exist—but they do, so It must; (3) contingent beings depend on a necessary being; (4) real degrees of real perfections presuppose the existence of that perfection itself (or, “better implies best”); (5) the argument from design. The last was refuted by Hume, the fourth is wrong (values are not objective), the third is dubious and ambiguous, and the first two can imply the conclusions of quantum mechanics. (The cause-and-effect relationship breaks down in the subatomic world.) A. answers the objection that invokes the existence of evil by saying that it is part of God’s infinite goodness to bring good out of evil. The Crucifixion is an example.

¹ His essence can’t because His nature isn’t proportionate to theirs. He is infinite, they are finite.

May 4

For my Chinese history class I wrote an amusing little dialogue between Confucius, Lao-tzu and the Buddha. The level of my understanding of the three philosophers lies somewhere between ‘meager’ and ‘nonexistent’, and I haven’t read enough of them to absorb their styles of speech, but this excerpt isn’t awful. The Buddha speaks most clearly because he was the most rational of the three.

Confucius: The people are confused, the government is corrupt, the towns are vice-ridden, and order is no more. The Way has been lost; the path of the sages is followed no longer. The great emperors of the Shang dynasty knew how to instill goodness and humanity into their subjects, for they were good and humane themselves. By their example they taught and led, and the people learned and obeyed and knew peace among themselves. People are like children: they act as their parents act, they want what their parents want. The emperor is their mother and father; he must do and desire what is proper, knowing that he thereby educates his subjects into propriety. Filial piety, the adhesive of society, will then be practiced. The sages knew this, but modern princes do not. Hence anarchy and war.

Lao-tzu: The Way that you discuss is not the constant Way. It is not nameless and can be discussed, and thus it is not the Way. Your words are clever, but what is behind them? Delusions should not be preached to the people, empty nothings exhorting striving and struggle against the purity of the Way, for they breed strife and competition and tyranny. You think not, but you know not. Nature wants no ‘ought’, no elaborate program of rules and maxims or propriety; Nature is simple and innocent. Consider the lilies of the field, how they grow; they toil not, neither do they spin. They sit in selfish selflessness, clothed and protected by the Way. Wherefore teachest thou blind prudence garbed in the mantle of wisdom? Would you lead the people away from Nature? Propriety, you say? Filial piety? Government? These are detours to suffering; the Way is to “live and let live”. Less government, less propriety, less constraining filial piety: that is my teaching. The child’s spontaneity should be the man’s. The sage, like the butterfly, flits from breeze to wafting breeze, riding the currents of the wind and teaching through his silence. Thus is the Way lived.

Buddha: Both of you are insightful and have conceived original remedies to suffering. I’d like to hear more of your ideas, but perhaps you might hear mine first. It is always worthwhile to consider a position opposed to one’s own. A life of observation and meditation has taught me that suffering is born from an attachment to the world. We crave and we cling to things, and we’re inevitably disappointed. We fail to recognize the truth of *impermanence*, of continuous flux and the consequent futility of attachment. It is an illusion. Life itself is an illusion, a product of this desperate grasping of Maya: there is no self, no Atman. We are part of the ceaseless becoming of the One, and if we recognize this—if we *live* this—our suffering will end and we’ll achieve Nirvana. There is a noble eightfold path that can lead us to that state, which I’ll describe for you if you like.

Confucius: Wait a moment. You speak in riddles, and Lao-tzu speaks in poetical gibberish. What nonsense you’re saying! But I think I have deciphered the gist of your ideas: you both are concerned with the individual first and society second. For you, the man is the parent and society the child. Is it not so?

Lao-tzu: In speaking, trustworthiness is good. Your analogy is feeble, but I trust it.

Confucius: You, Lao-tzu, wish that the gentleman return to nature, leave society behind, and thus escape suffering. You reject social obligations as the wild mare rejects captivity: you fear them, you fear they’ll mean a loss of freedom, for your highest good is not humanity but a licentious liberty to do as you will.

Lao-tzu: My words are mysterious, so I understand your misunderstanding. But I too hate the immoral, as do you. The immoral is not natural; Nature is not profligate. I exalt not the freedom of the mare but the simplicity of the hare. Society need not be abandoned if a man wish to be a sage;

he can be a good son without losing himself in rite upon rite. The people will live as they will, ignorant and rightly so, but the sage knows his place in the cosmos and does not need ceremonies to remind him. You, however, value “propriety” and the web of social responsibilities, divorced from nature, that it entails. You honor worthy men, thus teaching the people to compete. Propriety honors rare treasures, thus teaching the people to steal. I say the sage governs by emptying minds and filling bellies, as Nature ordains it...

Confucius: Nature! It’s always “nature” with you! Humans are not nature; they are its sovereigns. If you were consistent you would tell us to scatter and live in the forest, with bears and bats for our companions!

Buddha: Calm yourself, Confucius. Detach yourself from anger. Your own ideas, which I do not yet comprehend, seem flawed as well. The people will not become good citizens merely if their emperor is a good ruler. They are too detached from him; their own worries and circumstances dictate their actions. They cling to themselves, so they suffer and act accordingly. Only if they renounce the illusion of the self will they act as a wise emperor would like.

Confucius: Tell me precisely how they would do that, Siddhartha. How is it possible that a person is not a person? When I was a youth I thought I existed; when I was a young man I thought I existed; now that I am old I know I shan’t soon exist—but I believe I still do at the moment. Am I wrong?

Buddha: Siddhartha cannot and could not answer your question, but I believe *I* can. A person is a combination of impressions, thoughts and experiences; he is not *one*. He is born and dies every moment; he is not perpetual...

After I read more of the philosophies I’ll revise and continue the dialogue. The rest of it is boring.

God isn’t a body because He is the First Mover and Himself unmoved, which is possible only if he is a spirit (for every body is in motion only if it’s *put* in motion). He isn’t a soul, though, because the definition of that word is “the form and life of a body”.

God is His own essence; he is not an individual that *has* an essence. He “transcends the distinction between universal and individual”. He isn’t matter but only form—which, however, “is individualized precisely because it cannot be received in a subject [matter]”.¹ He is also His own existence: whatever a thing has besides its own essence must be a result either of the “constituent principles” of the essence or of an exterior agent. Since God’s existence can’t be caused by something else, it is ‘caused by’ (or identical with) His essence.

May 5

I had my last class today: Greek Drama. It was a fitting end to the Wesleyan experience.

The nocturne in D-flat, op. 27/2, is obviously one of the most perfect that Chopin wrote. Not a single note is out of place: it reminds me of Hamlet’s “to be or not to be” speech. Nor is there a more *aristocratic* and *polished* nocturne. Maybe that’s one of the reasons I love it: my instincts are aristocratic.

...You condemn elitism, dear reader. But think about this: does not the existence of *prejudice* condemn the commoners [which includes most of the “elite”]? Does it not justify contempt of them? Racial prejudice is the most despicable of all. A prejudiced person...what value can he have as a human being? Perhaps some: it’s possible for good and bad to exist together. Goethe was probably prejudiced against Jews and “savages”—but that was more forgivable in his time than in ours. Nevertheless, in the majority of cases prejudice coexists with overall less-than-worthiness.

Aquinas’ equation of goodness and being—based on the proposition that “everything is perfect so far as it is actual”—is wrong.

I need a break from the saint. Hence I’m reading Longinus’ *On the Sublime*. He thinks that “the effect of elevated language is not to persuade the hearers but to amaze them”. In chapter 2 he says that the

¹ The point is that most forms are individualized by matter, but God(’s) is by His (its) *lack* of matter.

art of the sublime is based not only on innate genius but on rules and systems.

When I wrote that nothingness is inconceivable I forgot that it ‘exists’ before birth and (probably) after death. There was *nothing* until twenty-two years ago. It took me a long time to fall asleep last night because my obsessive-compulsiveness latched onto that paradox. ...Uh-oh. Here it goes again. Swimming, drowning, choking... Nothing outside the universe? Universe is everything, creating its own space as it expands? The surface of a balloon in an extra dimension? No center? Unconceptualizable? What does that mean? How can something be beyond the powers of reason? As for the existence of nonexistence: it’s true regarding the unicorn, so it’s a pseudo-problem arising from language. The nonbeing exists only in the mind, not referentially or ‘really’. What exists exists, and that’s all that can be said without applying alien concepts like ‘nothing’ to the world. There is no Nothing in the world; there is Something and nothing else. But that doesn’t help me tackle the problem of the Nothing before birth. –*That* nonbeing, however, is, once again, such only for *me*, now, not ‘in itself’. But if it isn’t being and it isn’t nonbeing, it—*isn’t*? But then it’s nonbeing. Is logic inappropriate here? Was I right to reject the being/nonbeing dichotomy in my thesis? But then when is logic acceptable? More generally, how can we know whether *any* of its principles obtain in ‘reality’? In the thesis I said we couldn’t, but...where does that leave us? But that was a confusion: they obtain in the world of physical appearances and *not* in the worlds of quantum mechanics, relativity and metaphysics. But again: where does that leave us? If certain concepts become useless must we stop asking certain questions? Presumably.

Longinus’ criterion for true sublimity is sensible: the same piece of writing reread multiple times must repeatedly be capable of touching the spirit of an intelligent and well-read man with a sense of grandeur, as well as leaving “more food for reflection in his mind than the mere words convey”. If it loses its force after careful examination it isn’t truly sublime. I wonder if I’ve ever written anything that can pass the test.

May 7

Last night I was about to go to the naked party (definition: everyone is naked) when I heard it had been broken up by the prudes in Public Safety. So I wandered about the campus with some CSSers, tipsy and bored, until I realized nothing worthwhile was happening and I might as well go home.

Finished Longinus today.

“In sublime passages we ought not to resort to sordid and contemptible terms unless constrained by some extreme necessity. We should use words that suit the dignity of the subject.”

[...] It’s midnight and I’m listening to Bach’s Air on the G-String. You ought to know what that means. Drops of liquid sorrow streak my cheeks. “Sometimes your spirit hurts so much your body weeps.” –I could write about it, try to write “sublimely”, try to be poetic and eloquent and superficially profound, but I’m too confused. Why am I alone?

...Fifteen minutes ago I was full of self-pity. I wanted to fall asleep and either wake up in the arms of a girl or not wake up at all. Now I’m relatively happy. For no reason whatever. I’m just suddenly content. What grotesque fickleness.

May 8

Reading Turgenev’s *Fathers and Sons*.

Worked out this evening.

May 13

Finished the book. It wasn't nearly as satisfying as Dostoyevsky's and Tolstoy's novels, but all in all I liked it. Bazarov, though, is a bit of an ass.

Tonight I read selections from Petrarch's letters. I found that I have a great deal in common with him.

May 16

Reading Frege's *Logical Investigations*, edited by P. T. Geach. In the first few pages of the essay "Der Gedanke" there are ideas similar to ones I expressed in my thesis—but there are others quite absurd. Particularly the statement that "truth does not consist in correspondence of the sense with something else, for otherwise the question of truth would get reiterated to infinity". That proposition was defended by the author two paragraphs earlier, but the argument was sophistical (i.e., attractive, even irresistible, at first sight, but (1) only because it stays at the level of appearance and mere *words*, and (2) impossible to believe because it denies what is on another 'level' obvious). I'll quote it:

A picture is meant to represent something. It might be supposed from this that truth consists in a correspondence of a picture to what it depicts. Now a correspondence is a relation. But this goes against the use of the word 'true', which is not a relative term and contains no indication of anything else to which something is to correspond. If I do not know that a picture is meant to represent Cologne Cathedral then I do not know what to compare the picture with in order to decide on its truth. [What in God's name...? How does that establish the previous sentence? If anything, it confirms (or presupposes) the *contrary*—that a relation is presupposed by the use of the word 'truth'.] A correspondence, moreover, can only be perfect if the corresponding things coincide and so are just not different things. [Silly. That reminds me of Kierkegaard's argument that sentences can only *approximate* reality, by virtue of the nature of language. I addressed that idea in my thesis, though admittedly not with analytical rigor, because I didn't think that was possible. "George Bush has a face" corresponds perfectly to reality, even though it is, in a sense, only an "approximation" of reality (since it's a *statement*, or 'rehashing', of it).] It is supposed to be possible to test the genuineness of a bank-note by comparing it stereoscopically with a genuine one. But it would be ridiculous to try to compare a gold piece stereoscopically with a twenty-mark note. [Blah blah. Stop embarrassing yourself. I wonder if Frege is playing 'devil's advocate' here and intends to refute these childish arguments later.] It would only be possible to compare an idea with a thing if the thing were an idea too. And then, if the first did correspond perfectly with the second, they would coincide. But this is not at all what people intend when they define truth as the correspondence of an idea with something real. For in this case it is essential precisely that the reality shall be distinct from the idea. But then there can be no complete correspondence, no complete truth. So nothing at all would be true; for what is only half true is untrue. Truth does not admit of more or less. —But could we not maintain that there is truth when there is correspondence in a certain respect? But which respect? For in that case what ought we to do so as to decide that something is true? We should have to inquire whether it is *true* that an idea and a reality, say, correspond in the specified respect. And then we should be confronted by a question of the same kind, and the game could begin again. So the attempted explanation of truth as correspondence breaks down. And any other attempt to define truth also breaks down. For in a definition certain characteristics would have to be specified. And in application to any particular case the question would always arise whether it were *true* that the characteristics were present. So we should be going round in a circle. So it seems likely that the content of the word 'true' is *sui generis* and indefinable. [I don't find these arguments compelling.]

Frege means by 'thought' something for which the question of truth can arise. It is the sense of an assertoric sentence. He thinks, problematically, that sentences in which one expresses (or 'vents') one's

feelings are not assertions, so the question of truth can't arise for them—and therefore their senses aren't thoughts. (I find both alternatives—viz. that the question of truth *can* arise and that it *can't*—to be problematic. I cursorily addressed the topic in my introduction, effectively concluding that Frege's commonsensical way of treating such sentences is generally the correct one. We hardly ever intend expressions of feelings or wishes to be related to the true/false distinction—because their 'truth' just isn't relevant to us in the moment that we speak them—although their 'form' indicates otherwise.) “Sentences expressing wishes or regrets are ruled out in the same way.” A yes-no question contains the same thought as the corresponding assertion; the only difference is that one “requests” and one asserts. On the heels of this distinction between assertion and thought Frege introduces another division, so that there are now three concepts: the grasp of a thought (thinking); the acknowledgement of the truth of a thought (the act of judgment); the manifestation of this judgment (assertion).

[...]

I've finished the essay. It gets rather convoluted in places. I still don't have a firm grasp of what he means by 'thought', but I'm not terribly bemused by it either. What bemuses me is...the essay as a whole. It seems to be peppered with so many little confusions, or obscurities, that I don't know what to make of it. What Frege says about the self is muddled and wrong. And the topic of idealism doesn't deserve all the attention he gives it: what I wrote in the thesis is enough to 'refute' it.¹ As for the two points that Leech summarizes in his preface, namely “(1) that any thought is by its nature communicable² and (2) that thoughts about private sensations and sense-qualities, and about the Cartesian *I*, are by their nature incommunicable”, as well as their immediate implication, namely that “there can be no such thoughts”—which Frege never says, though Wittgenstein does (along with the idea that pain isn't a “private incommunicable somewhat”, which I've never understood and I suspect is another instance of sophistry disguised as a grandiose self-consciously revolutionary attack on common sense)—as for those points, they don't ruffle my feathers for the following reasons: (1) I haven't mastered the notion of the 'thought'; (2) 'thoughts' about private sensations are *not* always incommunicable, since (i) it is at least theoretically possible—i.e. there is no reason that it should be *always impossible*—to understand someone's 'private' thought by applying a sentence spoken by him to one's own consciousness (and thereby experiencing the intuition he does) and (ii) the fact that we all know, for example, what physical pain feels like enables us to 'abstractly understand' or 'relate to' a person's pain (so that it isn't as utterly foreign to us as the experience of nirvana, for example, is to me); and (3) at a certain point—around 1:30 a.m. in this case—one realizes that only two words are necessary to answer the gibber-jabber I've been indulging in: *so what?*

[...]

Incidentally, Frege's insistence that true thoughts are *timelessly*, '*eternally*' true echoes what I wrote when examining the Law of Excluded Middle. Schliesser had no idea what I was talking about, but he's an ass who's incapable of relating one person's ideas to another's.

May 17

I read most of the essay on “Negation”. Frege's view is that the distinction between affirmative and negative judgments (or thoughts) is logically useless and can lead to endless, sterile word-disputes. Some terms simply can't be defined: 'judgment' is another example. He also argues (1) that a false thought isn't one that has no being—duh—and (2) that negation doesn't *split up* the contents of the thought (nor, indeed, anything else). In both essays he asserts that thoughts exist even before they have been expressed—which,

¹ Idealism is so silly that to try to refute it is unnecessary. Just ignore it! (In any case, it can't be refuted. Berkeleyan idealism, for instance, is logically impeccable—but it also belongs in the 'So Fucking What?' category. It's a dead-end.) The one argument for idealism that used to trouble me is “How can objects have appearances when they aren't being perceived?” But I've learned to ignore it, as being unanswerable and 'scholastic'.

² That sentence doesn't state what you think it does. Frege uses 'thought' in a very different sense than the rest of humankind does.

aside from being a little confused, is similar to what I wrote toward the end of the first section of the introduction.

[...]

[Deleted entries.]

May 24

My last night at Wesleyan. This is it. Four years have gone by. I remember my first day clearly, “when hope was high and life worth living”. No, just kidding. I won’t experience Fantine’s state of mind for at least another five years or so. Right now I’m just having trouble accepting that college is over. High school and college: eight years of self-discovery—possibly the most mentally tumultuous period of my life—are at an end. I’m on the brink of adulthood! (That’s what I’m told, anyway.) Etc.

My family came this morning. I spent the whole day walking around the campus with them.

May 25

Graduation.

Tuesday, May 27

In the two days since graduation I’ve read volume 3 of Green’s *History of the English People* and Luther’s essay “Concerning Christian Liberty”. The latter is repetitive, superficial and occasionally contradictory. The gist of it is that *faith* makes the Christian, not works. There are more details and flimsy arguments that I don’t care to repeat.

[...]

May 28

Last night I wrote a long email to Joe and Arash. The desire had been haunting me for weeks, and I finally succumbed. My motive was malice. I couldn’t let them get away with such condescension and smugness. I wrote the email not with the savagery I had originally intended but with a condescending intellectualism: it always irritates people more to be looked down upon than to think they’ve ‘gotten’ to you. Arash bore the brunt of my subtle scorn: it’s fun to prick the pride of a recent Oxford graduate. I ended the message with extreme politeness, for I had written myself into joy. Malice can be so rewarding!

Joe wrote back a few minutes ago. His civility was of course worthy of a courtier. He explained what he had meant by the Wittgensteinian criticism, though poorly and in disregard of what I had written. He thought I had equated ‘understanding’ with ‘certainty’ or an ability to evaluate claims by ‘foolproof criteria’, which isn’t true. I’m not so philosophically unfledged. I know that the issue is the existence (or alleged nonexistence) of criteria by which to test one’s understanding of claims that appeal to first-person authority. (I admit that in the earlier entry I thought the problem had also to do with the ostensible nonexistence of criteria by which to judge the *truth* of private, first-person statements.) *My* claims are, first, that there are criteria relevant to determining the truth of private intuitions; second, that there are ways to determine whether one understands statements describing one’s own consciousness; third, that appealing to ‘private experience’ or consciousness (which includes using one’s imaginative faculties) is an integral part of *many* areas of philosophy, so to reject it is to reject much of philosophy; fourth, that in one sense

it's a triviality to say that private experiences are incommunicable, in another sense it's wrong (see the prior related entry), and in a third sense (relating to the possibility of someone else's experiencing an exact or approximate 'copy' of the perception) we can't know whether it's true or false, but it's highly likely that it's usually false. On the whole there was little of substance in the email, but at least Joe had the decency to reply, which I doubt Arash will.

I'm reading *The Sickness Unto Death*. Section A in the first chapter of part I contains a few ambiguities, but aside from those, the whole passage can be seen as an experiment in how far a philosopher can extend a maze of words without getting lost himself. Kierkegaard shows us that after a page and a half it's time to give up. One of the ambiguities I mentioned is the following: "If this relation which relates itself to its own self is constituted by another, the relation...is in turn a relation relating itself to that which constituted the whole relation. Such a derived, constituted relation is the human self, a relation which relates itself to its own self, and in relating itself to its own self relates itself to another." Why does an active, self-conscious relating-itself-to-itself imply a comparable relating-itself-to-another? Self-consciousness, which is what K. means by the self (for it is a "relation relating itself to its own self"), actively relates itself to itself, but it doesn't thereby actively, self-consciously relate itself to the Power which constituted it. There is no logical connection between the two. A second source of confusion (for me) is this sentence: "This formula [viz., that the self is constituted by another] is the expression for the total dependence of the relation (the self, namely), the expression for the fact that the self cannot of itself attain and remain in equilibrium and rest by itself, but only by relating itself to that Power which constituted the whole relation." Presumably K.'s ideal, the eradication of despair, is attained when the self "remains in equilibrium and rest by itself", but he says that the ideal is reached when the self has finally done that which he previously said it does merely by virtue of existing, viz. relates itself to the Power that created it. I.e., in the first quotation he says the self relates itself to the Power by relating itself to itself, but in the second he says that only when it *learns* to relate itself to the Power can it be at rest. (He doesn't use the word 'learn', but it seems implied, because if in the context of the second quotation he means what he apparently meant in the context of the first, viz. that the self 'automatically' relates itself to its cause, what would be the point in saying that it's only if the self relates itself to the Power that it can be at rest? For it already does that when it relates itself to itself!) So there are three options: he has expressed himself very poorly, he's confused, or I'm wrong that faith consists in the "equilibrium" of the self. I don't know what this means: "[the formula for the complete eradication of despair is as follows:] by relating itself to its own self and by willing to be itself the self is grounded transparently in the Power which posited it." "Grounded transparently"?

...I hope the rest of the book doesn't follow in the footsteps of the first chapter. Does Kierkegaard expect to be understood?! What in God's name did I just read?! Ramble, ramble, bramble, bramble... Is this guy a genius or a kook?

...It appears that the whole book is "words, words, words!" Just words, no sense. And you thought the *quotations* were hard to understand! Søren probably had something in mind when he wrote the essay, but I won't return to it till I've read a scholar's interpretation.

In an email to Rebecca I told her she was my favorite person at Wesleyan since the day we met. I appreciated her stifled disconsolateness at my departure on Saturday.

May 29

I read Leibniz's *Monadology*. It's an impressive but extremely inadequate work. I confess that I don't understand everything in it—for example, its description of the monad—but I can't conceive that its conclusions are justified. Aquinas' arguments, which arrive at some of the same conclusions about God as do Leibniz's, are so much more rigorous that they make L's look comical. But even if L had argued more thoroughly I'd be intensely skeptical of his ideas, as I am of all metaphysical systems that don't rely on science. Metaphysics certainly isn't *dead*, but it's now more the province of science than of philosophy.

I've also read the first section of G. E. Moore's essay "A Defence of Common Sense". How best to describe it? Think of Kierkegaard's most repetitive and tedious writings, subtract whatever originality

and interest they have, add a pathological obsession with *carefulness*, add a humorless self-deprecation, subtract wit, and you'll have a defense of common sense. Moore clumsily argues for what I thought was too trivial to haggle over in my thesis, namely that we *know* certain statements about the world to be true or false. When discussing the Law of Excluded Middle I illustrated a certain class of propositions with a sentence that I claimed we 'know' to be true, namely "Grass changes colors".¹ I recognized that the metaphysical existence of grass can be doubted, but this didn't matter because the grass I was referring to was the grass *that we see*, which therefore exists in the only relevant sense. Its existence in some other metaphysical world [nature-in-itself] doesn't matter; for us it is real, and we *know* it's real. Propositions comparable to "Grass changes colors" (in their referring to the same 'apparent' world, i.e. the world we can directly observe in order to judge the statements' truth or falsity) are the ones to which the Law of Excluded Middle is applicable. These thoughts and many others were all in my head when I wrote that passage; the conclusion of Moore's argument occupied only one of the logical steps, and I thought it was so unproblematic that I didn't even argue for it. –The difficulty with ambitious thinkers is that we tend not to argue extensively for the propositions we consider uninteresting or obviously true, nor to express every logical step, and this invites the parasites that proliferate around higher organisms to nibble at our ideas insatiately.

May 30

Moore certainly had patience and scholarly dedication, but he was an atrocious writer and a dull thinker. The maxim of his philosophy is "Let's state the obvious and legitimize it in technical jargon". I'm astounded that he was influential. Are academics really as unintelligent as they'd have to be to be influenced by his ideas? I don't even *want* to be 'recognized' by such people!

The worst flaw of my thesis is that it's imprecise. I tried my hardest to rectify that, but the issues are so esoteric that my failure was preordained. I *agonized* over its occasional lack of logical rigor, but I neglected to read analytical essays that would have taught me how to refine some of the sentences and ideas in the introduction. Even that, however, wouldn't have cured the problem.

Kierkegaard describes well the difference between genius and talent: "Talent is to be ranked according to the sensation it produces; Genius according to the opposition it arouses. Talent adapts itself immediately and directly; Genius does not adapt itself to the given circumstances. Talent warms up what is given (to take a metaphor from cooking) and sees to its appearance; Genius brings something new..."

The following extract from his journal is an eloquent expression of the thought that has occurred to me approximately a thousand times.

In one of the Psalms it is said of the rich man that he heaps up treasures with great toil "and knoweth not who shall inherit them." So I shall leave behind me, intellectually speaking, a capital by no means insignificant—and alas, I know full well who will be my heir. It is that figure so exceedingly distasteful to me, he that till now has inherited all that is best and will continue to do so: the Docent, the Professor.

Yet this is also a necessary part of my suffering—to know this and then go calmly on with my endeavor, which brings me toil and trouble and the profit of which, in one sense, the Professor will inherit. "In one sense"—for in another sense I take it with me.

Note. And even if the "Professor" should chance to read this, it will not give him pause, will

¹ The only reason why our knowledge that grass changes colors, while not susceptible of doubt given our common-sense way of experiencing the world (i.e., given the invariable 'existential orientations' and presuppositions of the philosophers themselves), isn't as unquestionable as our knowledge that we exist—or, more accurately, a description of an immediate experience that isn't also tautologous, as is 'I exist'—is that the first statement appeals to memory, while the second doesn't. Only statements that describe immediate experience are certain. In fact, it seems misguided to question them at all (as it is, in another but similar sense, misguided and futile to doubt that grass changes colors).

not cause his conscience to smite him; no, this too will be made the subject of a lecture. And again this observation, if the Professor should chance to read it, will not give him pause; no, this too will be made the subject of a lecture. For longer even than the tapeworm which recently was extracted from a woman...even longer is the Professor...

Of course, all the self-congratulation in which spirits like ours are wont to indulge is itself funny, but at least we're *aware* of that.

I read the Introduction to the *Phenomenology of Spirit*, translated by Miller. I'm unclear on how Hegel proposes to avoid the problems he summarizes in the first few paragraphs, problems seemingly inherent in the division between knowledge and object. I know he wants to do away with that division, but *how?*

Emma Kirkby, you goddess, you! You're the only soprano I've ever heard whose voice is divine.

May 31

The Eleatic objection to Nothingness is a confusion arising from grammar. 'Before birth nonbeing exists.' So it does, but that general way of saying it (i.e., '[noun] is'), which is unavoidable, is confusing. Actually, the paradox reminds me of the ontological proof: it's a frivolous little word-game. What's more disturbing is the nonbeing itself. Try to think of it! Try to intuit what 'nothingness-for-oneself' means. Try to imagine the *reference* of that concept. 'Tisn't easy.

June 1

Yesterday I read Quine's paper "On What There Is". It's better than Moore's. However, I couldn't help thinking that the topics it confronts and some of its arguments aren't worth the attention they receive. The paradox it sets forth at the beginning is similar to the old Eleatic one: "Nonbeing must in some sense be, otherwise what is it that there is not?" Quine imagines a discussion between himself and McTaggart (whom he calls "McX") wherein they debate their respective ontologies. McTaggart believes in things whose existence Quine disputes. However, this seems to involve him in a predicament. "I cannot admit that there are some things which McX countenances and I do not, for in admitting that there are such things I should be contradicting my own rejection of them." Right on, bro. One problem, though: there's a difference between existence as an independent, physical being and existence as an indeterminate intention. The idea of Pegasus periodically exists, but Pegasus itself doesn't exist (even if we construct physical models of it). When you say so you have in mind an 'indeterminate image'—which in fact isn't even an 'image' properly understood—of a winged horse, and you're denying that there is a live, physical incarnation of such a creature. What's so objectionable about that solution to the paradox? Kine [Quine], however, rescues himself from the oh-so-distressing predicament by invoking Bertie's theory of descriptions. As you may know, that theory provides a way to analyze descriptive phrases like 'the author of *Waverley*'. Thus: 'The author of *Waverley* was a poet' means 'Something wrote *Waverley* and was a poet, and nothing else wrote *Waverley*'. "(The point of the added clause is to affirm the uniqueness which is implicit in the word 'the', in *the* author of *Waverley*.)" If you say that 'the author of *Waverley* is not', what you mean is that 'Either each thing failed to write *Waverley* or two or more things wrote *Waverley*'. Hence in the first version you're not referring to a particular entity; you're *denying* it, as is obvious if we transfer "the burden of objective reference" from a name to a "bound variable", a variable of quantification like 'something' and 'nothing'. Therefore 'Pegasus is not' means (presumably) 'Either each thing failed to be a winged horse that was captured by Bellerophon or there were two or more winged horses that were captured by Bellerophon'. Eureka! I don't know what we've gained by this exercise in casuistry—for the concept of the winged horse (which doesn't exist) is still winking at us, hidden in the soothing language of modern logic—but at least it sounds impressively technical. The second half of the paper discusses whether there are such entities as

attributes, relations, classes, numbers and functions. I found some of the paragraphs confusing and unsatisfying, but I did appreciate the history lesson near the end, in which Quine compares the medieval controversy over realism, conceptualism and nominalism to the modern one over logicism, intuitionism and formalism.

I've been given a job as an English teacher in South Korea next year.

June 2

No other fragment or piece of sacred music is as destructive a force [a comment meant in irony] as the Hallelujah chorus. I can picture myself having a heart attack while listening to it.

The extent of my worry over the fate of humanity is unjustified. We won't destroy ourselves. Only a natural catastrophe could destroy us. An observer of the demise of the Roman Empire might have thought that the human race was descending into chaos and Armageddon was at hand, but he would have been wrong. Appearances can be deceiving. We humans, the sovereigns of nature, crafted in the image of God, have millennia ahead of us. An age of glory awaits us. [Um, good luck with that.]

I read "Two Dogmas of Empiricism". I thought it was more convincing than the other essay, not least because I've always agreed with the thrust of its critique of empiricism. Radical reductionism, the doctrine that every meaningful statement is translatable into a statement about immediate experience, is just dumb. So is the verification theory of meaning (that "the meaning of a statement is the method of empirically confirming or infirming it"). Quine's arguments against the distinction between analytic and synthetic statements are fairly convincing, but I'm not willing to abandon the distinction so rashly. It's too important and intuitively attractive to be discarded before no effort has been spared in saving it. At the beginning of the paper Quine delineates two classes of analytic statements that I'll copy here because they're worth remembering: *logically true* sentences such as 'No unmarried man is married', which remain true under any interpretation of 'man' and 'married', and sentences that can be turned into logical truths by interchanging synonyms, such as 'No bachelor is married' (which becomes 'No unmarried man is married'). The second class is the problematic one, for its definition includes the unexplained word 'synonym'. According to Quine, the verification theory of meaning supports the division between analytic and synthetic in this way: "as long as it is taken to be significant in general to speak of the confirmation and infirmation of a statement, it seems significant to speak also of a limiting kind of statement which is vacuously confirmed, *ipso facto*, come what may; and such a statement is analytic". However, I'm not sure why this defense of the division has to be based on the verification theory of meaning. Surely I can believe that an essential difference between a. and s. is the inconceivability of 'infirmation' or refutation of the former (unlike the latter) even if I don't subscribe to the verification theory of meaning.

[...]

June 4

I'm reading Ayer's good book *The Problem of Knowledge*. The conclusion of the first chapter is that "the necessary and sufficient conditions for knowing something is the case are first that what one is said to know be true, secondly that one be sure of it, and thirdly that one should have the right to be sure." If a superstitious person who after walking under a ladder was certain that something unfortunate was thereby about to befall him, and he subsequently turned out to be right, he nonetheless could justifiably be said not to have known that it would be so. He didn't have the "right" to say that he knew, because his grounds for believing in the occurrence were faulty.

June 8

Most of the paradoxes in which Ayer finds himself entangled when analyzing personal identity dissolve upon substituting my ideas for his. (I don't know how similar mine are to Sartre's, since I've forgotten the subtleties in *The Transcendence of the Ego*). His summaries and critical examinations of such debates as the private language vs. public language controversy, the supposed incommunicability of private experiences and the debate over physicalism (which argues that "to say anything about a person's thoughts, or feelings, or sensations, or private experiences of any kind, is always equivalent to saying something about his physical condition, or behavior, where this applies [both] to the statements that one makes about oneself [and] to those that one makes about others"), as well as the disagreements over the reality of the external world, the past and even experiences themselves, have not only enlightened me on the main contentions of the conflicting parties but have convinced me that these issues are vacuous academic exercises for bored minds. Gilbert Ryle, from what I've read, was a fucking imbecile. The whole analytic tradition, nauseatingly preoccupied with "proving" propositions, is almost as superfluous and philosophically emaciated as the Scholastic tradition was in the Middle Ages. Its chief merit has been to emphasize precision. A. J. Ayer is one of the few who understands the poverty of most counterintuitive analytic theories.

This evening we attended the annual Garden party at the Art House, where Grandpa Bob was honored for his artistic, scholarly and philanthropic achievements. I was surrounded by old geezers, but I occupied myself with the video camera.

June 10

Reading volume 4 of that history of England. I had a physical today, complete with rectal exam. Charming experience. Makes me wonder why people enjoy anal sex. Don't they feel disgusting?

June 11

When I listen to pieces like "Ev'ry valley shall be exalted", "And the glory of the Lord", "For unto us a child is born", "Rejoice greatly", "Hallelujah", "Sinfonia", "Sinfonia pastorale"—speakers blasting and eardrums bleeding—I feel like I'm ten years old. I giggle and have seizures of pleasure while I imagine I'm conducting the orchestra.

Reading *Heart of Darkness*. It's intimidating to one who'd like to write literature some day. I'll never be in (anywhere *near*) the same league as Conrad. "The day was ending in a serenity of still and exquisite brilliance. The water shone pacifically; the sky, without a speck, was a benign immensity of unstained light; the very mist on the Essex marshes was like a gauzy and radiant fabric, hung from the wooded rises inland, and draping the low shores in diaphanous folds." [Well, maybe that writing isn't so great after all.]

June 13

I'm looking forward to being in California, though I'm sure I'll get sick of my job quickly. I remember telling myself last summer "I'm never going to be a camp counselor again." Yet here I am. Time heals all wounds. Besides, I'll do anything to escape from the low level of depression I've been feeling since I got home. [...] Tonight we saw a British movie called *Once upon a time in the Midlands*, which portrays the lives of a slew of depthlessly mediocre people, and I feel polluted.

I played Chopin's Prelude in E minor, Op. 28 No. 4, over and over again until my gloom had spent itself. Reading *Heart of Darkness* continued where the piano-playing left off: I'm cheerful now.

June 18

Camp Mendocino is in the redwood forest. Though it hardly ever rains here in the summer, the vegetation is luxuriant. A little creek runs nearby.

The camp is a fraction of the size of Blue Lake. There are eighty staff members, thirty of whom are males. So the ratio of the sexes is favorable. Unfortunately most of the girls are not pretty: there are about ten to whom I'm attracted, and only a few of these have appealing personalities. The majority of the counselors are from England and Ireland, for some reason.

On the four-hour trip from San Francisco to the camp I talked to a cute girl from Oregon who sat next to me. Elizabeth. Intelligent and personable but has a 'butch' figure. In the afternoon I met the five counselors in my 'tribe' (Apache). The 'chief', who's a 21-year-old Brit, is 'daft' and irritating, but he's not a bad leader. The others are quiet and fairly slow-witted—with the exception of the veteran counselor, Mark—but they don't seem arrogant, which is a rarity among guys. I don't dislike them.

The camp isn't very well-organized. Or at least it *seems* that way, because I can't help comparing it to Blue Lake, which has affinities with a fascist dictatorship.

June 19

Last night the six tribes performed skits for each other. I had a shockingly good time. A football match earlier had energized me, so I enthusiastically participated in all the silly cheers. Watched Zoey, a junior, from across the amphitheater, jumping up and down and leading cheers, and I felt myself developing a crush on her. She's so adorable!

Today included more meetings and icebreakers. A junior at Stanford named Hanna talked to me, which wouldn't be noteworthy except that our interactions suggested she 'likes' me. Particularly during the afternoon hike she seemed unusually responsive to my inane comments. And she cast a hundred sidelong glances in my direction. The more I talked to her the more I liked her, to the point that I now can't stop thinking about her. It doesn't hurt that her mulatto body is perfect and her face is a porcelain doll's.

An Irish lass named Joanne. Her friend Nicola has attached herself to me, probably because I give her attention, which, being an ingenuous, plain-looking girl, she isn't used to. It's sad that she seems to mistake my friendliness for romantic interest.

June 20

My mercurial temperament has been acting up lately. Today it was infused with the spirit of Bacchus. We had breakfast at 8:30, per usual; I stayed half-asleep for much of the morning, per usual; I conversed with Hanna, per usual—but this time she let it slip that she has a boyfriend. The revelation was so imperceptibly inserted into the conversation that it couldn't have been said with the intention of warding me off. She must be blissfully ignorant of my ulterior motives in talking to her. My face masked my disappointment perfectly, but from that moment on I lost my desire to 'charm away' her reticence.

By the early afternoon I had been successively apathetic and energetic multiple times—moods catalyzed by events like a pick-up basketball game, a confab with Elizabeth, an inspirational meeting, my repeated recognition that no girls here truly interested me, and a meeting that addressed the severe behavioral problems of inner-city children. At 3:00 everyone took a swimming test in the arctic river that courses through our campground. [...]

An Irish lad named Jason is my favorite person in the tribe. Soft-spoken, likable, quick-witted and funny. Quiet, but his subtle reactions to events are what crack me up.

June 21

The campers are here. Because it's the first session, there aren't many: I only have three in my cabin. 12- to 14-year-olds. They're good kids: Jerome and Matt are sociable, and Jordan is quiet and respectful. I'll have to exert an extra effort to make sure he's having fun.

June 23

Most of the kids are hoodlums. Luckily there are only fourteen of them. My cabin is better-behaved than the others, but because each counselor has to keep *everyone* under control that doesn't matter. Yesterday I broke up three potential fights between punks who have no respect for authority (particularly mine). They come from 'projects' like Sunnydale, which anyone in this area can tell you is a horrifically violent place. Ironically, these soon-to-be drug dealers were transported with innocent glee at the rantings of the staff on stage. Earlier in the day Jason and I played basketball with them for hours. It was the most fun I've had in weeks. The organized activities we went to (boating, swimming, horse-riding) were less enjoyable, but that was mostly because the brats wouldn't shut up when they were told to.

[...] A buxom 24-year-old Swiss girl named Sylvia is quite flirtatious with me, but that's probably how she acts around all guys.

Jerome is the best kid in the group. He never puts anyone down; he's immune to the mean-spirited, disrespectful atmosphere that surrounds him. It bounces off him harmlessly.

June 24

Three fights today, in all of which I intervened. One boy was kicked in the face. Another was thrown to the ground by a dumb goliath named Tony. The disrespect for counselors is staggering. Two hours ago a boy sprinted into my cabin screaming like a banshee; I grabbed him by the arm and pushed him outside, not in the mood to reason with someone who doesn't recognize reason. He started cursing at me, threatening me and acting like he was back in the 'hood. I was angry myself, so I stupidly provoked him by being contemptuous. Half an hour later Steve found out about the incident and ordered the kid to apologize to me. Marcus was silent, so I apologized first and he reciprocated.

Fortunately I'm fond of a few counselors (and Jerome). Last night I socialized with two cute Poles for a couple hours in the staff lounge. Agata and Ania exemplify the kind of person who knows no dark thoughts but is somehow not thereby sickeningly saccharine. I love being in their presence. Gillian's too. I managed to steal an hour out of the day to talk to her (and weave a friendship bracelet at the arts and crafts area). She and I have two hours off tonight.

I treasure my music as I never have in the past.

June 27

There have been the usual fights and curses and threats and disobedience. We went on an overnight hike yesterday afternoon; no one enjoyed it. Swarms of mosquitoes made the kids cranky, though we distracted them from boredom with games like 'capture the flag'. I fell asleep to the gentle hum of "yo' mama" jokes.

...During siesta, as I was alternately dozing and reading Wittgenstein (in German), a fight occurred outside. It wasn't the ordinary scuffle that happens every ten minutes; it was a full-fledged battle to the death. Tony repeatedly swore that he would kill Jordan (a different one). I didn't know how serious the incident was until the very end, when I heard running and yelling. (That's when I heard the death threats too.) I sprinted outside to the basketball court, where I tried to stop Tony from chasing Jordan. Mark and Shane were already there. At first I was so preoccupied with defusing the situation that I didn't notice how

severe Mark's wound was. But when the rivers of blood crossing his chest caught my eye, I followed them to their source and saw a deep gash behind his ear. He had been hit in the head with an iron rake. Tony was crying from sheer rage, but the three of us managed to bring him under control. Apparently the whole thing had started with *taunts!* *Taunts* had made him that rabid! He's gone home now, mercifully. –The lesson to be drawn from this is that I can't stay in my cabin during siesta.

[...]

July 3

If the world is a stage, the play is tasteless. I might as well beat my head with a rock over and over again. I'm tired of always being right. I'm tired of being justified in my disdain for people. I'm tired of having my points proven day after day after day.

The campers this session behave slightly better than those last session. As far as I know there haven't been any fights yet (though there have been plenty of conflicts). Nonetheless, I dislike all of these boys. Even Jerome continually whines like a little girl. The Apache counselors are overworked, underpaid and underappreciated.

Fortunately I've been designated the archery specialist, which means I can spend two hours in the morning and two in the afternoon away from the little shits, teaching archery to younger kids who obey their elders. My new position began today; my pupils were 7- to 10-year-olds. Not only did they listen to me; they also amused me and rejuvenated me. I laughed out loud when the girls called me "sir". As if!

...I'd like to quit this job, but that would be weak. And I'd have no place to go except *home*.

July 4

"Quit! Quit! Quit!" The voice in my head hasn't left me alone for a week. Today was especially hard. I have officially stopped caring about controlling the kids. It's impossible and I'm tired of shouting every minute. I'm only going through the motions now, biding my time until either something drastically changes or I leave. Apathy, fatigue and disgust tyrannize my thoughts. I'm going to talk to Lavina or James within the next two days. (Tomorrow's my day off.)

I had an hour-long break at 3:00. Agata and Ania passed me on my way to the cabin; they were headed to a secluded spot on the river. They asked me to come along, so I did. What a stroke of luck it was to meet them! They stripped to their bathing-suits, rubbed oil onto their svelte tanned bodies and asked me about my past and my interests.¹ After lying in the sun for half an hour we swam in the gelid water, I wearing jeans. Then we lay on the beach, and then I left. –It doesn't sound like much, but it was enough to dissolve the knot of anger that had been lodged in my chest the whole day. Ania and Agata aren't typical conceited attractive girls; they're quintessentially "sweet" Eastern Europeans, as I think I mentioned before. Merely listening to them is a great comfort.

In the evening there were various patriotic activities for the entire camp to take part in. I was probably supposed to focus my energies on supervising Apache twits, but instead I fraternized with young'uns. A little boy named Chris adopted me as his horse, which meant I had to gallop wherever he desired for thirty minutes. He twisted my head with his paint-smearred hands when he wanted me to change directions, and he kicked me in the ribs when I was going too slowly. It was a rude awakening to return to my own tribe at 9:00.

At 10:00 I told Steve I can't stay in this unit. Jessica happened to be nearby, so he called her over. I explained to them both that I'd be a far more effective and happy counselor with the youngest group. They

¹ The conversation was the only part I really liked. The sight of their bodies was just frustrating.

were sympathetic. In two days I'll have a meeting with James and Lavina to sort out my situation.

July 6

At 11:30 yesterday I took the “skunk train” to town. The first thing I did upon arriving was eat lunch with Margo and Christy at a Chinese restaurant. I found out that I'm a Monkey under the Chinese zodiac, but the meal was otherwise uneventful. When the two girls met up with Shay and her boyfriend I struck out on my own. This involved listening to music, eating pastries, eating ice cream and ambling aimlessly downtown. At 6:00 I walked two miles to a salmon barbecue, hoping to meet the counselors there so I could have a ride home. But I encountered only two thousand hicks. Half an hour later I left, having decided that the white trash culture was not to my liking. So I walked another two miles, pausing awhile near the ocean to gaze at the horizon in wonder, lose myself in Water Music and cry from the painful beauty of it all. My ruminant mood left me when the music ended, so I resumed my quest for either my ‘friends’ or a hotel. I couldn't find the former, so I settled for the latter. But I couldn't even find *that* until 9:00, after I'd walked thirty blocks in a fruitless search for a cheap motel and had finally yielded to the inevitability of staying at an antique \$90 hotel for the night. Oddly enough I slept fitfully in my unwontedly luxurious accommodations. Awoke at 9:00, ate a hurried but delicious meal, rode the train to camp and resumed work at noon.

July 9

I forget what happened on the 7th. Yesterday I got sick from eating the year-out-of-date meat we're fed. In the evening I staggered to the infirmary, threw up multiple times and slept on the couch. The vomiting was more repulsive than usual: not only did my half-digested food project from my mouth at such speed that my throat was deeply scratched, but when I blew my nose immediately afterwards large chunks of tomato ended up in the tissue. Don't ask me how they squeezed through my nostrils. As I hugged the toilet I grew sentimental and sorrowful; I pondered the sufferings of humanity, the infinite *smallness* of the species, and I wept. Thought about how doomed and pathetic, but touching, is man's attempt to reconcile himself with nature. And in my poetical pose I recalled a line from *Don Juan*: when Byron describes the contrast between the feminine and the masculine experience of crying, he says, “For them 'tis a relief, for us a torture.” He's absolutely right. Tears *sear* a man's face but *soothe* a woman's.

The night's repose substantially cured me. In the morning I packed my bags as the campers packed theirs, for Jessica had told me I could work in Cheyenne, which is the youngest boys' unit. I needn't tell you how thrilled I was to free myself from an asylum for young personifications of filth. A Cheyenne counselor named Benjamin fortuitously wanted to join Apache, so we switched places. Two hours later the new batch of campers arrived for the third session; there are only nine Cheyenne boys. So far I like most of them, with the exception of an obnoxious kid named Darius. They all seem to like me—frequently hold my hand when walking somewhere or beg to have a piggy-back ride. They never curse, they're respectful, they don't show any inclinations to fight, and they love to play games with the counselors—of whom there are ten. (Far more than at Apache, perversely.) There's a good rapport among the staff members, probably because half of them are girls. —In short, I've advanced from purgatory to...well, not paradise, but something like it.

July 11

It's my day off. I'm staying at the camp, since there's nothing to do in Fort Bragg. Woke up at 11:00; it's 1:30 now, and I'm sitting by a brook far away from all noise. The only sounds I can hear are musical: waters bubbling over rocks and breezes rustling leaves. Were I a wordsmith I'd paint for you the

quiet splendor of the scene. Only a Keats could do it justice. –I’m skeptical that it was blind chance that carved this enclave of raw harmony.

A little snake is sunbathing on a floating branch nearby. If I weren’t here it would be there in that identical coiled position, smelling the water with its forked tongue, eyeing minnows, ignoring dragonflies mating beside it—and no human being would see it. No one would know of its existence. Its place in the cosmos would be the same but radically different. I find that to be virtually imponderable, though I’m not sure why. I’m tempted to accept idealism only because it would be a tragedy for this scene to go unwitnessed.

People have arrived. I’ll socialize briefly and return to myself in a minute.

[...]

July 17

[...]

The campers are still as fun as on the first day. I wrestle with them, play dodgeball everyday, etc., and am more a friend than a superior. You might think that would be inadvisable, but you’d be wrong, for I’m able to switch into the drill sergeant role on the rare occasions when I have to. I especially like two brothers named Trave and Jairius, who are the wildest little whirling dervishes of delight you could ever meet. Their smiles stretch from ear to ear (almost literally), their wit is startling for their age, and their rambunctiousness finds an outlet in their obsessive attempts to twist my nipples. Because I’m the archery specialist I can’t be around these fun kids all day long, but at least I see them during meals, in the evening and during siesta.

July 21

It was an uneventful day off. The fourth session began on the 18th; no campers “stayed over” except Trave. I wish Jairius had too. There are fourteen kids in the unit, all of whom are cute little guys who generally obey their counselors. A fat, awkward boy named Kevin has taken a liking to me. He’s a social outcast who doesn’t know how to relate to people: sometimes he hugs me and lays his head on my shoulder, while other times he fights violently with me, as if he’s angry. Clearly he’s desperate for affection, so I don’t discourage him—though I’m repulsed by his obtrusiveness and his smell. Trave remains my favorite.

[...]

At 10:00 Christina and I ate at the staff barbecue. That may have been the reason I woke up in a great mood this morning. Drank coffee at breakfast for good measure. Isn’t it interesting that jokes and types of behavior that usually don’t even *occur* to you suddenly ‘leap out’ when you’re feeling abnormally happy? I love it! I wish it happened more often.

July 24

Several counselors have quit recently. Hanna was one of them. I, on the other hand, could hardly ask for a more enjoyable summer than the last two sessions have given me. What a change from the first two!

[...] When I tell Gillian that classical music is more sophisticated than its competitors and she replies with “That’s such an elitist attitude!”, I can’t help imagining a monologue in which I sneer at her, “You child. You haven’t lived yet and you haven’t thought yet. You don’t know what you believe—though you think you do—and you never will. In the last eight years I’ve lived decades; centuries of cultural

evolution have been compressed into one mind's process of maturation. I've thought so much that I sometimes fear I can no longer write anything that isn't a repetition of something earlier. Who are *you*? Why am I talking to you?" But my superego, that bland and compassionate preacher of equality, recoils and shouts, "You egomaniac! Hasn't experience taught you anything? Look in the mirror. Is your face really so unique? Is it *lived* in? No; it's young and pretty and soft. It's *equal*, as are you. You and Gillian have your ignorance in common, along with Socrates and Aristotle. So stop making a fool of yourself." But then my intellectual id appropriates that comment: "Your perceptiveness (which is also mine) refutes your point. How could we be 'equal' to Gillian if...[etc.]" The dialogue could continue, but my sense of humor smothers it.

July 25

Friday. No work. Staying on camp. Walked half an hour toward Counselor's Rock, but directions were faulty. Morons. Furious for ten minutes, then sat in shade and read journal. Realized it's time I branched out. Document has proved invaluable for seven years, but adolescence is over. No longer need 'crutch'—or: no longer can let myself lean on it at all times. Must slough off old skin and grow. Journal provides no more avenues for growth. Isn't 'expansive' enough or 'grand' enough. Short stories, novels, essays, endeavors in science, philosophy, art, *human relationships*: these are my next evolutionary steps. Am approaching, or have reached, the natural conclusion of ceaseless self-meditations: self-consciously dubious self-knowledge. And *full experiential awareness* of the necessity of such dubiety. Wonder is the beginning and the end of inquiry. I began in wonder and now I end in it, only to begin again on the basis of that ultimate insight. My journal will now necessarily be repetitive, or consist in variations on old themes, because it isn't much more than a record of my progressive appreciation of skepticism and irony—so I'll relegate it to the status of 'one pursuit among many', all of which are grounded in the central fact of my existence: levitation. However I continue to grow, I cannot surmount the plane that my nobler thoughts have already attained. I can but try to live in harmony with them, which involves broadening myself. Hopefully the move to Korea will facilitate the transformation that has in fact already begun.

...Last night we played games with the campers while sitting around the campfire. One of the games required that each person tell us his favorite superhero. Most of the kids reeled off names like Wolverine, the Hulk, Superman and Batman, but when it was Kevin's turn the name was "Chris". And he pointed at me.

[...]

July 29

Went to Counselor's Rock with Elizabeth and Christina. Elizabeth is the funniest girl I've ever known. (It isn't often that I meet genuinely funny girls. The sex is supposed to be more passive: its representatives—to speak on a simplified, animalistic level—merely approve or disapprove of men whose task it is to impress them, whether through humor or intelligence or anything else. It's a testament to mankind's elevation above animals that women are also required to impress men—for this indicates that sex isn't the 'highest good' for us men, while it is for male *animals*. In other words, we have standards.)

...How much more unambiguous would life be if faces were clear expressions of characters! But that would make ugliness far too common. Most people would have the aspect of the man I saw in Lisbon whose face was a mass of boils. Procreation would be impossible.

July 31

Finished reading the play, finally. I liked it. *Die Stücke von Max Frisch sind immer philosophisch und ziemlich melancholisch. Darum gefallen sie mir. Wenn sie keine 'Themen' hätten, würden sie mich nicht interessieren. Nun werde ich Santa Cruz wiederlesen.*

August 1

My pen is itching to write short stories. The moment I'm free I intend to write a satire on late capitalism that reverses and perverts the Biblical apologue of "Job". It'll be about the misfortunes that befall a man named Joe who worships the God Mammon.

...Cultured people are fond of the dictum that nothing is more difficult than to stand alone against the world. At the end of one of his plays Henrik Ibsen has the hero sum up his hardships with that maxim, and it's clear that the real speaker is Ibsen himself. But I disagree with him. To fight against the herd with one's heart and soul is actually quite easy, for it is essentially its own reward. Anything that is its own reward is not truly difficult, though it may require effort. I prefer the saying that such solitary struggle can be the most *valuable* thing in the world.

A little while ago, when I was listening to one of my CDs in Darik's cabin, I heard Jeff say right outside the door that he feels pretentious when he listens to classical music. My immediate thought was, "You asinine little boy! You just indicted yourself. Of *course* it's only a pretense for *you* to listen to high art. Nothing can act contrary to its essence." Then I smiled at myself and continued reading.

I'm savoring the anticipation of living in Korea. To be rid of the American culture! Not to be trapped in a closed community! O, to be free!

August 2

Logical fallacy: because I usually listen only to classical CDs I like no other kind of music. In reality I enjoy, in certain moods, almost everything that history has to offer music-wise. However, I'm bombarded with so much of the easy-listening stuff merely by virtue of living in this society that on my *own* time there's no need to listen to more of it. Instead I listen to the *other* kind of music, the kind that demands concentration (and intensive study) in order to be fully appreciated. For there is *classical* and there is *popular*—which includes virtually everything: rock, pop, ragtime, motown, gospel, rap, folk, hip-hop, jazz, etc. (To be fair, some jazz is too complex and intellectual to be considered 'easy listening'. My dual classification is simplistic, but it isn't entirely wrong.) The 'popular' music isn't always *bad*; it's just less sophisticated and less sublime. Even so, it can be wonderful to listen to.

Finished rereading the play. Now I'm going to read Wittgenstein's *Über Gewissheit*.

August 3

There are thirty kids in Cheyenne. They're the worst bunch we've had all summer. Apache en miniature. Absolute animals. They've made me so angry that I've been tempted to beat them multiple times. Smash them into the ground! Really *pulverize* them! I'm counting the days until I can leave this place, this first circle of hell. Neither the campers nor the staff please me in any way.

August 5

I'm in the groove, so the shit I put up with doesn't really bother me anymore. The same old yelling, the same old fights, the same old longing to hear Handel's "Messiah"... The peculiar routine is actually

somewhat exhilarating. I always have to be on my toes, and I'm generally energized in an angry sort of way. The evening heralded something new: while we were trying to prep the campers for the talent show they were so outrageously behaved that Peter and I took the fourteen worst kids on a steep hike in the forest and Allison planned the skit with the others. The boys complained and cursed the whole way—threatened to sue us, wished they were dead, wished we were dead, lamented “nature’s fury” (!)—but all my pent-up aggression flowed into my legs, leaving ebullience in its wake. For forty minutes I smiled and laughed at the miasma of resentment that surrounded me.

August 8

The overnight hike was more fun than I'd expected. Peter and I led the campers on a supplementary evening hike that included ascents and descents of 80° inclines—dirt-slides, basically—where injuries were not only possible but probable. Because of the danger the boys set aside their mutual aggression and cooperated like a team of mountain-climbers, holding hands and helping each other up the mountainside. It was truly wonderful to witness. What a transformation! In the morning, however, they were back to their old selves. Not quite as bad as in the previous days—I'm even starting to like three or four of them—but not anything like respectful.

August 9

Day off. Fort Bragg. Warm weather. Alone. Need haircut. Salons closed. Tired. Want bed. Could read. But would. Rather not. Too dead. Want mo. Tel to. Sleep in. Right now. So bored. So sick. Of Camp. Mendocino. Cino. Can't wait. To talk. To San. Gi in. Two weeks. Miss her. –Shut up. Voice of. Mono. Tony. You de. Press me. Too much.

...I really screwed myself this time. Sabotaged myself through a series of idiotic blunders. The first mistake was to come to Fort Bragg again (only to get a haircut that never happened). The second mistake was to decide not to meet John, Shay and Robby at 4:00: they could have driven me home, but I couldn't stomach the thought of spending three hours with them first. The third mistake was to wait till the late afternoon to look for motels. The fourth was to *walk* to them instead of *call* them. The fifth was to watch a movie in the evening rather than eat dinner or continue searching for accommodations. (I was so frustrated and furious that I thought I needed to see *Pirates of the Caribbean* to calm down.) The sixth was not to inquire about a hostel or shelter until 10:00, which was precisely when its doors closed. Now the only option left is to sleep on the beach. Every motel I called (at 9:30) was full. I even called a taxi service, but the person had never heard of Camp Mendocino. –This is the kind of thing that could only happen to me, and that *never fails* to happen to me.

...I couldn't find the entrance to the beach, so I tried to sleep on a bench in the middle of town. That didn't work. It's too cold to sleep. It's 1:00 a.m. now; I'm going to wander the streets and listen to music. And then maybe read.

August 10

5:30. At 1:00 I went to a redneck bar, the only one still open. My favorite pastime, people-watching, was especially entertaining there. Unfortunately the bar closed, whereupon I had to venture into the chill night air again. Managed to fall into a light sleep until shouting teenagers woke me up; Wittgenstein accompanied me the remainder of the night. Now it's Beethoven's turn.

[...]

There's a good deal of intellectual pleasure to be had from watching the sun rise. All around you is peace, but you know that soon the little civilization will be bustling and the little people will be scurrying

with childlike self-importance. Or you can watch the sky and reflect that what you're seeing is the result of the earth's rotation, a rotation so fast yet so imperceptible. "Miraculous" doesn't begin to describe it.

To be a young man is an experience I wouldn't trade for anything in the world.

The second movement of the fifth piano concerto speaks for itself, but I have to make one comment nonetheless. The *logic*, the *proportion*, the *restraint*, the *development*, the *beauty* rival those of the most flawless dawn. –How ugly life would be without classical music! How flavorless! How meaningless!

August 12

Session 6 hath begun. The campers are fairly well-behaved—as *anyone* would seem in comparison with last session's brats. My ability to discipline kids has been well-honed, such that now I can intimidate them into silence by looking intently at them or talking in a quiet but stern voice. It helps if I use mild threats.

August 14

The stated purpose of my reading *Über Gewissheit* is that it'll help me learn German, but an 'adscititious' purpose has crept in: as a philosophical text the book keeps me in that state of perplexity I so love. Or hate. It's quite frustrating to read for two contradictory purposes at the same time, one of which demands that I *trudge on*, paying attention only to grammar and vocabulary, the other of which demands that I interrupt myself constantly. I'll have to return to the book and read it on its own level, for its own merits. Most of the 250 sections I've read are interesting—far more so than Moore's pertinent essay—and address (obliquely or directly) questions I dealt with in the introduction to my thesis. I didn't pay as much attention to certainty, but I did to truth. If you compare the two pieces of writing you might be hard-pressed to find parallels, but I think they're more 'real' than 'apparent'. The broader themes and doubts are similar; I just answered them more systematically and (perhaps) satisfactorily, relying less on pragmatism and behaviorism. This book, however, has of course renewed my doubts.

August 15

This is what I call a vacation. I'm in Mendocino, a quaint town on the coast that sits atop bluffs¹ which provide a panoramic view of the ocean. What a relaxing sight! *Look* at that placid sea out there, harboring secrets and immensities inconceivable to the human mind. What is it about the ocean that's so soothing? Is it the instinctive humility I feel when faced with infinity? Or is it the stretch of pale blue that intoxicates me? Maybe it's the sound of the surf, or the cool of the breeze. Or an amalgam of them all.

The myriad shops, located in buildings that were once saloons, are as charming as their reputation holds them to be. There's an excellent book store, a fudge store, a toy store, a blown-glass store, an art gallery, a hundred cafés and restaurants, an antique store, a "jam and preserves" store, etc. I'm staying at McElroy's Bed and Breakfast, where Mom was good enough to make a reservation for me. Unfortunately I arrived in town at 3:30 and have to leave at 8:00 in the morning.

Observing nature is like observing architecture: it can't be fully appreciated unless its principles and its history are known. My understanding is severely deficient in both areas.

This town is like a little utopia. The people are unusually friendly and polite, the streets are picturesque—irresistible—the food is delicious,² the scenic backdrop is breathtaking. It's significant that most of the residents were once hippies.

¹ These constitute Mendocino Headlands State park, which is where I'm sitting right now.

² That's an essential part of a utopia.

Poems:

in the dusk
 a passing shade smiles
 her twilit eyes

silvery and tremulous
 is the moonlit avenue
 to the horizon

the mercurial
 flames embedded in the vault
 look down on transience

the foghorn yawns,
 a solitary Cyclops
 that finds in me a friend

young couples amble
 along the sidewalk, gambol
 past a lonely bum

dew on a windshield:
 nature kisses a machine
 and hugs her prodigal son

August 16

the sun burns shafts
 in the icy fogbank,
 the fallen cloud

I'm stranded in Hicksville. I came back to Fort Bragg this morning, expecting to take a train to camp, but it appears there's a problem with the skunk's insurance company. So there's no train today. And I have no ride back. I'm about to call Lavina.

...Someone's going to pick me up. In the meantime I'm having breakfast in a diner on Main Street. What a grand mood I'm in! I feel so *free!*

It's weird beyond expression that I used to live in Mom's body and feed off a placenta.

As I watch the friendly hustle and bustle of Main Street I'm reminded of the short scene in *Amadeus*, just before Mozart meets his father for the first time, in which he is skipping along the street and enjoying the festive atmosphere of Rococo Vienna. In the daydream I, of course, am Mozart, listening to music in my head.

[...]

August 22

I'm in Fort Mason [in San Francisco], whither I walked from Pier 39 on Fisherman's Wharf. The

view from this little park reminds me of Lisbon. Sort of. There are the same hills, the same white houses, the same palm trees and the same harbors—but not the same depth of character. It all seems too *new* here. Slightly artificial (though only slightly). Even so, I like San Francisco more than any other American city I've visited. Its great strength is that it's vaguely European: not all skyscrapers, mega-stores, flat landscape, über-civilization, a glorification of *function*.

[...]

Unrelated thought:—Mankind is not the end of evolution. It is not the Ultimate animal, after which nothing more can be said. It is not nature's supreme triumph. It is only a stage, a phase that will pass away and yield something new—neither better nor worse. It is an animal that's had spectacular success for a short while. That's all. Its whole global civilization will one day suffer the fate of the Pharaohs. So don't get too arrogant, okay?

August 23

In cities like San Francisco, Sydney, Paris, Vienna, Rome and the like, things that are in themselves unpleasant become interesting and add color to everything else. They're not only *necessary* but *good*. 'Bums' add flavor, bad music is charming, tourists are like well-intentioned children, overflowing crowds are exciting. Everything is justified from the perspective of the whole. The drawback of this Goethean perspective is that it treats people not as ends but as means. Their contributions to the totality are the only things that are considered. Of course, if the individual is seen as a microcosmic totality himself then he *is* an end—but there's also a totality outside him that he's a part of. It all depends on what perspective you adopt. As ends, all people should try to mimic the world (the *great* 'end') and be 'total', but as means only *some* should, and the multitudes should be as stunted as they are to provide the macrocosm with variety and contrast.

—Oh, why do I ever experiment with Goethean ideas? They never lead anywhere.

August 25

In the Kansas City airport I met a pretty young lady from Providence who had lived in San Jose for a year, working with the AmeriCorps program (which has recently been downsized due to Washington's conservative agenda). We talked for a while, shared a few laughs, and now I'll never see her again. "Ships that pass in the night."

Yesterday I read a book by the physicist Hannes Alfvén entitled *Worlds, Antiworlds: Antimatter in Cosmology*. It was written in 1966, so it's a little out of date and much of it seems like science-fiction, but it's fired my resolve to research cosmology and astronomy till I'm blue in the mind. I'm royally fed up with being ignorant of those subjects.

Speaking of ignorance, let me tell you what a childhood spent in the heart of a city can lead to: one night I was watching *Jurassic Park 3* with another counselor at camp, and out of the blue she said "Dinosaurs didn't really exist, did they?" I was stunned.

I've decided to divide every day of the next three weeks¹ into four parts: (1) read German; (2) read science; (3) practice the piano; (4) write or plan short stories. That's only a guideline, though. I've begun by setting aside Wittgenstein—after 400 sections I'm getting tired of him—and replacing him with a collection of short stories, *Aus Nah und Fern (From Near and Far)*. Now I'm going to the college library to borrow books on astronomy and physics.

Yesterday I also transferred most of the summer's journal onto the computer. In the morning the whole family went to a beach in Tiverton.

...Reading *The Five Ages of the Universe: Inside the Physics of Eternity*, by Fred Adams and Greg

¹ It'll take that long to get my visa.

Laughlin. It's a fascinating book: informative, fast-paced and intellectually adventurous. (Its predictions of the distant future are daring, perhaps recklessly so.)¹ The exposition is almost *too* rushed: at times when I was deciphering the first chapter I felt like I was reading mere words with no recognizable meanings. Of course, that's because many of the concepts are absolutely incomprehensible and have no relation to earthly experience. What does it mean to say that in the first quintillionth-of-a-second of the universe's existence its size expanded from that of a period at the end of a sentence to more than that of the current observable universe? What the *hell*? I *sort of* know what means, but not *really*. Or what about the theory that "virtual particles" continually flicker in and out of existence, leaving no trace and arising from nothing?² I won't even *try* to understand *that* one.

August 26

General relativity seems to imply that space itself is viscous, somehow. For how else can one visualize such theories as that galaxies aren't moving *through* space at speeds of many kilometers per second but are actually 'stationary' and *space* is expanding? Or that spacetime can be curved? Or that massive bodies revolving around a central one cause 'ripples' in the structure of spacetime? ("As a massive body moves through space, the curvature of spacetime must also move, and the movement sends disturbances traveling outwards through spacetime"—which are gravitational waves.)

Think of this: if you travel in a straight line across the universe (for trillions of years and at a very fast pace) eventually you'll come back to your starting point. For space isn't infinite, but it isn't bounded. It's like the surface of a balloon in three dimensions. Whatever that means.

...The last section of chapter 5 ("The Dark Era") blows my mind. The production of new universes is the subject. I'm left with the impression that "wormholes" aren't just fanciful products of an over-exuberant scientific imagination; they may be fact. Our own universe may have originated through a black hole in another. The authors even speculate that humans might eventually be able to *intentionally create* a child universe or set off a "cosmological phase transition" (which has something to do with changing the universe's vacuum energy state from its current 'artificially high' level to a lower and (slightly) more stable one, albeit one that would destroy everything as its expanding bubble shot through space). I'd love to become an astrophysicist just to *understand* all this.

August 27

Read chapter one of *Extreme Stars: At the Edge of Creation* by James Kaler—a more technical book than its hokey title suggests—and continued *Aus Nah und Fern*. Played the piano.

August 28

Practiced piano, read German, went to the dentist, picked up new pair of glasses, and read *Einstein's Greatest Blunder?: The Cosmological Constant and Other Fudge Factors in the Physics of the Universe*, by Donald Goldsmith. As you can tell from its title, it's a popularization, but it's a good one. My purpose in reading such less-than-technical books is that I want to know the state of cosmology as a whole before I delve into specialized debates.

I don't know what the general idea of the scientific community is regarding the nature of the

¹ I haven't read them in depth yet. I've only read about the "Primordial Era" of the Big Bang and its immediate aftermath and the "Stelliferous Era" that we're currently experiencing. (This chapter was largely a review for me.) The other eras are the Degenerate, the Black Hole and the Dark.

² Strictly speaking, they're held to arise from "vacuum energy", but what is *that*?

spacetime curvature of the universe—whether it’s flat, negative or positive—but it seems to me that it must be flat. Or nearly so. Why else would light always travel in a straight line (except when it approaches a massive body)? The closed spacetime surrounding a black hole bends light towards it; open spacetime (if it exists anywhere) presumably bends light away; flat spacetime must cause it to go straight. Am I missing something? Are there other theories for why light travels in a line? My idea is pretty attractive, at least to an ignoramus like me: it’s simple and it kills two birds with one stone.¹

But I’m probably wrong that the path of light would bend in a closed or an open universe. For *where* would it bend? Which direction? If the *whole universe* were curved, there’s no *one* direction in which light would bend. The reasonable possibilities seem to be either that it would go straight or that it would bend *nowhere* (or everywhere), the peculiarity of which idea suggests that it could only go straight, and therefore that my explanation is wrong. Alternatively, it may be incorrect to draw an analogy between the curvature of all of space and the curvature of one region (e.g. a black hole).

August 29

I’ve broken with Sangeetha. As far as I’m concerned, our friendship is over. It wouldn’t have come to this if she hadn’t sent me an appalling email that was utterly scornful of my timid accusations that she had acted inconsiderately this past month (in a variety of ways). [Boring details follow of Sangeetha’s terrible behavior, which led me to end our friendship. Though later it resumed, for a while.]

August 30

Finished Goldsmith’s book. The poor man frequently attempts to be funny, but nerd-humor just doesn’t cut it. (Example: the title of one chapter is “Hot dark matter, cold dark matter, what’s the matter?” ‘Gallopings metaphors’ are another favorite: “Let us examine this statement to see whether we can crack the mysterious shell of scientific talk to fry the yolk of understanding.”)

I also practiced the piano, read two short stories by Hawthorne, read German and edited two philosophy papers that I’ll send to graduate schools.

September 2

Parents bought me a laptop yesterday. Reading *Three Roads to Quantum Gravity*, written (badly) by Lee Smolin. Terry’s first day of high school tomorrow. Poor kid. Worst years of my life.

September 3

Finished Smolin’s book. Skimmed the last few chapters. Concepts not sufficiently explained to the layman. Mélange of exotic ideas like string theory, loop quantum gravity, spin networks, knots, links, supergravity, holographic principle, black hole thermodynamics, “Bekenstein’s bound”, discrete structure of spacetime, quantum chromodynamics, quantum electrodynamics, lattice theory... Space and time are not infinitely divisible. *Things* don’t exist; only processes. (Heraclitus.) Space composed of relations between processes; not an absolute ‘background’ to them. (But where do the processes occur? Surely in space!)

¹ That’s a rather grim expression.

September 5

Got vaccinations for Asia. Went clothes-shopping with Mom. Read Hawthorne and German. Exercised for the first time in months, to burn away lethargy. 'Twas effective. Must exercise every day from now on; otherwise no energy.

September 7

German. Rode bike to Colt State Park, sunbathed. Admired a middle-aged woman with spectacular legs and butt. Thought of a story, or a parable, about a Reclusive Poet and an Experienter (a Don Juan-kind-a guy, who just *lives* and doesn't poeticize about his adventures). Ostensible antipodes...but are they really? No, as I'll show. Was going to exalt the Experienter—as a Greek, etc.—but decided against it. Will exalt neither at the expense of the other, though in the end the Poet will come out on top by virtue of having his name live on through the ages. Other morals besides that one. Already started writing.

[...]

September 8

German, though not much. Piano, though not much. Bach's Siciliano from sonata 2 for harpsichord and flute, transcribed for piano—a marvelous piece, delicate, with the density of air, tenuous as a wisp of smoke, dream-like. [...]

...One of the reasons it was comical when I flirted with the idea of my being a “genius” is that the word is rather meaningless. It doesn't denote some real concrete quality. Imagine the young Nietzsche alone in his room trying to convince himself (as I'm sure he did on occasion) that he's a genius. Or Byron, that most self-conscious of poets. Introspecting painfully to isolate the magical quality and point to it. How ludicrous! At most, one can say, “If this man and this man are called ‘geniuses’, then I deserve to be too, for my writings are comparable to theirs.” But even that can be misleading. It's only through convention, i.e. not through a comparison with *objective criteria*, that works are said to be ingenious—for the word has no “reference” (see my senior thesis): nothing corresponds to it, nothing is pointed to. It's just an approximation, a way of saying that a work has impressed the person who is making the judgment.

September 9

I read Freud's *Leonardo da Vinci: A Study in Psychosexuality*. Parts of it are ingenious, i.e. imaginative, insightful, while other parts are wild flights of fancy. It begins by outlining some contradictions and mysteries of Leonardo's character, among which his obsession with scientific investigation is emphasized. This impulse was so strong that for decades it overpowered and eclipsed his desire to create art. What can explain it? After stating the methodological principles that psychoanalytic solutions to such problems are to be sought in the earliest childhood of the person and that “forcible impulses” like Leonardo's “draw upon sexual motive powers for their reinforcement”, Freud notes that many children go through a period of infantile sexual investigation beginning with their third year. They ask questions like ‘where do children come from?’ If this period ends “through an impetus of energetic sexual repression, the early association with sexual interest may result in three different possibilities for the future fate of the investigation impulse.” Either (1) the curiosity is inhibited, narrowing the free activity of the intelligence and possibly leading to a neurotic disease; (2) “the intellectual development is sufficiently strong to withstand the sexual repression pulling at it”, in which case the suppressed sexual investigation sometimes comes back from the unconscious as compulsive reasoning toward a ‘solution’ which is never reached; or (3) the libido is sublimated into curiosity, and the investigation impulse is reinforced. This last

result is compulsive, to an extent, but it isn't as neurotic as the second possibility because it's a *sublimation* rather than an "emergence from the unconscious". It avoids all sexual themes. This third type was the outcome of Leonardo's infantile development.

Freud needs some data, so he turns to a sentence in one of da Vinci's books: "It seems that it had been destined before that I should occupy myself so thoroughly with the vulture, for it comes to my mind as a very early memory, when I was still in the cradle, a vulture came down to me, opened my mouth with his tail and struck me many times with his tail against my lips." This, says Freud, is too outrageous to be a real memory; it's a fantasy formed later and transferred to his childhood. Clues to deciphering it are found in dreams: "tail" is a "substitutive designation" of the penis in many languages, including Italian; the action of the vulture corresponds to fellatio. So the fantasy seems homosexual. (We'll return to that later.) The reason it's displaced to the nursing period is that sucking the penis is similar to sucking the breast. But why is the mother replaced by a vulture? To answer this question it's necessary to know that the ancient Egyptians worshiped a motherly deity whose head was that of a vulture. The reason for the choice of the animal is that—as Greek and Roman texts tell us—the Egyptians thought the species consisted only of females. They're supposedly impregnated by the wind when they stop in mid-flight and open their vaginas. Leonardo must have known of this myth because (1) he was an avid reader of classical texts, and (2) the church fathers commonly used it as an argument against those who doubted the virgin birth. Freud reconstructs the origin of the vulture fantasy in this manner: "While Leonardo was once reading in a book of a Church father or in a work on natural science that vultures are all females and reproduce themselves without the cooperation of a male, a memory flashed through his mind which became transformed into the fantasy, but which wished to express that he too was such a vulture child, who had a mother but no father. [He was an illegitimate son. The interpretation of the fantasy presupposes that he lived alone with his peasant mother the first few years of his life, for only in this way could he have missed his father during his infancy and thus thought of himself as a 'vulture-child'.] An echo of the pleasure which he had once experienced at his mother's breast then associated itself to this fantasy in a manner as only such old impressions alone can manifest themselves. The allusions established by [certain] authors to the idea of the holy virgin with the child, which was so dear to every artist, must have contributed to make this fantasy appear to him valuable and important." The only hard data available record that Leonardo was living in his father's house when he was 5; there is no unambiguous confirmation of Freud's belief that Leonardo moved there after having first lived with his mother for several years. But because the father was married to another woman in the same year as Leo's birth—a marriage that turned out to be childless—it seems reasonable to suppose that Leo wouldn't have been adopted until four or five years had elapsed and it had become evident that the wife's womb would bear no fruit. In short, Freud's ideas have led to the conclusion that the young boy had no father figure in the first, formative years of his life.

To answer the question as to why the fantasy has a homosexual character Freud first confronts the odd fact that the vulture-headed goddess of the Egyptians is portrayed as possessing both breasts and an erect phallus. (Numerous other goddesses of the ancient world have the same characteristic.) Now, why would a goddess who is supposed to represent the essence of motherhood have a penis? The reason is that when the young child is going through the stage of investigating his own genitals he assumes that everyone, including his mother, has one. This infantile assumption is the common origin "for the androgynous formation of the maternal deities and the vulture's tail in Leonardo's childhood fantasy." But it doesn't explain Leonardo's 'ideal'—not active—homosexuality (which was noticed and documented by his contemporaries). Freud now reverts to case-studies of his own homosexual patients. In all of them there was a strong early erotic attachment to the mother as a consequence of the father's weakness or absence. This was followed by its repression (because the love of the mother cannot continue to develop consciously). "The boy represses the love for his mother by identifying himself with her, and by taking his own person as a model through the similarity of which he is guided in the selection of his love-object. He thus becomes homosexual; as a matter of fact, he returns to the stage of autoerotism, for the boys whom the growing adult now loves are only substitutive persons or revivals of his own childish person, whom he loves in the same way as his mother loved him." Actually, his unconscious is so fixated on the memory of his mother that in pursuing boys he's really just running away from women who could cause him to become

disloyal to his mother. Certain facts of Leonardo's life (that he only took handsome youths as his pupils, that he apparently never had a love affair with a woman, that he was once openly charged with being homosexual but was acquitted) make it reasonable to apply those ideas to him as an explanation of his actions. The analysis also explains a trivial but hitherto unsolvable problem connected with his diary, of which, however, I won't go into the details.

The last three chapters are less interesting and perhaps even more far-fetched. You might be more amenable to the first three if you read them in addition to my short summary of them, for I hardly did them justice. Nevertheless, you can surely divine my objections. They're probably yours as well.

September 10

I'm reading *Beyond the Pleasure Principle*. **Notes:** The course of mental events is regulated by the pleasure principle, i.e. it's set in motion by an unpleasurable tension and leads to a lowering of that tension. Unpleasure corresponds to an increase in the amount of excitation present in the mind "but not in any way 'bound'", while pleasure corresponds to a diminution. To say that the pleasure principle is dominant in the psyche is to say that "the mental apparatus endeavors to keep the quantity of excitation present in it as low as possible or at least to keep it constant." (Entropy...) However, strictly speaking, it isn't "dominant". If it were, all our mental processes would have to be accompanied by, or lead to, pleasure, which is obviously not the case. There exists merely a strong *tendency* towards the pleasure principle, which tendency is opposed by other forces. One of them is the instinct of self-preservation: from its point of view the pleasure principle is inefficient and even dangerous, and it's replaced by the reality principle. "This latter principle does not abandon the intention of ultimately obtaining pleasure, but it nevertheless demands the postponement of satisfaction and the temporary toleration of unpleasure as a step on the long road to pleasure. The pleasure principle long persists, however, as the method of working employed by the sexual instincts, which are so hard to 'educate', and, starting from those instincts, or in the ego itself, it often succeeds in overcoming the reality principle, to the detriment of the organism as a whole." Another circumstance leading to unpleasure is the series of conflicts coincident with the development of the ego into "more highly composite organization. Almost all the energy with which the apparatus is filled arises from its innate instinctual impulses. But these are not all allowed to reach the same phases of development. In the course of things it happens again and again that individual instincts or parts of instincts turn out to be incompatible in their aims or demands with the remaining ones, which are able to combine into the inclusive unity of the ego. The former are then split off from this unity by the process of repression, held back at lower levels of psychical development and cut off, to begin with, from the possibility of satisfaction. If they succeed subsequently, as can so easily happen with repressed sexual instincts, in struggling through, by roundabout paths, to a direct or to a substitutive satisfaction, that event, which would in other cases have been an opportunity for pleasure, is felt by the ego as pain... There is no doubt that all neurotic pain is of that kind—pleasure that cannot be felt as such." A third cause is the perception of external danger.

Chapter 2 first discusses traumatic neuroses, specifically the fact that victims have dreams that repeat the experience over and over again. This contradicts the usual function of dreams, which is wish-fulfillment; Freud suggests that either the function of dreaming is upset in this condition and diverted from its purposes, or that the abnormality is a result of the ego's masochistic tendencies. He then discusses a child who's fond of playing a strange repetitive game in which he symbolically reenacts the painful departure-from-the-house of his mother every day, the conclusion of which analysis is that it's hard to tell if the game can be explained through the pleasure principle or if it arises out of another more primitive instinct.

In chapter 3 he notes that neurotic patients are often compelled to *repeat* their repressed experiences instead of *remembering* them. They're "acted out in the sphere of transference". To understand this compulsion to repeat, we must realize that the resistance to recollection isn't on the part of the repressed; it's on the part of the ego, which has both conscious and unconscious aspects. "Resistance during treatment arises from the same higher strata and systems of mind which originally carried out repression"—that is to

say, the ego. The relevant dichotomy isn't between conscious and unconscious (because the ego's resistances are themselves unconscious), but rather between the ego and the repressed. The reason for the ego's resistance is that it seeks to avoid the unpleasure that would result from the liberation of the repressed. However, compulsive repetition is itself unpleasurable; what is its relation to the pleasure principle? You might think that although it gives pain to the ego it gives satisfaction to the repressed unconscious, but this is wrong because the primitive repressed instincts aren't actually being satisfied. For example, patients try to feel themselves scorned by the physician or discover objects for jealousy, substituting new objects for the original ones in their infancy. "None of these things can have produced pleasure in the past, and it might be supposed that they would call less unpleasure today if they emerged as memories or dreams instead of taking the form of fresh experiences. They are of course the activities of instincts intended to lead to satisfaction; but no lesson has been learnt from the old experience of these activities having led instead only to unpleasure. In spite of that, they are repeated, under pressure of a compulsion." Similar 'recurrences of the same thing' are observable in ordinary people. All these considerations, including those in the last chapter, lead to the conclusion that the repetition-compulsion overrides the pleasure principle. Of course, usually this compulsion isn't the sole cause of such actions. Children's play, for example, obeys the pleasure principle as well.

Chapter 4 features a long, detailed, scientifically antiquated investigation into the nature of the mind's protection against external stimuli. If the stimulus is powerful enough, and if the mind isn't sufficiently prepared for it by feeling anxious (which heightens the mind's energy level and thus reinforces its defenses), it can break through the psychological defenses and cause trauma. Freud speculates that recurring dreams "are endeavoring to master the stimulus retrospectively, by developing the anxiety whose omission was the cause of the traumatic neurosis."

In chapter 5, after saying that repetition-compulsion has much in common with an instinct, he gives a general definition of 'instinct' as "*an urge inherent in organic life to restore an earlier state of things which the entity has been obliged to abandon under the pressure of external disturbing forces...or, to say it another way, the expression of the inertia inherent in life.*" It *may* be the case that certain instincts push towards progress instead of an earlier state, but for now Freud will carry his idea to its logical conclusion. If it has any basis in fact, organic development is a result of outside influences. Modifications in an organism are accepted by the conservative instincts and stored for further repetition. "Those instincts are therefore bound to give a deceptive appearance of being forces tending towards change and progress, whilst in fact they were merely seeking to reach an ancient goal by paths alike old and new." If the instincts are conservative then the goal can't be something not yet attained; it must be an initial state from which an entity departed. Since everything dies for *internal* reasons, the goal is death. Instincts like self-preservation, self-assertion and mastery may have the function of ensuring that the organism will follow its own path to death, or of warding off "any possible ways of returning to inorganic existence other than those which are immanent in the organism itself." However, all this ignores the sexual instincts, which are the *life* instincts. They want to prolong it and assemble it into ever more complex structures. They operate in opposition to the rest: there's a constant war between them. Though it may seem that in a minority of humans there's an added drive towards perfection, in reality their striving is a result of instinctual repression. It continues unabated, never resting, because the pleasure *demanded* by the repressed instinct is different from the pleasure *achieved*.

Incidentally, Freud's hypothesis is more reasonable than you might think. When life originated, the law of entropy preferred a return to inanimate matter, while forces like electromagnetism fought to increase the complexity of the molecules. As applied to advanced organisms, though, the idea of a dichotomy between two sets of instincts sounds less believable. But it's aesthetically appealing.

Chapter 6 begins with another antiquated analysis of the assumption that, given time, every organism will die of internal causes. The conclusion is that in all entities, even protozoa, there do exist tendencies toward death. So Freud is free to continue his reflections. Next he summarizes the history of his libido theory. Early on he was aware of an opposition between sexual instincts, which are directed toward an object, and others that he called ego-instincts, which remained mysterious. Self-preservation was one of them. Later he realized that the ego isn't only a repressive, censoring agency; it's a reservoir of libido,

namely ‘narcissistic’ libido. Thus the self-preservative instincts were seen to be libidinal. (This idea compels Freud to withdraw self-preservation from the community of death-instincts.) As for the rest of the ego-instincts, their nature has up to this point remained a mystery, because “psychoanalysis has not enabled us hitherto to point to any instincts other than the libidinal ones.” In attempting to throw light on the theory of the instincts, Freud suggests that love and hate may correspond roughly to life and death. The sadism inherent in the sexual instinct may be “a death-instinct which, under the influence of the narcissistic libido, has been forced away from the ego and has consequently only emerged in relation to the object.” Masochism might be a turning-back-toward-the-ego of the death-instinct, i.e., a return to an earlier stage of the instinct’s history. Or it could even be primary (instead of a double displacement). Next, Freud reminds us that the goal of the pleasure principle (to reduce tension) is one of the strongest reasons for believing in a death-instinct. Lastly he flirts with Plato’s idea that lovers seek to return to a lost state of union-of-the-sexes, because it provides a potential way to introduce the compulsion-to-repeat into the sex instinct.

Chapter 7 is only four pages long.

I leave on the 14th.

September 14

We drove to the airport at 7:30 this morning only to discover that my employer hadn’t paid for my ticket, as had been promised in the contract I’d signed. I don’t know who screwed up, but this time I know it wasn’t me. Tonight I’ll call Scott Kim, my immediate boss, to find out what happened. In the meantime I’m reading Freud’s *Ego and the Id*.

While reading the essay on Leonardo da Vinci I recalled a distant memory, probably from the very early stages of childhood. I remember being confronted by the fact that women have vaginas and feeling thereby wonder/disappointment. It surprised me that that’s all there is down there. But then I asked myself what I’d expected and could find no answer. I knew it was absurd to expect them to have penises. Still, I was disillusioned: I thought, “If that’s all they have, then what’s the big deal? What’s so great about a slit?” Thus, Freud’s belief that male children are disgusted or contemptuous when they find out that their mother has a vagina--and that this (1) sometimes causes them to be misogynistic later in life and (2) is why ancient mother-goddesses were pictured with a penis--struck me as *slightly* less bizarre than it might have you.

In the beginning of the book I’m reading Freud distinguishes between two types of the non-conscious, viz. the preconscious and the unconscious. The former represents thoughts that are latent and can become conscious at any time; the latter represents ‘thoughts’ that are repressed and cannot become conscious except through therapy. But after he introduces the concept of the ego he is forced to extend the notion of the non-conscious once more. For the ego is the “coherent organization of mental processes” to which consciousness is attached; it is the agency which supervises itself and “which goes to sleep at night, though even then it exercises the censorship on dreams.” It is what represses the unconscious--but the part of it that has this function is itself unconscious. Two consequences follow: the unconscious is extended to include not only the repressed but also the part of the ego that does the repressing; in analytic practice the antithesis between the coherent ego and the “repressed” which is split off from it is substituted for the earlier one between the conscious and the unconscious.

The main difference between an unconscious (Ucs.) and a preconscious (Pcs.) idea is that “the former is carried out on some material which remains unknown, whereas the latter is brought into connection with word-presentations.” The question ‘How does a thing become conscious?’ is better stated as ‘How does a thing become preconscious?’, to which the answer is ‘Through becoming connected with the word-presentations corresponding to it.’ “These word-presentations are residues of memories; they were at one time perceptions”--auditory ones¹--“and like all mnemonic residues they can become conscious again.

¹ “In essence a word is the mnemonic residue of a word that has been heard.” (Not a good definition.) Visual components of word-presentations are secondary. By the way, “it’s possible for thought-processes to become conscious through a

...[O]nly something which has once been a conscious perception can become conscious, and anything arising from within (apart from feelings) that seeks to become conscious must try to transform itself into external perceptions: this becomes possible by means of memory-traces." Therefore, to make something that is repressed conscious we have to supply Pcs. intermediate links through the work of analysis.

(Note: "Unpleasurable sensations impel towards change, towards discharge, and that is why we interpret unpleasure as implying a heightening and pleasure a lowering of energetic cathexis." See my notes on *Beyond the Pleasure Principle*. A cathexis is a concentration of emotional energy on an object or idea.)

The ego includes the preconscious, the perceptual and the conscious systems. To account for its unconscious aspects Freud introduces the id: "The entity which starts out from the system Pcpt. and begins by being Pcs. is the ego, and the other part of the mind, into which this entity extends and which behaves as though it were unconscious, is the 'id'." The individual is an id upon whose surface rests the ego, which "is not sharply separated from the id; its lower portion merges into it." "But the repressed merges into the id as well, and is merely a part of it. ...The repressed can communicate with the ego through the id." "The ego is that part of the id which has been modified by the direct influence of the external world... It seeks to bring the influence of the external world to bear upon the id and its tendencies, and endeavors to substitute the reality principle for the pleasure principle which reigns unrestrictedly in the id.... The ego represents what may be called reason and common sense, in contrast to the id, which contains the passions." The ego tries to guide and restrain the superior strength of the id, though it must do so with "borrowed forces" (from the id itself). It's created by the perception of both the external and the internal worlds; i.e., it's a "bodily ego", derived from bodily sensations, "a mental projection of the surface of the body".

Chapter 3 begins with a peculiar discussion of the replacement of object-cathexes by the ego's identification with them. When an object is lost it's set up again inside the ego. "This transformation of an erotic object-choice into an alteration of the ego is a method by which the ego can obtain control over the id and deepen its relations with it--at the cost of acquiescing to a large extent in the id's experiences. When the ego assumes the features of the object, it is forcing itself, so to speak, upon the id as a love-object and is trying to make good the id's loss by saying: 'Look, you can love me too--I am so like the object.' The transformation of object-libido into narcissistic-libido which thus takes place implies an abandonment of sexual aims, a desexualization--a kind of sublimation, therefore." The origin of the super-ego is in a child's early identification with its parents. But that's simplified. What actually happens in the case of a young boy is that he identifies himself with his father and has an object-cathexis for his mother (which originally relates to her breast). But then he sees his father as an obstacle to his sexual wishes regarding his mother, and the son-father relationship becomes ambivalent. The Oedipus complex ends when the boy either identifies himself with his mother or intensifies his identification with his father.¹ The latter is more normal. (The bisexuality inherent in all children complicates the matter, but I won't go into that. It implies that there's also an identification with the mother.) This coincides with the creation of the super-ego, which is "a precipitate in the ego" consisting of one or two parental identifications, and which has the task of repressing the Oedipus complex. The more powerful this complex was, and the more rapidly it succumbed to repression, the greater will be the domination of the super-ego over the ego (in the form of a conscience or an unconscious sense of guilt). Mankind's "higher nature" (excluding, perhaps, science and art) has its origin in the super-ego, or in the process whereby we 'take our parents into ourselves'.

"The ego ideal [i.e., the super-ego] is therefore the heir of the Oedipus complex, and thus it is also the expression of the most powerful impulses and most important libidinal vicissitudes of the id. By setting up this ego ideal, the ego has mastered the Oedipus complex and at the same time placed itself in subjection to the id. Whereas the ego is essentially the representative of the external world, or reality, the super-ego stands in contrast to it as the representative of the internal world, of the id. Conflicts between the ego and the ideal will ultimately reflect the contrast between what is real and what is psychical, between the external

reversion to visual residues", but this visual thinking is relatively primitive because it doesn't detect relations between the subject-matter of thoughts.

¹ The difference between this *parental* identification and the kind described above is that the former isn't a result of an abandonment of the object.

world and the internal world.”

In the first pages of chapter 4 Freud repeats what he wrote in *Beyond the Pleasure Principle* about the life and death instincts. “Life is a compromise between the two trends....and the problem of the goal and purpose of life is answered dualistically.” Love and hate he considers to be respective representatives of Eros and death, which may pose a problem: if love could in certain cases be seen to change into hate or vice versa, this would undermine a distinction as fundamental as that between the two instincts, “which presupposes physiological processes running in opposite directions.” He concludes that there never is a direct transformation of one into the other. However, sometimes a quantity of displaceable energy is diverted from hostility to love because it has thereby a greater possibility of discharge. But what is this displaceable energy? “It proceeds from the narcissistic store of libido--it is desexualized Eros,” answers Freud. (Almost all instinctual impulses and energies are derivatives of Eros.) It’s active in both the ego and the id. (But how can desexualized Eros ever be used in the service of the death instinct? Or rather, how can Eros be desexualized, i.e., lose its essence? If it can be altered in such a way as to serve the death instinct, isn’t the distinction between the two instincts undermined?)

The last chapter is an investigation of the super-ego and the unconscious sense of guilt that becomes pathological in cases of hysteria and depression.

I’m sick of reading Freud. I don’t know how to evaluate his ideas. On what basis can I decide for or against them?

Sunday, September 21

Korea. The people are as friendly and polite as I expected them to be. I like being bowed to (and bowing in return). It’s so civil! Scott Kim’s a nice guy. My room is in a dorm-like building that houses eleven English teachers.

September 22

Yesterday afternoon two of my hallmates (Judy and Craig) and their friend (Glen) gave me a tour of the city. We ate lunch in a small Korean restaurant—had kimchi and other spicy delectables—then walked around downtown, which is where our dorm is. Window-shopped and drooled over the beautiful Korean girls. Everyone is thin here. Haven’t met one fat Korean. There were no Westerners anywhere, so we were the object of friendly, curious looks. Later we took a cab to a bus station, where we picked up Craig’s Korean girlfriend and continued to a mountain called Apsan. Took a “gondola” halfway up; hiked the rest. The view of Daegu was stunning: a sprawling city nestled in a large valley, with little islands of forested hills interspersed among the collections of high-rise apartment complexes. Mountain ranges in the distance. Our next activity was supper. It seems that many restaurants have small square tables with a stove in the center, where the food is sometimes prepared in front of the customer and sometimes kept warm after being prepared in the kitchen. One orders a single dish that comes with about eight small plates of side-orders like kimchi—and in the end there’s barely enough room for everything on the table. I made a valiant effort to eat with chopsticks. Failed. Sampled a drink called soju, which is to Korea what sake is to Japan; it was foul. Tasted like a mixture of gin and vodka but without the potency of either, so there’s nothing redeeming about it. Afterwards we roamed around downtown—“where the streets have no names”; it’s weird—eventually to find ourselves in a bar. Drank for a while, then went home. We split up; I walked with talkative, fat, boring Judy, who is, however, friendly and helpful.

Incidentally, there are too many cars in Korea. And the drivers all seem to idolize Evel Knievel. Motorcyclists even drive on sidewalks.

Scott Kim went over administrative details with me this morning; we had lunch later. Sat cross-legged on mats and ate something tasty and healthy. Rice is served with every meal, apparently. The soup smelled like toilet water and contained all sorts of strange herbs. At 1:30 I went to an internet café with

Judy: the old woman in charge looked at me suspiciously more than once, clearly displeased with what she saw. I smiled and bowed, but she glared back impassively.

In a few minutes I'll observe classes for four hours. Tomorrow I'll teach.

...I'm gonna like this job. For some reason I find Korean children cuter than Western ones. Maybe it's because they're friendly to foreigners...and they're good-looking...and their facial features are exotic. Most of the teachers (Korean and foreign) are extremely likable, though some are perky to a fault.

The redolent stench of sewage permeates the air of certain lucky spots around the city. I turn a corner and it slams into me. The system must be outdated. Another oddity: many places (outside) reek of marijuana, but I can never find the source. I suddenly walk into a cloud of it, and as suddenly it's gone.

September 23

I taught six forty-five minute classes; half were difficult and half were fairly easy. Many of the boys were wild and talkative, but I found it hard to be severe with them. That'll change soon. I tried to enliven the stale 'listen-and-repeat' lessons by skipping around the room (not literally), getting close to their faces and watching how their lips moved, speaking enthusiastically, drawing on the blackboard and sometimes making individuals read from the front of the classroom, but ultimately it all seemed nearly futile. In four classes they wouldn't stop chatting, and in *all* the classes I couldn't think of ways to keep them interested. Not even the games we played made much of a difference. At times I just stood there dumbly, totally lost, letting them converse as I desperately tried to improvise. The worst part is that they have virtually no command of English.

It's 10:30; I feel drained. Judy and Craig invited me to dinner, but the thought of spending time with them was so unsavory that I declined. So I'm hungry. But I'm too tired and depressed (lonely, stressed) to go outside. Maybe I'll just go to bed.

September 24

World War I was the most insane event of the 20th century. Look up 'absurd' in the dictionary and it'll say "See 'World War I'". The slaughter of millions, of an entire generation, isn't even the main reason; the fantastic *pointlessness* of it, the tragicomic *irrationality*, is what's unbelievable. One anecdote in particular is telling. It was Christmas day of one year, somewhere on the front; the German and French soldiers in the trenches had been bombing each other continuously for weeks. But today, suddenly, the bombing stopped. All was silent in No Man's Land. Eventually men on both sides climbed out of the ditches and ventured onto the stretch of frozen earth that separated them. Hundreds streamed out. When the enemies met in person they didn't shoot or attack; they shook hands, drank and played cards! For the whole day. Finally they returned to the trenches and resumed shooting.

...Today was better. The kids obviously find my antics amusing; they must think I'm crazy. I like them, but they're almost as hard to control as the Mendocino devils.

Saturday, September 27

Dinner last night with Judy and her middle-aged friend. Later went to an internet café and registered with a Korean dating service. At 11:00 in the morning a few of us went to a two-hour Korean language course, which was intimidating. But at least the teacher was angelically beautiful. At 1:45 I went to work—yes, there's school on Saturday—and I left at 5:30. 'Twas a good day: I was better prepared than in the past and was able to hold the kids' attention. The largest class, which is usually the worst, was today the best: I jumped around from the front to the back of the classroom, from student to student, speaking authoritatively without pauses, not giving anyone time to hold conversations, disciplining the trouble-makers without being

mean. [...]

September 28

Last night I bar-hopped alone and made no new acquaintances. It was thoroughly depressing. All these gorgeous Koreans were walking around the streets—mostly in large groups—and I didn't have the courage to approach any of them. They were too attractive! At 2:00, half-drunk and desperate for companionship, I went to an internet café and sent emails to ten random girls who were registered on that dating service.

Today I people-watched downtown while reading a Korean grammar book. Wanted to talk to a girl (a bakery employee) who always stares at me when I walk by her store, but the more I wondered what I'd say the less energy I seemed to have, and in the end I walked away disappointed and apathetic. –I hate this meditative shit. My whole body—my whole *being*—is congealed sex-instinct, with the exception of my shyness.

Wednesday, October 1

Last night I went to a taekwondo class to find out how much it would cost and whether it had 'socializing potential'. The answers were: 70,000 won per month, and No. There were only four students, and they were teenage boys. I also visited a place that has practice rooms with pianos. The way I'd discovered it was noteworthy: I was sitting in the teachers' lounge between classes and heard a Chopin étude being played somewhere. For a while I couldn't pinpoint its source—it sounded like a recording—but eventually I realized it was coming from directly overhead. Quite excited, I raced upstairs and saw ten practice rooms, most of which were being used. After a lot of effort, many gestures and the use of props I was able to learn from helpful Koreans that the players were waiting to be given a lesson by a teacher in the other room, and that I could use the facilities if I returned in the morning. But, predictably, in the morning I didn't want to get up before 12:00. So I took a cab to the school two hours early, at 1:30, with my music under my arm. When I arrived, the practice rooms were swarming with little kids and I was politely told to leave. "No English, no English," the woman said.

October 2

Went to the bakery where the girl who "likes" me works. She was obviously delighted, though also nervous and uncomfortable. As I ate my cookie—feeling a bit uncomfortable myself—she stood nearby and alternately giggled with her coworker and watched me. I asked both girls if they spoke English; they didn't. Damned disappointing. One bag of cookies I'd bought tasted rather bland, so I gave it to her as a kind of primitive mating ritual. I'll go back in the near-future, carrying my grammar book as a conversation-starter.

[...]

Sunday, October 5

At 3:00 yesterday I was invited by the ol' Canadian gang to see a 5th-century burial ground in another part of Daegu. It consisted of a lot of mounds and some signs in Korean. In the evening we got drunk and had a good meal; later we went to a Western bar, which I soon vacated in favor of roving about the streets. Went home lonely and sad.

Today: watched a movie, visited an internet café, bought a Korean-English dictionary. It occurred

to me I could meet girls by asking them for directions and starting a conversation if they spoke English. So that's what I did. (Yes, I'm really such a lunkhead I hadn't previously thought of that.) Talked to five or six, but none spoke English.

...Went to a bookstore to ask about Korean language lessons, but no clerks understood me. An eavesdropping man did, though. I gave him my number; he told me he'd find me a teacher.

Ohhh, the girls in Daegu! You haven't seen beauty until you've seen these girls! But you haven't known frustration until you've seen them either.

I just watched *Notting Hill* again. Julia Roberts is pretty, but she pales next to Koreans. –Women.... What pain they cause in my chest! I don't care what you say about Byron, Casanova, Don Juan or any other character, fictional or real: no man has ever been or ever will be more of a born lover than I. You might think I'd tire of adverting to this theme of love, of pining, so often, but every attack of it—so many times each day!—is fresh and new. All the previous states are forgotten, all their artless unsubtlety, all the unoriginality of the feeling, all the knowledge of its worthlessness in the grand scheme. I just *yearn*, and that's all I know.

October 6

It's as though something presses against my chest, something clogs it, it's opaque, hot, perceptible. When I talk about the Korean sex trade with Westerners I feel the discomfort almost as much as when I look at beautiful women. Tonight I walked downtown to the little bakery, carrying my Korean dictionary so I could point to words like 'lonely' and 'friends' when talking to the girl, but she wasn't there. Instead, a Canadian named Peter and his Kiwi friend bumped into me. Peter, a lively guy with a sense of humor, suggested I eat dinner with them at a "bulgogi" restaurant. This involved me in a long conversation about Korean prostitutes, bath-houses with exotic massages, bars with 'extra' services, etc. I'd already been informed by Craig of all these delights—which are deemed fairly respectable and normal in Korea—but Peter offered a more detailed account. For example, even men with wives go to bath-houses where, aside from sitting naked in a sauna and pool, they can get a full-body massage that includes a hand-job by a naked woman. [...]

Beautiful rape.— The lyricism of the first movement of Beethoven's 24th piano sonata should ravish anyone who sheds his modesty and opens himself to being violated.

Sublimation has run its course. I can't be productive again until Eros is satisfied. I just can't work. I can't do anything except love and fuck with a good conscience.¹ Solitude has lost its romanticism; it's stale. I spend my free time exploring downtown or watching movies because work has become something almost to be ashamed of.

Four of us teachers were driven by Scott this morning to the immigration office, where we paid lip-service to the bureaucracy. In the afternoon I took a cab to my usual school, only to discover I'd been reassigned. (New teachers are always shuffled around. My permanent position will be at a school called Chim-san.) I said good-bye to my precious kids with a heavy heart—no amount of bad behavior could stifle their cuteness—and found myself, thirty minutes later, at my new job for the day. The students there were *shockingly* respectful and truly in awe of my style of teaching. They were speechless. The girls also continued in the strange Yung-san tradition of modestly covering their eyes when I knelt down near them to watch their pronunciation. This common reaction isn't merely a result of embarrassment; most Western girls wouldn't behave that way. It's also somehow a result of their Korean upbringing, which ingrains in them a highly civilized, anti-arrogant timidity.²

¹ Writing sentences that have verve is fun. And often dishonest.

² That generalization is only partly true. For example, the Confucian value system sanctions an implicit social hierarchy in which different modes of behavior are appropriate to different levels.

According to Peter, Koreans have no tolerance for marijuana. It's seen as on a par with cocaine, and anyone found in possession of it is sentenced to years in jail. (The smell I've noticed is a spice used in cooking.)

October 9

On Monday, Wednesday and Friday I teach the same children; on Tuesday, Thursday and Saturday I teach another group. Five or six classes each day. The kids today were so unlike the ones yesterday I might as well have been at a different school. Everything was transformed; I felt like I was back at Yung-san. The lobby and the halls teemed with little people intensely curious about me; the classes were larger, louder and absurdly more fun. [...]

[...]

October 12

[...] Went downtown to meet people. Approached quite a few girls; got two phone numbers. The cashier's and Lee Eun-joo's. I met this lovely university student in a bookstore after stalking her for several minutes. [...] "Would you like to go to lunch with me sometime?" She laughed sweetly and said yes. Then we had a short conversation, during which I learned that her personality is as enchanting as her looks. Like most Korean women she covered her mouth, turned her head and laughed when feeling embarrassed or flattered, a gesture that's just maddeningly cute. We exchanged phone numbers, shook hands—I liked the feel of her skin, her diminutive hand in mine—and she told me to call her. In spite of my composure I was head-over-heels in love when we said good-bye. I even permitted myself, by way of celebration, the indulgence of buying a Glenn Gould recording of some of Bach's Partitas, Preludes and Fugues. (Yesterday I bought a CD of Liszt's Etudes. I wouldn't wholly discount the theory that Liszt, like Paganini, signed a pact with the devil.)

Downtown is a fantastic place. It's full of streets you'd think were meant exclusively for pedestrians, but cars constantly weave through throngs that treat the roads as extensions of the sidewalks. Bad Korean pop music blares from the speakers of guys stationed on street corners, selling CD's. Greasy indigenous food, such as ground fish-bone on a stick (which I've eaten), is sold in kiosks everywhere. Elderly shop owners squat next to stores and houses to wash vegetables or sell jewelry. I've often imagined them in the foreground of a scene the background of which is changed from a twenty-first-century city to an eighth-century farm, and they look exactly the same. All women walking with female friends hold hands or lock arms; even some men do, and it isn't considered gay. Women don't smoke in public. When I hear Western music emanating from stores I think it's lucky the words aren't understood by Koreans: noisome sentiments seem out-of-place in a land whose conventions are Confucian.

I met a friendly 24-year-old Canadian (named Freedom) this evening, who gave me his phone number. He lives two blocks away. I might use him to meet his Korean friends.

October 15

Ate dinner at Subway, asked the cute (and surprised) cashier if she wanted to exchange Korean lessons for English lessons, she said yes and suggested we meet tomorrow in a bar.

When I approach *hot* girls they're usually curt; when I approach *cute* ones they're friendly. More than friendly. Tonight when I started to ask a 'hot' girl for directions she gasped and ran away.

I learned recently that a certain kind of bishop is called a "primate". For two minutes I couldn't

stop laughing. I *live* for little ironies like that!

Thursday, October 16

This was the best day I've had in a long time. Most of it was spent with Sin-ae. After meeting at 12:00 we walked to a coffee shop and talked—or tried to—until 4:00. Strangely enough, she did most of the talking—even though it was all in English and her command of the language is second-rate at best. I did a lot of concentrated listening and patient waiting for her to find words in her electronic dictionary. She's a student who has temporarily withdrawn from her university because she's changing her major from English to fashion-design, which she loves passionately. I asked her countless questions about her interest, not so much because it fascinated me as because I loved watching her talk. The smile, the eyes, the eyelids, the laughter, the mannerisms, the embarrassment: they were all entrancing. I was amazed she wanted to be with me for so long: I feared she was putting on an act. (After my experience with Allison I know how adept girls can be at dissimulation.) But that suspicion was proven wrong later. During our conversation, at moments when she was having particular difficulty expressing herself, she wrote in Korean on a piece of paper that she finally gave to me, with the advice that I give it to a friend who could translate it. At work I asked a fellow teacher and then some students to tell me what it said. Apparently its gist was that she likes me—or “loves” me, to quote the students. And *that*, you will understand, elated me.

My surplus of energy ensured that my classes were fantastic.

On my way home two girls I'd never seen before called out “Hello!” and then “Handsome!” as I passed. –Just goes to show how dependent on one's mood is one's attractiveness.

October 17

Finally bought a Korean textbook. Got to work late because there are a million traffic lights in this city (and they're all two minutes long). Ate dinner at Subway to get Sin-ae's phone number (which I'd lost). She was upstairs when I walked in, but one of her coworkers fetched her when she saw me. The employees didn't try to suppress their whispers and furtive glances as the two of us talked. [...]

October 19

Today I really *felt* something for the first time in months. It was sadness, but at least it was an emotion. Caused by Sin-ae. Only an adorable, witty girl I'm truly fond of could have caused it. I met her downtown at 1:00. She was dolled up in makeup and a skirt, her hair styled prettily. I was overjoyed to see her, not least because I'd forgotten how lovely she is. She has a comfortable face I could stare at all day, in spite of a patch of grafted skin below her jawbone—a relic of a burn she suffered while a child. I wanted to hold her hand as we walked but didn't. The movie we saw was *Matchstick Men*: it was good, but my enjoyment was marred by (first) my doubts about how I should behave and (then) my stupidity in behaving as I did. For twenty minutes after we took our seats I hesitated as to whether I should put my arm around her. I wanted to, and, from certain ‘signals’, I thought she wanted me to, but it was hard to muster the courage. I kept looking at her and thinking, “Okay, now! Do it now! She just leaned forward: maybe she wants to give me room to put my arm there. Go!” Finally I did, after I'd mentally twisted the situation into a sort of ‘test’ of my courage. As it turned out, I'd completely misinterpreted her. Right after I'd made the move I asked if it was okay; her answer was a confused look of surprise and discomfort. “No?” I said. The look didn't change, so I removed my arm. “Okay. Sorry.” Two minutes of burning embarrassment, and then the feeling subsided into the intellectual equivalent of a dull pain. Afterwards we went to a ‘traditional tea’....place, where the atmosphere was peaceful and accommodating to my mood. For an hour we drank our tea and ate kimbap, trying to converse but failing because of the language barrier. Under these

conditions I despaired of our relationship, and I wanted to tell her so (in gentler terms). When she suggested she change her off-day to Sunday so that we could be together from morning till night I judged the moment opportune. “Why do you want to be around me? I can’t speak Korean. It must be boring for you. Understand ‘boring’?” Most of those words were over her head, but ‘boring’ wasn’t. She adamantly denied the charge. “But we can’t speak! I no Korean, you only a little English. We can’t talk!” Etc. Her only answer was her forcefully repeated suggestion that we both study the other’s language. I was so fond of her and so frustrated I could have cried! As I walked home alone I felt such an uncomfortable mixture of mellow contentment, proto-love and doubt-that-I’ll-be-able-to-keep-her that my eyes welled up, but I willed them dry.

I’ve been galvanized. I’m inspired to learn Korean now.

....Studied for six hours straight. I think I’m starting to get the hang of this language.

October 20

At Subway tonight Sin-ae greeted me with a tepid “hello” and said hardly anything else personal. She muttered “fine” when I asked “How are you?”. The moment I saw her I sensed the change and adjusted my behavior accordingly. Thus, we were both merely polite the whole time. When I finally asked her if she was free this weekend she reminded me of her fashion show. For some reason she said we could get together *next* week, but I knew it was a lie. A few minutes later I left. [...]

I wonder what words passed between Sin-ae and her coworkers last night. When and why did she change her mind about me?

At least I can still look forward to my date with Eun-joo. I’m not sanguine, though.

The beautiful scene in the movie *Lady Chatterley’s Lover* in which Oliver places flowers into the Lady’s hair and onto her naked body, kissing her all the while, and then makes love to her....—that scene is a crude representation of how I’d treat any woman I loved.

October 25

Two nights ago I ate fried caterpillars. They tasted about as good as you’d expect. In the past month I’ve also eaten octopus tentacles, which were too leathery for my liking.

I took the GRE today. Did damn well, I think. I enjoyed work, from 2:30 to 7:00: in one class I let three of the students teach for fifteen minutes as I took their places and acted like an obnoxious ten-year-old. The kids *loved* it. They were positively rapturous. Unfortunately it was hard to bring them under control again.

It’s amazing how forthright some teenage girls are here. Perfect strangers I meet on the street tell me I’m handsome and then strike up a conversation! Why can’t *older* girls be as amiable?

October 26

The last twenty hours have been eventful (by *my* standards). Late last night I felt distinctly “peck[er]ish”, so I went to “Gypsy Rock”, a Western club that’s supposed to attract horny Korean girls. It was jam-packed and the music was eardrum-destroyingly loud, but by the time I’d consumed 25,000 won’s worth of alcohol I felt grand. In the beginning I sat at a table and watched as G.I.s had sex with dancing girls while fully clothed. It was ridiculous. My thoughts hovered around two themes: ‘how can anyone be so shameless?’, and ‘why can’t that happen to me?’ At 2:30 I walked home empty-handed (though with a phone number). In the morning I had a two-hour lesson with Bryan’s wife, who’s shy and not a great teacher. Immediately afterwards I met Eun-joo. We were together for three hours; they were the best three hours I’ve had since my first meeting with Sin-ae. Eun-joo’s English is superb compared to Sin-ae’s, so our conversation had *momentum*! (Imagine that!) The best part, though, was her reaction to me. I swear she

looked like she was having the time of her life. *Constantly* laughing, repeatedly saying I'm a comedian (!) etc., actively engaging in the conversation despite her shyness, innocently flirting, and so on. For a while I thought our relationship had great potential to blossom into romance. Told her she was “kiopda” (cute) after she'd said that a girl loves it when a guy says that because it means he likes her. (Her reaction: blushing, smiling, covering her mouth, turning her head and saying “Thank you”.) I'd figured her comment was an unambiguous hint for me to tell her she's pretty, but, as it turned out, I was wrong. Halfway into the afternoon I asked if she had a boyfriend,¹ certain the answer would be ‘no’—but it was ‘yes’! She's been involved with a guy for three years! That fairly knocked the wind out of me. Later she even asked if he could join us the next time we met (for dinner on Saturday); I was taken aback but agreed. How can girls be so oblivious? Their naiveté is unbelievable. Chris Rock has a simple formula for understanding men's behavior around women: every act of kindness is an offer of sex. “A man opens a door for a woman: ‘want some dick?’ A man smiles at a woman: ‘want some dick?’...”

We parted after what would have been intimate expressions of budding affection if she hadn't had a boyfriend. I loitered downtown for an hour in the hope of...well, you know—but nothing came of it. The only noteworthy event was when a strange man asked me if I'd answer ten questions he was supposed to pose to a foreigner as his homework for an English class. When I said yes he guided me to a park where we could sit, all the while falling over himself with glee. ‘A real live foreigner!’ Despite my amusement I was wary of this odd fellow who surely had an ulterior motive in bringing me to a park—and who spoke nary a coherent word of English. But my suspicions were baseless: his mind really was as simple as his behavior. We sat on a bench, he gave me a pen and a sheet of paper, he stuttered his pidgin English, I wrote hurriedly, he had a picture taken of the two of us—and he insisted on taking me to a coffee shop. By then I wanted to get the hell away from this beaming freak of nature, but I consented. So he bought me a Cappuccino, we tried to talk, etc., and at last we left. He followed me part of the way home, but since his house was (mercifully) in a different direction I was soon rid of him. Just in time, too. A girl I'd met through Freedom caught sight of me and accompanied me the rest of the way home (her building being next to mine). Min-yeong. Not only is she gorgeous to the *n*th degree—heart-attack gorgeous; she's also the most easygoing Korean I've met, a student of English and German literature, and she loves—*loves*—to laugh. She must have some major flaw I haven't noticed.

[...]

Monday, October 27

Had a late dinner at the restaurant where Kang Shin-kun works (the boy who introduced me to his friends on the 23rd.) At 10:30 we met three of his friends—different ones—and sat in a coffee shop for two hours. It's startling how affectionate Korean men are with each other: repeatedly they told me they were really happy to have me as a friend, that I'm “honest”—I have no idea what made them say that—that I'm handsome, that they want to be “close” to me, and so on. One of them touched my thigh several times, as if it were the most natural thing in the world. They aren't gay; they have girlfriends. They just come from a culture that doesn't value aloofness as much as the American—that's less *suspicious* and *hardened* than the American. On Monday night they'll introduce me to a female friend of theirs, an English teacher.

I've never had such a network of friendships!

October 31

[...]

Around midnight I entered a bar and left two minutes later. Then I ambled along the streets, feeling

¹ Questions like that are common and accepted in Korea, even between strangers, and apparently they don't imply anything.

restless but unwilling to get drunk alone, longing for excitement. Soon it came. In an asexual form. I walked past a girl who was craning her head back to get a better look at some stupid play-fighting ahead of me; I thought, “These Koreans. Anything out of the ordinary fascinates them. –But maybe it’s a real fight?” I dismissed the idea until it was confirmed five seconds later. I saw two guys facing each other, just staring, motionless, and I walked past them. But suddenly they lunged, hitting each other in the face. Then I noticed blood running down the right temple of one. I walked back to them, conscious of a small crowd of spectators, hesitated for a split second, placed my beer on the kiosk beside which they were brawling, and interfered. I’m not sure why; I think I knew that if I didn’t, I’d curse myself afterwards. And in the two seconds before I joined the fun I thought of a story Peter had told me: his friend Troy had once gone to a bar where the only other customer was a drunk G.I. The guy violently pushed a petite Korean away from him; Troy (a big man) yelled at him to get the fuck out of the bar, and he obeyed. When I heard the story I wondered if I would have acted the same way; tonight I thought, “Well, this is a step in the right direction”, so I leapt into the fray. Those buggers were hard to pull away from each other. Soon a female friend of theirs raced over to help me, but she wasn’t of much use. She just yelled and pleaded with them. A third man, who also seemed to know them, held one back as I held the other, and thus we finally separated them. Or so I thought. With an artificial calmness I fetched my beer and began to walk away. But in ten seconds they were at it again. This time all three guys were involved, knocking over various parts of the food stand (whose owner was happily watching the whole thing from four feet away) and risking their eyes’ being poked out on the metal corners. The fight was vicious; it was drawing loud gasps from the mob. So I set my beer down again—somewhat miffed—ran over to the action and tried to end it. The frantic girl was in the middle of it, aided by a stranger who wasn’t having much success. Two of the fighters had actually locked hands as they fought; the essential thing was to pry those hands apart. What a grip they had! Only when I used all my strength did they separate. Unfortunately the result was that one of the participants fell to the ground on top of the girl, who remained crying on the cement when he was off her. My immediate task was to bear-hug one guy until the remnants of the fight between the other two had been overcome through the efforts of a few newcomers. With that accomplished I checked on the prostrate girl by politely asking if she was okay—at the same time conscious of a hackneyed chivalric pride implicit in the act. She didn’t respond, but she was obviously unhurt, so I grabbed my beer and left.

That was fun.

November 6

Getting tired of the language barrier. Less than 5% of Daegu’s population speaks English, which severely limits the number of ‘fish in the sea’.

Saturday, November 8

[...]

Work was fine, on the whole. Except for the last class. Which has a surplus of brats. [...]

Wilted from exhaustion, I met Eun-joo and her boyfriend outside the bookstore. The guy was personable and curious about me, but it was Eun-joo who made the evening worthwhile. I’ve never met anyone sweeter, regardless of what her boyfriend said to the contrary. (I said I’d like to have a girlfriend similar to her, and he said, “She’s fine *now*, but I know her better...[etc.]”.) Her peaceful face and smiling compassionate eyes... She looked like a seraph the whole evening. I’d glance at her and she’d be looking at me with such baffling tenderness that I’d have to turn away out of embarrassment. Sometimes I’d smile back with a warmth that I thought her boyfriend would misconstrue,¹ but the intensity of her Christ-like expression was intolerable. It was as enigmatic as Mona Lisa’s but far less sinister: I couldn’t tell if it

¹ Actually, he would have “misconstrued” it if he thought it was *innocent*.

conveyed contentment, pity, yearning or adoration. Or nothing at all.

Young-yoon called at midnight. She's bringing her cell phone out of retirement so we can call each other whenever we want. (I'm buying a phone next week.)

November 11

[...]

The problem with most (not all) popular music is that once you hear it...you've heard it. It's all *right there*, in the open, buck-naked, indiscreet and immodest, unsubtle, lacking all subterranean methods of persuasion. It says, "Here I am! Take me or leave me, but be quick about it!" With the best classical music, on the other hand, when you hear it you've only *just begun* to hear it. There's a world beneath the sound. Secrets compounded on secrets, a tormented and profligate past, a creation of order out of chaos, an instinctive knowledge of mathematics that's tastefully hidden, rhetorical devices unknown to the listener but dominating him—all of which are concealed behind a simple and spontaneous idealism. In short, it's more life-affirming than popular music.

Thursday, November 13

Work was okay for most of the day, but in the last two classes all hell broke loose. [...]

Because of the last ninety minutes it became one of those (ever-more-frequent) days that make me want to quit. On the way home, as I was brooding on life's cruelty, it occurred to me that if I were hit by a car tonight I'd be grateful to the driver for liberating me from this vale of tears. I don't even have anyone to come home to after a day like this! No one to hold and love! I'm alone.

...Writing that two-word sentence was the last straw. I burst into tears. Cried for ten minutes. Felt as though I'd have a nervous breakdown. Wanted a gun so I could give my life a theatrical end. I've been alone too long. Far too long. In my own mind I tend to make light of my troubles, but if I'm capable of such an attack of weeping as just happened they must be more serious than even *I'm* aware of. My cheerful anger at life must not be just an act, and it must be less cheerful than I thought. I *fuckin' resent* how life has treated me. I know it's given me happiness over the years, but it's withheld the only *real, secure* happiness, for the sake of which everyone looks for love.

...I'm content now, listening to Schubert and knowing I have friends.

November 14

Went to Subway because last night Sin-ae had asked me to. But she wasn't in the mood to talk. Was obviously depressed: her boss was angry at her for some reason, the problem with her boyfriend was obsessing her, etc. I didn't want to talk either, so I left. On the way home I was surprised that I had to fight back tears: I thought I was past all that! In the privacy of my room I lay down and cried again.

Thank God I have a three-day weekend. I'm too depressed to do anything active.

...Faust's curse against everything: that's what I feel like uttering right now. A curse against my "currently unavailable" internet, a curse against my fickle cell-phone, a curse against my job and my students, a curse against my hunger and my boredom, a curse against girls, a curse against myself, a curse against Koreans who can't speak English... I've been sitting in my chair for an hour, doing absolutely nothing.

[...]

At midnight Young-yoon called me; we talked for over an hour. She still seems smitten with me, always wondering what I'm doing at that particular moment, always wanting to see me, always feeling a great 'security' in our friendship. She thought I was hilarious tonight as I cracked jokes every minute—

until the conversation took a grim turn when she said she'd often wanted to kill herself. At first I thought I'd misheard her; then I waited for the sound of laughter that would tell me it was a joke. But it wasn't. She's been so unhappy for so many years that suicidal thoughts have been common. I asked if they still were; she said no. But then she said she'd probably kill herself eventually, "since life is so long and hard". I was in shock—partly because this was all said so matter-of-factly—but I managed to mutter some sentences along the lines of "You should see a psychologist if you ever feel suicidal again" ("Yes, I've wanted to"), "It would give your parents great pain if you killed yourself" ("I know; that's why I haven't done it"), "You should talk to me whenever you feel sad", "I've contemplated the same thing occasionally, so you're not alone". When I asked if she was all right now she replied that it was enough that I cared about her. Then she said she wanted to see me tomorrow and Sunday, the first day at DD and the second to watch a movie with her coworker Hye-young.

[...]

The wretched thing about all moralities—even when they aren't moralistic *per se*—is that they demand continuous obedience. The slightest lapse is a sign of weakness. People are required to monitor themselves at all times. They have no room to stretch, no freedom. Most states of mind fostered by this self-cruelty are pathological in one way or another.

November 17

A series of thoughts relating to the movie *Amadeus* has been bothering me for months. I want to be rid of them, so I'll outline them now. –The title "Amadeus" is appropriate, but it's also misleading in that it draws attention away from the most intriguing themes in the film, those revolving around Salieri. In fact, it could justifiably have been "Salieri", for that man's agony is even more tragic and pathetic than the early loss of Mozart's genius. The religious imagery scattered throughout the film hints at Peter Schaffer's real intentions in writing the story (or, in any case, what *should* have been his intentions). Obviously Mozart is analogous to Jesus Christ: (1) the motif of the Cross is subtly included in many scenes, such as the one in which Mozart's body is thrown into the grave; (2) symbolic narration and dialogue are common, for example when Salieri says that Mozart was "split in half" when he wrote *Don Giovanni* and *The Magic Flute*—split between the oppressive memory of his dead father and his own hedonistic lifestyle, but also between the divine and the human, as was Jesus; (3) Salieri makes constant allusions to God and God's 'chosen one' in reference to Mozart, such as when he says that God would kill His own beloved rather than let a mediocrity share in the smallest part of His glory. The difference between Christ and Mozart is that God killed the former *because* he wanted mediocrities to share his glory, while he killed the latter to *prevent* them from sharing it. The meaning of God has been reversed in a self-conscious, humanistic age. He doesn't forgive and love everyone equally; he loves the few and despises the many. In an era devoid of collective faith this is the natural interpretation of God, for it grows out of individualism and the universal pursuit of private happiness. Most people would take it to mean that God favors the wealthy and powerful at the expense of the poor and weak, but people who strive for greatness, like Salieri, take it to mean that God loves geniuses and hates the untalented. Therefore, Salieri must bear the awful burden of knowing that he is contemptible in God's eyes. Initially he revolts against this divine bias, which means that he revolts against God. It is he against the Almighty. Life is reduced to a power struggle. Nihilism is the immediate, instinctive reaction to the loss of religion: destruction of the beautiful (out of envy or resentment or contempt or sheer hatred of everything) becomes the goal of life. Values don't matter anymore. The most effective way to revolt against God is to do harm to his beautiful son, which Salieri thus tries to do. But he fails, because God beats him to it—out of pure malice. "I'd rather kill something beautiful myself than let you have the satisfaction of killing it." Thirty-two years later the seed of nihilism in Salieri has rotted away, having been suited only to a time of life when it could be nourished by passion. The old man is now sad and broken and regretful of his youthful selfishness. He tries to kill himself; then he scans the past, comprehensively, one last time; then he reaches the final stage of his life, which is also the last stage of history and the resolution of the dialectic: the serene affirmation of what is. Salieri takes this last step all

by himself, without any help or hindrance from God, in a humanistic vacuum, as it were. He smiles peacefully and declares that he is the patron saint of mediocrities, that he is absolving all ordinary beings of the sin of being ordinary. This absolution wouldn't make any sense if it came from someone who was *so* unremarkable that he couldn't recognize real greatness; nor would it carry much weight if it came from someone who was so extraordinary that he had no acquaintance with the condition of mediocrity (for then it would be indistinguishable from pity and would indicate more about the man's own kindheartedness than whether the sinners really 'deserved' absolution¹). Only a man familiar with both extremes of human nature, a Salieri, could utter such an absolution. He knows what it's like to be mediocre and he can appreciate and understand greatness, so he can 'weigh' both sides against each other and conclude that ordinary people aren't worthy of God's contempt, that they aren't sinners, that they're simply people who have been wronged by the Almighty (or Life).² This knowledge lets him feel a kind of Christian love for them, and it's through this love that he attains peace. He is the Christ of the masses, the Christ of modern society, the Christ whose Crucifixion (perpetrated by *God*) is his *existence*—the man torn between greatness and dullness as Jesus was torn between divinity and humanity. Mozart is the hated Christ who is worshipped and crucified in despair as modern man first examines himself and realizes that 'noble happiness' is achievable only by rare people. He represents the dialectical antithesis, the perspective that is overcome when all remnants of religion are cast aside (all 'idols') and an *honest equality* is established among men, heralded in the transformation of Salieri into the Christ of the modern masses. —But in the end Mozart has the last laugh. He knows he's the best; he knows all this reasoning is just so much rationalization for a lack of talent (though it's also *true*). So he happily leaves us to justify and forgive our own mediocrity while he goes on creating beauty.

November 22

Work was awesome. I played games and wrestled with the kids most of the time.

....This is one of those beautiful moments that remind me not to give up on life. They happen only at night, and they can't be communicated through writing. I wish a girl were with me.

—I don't know why I like girls. They're practically all I think about, and I don't know why. There's nothing logical about it; reasons are superfluous in love. But it doesn't matter. That's the most marvelous thing of all: I follow my feelings instinctively, not intellectually. I'm being *led* by a guide millions of years old, blindfolded but trustful. Something that *feels* so right must *be* right. I don't need a justification for it.

I know now that nothing except love can fill me with real *joy*. Nothing else comes close. I've written profound essays, but the experiences were anticlimactic. Only my time with Sangeetha came close to satisfying me.

November 27

Johann Sebastian Bach³ is first among the gods in the shrine of music. He is so imposing a figure that not even Beethoven, not even the Ninth Symphony, overshadows him. *Nothing* can. If God pointed to the Creation and said, "You didn't do *that!*", Bach could retort, "But I recreated it and made it intelligible—and I *never rested*, unlike you!" He's *perfect*, if only by virtue of his power. He stands at the head of the most remarkable two hundred years in the history of music—and I can't think of a better herald of the Golden Age than a man who was more modern than modernity itself⁴ yet more ancient than antiquity. His oeuvre

¹ It would actually *enforce* the separation between the two types of people.

² A flaw in my interpretation is that *fundamentally* Salieri is unremarkable. There isn't enough genius in him to allow the 'downward' look that's necessary for absolution. It would make more sense for Mozart to absolve us than Salieri.

³ His monumental human dignity demands that he be called by his whole name.

⁴ He even has something for heavy metal, not to mention jazz.

is not only immortal; it is timeless. ...I'm listening to the Chaconne from Partita No. 2 for solo violin. It bears the signature of Bach as clearly as the universe bears that of the supernatural.

...He's so *confident*! He never doubts himself. Even Mozart has moments of doubt--and makes juvenile mistakes--for example when he laughs too hard at himself in his music. (That's self-consciousness, and self-consciousness is a form of doubt. But Mozart is able to turn it into a virtue.)

Saturday, November 29

[...] While I'm copying things I might as well copy the two essays I'm submitting to graduate schools as "writing samples". They're a decent representation of my usual writing in college. They were written in my sophomore year, which explains most of their flaws (like superficiality).

A Refutation of Kantian and Benthamite Ethics

May, 2001

Bentham and Kant present two diametrically opposed theories of morality. Bentham's is consequentialist: it states that actions can be morally evaluated only on the basis of their consequences. (For example, lying is immoral if it leads to a person's death.) Kant's position is deontological: actions are intrinsically either right or wrong; their results do not matter at all. Since Kant's ethics are based on his metaphysics, and Bentham does not even have a metaphysical system, the former theory is more complex than the latter. But that does not mean it is more correct; indeed, Kant's ethics are more *incorrect* than Bentham's--though Bentham's are more superficial than Kant's.

Bentham has both a psychological and a moral theory. The first claims that humans invariably desire to maximize pleasure and minimize pain; the second claims that actions are good only if they result in an augmentation of pleasure and are bad only if they increase pain. The moral theory is what concerns us in this paper. By this theory, the words "right" and "wrong" are meaningless without reference to utility. (For instance, what is right is what promotes the general welfare.) In regard to actions that affect society as a whole, an individual should forsake his own pleasure for the greater collective happiness.

Kant, on the other hand, does not think that morality is even possible unless humans have free will. In other words, we cannot make use of practical reason, which is the branch of knowledge concerned with ethics, if we do not have the ability to govern our own actions. But this poses a problem: all of our experience leads us to believe there are causes determining how we think and act, so how can we be free and hence moral? Science teaches us that there are innumerable biological, chemical, and physical laws that determine how we act; experience teaches us that it is possible to feel *compelled* to do something to the extent of barely having free will (lust is an example); philosophers teach us that we are only deluding ourselves in believing in freedom. Kant responds to these objections by making a distinction between the thing in itself and the phenomenon. The first we have no access to; the second is everything we are commonly aware of, including facts that seem to refute free will. Now, according to Kant we are rational beings, and this means that in thinking or acting we cannot but assume ourselves to be free. (Philosophers may construct theories refuting free will, but it is impossible to *act* on this belief.) Kant discards the philosophical objections by relegating the debate between freedom and determinacy to the thing in itself, and hence to obscurity: theoretical reason cannot know anything about the thing in itself, so it cannot know if people are *fundamentally* ('in themselves') determined or free. This uncertainty is unavoidable, so we might as well continue to assume that we are free--because, as was already stated, we cannot act as moral agents except on the supposition that we have free will.

It is as rational beings that we think we are free; hence morality, being based on freedom, must be grounded in reason. We cannot pursue *ends* in our moral actions, for this would subordinate us

to causes in the phenomenal world (in this case desires, which are extrinsic to pure reason) and hence destroy our freedom, so we must act only for the sake of acting rationally. This means that we must find the ground of our moral actions in reason itself, which gives rise to the categorical imperative: “act only according to that maxim whereby you can at the same time will that it should become a universal law.” In other words, if the maxim of an action is contradictory with itself when universalized, it is wrong. Because the categorical imperative is the only moral law that pays no heed to consequences, it is the only one compatible with freedom.

On the basis of this theory Kant can criticize Bentham on the following grounds: (1) Bentham does not take into account the limits of theoretical reason (instead, he accepts the world as it appears to us and ignores the theoretical necessity of the thing in itself); (2) there can be no true freedom in Bentham’s system, since people are motivated by consequences--which implies that Bentham’s morality is not a morality at all. It is at most a convenient way of acting.

Bentham, on the other hand, criticizes Kant for the following reasons: (1) the categorical imperative, which requires people to act only for the sake of duty, is an impossible ideal (because people always act on empirical stimuli); (2) obeying the categorical imperative may result in actions that do not promote the greatest happiness, so it is morally repugnant. Of course, this last objection presupposes rather than establishes Bentham’s own ethics, so it is useless. The first objection is an unproven psychological assertion. How do we know people cannot act solely on the recognition of duty? This claim is virtually impossible to prove, which is why Kant can resort to the argument that in cases where the only motive we are conscious of is the desire to act in accordance with duty, we can assume that we are indeed doing so (for the truth lies in the realm of the thing in itself).

On the whole, if we accept Kant’s basic premises (e.g., the incapacity of theoretical reason to determine if we are truly free), it is difficult to refute his ethics. The reason is that he can always resort to the thing in itself: he can always say, “we don’t *know* that we are unfree”, “we don’t *know* we can’t act on duty alone”. However, this response deteriorates into dogmatism: it ends all discussion. Even if the thing in itself exists, falling back on inarguable claims is philosophically unacceptable. If nothing definite can be said about the thing in itself, it ought to be ignored and “*phenomena*” analyzed instead. Thus we should follow Hegel (and Nietzsche) in judging that Kantian ethics are empty and unreal.

Bentham’s ethics do not fare well either. His psychology, of course, is simplistic--it is a fact that people do not always act to augment pleasure and avoid pain--but his hedonistic ethics are distasteful as well. First of all, it is impossible to make interpersonal comparisons of utility. We have no access to each other’s states of mind, so we have no idea how much pleasure other people experience. Secondly, Bentham does not provide a satisfactory argument as to why happiness should be pursued rather than pain, or why it should be pursued *at all times*. It is through pain that we become stronger and that we acquire a greater appreciation of pleasure. Thirdly, pain and pleasure are sometimes indistinguishable from each other. For example, it is not always easy to decide whether one is happy or sad, or neither. Similarly, sadness can be gratifying, as when one enjoys it for its tranquillizing effect on the mind.

However, an important point is implied in Bentham’s system: no absolute, categorical morality exists. Virtually every psychological and sociological investigation of morality lends support to the claim that morality, far from being required and determined by the nature of reason, is a relativistic human creation that is caused and influenced by innumerable social factors. There is simply no good reason to believe that certain actions are *inherently* right or wrong, i.e. that morality is *a priori*, like logic and mathematics. Hence there is no good reason to believe in a deontological ethical system.

To conclude, this paper has argued that both Kant and Bentham are mistaken in their ethics. Kant, it seems, eventually has to become dogmatic, since his theory cannot effectively be argued against, while Bentham ignores essential facts about human existence. Lastly, we have argued that there is no ‘intrinsically right’ morality, which implies that consequentialism (when not hedonistically utilitarian) is the best theory by which to evaluate the moral status of actions.

Marx's Critique of Bourgeois Rights
May, 2001

The term “rights of man” refers to the abstract entitlements that were delineated in the “Declaration of the Rights of Man”. They include liberty, property, security, resistance against oppression, and political equality. Each one implies a freedom *from* something or somebody, even when it is expressed as a freedom *to* something. They all presuppose separation between humans and the universal pursuit of self-interest; that is, they *abstract* from social relations. In his essay “On the Jewish Question” (1843), Karl Marx criticizes this abstraction from reality, this reliance on the empty concept of *man* rather than the fuller notion of *social being*. This paper will expound and evaluate Marx’s critique of the “rights of man”, with some assistance from Durkheim.

In his “Theses on Feuerbach” (1845), Marx states that “the human essence is no abstraction inherent in each single individual. In its reality it is the ensemble of the social relations.” In other words, there is no abstract individual that represents the species, no ‘general type’ of humankind. The society in which one matures determines the kind of person one will be. Thus, it cannot be stated that humans are rational, self-interested beings, for--apart from the fact that these terms can have various meanings--not all societies have been characterized by universal rationality and self-interest. For example, India has not historically been an especially ‘rationalistic’ civilization; its religions have been predominantly mystical, and its ideal human being has been the Brahmin rather than the rational philosopher or scientist. An important reason for this, according to Marx, is that India’s social relations have been more personal than ‘legalistic’ and impersonal; i.e., communal life has been the norm rather than self-interested isolation or the instrumental rationality of capitalism.

Marx thinks that the notion of ‘right’ itself is bourgeois. It presupposes private property, which is a historical development and not in any sense ‘natural’. That is, the universalization of private property, which occurs with capitalism, sets every person against every other in the economic sphere and thus necessitates that, in order for the economy to continue functioning, the rules governing human interaction be based on *division* rather than *unification*.

Hegel and other early bourgeois political theorists might retort that these divisions between humans are resolved in the state, which transcends the particularities of civil society. In the state everyone is an integral part of the whole, no one is ‘protected against’ anyone else; i.e., there is no separation between individuals. But this is precisely what Marx denies. He does not think that the state can possibly transcend civil society or the economy; rather, every contradiction of civil society is reflected in the government. Since the latter is only an instrument of the former, political emancipation (an essential part of the doctrine of human rights) is not *human* emancipation. It is, like all bourgeois rights, merely an abstract principle with no basis in reality or society. Thus, “human equality”, the underlying thread in all bourgeois rights, is itself unreal.

In order for there to be genuine human emancipation, *real individuals* must not be pitted against one another for the sake of abstractly realizing their ostensible essence through the state. This means that private property must be abolished, because it is the cause of divisive social relations and the rights that correspond to them. Now, Marx’s contention that we are creatures formed by society implies, according to him, a specific moral ideal: the universal realization of our social essence. This occurs in communism, the society in which people are no longer constrained by social relations they cannot understand or break out of. In communism we will develop ourselves in all directions, for private property--which is a power over us in capitalism, alienating us from our social ‘essence’--will no longer exist. That is, human rights themselves will no longer exist [or be explicitly recognized]; they will simply be transcended (‘unnecessary’) in our relationships with others.

Durkheim disagrees with this theory. First of all, he thinks that the augmented division of labor

in the modern world rather than capitalism per se is what ought to be the focus of analysis. The modern division of labor abolishes the mechanical solidarity of primitive societies, which is characterized by common interests and a common consciousness, but in doing so it constructs a more durable social bond: organic solidarity. This is defined by interdependence between citizens and a beneficial social hierarchy. Individual differences are highlighted; separation between people is the norm, and this is indeed good, for (1) it is only through separation that we become properly social, and (2) the recognition of rights presupposes solidarity. (That is, unless we were already in a social bond we could not invent rights that enforce separation.) Hence, abstract bourgeois rights are *good*: they enhance organic solidarity, prevent people from harming each other, and strengthen our pre-existing social bonds.

However, this critique of Marx is inadequate. Durkheim confuses the issue by conflating capitalism with its extreme division of labor. The two are, no doubt, intertwined, but private property in the means of production is by no means an integral part of any detailed division of labor. (There was no private property in the means of production in the Soviet Union, but there was a highly detailed division of labor.) This suggests that in a future communist society we could abolish private property--thereby the unnatural rights of man--and salvage the beneficial effects of the division of labor, such as interdependence. Thus, there would be a kind of social separation that increases solidarity, but there would be no abstract rights to undermine the latter. For, even if it is true that these rights do presuppose social bonds, it is also true that they *weaken* these bonds by encouraging political and economic conflicts. Aside from these practical errors, Durkheim does not even address Marx's philosophical claims--viz., that there is no human essence on which rights are based, and that rights (and the state) cannot transcend the contradictions of civil society. In short, Durkheim's critique of Marx fails to refute Marx's central claims.

Indeed, the only major flaws in Marx's arguments seem to be in his account of human emancipation. He claims that under capitalism we are alienated from our work, our fellow beings, nature, and our "species being" (our consciousness that we are part of a single species); under communism this will cease to be the case. This philosophical theory, even when fleshed out in the *Economic and Philosophical Manuscripts* (1844), is vague and not sufficiently supplemented with psychology. After the discoveries of Freud and his successors, as well as philosophies like existentialism that emphasize despair and the irrationality of existence, it has become doubtful that it is *possible* to emancipate humanity collectively or individually. Suffering, for example, is inherent in the human condition, and it is suffering that leads to conflict between people. Since this suffering would exist even in a society without classes and a state, there would remain social ills that would probably necessitate a police force, which in turn would require the recognition of abstract rights. Moreover, we must agree with Durkheim that there is a kind of individual isolation that is a necessary part of existence: in a certain 'private' sense, individuals are more fundamental than the species. Hence there is something to be said for individual rights. If Marx would retort that rights would not have to be made explicit in communism because they would be automatically respected by everyone, we could, as already stated, rely on the fact of universal suffering to demonstrate that there will always be interpersonal conflicts that necessitate the articulation of rights.

In any case, these considerations do not lessen the force of Marx's critique of abstract rights under capitalism. As this paper has argued, rights serve primarily as a veil over the conflicts inherent in civil society and private property; that is, they do not "free" humans to do as they want, as they are supposed to. Their social effects are largely illusory--for they are more political than social--which also suggests that they do not enhance organic solidarity.

I'm not looking forward to editing those papers.

December 1

[...]

I listen to Beethoven and to Mozart in different ways. Obviously in both cases I'm conscious of hearing equally great music.¹ However, when I listen to Beethoven I hear astonishing *hard work* and incredible *determination*, while when I listen to Mozart I hear something *natural* and *miraculous*. I can relate to the one, but not to the other. The one is human, the other isn't. Beethoven is more *admirable* than Mozart, but Mozart is more *extra-ordinary* than Beethoven. --That's splitting hairs, of course. Compared to the rest of us, both are gods.

Wednesday, December 3

I've already remarked that Koreans tend to be more polite than Westerners--sometimes obsessively so;--but they can also be more *impolite*. I don't understand it. It defies explanation. I'll give you two examples: last night at D.D. Y-y told me that H-y had been surprised the first time she'd seen my new haircut. I asked jokingly, "Was it a bad surprise?" Y-y answered, "Certainly", as if it were the most obvious thing in the world. This wasn't the answer I'd expected. Thinking she'd misunderstood me, I said, "She didn't like my haircut?" "Of course not." I hesitated in perplexity. "Uhhh... Haircut: bad--ugly--?" (with gestures for emphasis). "Yes." "...Oh. Okay." Then she elaborated on why it was so bad. Later Sin-young arrived. One of the few things she said to me--or *indicated* (with her hands)--was that I had a lot of pimples on my face. Y-y agreed. They also remarked that S-y had quite a few on her forehead, and they showed me. But...what the hell?? Who points that out to someone?! Especially when it has nothing to do with the conversation! Besides, I don't have *that* many! --I've decided that Koreans are more preoccupied with appearances than Americans.

Maybe that rudeness can be explained by the fact that Koreans are often less socially mature than Westerners, and since their minds are attuned to appearances, it's natural they'll analyze one's looks when it isn't appropriate.

December 5

I can't believe I have nine more months of this damned job.

December 8

Work went well. My unusual energy (lately I've been tired; my immune system is weak from the cold) lent me charisma (a loan I'll probably have to repay with interest tomorrow). Didn't even have to rely on games to consume the last five minutes of class. I simply *taught*, intensely. After work, went to D.D. because Y-y had asked me to. That was as blah as I'd known it would be. Two offspring of Aphrodite claimed a monopoly on my attention, but they didn't talk to me much. Were clearly good friends: laughed and played together rambunctiously as Young-yoon and I watched. "They're usually not so wild," she said. "I think it's because you're here. They're embarrassed. They want to talk to you, but they're shy." [...]

Jeez, I just remembered that when I asked them if they spoke English they practically *hid* behind Young-yoon! They're twenty-two years old!

These days I spend so much time writing, reading and listening to music for one reason in particular: it keeps me from stabbing a knife through my panting heart. "Sssseeeexxxx....sssseeexxxx," my chest whispers. "Lllloooovvvve...." I've always had monomaniacal tendencies—from 14-17, it was *self-change*;

¹ I admit that many of Beethoven's compositions are more impressive than Mozart's, but that's because the former's talents had twenty more years to mature than the latter's.

from 18-19, *Marxism*; from 19-22, *philosophy/journal-writing/acquiring knowledge* (with hundreds of ill-fated whims peppered across the years)—but rarely or never has the perpetual *idée fixe* of GIRLS not been offset by some other faddish craze like *Nietzsche* or *screenwriting* or *thesis*. Since I've arrived in Korea I haven't let myself read a single book in English, so I've had fewer defenses against myself than in the past.¹ It's been all *me me me*, i.e. *sex sex sex*.

Don't patronize me with your "You poor romantic fool, you think sex and love are something they're not. You're setting yourself up for disappointment. Neither is the source of happiness you seek. Sex isn't a 'miracle', as poets say; it's just a pleasurable experience. Love is almost as much torment as bliss." I know that. I know I'll be disillusioned. I know I won't stop feeling the pain I feel now. But this isn't some rational calculation of the best means to attain a desired end. This is *brute instinct*, in all its Faustian absurdity. I'm a machine, and that's all. —Besides, as long as I know the final result will be 'Moments of Ecstasy' I'm content to yield to the machinations of Eros. As long as I can take a break from sex in the middle of it and remember that *I'm inside a girl*, or pause while kissing someone to reflect that *at this moment I am perfectly happy*, I'll have achieved something worthwhile.

Come to think of it, I'm pretty happy *now*. I'm listening to one of the six most sublime movements in Bach's collection of cello suites, namely the Prelude of No. 3, and I'm writing something artistic at the same time, while eulogizing love and savoring its anticipation with my whole being, as I become for myself an Other who is touched by God...

Another piece I love is Liszt's ode to passion called "Un sospiro".²

Tuesday, December 9

Trying to fall asleep last night was hellish. In addition to my usual insomnia, which ensures that it takes three hours for me to lose consciousness, I was plagued by thoughts of Dave having wild sex with his beautiful 22-year-old, contra-bass-playing sex-mate. She isn't a girlfriend—he says their casual relationship is already fizzling, after two weeks—but she *is* a lover, and a damned good one apparently. Most Koreans are supposedly timid in the sack, but this girl is so eager and tries so many positions that she wears her lover out. So last night as I thought about her I was agonized with lust. There was no way out of it: not even internet porn could save me. It was truly nightmarish. As I lay in bed, crushed by the eternity of those moments, my body acted out the frantic, surreal anguish into which my mind had contorted itself.

December 10

Last night Ji-su wrote in her email an odd question: "Chris, we are friends, right?" I asked if that question meant she wanted us to be *only* friends; her answer was Yes. Apparently she'd just met a guy she used to like who hadn't liked her, and he'd changed his mind: now he likes her, and she wants to be his girlfriend (even though he's leaving the country in February!). She apologized profusely, but that didn't allay the pain.

When I came home from work I felt so lonely that I sat down to write a short story describing a boy's daydream about a girl. Autobiographical, of course. (The girl is the one I saw in New Zealand on New Year's Eve, whose beauty stunned me so much I described it in my journal.)

I'm going to visit Jae-eun during my short Christmas vacation.

December 11

¹ However, learning Korean has been an effective 'distraction,' as I implied in the paragraph's first sentence.

² Jae-eun has played both that piece and "Gnomenreigen". She's nineteen years old.

Karl Marx had one of the greatest names in history. Two syllables that are so aesthetically compatible they somehow seem to have a meaning, *Karl Marx*. If it's possible for a name to be pithy, his is.

Here's what I wrote last night:

I saw her in New Zealand, on New Year's eve. In a town called Dunedin. To describe nature's handiwork in that privileged spot on the globe would be to insult it, for no description could do it justice. Dunedin itself is nestled in a valley whose walls are hills that hide the Pacific from view. One might lament this false modesty of Mother Nature, which contrives to conceal what is most over-awesome from splendor-starved human eyes, but that would be unjust: Her mischief was done with an end in mind. She knew that delayed gratification is *more* gratification—that a climb enables one to savor the pleasures of the summit more fully. In the meantime, there are the hills and the harbors to overawe one. For they are indeed overwhelming, though not in the sublime sense that the ocean is; they are instead merely *perfect*, that is, both epitomizing and existing outside human standards of beauty. Against the backdrop of this scenery I saw the girl who seduced and captured my imagination as fireworks streaked across the night sky, which loomed above us unperturbed.

Why can I not write good literature? I can't picture the great writers in history writing something like that. I don't know what it lacks, but it lacks *something*. I don't mean that the description is unnecessary and purposeless, for the end of the story will refer to the beginning, and all the sentences—from the one that starts "One might lament..." to the one that ends the paragraph (but especially the one starting "She knew...")—will be seen as symbolic and related to the main theme.¹ I mean that...does it come across as didactic? Is that its flaw?

December 14

In my short defense of the [anti-postmodernist] idea that the 'Indo-European logic' is applicable to every language [which I subsequently deleted because it was idiotic] I forgot to give a suggestive example: in English there are two uses of the verb 'to be', namely the one that means 'existence' and the one that attaches a predicate to a subject. ('I am' vs. 'I am a boy.')

Although the same word is used in both contexts, its logical analyses are different. Now, if the Indo-European logic were indeed only Indo-European—as some authors I've read have suggested—is it likely that one of its most essential and obvious 'laws' would be equally essential and obvious in the logic of a language whose origin was totally separate from that of the Indian and European languages? No. Yet Korean not only relies on the distinction between *uses* of the verb 'to be'; it represents the uses by different *words*. Thus 'exist' is *iss-da* and the copula is *i-da*. Clearly that aspect of logic isn't Indo-European. Which leads one to think that the rest of it isn't either.

Anyway, if Asian languages were so fundamentally different from European ones as to be based on another logical system, communication between the races and translation of their languages would be impossible.

Yes, logic is as universal as math. (Is math *based on* logic? Reducible to it? Tough question.)

Monday, December 15

I like Eun-sung more every time I see her. Her sense of humor is her best asset: it's dry and perceptive. Similar to mine. She sees humor in all the situations I do.

...I can't even imagine the level of stupidity that must preponderate in an administration that begins a war *certain* of (1) victory, (2) extensive material destruction in the defeated nation, (3) fierce resistance

¹ Theme: the longer I have to wait for love, the greater my happiness will be when I find it.

by the defeated population, (4) prevailing poverty, poor education, and anti-Americanism, and, in short, (5) incalculably high costs of reconstruction after the war—yet unwilling to plan-in-advance how to address these problems, choosing instead the method of *ad hoc* experimentation while (meanwhile) chaos ensues, social upheaval occurs and the rest of the world looks on in contempt.

The deeper I delve into the Korean language...the deeper I sink into the mire.

What priceless cultural artifacts are languages! In the process of using them we're interacting with the past. If you really want to understand a culture (including its past) you have to learn its language. I've already learned so much about Korea!—about the importance of social status, the ubiquity of 'formal' politeness,¹ the ideas and professions that were admired in the centuries when the language was being formed, etc.²

December 16

[...]

Yes, it's a game. That's the first essential insight. Not until now have I really appreciated it. I've always thought, 'Be yourself and you'll find someone eventually', but that's a benighted view. If pretty and intelligent women are my target, I can't just be myself. I have to be manipulative (unfortunately!). I have to study them, know what they want and become that. I have to be an actor. To play the game well I have to be confident and 'hard to get'.

But that's only the beginning. There's a whole 'science' behind this Game of Romance, as I learned tonight while reading an online book about dating. The book is full of useful Machiavellian wisdom on how to manipulate girls into your bed and connive your way into their hearts. Though its style is amateurish and its author has no dignity, it's inspired me. I'm in the same 'from this day forward' mindset that caused me to spend so many hours of my adolescence forming 'resolutions'. The self of the past was romantically unfledged; the self of the future is a disciple of Don Juan. An arrow aimed at a bull's-eye. [...]

The best part is, it'll be fun! It's what youth is all about! I remember when I was prematurely weary of the Game, before I'd even experienced it and understood it. I still haven't and don't, but at least I understand it's invigorating.

It's also a bit nihilistic, but who cares?

December 17

Didn't fall asleep until 7:30 this morning. It's the same every night. My mind is hyperactive.

December 21

It's 5:00 a.m. Haven't been able to sleep; have written more of my pedantic story; have realized I've reached—or nearly reached—the pinnacle of romantic desperation. I'm ready to do almost anything to meet people. Tomorrow—I mean, today—I'll go to the bookstore and be friendly. Won't plan what I'll say beforehand: when I plan, I doubt, and when I doubt, I fail.

...Four hours of sleep, then a non-lesson with Bryan's wife, then a taxi ride downtown, then the

¹ 'Formal' not as opposed to 'informal' but rather 'content'. For example, in speech there are four basic levels of politeness: the formal polite, the informal polite, the informal 'less' polite and the friendly, all of which are determined by sentence-endings. (Those levels are only the very, very beginning. The extent to which grammar/language is organized around the need to be respectful is astounding.)

² For instance, to be respectful to an elder you're supposed to call him "Teacher". Thus, I'm supposed to call my boss "Kim *Sonsaeng-nim*". Clearly, then, teachers were respected in the time of King Sejong.

revelation that I didn't have my wallet, then a search for eye-candy to talk to, then the irony that the one time I'm determined to approach it is the one time I can't find it, then the walk home, then the sigh of relief as I found my wallet in my room, then the listening-to-Chopin-as-a-soundtrack-to-depression. Now the return to the cold cruel world outside to reserve a train ticket to Seoul.

...I reserved the tickets. I also said "Do you speak English?" to about ten girls; only two did, but they gave me their numbers. They were browsing the English section of the bookstore, so it was a safe bet they knew the language. [...]

Reimposing a daily regimen of exercise as part of my heroic effort to become a womanizer. *This* time I *promise* I won't quit. Within five months I'll be an underwear model.

December 23

Going to Seoul tomorrow morning.

...Insomnia is a curse I wouldn't wish on many people. Every night I lie in bed with eyes wide shut for hours, struggling to fend off Venus-begotten demons. I think about love, then I chase the thought away. Then it creeps back as a vision of me cuddling with a girl. Then I roll over and concentrate on the music I'm listening to...and then I wonder if I'm destined never to fall in love...or to hold a girl's hand while we're walking downtown...or to feel fulfilled. I wonder what Eun kyung thinks of me, whether I have a chance with such a pretty girl. I wonder how I should proceed when dating Koreans. I wonder how many people are having sex at that moment. Then I turn on the light and pace the room, cursing because I don't want to study Korean but there's nothing else to do, so I pick up a book and read it in the hope that drowsiness will soon ambush me, but it never does, it takes hours of false starts and teases before the final wave of slumber washes over me, and by that time it's too late to get a good night's sleep, even if I sleep till noon. So I'm tired the next day, and yet the next night I can't fall asleep till 5:00 because I woke up at noon, and so the cycle continues, even when I wake up at 10:00. Ahh, curse it all.

Saturday, December 27

When I saw Jae-eun in the train station I was disappointed. She was homely. A plain face with braces and no features that stand out in memory; a boyish, small body. Not only that; she was quiet. *Really* quiet. When I talked about music she just listened and muttered her assent; when I didn't talk at all, there was dead silence. It was terribly disappointing. We met her father in Lotte World (a gigantic mall-complex), where he works. Energetic man, thrilled to meet an American. He drove us to the motel where I was supposed to stay, but its Christmas price was so exorbitant he offered to let me sleep in their apartment. When we arrived I was introduced to Jae-eun's mother and sister, neither of whom spoke English (nor did the father); then I was ushered into Jae-eun's room, where the two of us took turns playing her piano for hours. But most of the time *she* played. Her talent dwarfs mine. I'd already known, 'abstractly', what she was capable of, but when I heard her I was amazed. Though she doesn't practice more than a couple of hours every day, she was able to dash off piece after piece that would have taken me months to learn. She could even sight-read difficult pieces with few errors! Her modesty presented a comical contrast to the reality. Imagine Tchaikovsky insisting, in response to a fan's praise, "No, no, I'm not a better composer than Mussorgsky. I'm really not that good. God didn't bless me with much talent; Mussorgsky has more." Jae-eun's humility was almost equally ludicrous. She made Chopin's Scherzo in B-flat minor—and his Polonaise in A-flat—look easy. When I asked her to play "Gnomensreigen", which she hadn't touched for five years, she was so successful I was convinced that after two weeks of practice she'd be able to play it flawlessly.

Later that night her father brought home a cake. As we were eating it, sitting in a circle on the rug next to the TV, I began to understand Jae-eun's antipathy: he acted like a child. Aside from getting drunk on soju while telling me (many times) how much he enjoys its taste, he talked about absurd things like his

friends' opinion that he looks like James Dean; he disrespected his daughter by explaining to me why he'd made her quit piano lessons two years ago¹ (as if she weren't there—even while she translated!), namely because she'd spent so much time playing that her grades had suffered; he fawned on me while ignoring his family; he kept the conversation focused on himself. I glanced at Jae-eun every few seconds; it was evident from her fidgeting and forced smiles that she was ashamed. Her mother was the docile servant of her father that most Korean women seem to be—"Do this. Get that." "Okay."—which was, perhaps, nearly as embarrassing to Jae-eun. (Several times that evening and during the next two days I tried to help the mother wash dishes or simply bring a bottle of water to the table, but the father gestured as if to say, "No, that's her job. Don't trouble yourself.") The contrast with *my* parents—with my mom's forceful personality and my dad's simple goodness—was extreme. I was relieved when I said goodnight to them.

Jae-eun had scoured the internet for info about a bus tour of Seoul, so the next day we braved the weather. The tour was pitiful. We walked around one of the old "palaces" that are scattered throughout the city, but, compared to European palaces, it looked more like a thatched-roof cottage than the residence of a king. We also saw a "traditional village"—which was a collection of eight "grand houses" rather than a village *per se*—but that was another waste of time. Seeing the War Memorial museum was an appropriately dull ending. After lunch/dinner, we took the subway to the concert hall where the Nutcracker ballet was to be performed. It was at this point that my Seoul trip finally became worthwhile—but not because of the ballet. Because Jae-eun grew a personality. She'd been making tentative attempts at breaking out of her shell all day long, but not until our two-hour wait for the ballet to begin did her sense of humor blossom. Our conversation revolved around...well, not a topic, but a style, namely "*witty repartee*". *Badinage*. That kinda stuff. Pure fun. Pure flirtation. I found myself attracted to her, not only because of her wit but also because when she laughs she's fairly pretty. By and by my thoughts coquetted with the idea of kissing her. I considered draping my arm across her shoulders when the ballet began, but my shyness prevented me. Until after the intermission. When we sat down for the second half I furtively lay my arm on the back of her seat...and wondered...and hesitated...and took the plunge and maneuvered it onto her body. She smiled at me and pulled it closer. 'Yessss!' For the next hour I happily felt my arm tingle and then grow numb from its awkward position, as we savored the romantic Romantic music of Tchaikovsky and Jae-eun rested her head against my shoulder.

The next day brought more romance. We decided to stay home and listen to music in her room. Her mother having peeled apples for us, we snacked and talked happily while sitting cross-legged on the floor. Finally the anticipation grew unbearable; in a moment of laughter I leaned over to kiss her...and met her nose instead. Because she'd been laughing she was caught unawares and had instinctively, in a defensive motion, moved her head away. I retreated and asked if I might kiss her; she nodded. Then told me that was her first kiss ever. Her first kiss! I was chagrined when she followed up the intimate moment by playing silly little games with me, like 'rock/paper/scissors' and a staring contest, but after a while I put us back on track by kissing her again. From that time on we spent the whole day hugging, lying in bed, kissing, etc.

[...]

December 31

In the morning I felt healthy, so I went to work. That was my undoing. While in the unheated building I got so sick that I went straight home without eating dinner to lie in bed. Though it's New Year's Eve I'm confined to a sick-bed. But there's a silver lining in every situation. In this one it's that my physical weakness has had an oddly beneficial effect on my creativity. I lay in bed and let my thoughts scamper whithersoever they would; in time they alighted on a theme. Philosophy. I thought about Nietzsche's dictum that a philosopher who has traversed many kinds of health has passed through an equal number of

¹ That's the main reason she hates him.

philosophies. Then I remembered my terrible drunken episode at Wesleyan when it seemed I was flirting with death, and I thought of the thoughts that had crossed my mind then—the nihilistic truths I perceived and wished I hadn't. From there the parade of memories that marches past the mind's-eye of a convalescent became less fascist in its organization: each thought wended its way heedless of the others that nudged and jostled it. Memories of essays I'd written, ideas I'd had, conceits I'd spun crowded around each other... From the melee emerged tangible new entities that refused to live in a vacuum. Hence, I sat down to make them concrete.

I realized that the question of how philosopher-academics can all be wrong and *I* be right, which has pestered me for a long time, has a simple solution. You know I'm fond of belittling professors' pretensions to philosophy; you may not know that such disparagement has always been more polemical than 'seriously intended', as a simple statement of fact. I've certainly believed it, but I haven't *thought* about it. A moment ago I did. Now I finally understand that their self-stylization as philosophers has confused me: they really do have as little in common with the type as I've pretended to myself. They have different goals, different passions, different beliefs. Though they pose as inquirers determined to find Truth at all cost, wherever their journey may take them, be it into labyrinthine analyses of past thinkers, they're really just...intelligent *parasites*. They fritter away their lives in serious amusement that provides them with a paycheck. Along the way they get swept up in the grandeur of the themes that nominally fascinate them, and they come to believe that not only are they contributing "in their own small way" to the unveiling of truth, but that anyone who truly respects philosophy can show his reverence only by worshipping it in the way they do. 'Our way or none at all!' (How many times in history must that be the unrecognized creed of schools of ignorance?) The truth is that, in timidly aiming glancing blows at their target, they ensure they'll never hit it. They forget that a book can be packed into three pages, that truth can be packed into twenty. That it's permitted to bypass a whole *literature* as merely aesthetic. —In short, their self-frustrating over-cautiousness (which they think is the best way to philosophize in this day and age (—*therefore* I'm wrong)) stems from their having different ambitions from the philosopher's, ambitions grounded in skepticism and a passive nihilist's boredom. Their mistake is to measure my work with the yardstick by which they measure their own *discursive* work (one of the marks on which yardstick is that razor-sharp conceptual precision is an essential criterion for judging that a book is to be taken seriously).

...I'll write down my other, more interesting ideas later.

January 3, 2004

Unhappy all of yesterday. Felt as though I was incapable of loving another person, my mind being too *sick*; was certain I'd dislike sex when it finally happened; thought I'd become so contemptuous of mankind one day that 'wormwood' would grow luxuriantly in my soul. Fortunately, as my health slowly returns those prophecies become proportionately less convincing.

Skipping work again today. Sore throat, earache and runny nose.

Nothing's good, nothing's bad, nothing's sad unless we make it so. My death could be tragic or it could be the most trivial incident of the day. Whatever you want it to be. Choose, and give me a destiny.

Jae-eun will stay with me for the lunar new year, which is three days long. I'm looking forward to seeing her. (I'm really starting to *miss* her, believe it or not!) But I wish she hadn't had to lie to her mother.

Cold sores are all over the inside of my mouth. Don't know why. It's a Korea thing—happens to Koreans more than Americans.

Wrote a long, uncharacteristically unpretentious email to Rebecca. We correspond, on average, once a month.

I might never write anything that's an "ornament of the world", and I might never *be* an ornament of the world. If true, that saddens me. I'll have failed at one of the four purposes of my life. But the target to which I pin my fate is no adornment, no (however necessary) superfluity. It has a predominantly utilitarian value. For I'd like to help make possible conditions that would (1) alleviate mass suffering and

(2) allow the educated public to know the pleasures I know. And *more* besides. I would like a future version of myself to experience the pleasure of anticipating his favorite composer's next symphony, his favorite poet's next epic—without at the same time having to be callous toward the misery of a majority of the human race. Utopia, you say? Perhaps. Implausible...but not impossible. [...]

On the other hand, that may all be moonshine. It's likely that mankind will come within a hair's-breadth of destroying itself in a catastrophic war that occurs right around the time when it's reaping the effects of global warming. There's no place for a postmodern intellectual in this scenario. Doesn't matter. I'm not that selfish. What matters is the aftermath of the war. How will our descendants pull their tattered species together? Will the old bloody cycle begin anew, with warlords and city-states vying for dominance? How will the hapless commoners have the energy to *do* anything, knowing that all this has happened a thousand times before? Won't they be *sick unto death* of their toil and pain? Won't they finally feel a kinship with history that no one has felt before? The *intelligentsia* will, but what good are they? So the question still stands: centuries after this war, how will the world look?

I don't know. But I'm getting so depressed thinking about it I have to stop.

January 4

I've been here three and a half months, and I've met no one, male or female, whom I *truly* like. With the possible exception of Jae-eun.

...As I was writing an email to the possible exception, feeling, as I have for three days, that I'm living in some kind of 'limbo', I thought of the inevitable nuclear war, and the tears flowed freely. My problems and mankind's cooperated in convulsing water out of my eyes. No self-pity—don't delude yourselves, you haters-of-me—but just a helpless *awareness* of it all. Merely an appropriate way of experiencing the knowledge that life is worthless.

My room is a cockroach sanctuary. And graveyard.

I didn't study much Korean last week, but tonight I've been making up for that. I'm so disgusted with myself for not being further advanced with this language *by now* that I'm going to study it intensely for weeks. My friends speak passable English, so our conversations are usually in only that language. But no longer. In the past two hours my intuition has been confirmed that I'm able to formulate 'intermediate' sentences if I take five or ten seconds to plan them in advance. It's remarkably satisfying.

If my computer's keyboard had the Korean alphabet on it I'd write half my emails in *Hanguk-mal*.

...Bought cockroach-spray and went on a killing spree. I have killing sprees every night—at 4:00 I turn on the lights, the room is swarming with critters, and I smash as many as possible—but this time it was *systematic*. Must have killed thirty or forty. I also cleaned the room.

One of the boons of my Korea trip is that I don't have to be in America during the campaign season. It always makes me queasy: politicians are almost heroically cynical.

Going to the doctor tomorrow. Don't care about the expense. I want to eat again.

January 5

From what I've read of Howard Dean, he's the first gifted politician in decades to have some integrity. While his opponents—mediocrities like Kerry, Gephardt, Lieberman—play their old political game, saying anything and everything to bash the candidate they know is strongest, even if it means pandering to prejudice and conservative instincts in mainstream America (“When you were asked by *The Concord Monitor* about Osama bin Laden, you said you couldn't prejudge his guilt for September 11th,” Mr. Kerry said, scrunching up his face and turning incredulously to Dr. Dean. “What in the world were you

thinking?""¹), Dean doesn't compromise his convictions, doesn't pretend to be a centrist and doesn't have to twist anyone's words to make him look idiotic. (His answer to Kerry: "As an American, I want to see Osama bin Laden get what he deserves, which is the death penalty. But I was asked that question as a candidate for president of the United States. And a candidate for president of the United States is obligated to stand for the rule of law.") While Gephardt says he's confident he can beat Dean—bullshit and more bullshit—Dean says that *he* (Dean) *isn't* confident of success. He elaborates: self-confidence leads only to laziness. I don't remember a politician ever saying he wasn't confident of success. It's refreshing. Another example (of good versus evil): Dean warned that if he isn't the Democratic nominee, thousands or millions of young people across the nation who support him will not vote in the presidential election. He's absolutely right. But his opponents interpreted that as a threat, ridiculed it, said it proved his ambition is personal gain rather than unity of the party. ("He's threatening to take his followers with him if he loses!", whatever the hell that means.) –How revoltingly hypocritical! If *their* ambition were party unity, they wouldn't be viciously attacking the man who has the best chance against Bush.

Anyhow, Dean will probably win the nomination (if he doesn't flaunt his "ultra-liberalism").

Got medicine for only \$10. It must be some kind of a miracle drug: I've used it once and feel nearly cured.

[...]

Sunday, January 11

Went to the bookstore to meet people. The first attempt was unsuccessful, but the second wasn't. The girl I talked to was...a model for poetry.

Her eye (I'm very fond of handsome eyes)
 Was large and dark, suppressing half its fire
 Until she spoke, then through its soft disguise
 Flash'd an expression more of pride than ire,
 And love than either; and there would arise
 A something in them which was not desire,
 But would have been, perhaps, but for the soul
 Which struggled through and chasten'd down the whole.

Her glossy hair was cluster'd o'er a brow
 Bright with intelligence, and fair and smooth;
 Her eyebrow's shape was like the aerial bow,
 Her cheek all purple with the beam of youth,
 Mounting, at times, to a transparent glow,
 As if her veins ran lightning; she, in sooth,
 Possessed an air and grace by no means common,
 Her stature...*small*—though not a dumpy woman.

Jung-hee is no typical Korean. She's outgoing, self-confident, funny, phenomenal at English, an independent girl who knows nothing of conservatism and is not at all concerned with appearances. The only trait she has in common with her countrywomen is her beauty. During our four hours together we had lunch and drank coffee—and talked, and talked, and talked. She dates only foreigners, incidentally; Korean men

¹ Yeah, it must seem incredible to you, Kerry, who'd *never* say something so honest, sensible, and scornful of public prejudice and patriotism. You'd "*prejudge*" anything if it would get you votes.

she considers bossy. We'll meet for dinner this weekend.

Ji-su happened to see us together, so she called me later to hear the details. I enjoy talking to her. I can say *anything*; she's absolutely without pretense or snobbishness. She's my confessor.

Cleaned my room. Got down on hands and knees and *scrubbed*. To prepare for Jae-eun's arrival.

Bought Korean tapes.

For years I've thought that Nietzsche, in spite of all his 'radicalness' in questions of moral and nonmoral value, wasn't nearly radical enough. Inasmuch as he unquestioningly made judgments about what is good or desirable or "needful" (aphorism 290, *La Gaya Scienza*) he remained a prisoner of conventional ways of thought. In reality, such judgments are always unjustified. Like the belief in truth (but *more* so), they're relics of *animality*. Think about that. Every aesthetic judgment, every moral judgment, every nonmoral judgment of value is ('in the final analysis') *groundless*. How can that knowledge be endured? How can we continue to live while knowing that? Only in one way: suspending the knowledge, 'dancing around it'. Living life in an extended suspension of disbelief. That's one of the themes of my philosophy (such as it is). The spirit of inquiry takes us to a point that can be only *intellectually* appreciated; we're forced to double-back on our trail because truth is unlivable. We can but peer at it from the shore and collect shells as souvenirs.

[...]

January 18

At 2:00 I met a girl who Ji-su had said wanted to go on a blind-date with a foreigner. When I saw her walk into Burger King (our meeting-place), not knowing she was the one, I thought, "Wow. Wouldn't it be wonderful if *she* were the girl?" Then she asked "Are you Chris?" —Donghee (or Lisa) is one of those exquisite beauties I see constantly on the street but assume I'll never meet.

I ate lunch as she...watched...and talked, fortunately. She seems to have been spared the congenital Korean disease of shyness: asked plenty of questions and looked relatively comfortable the whole time. Later we went to a coffee shop, then to her bus stop. [...]

Went to Kyobo bookstore for two hours while waiting to meet Jung-hee for dinner. Read an introduction to *The Brothers Karamazov* that disturbed me so much I finally had to *force* myself to stop thinking about it. Probably you find it peculiar that I call a piece of literary criticism "disturbing", and I can give no reason for my judgment that you'll understand. In itself the introduction was perfectly harmless. Just a thoughtful interpretation of a novel. However, for *me* all forms of critical thought are so difficult, painful and oppressively urgent that I can't engage in them without longing for peace. That's the real reason I haven't read anything since September. In a way my life has been on hold for four months (really nine—since I finished my thesis). I can tolerate this hiatus only because I know that soon, or eventually, it'll end and I'll again be wholly involved with the questions that obsessed Dostoyevsky and Nietzsche. Especially those related to the question "*How should I act?*" Is it 'better' to live for myself or for others?¹ If for others, I must devote myself to them completely; if for myself, I must never do anything for another person that requires self-sacrifice. (I already know my answer to this particular question will involve a compromise, but what compromise would be acceptable to my nature, which needs to do something—*be* something—*anything*, as long as it's—wholeheartedly?)

By the way, if I remarked last year that I. A. Richards' book *Principles of Literary Criticism* is too philosophical (or 'psychological', or whatever I said), I was out of my mind. Or I was looking at an old or

¹ The question is meaningless, but it has to be asked—and answered—because we're human beings. What is the best way to live, and why? The problem has been in the front or the back of my mind for nine years. I know that an attempt to answer it satisfactorily is foredoomed—no answer (even one attacking and 'refuting' the question) will give me a modicum of contentment—but an attempt to *ignore* it would be even *more* ill-fated.

expurgated edition. Today I skimmed a copy, and it was fascinating.

At 6:30 I had dinner with Jung-hee. Slow and uncomfortable at first, but things improved when we left the restaurant to play pool. (*Christ, she's sexy!* Bending over the table wearing her spandex...) Then we walked around aimlessly; then we went to a coffee shop and discussed philosophy, religion, and relations between the sexes until 10:30. That was the best part. Passionate conversation, especially on my side. [...] And then criticisms of religion and the (astonishingly popular) idea that science and religion have two separate mental 'spheres' that are unrelated (and therefore that they don't interfere with each other, and therefore that they're compatible, i.e., that they can both be believed at the same time without the believer's being embroiled in contradictions)—for they make mutually contradictory claims about the nature of the world! How can someone believe that the universe was created in six days and that it was created in m(b)illions of years (or one second, depending on how you look at it)? Either *one* is right or the *other* (or neither)—and even *more* meager (practically non-) defenses by my (barely) religious companion.¹

[...]

Thursday, January 22

Yesterday I still felt sick--and it was cold outside--so Jae-eun and I stayed in my room the whole day. Listened to music most of the time, but also watched two (musical) movies and read philosophy (she Nietzsche, I Hegel--or rather, Hyppolite's commentary on the *Genesis and Structure of Hegel's Phenomenology of Spirit*²). True to form, she spoke about twenty sentences the whole day. Today we wanted to go downtown, but it's so cold we're staying inside again. During both nights we spent hours cuddling and doing all that stuff--not including sex. [...] But my biggest gripe is: How can she write such great emails and be a total mute in person?

At least it doesn't take much to entertain her.

Part 1, chapter 1, section 2, subsection 2 ("The end point of the development of natural consciousness") is *for me* more important than the preceding pages because it contains more information I didn't know, and it tackles problems I have more trouble understanding. Sadly, it's also less comprehensible. Its basic purpose is to explain why "the goal of knowledge is fixed as necessarily as the series of progressions" in the development of consciousness, and why consciousness is impelled constantly to advance to new levels, but in the course of the explanation it touches on other questions. For example, it describes how Kant overcame the problem that "if truth is defined as an accord between subject and object, it is not clear how this accord is ascertainable, since representation cannot step out of itself to give proof of its conformity or nonconformity to its object", namely through some strange conceptual maneuver that has something to do with "transcendental consciousness", so that in the end "the problem of truth is shifted away from the relation between consciousness and its object to the relation between common consciousness and that within common consciousness that goes beyond it--transcendental consciousness." It also tries to explicate Hegel's statement that "consciousness is for itself its own concept; it is therefore immediately the act of exceeding the limited, and, when the limited pertains to it, the act of going beyond itself." Hyppolite: "To say that consciousness is concept of knowledge is to say that it transcends itself, that it is *in-itself* what it must become *for-itself*." "Consciousness is not a thing, a determinate Dasein; it is always beyond itself; it goes beyond, or transcends, itself." In a footnote in the previous section Hyppolite had said "The self...in posing itself in a determinate manner contraposes itself to itself and thus negates itself and transcends itself." And now an extended quotation that will probably mean nothing to anyone who hasn't read the

¹ The idiotic idea is basically an *ad hoc* invention by and for the masses, who recognize the validity of science but don't want to abandon religion.

² An excellent book. After I read it I'll read Kojève's lectures. --I'm returning to intellectual matters. I'm tired of stalling and studying nothing but Korean.

whole passage:¹

Common consciousness goes beyond itself; it transcends itself and becomes transcendental consciousness. But the movement of transcending itself, of going beyond itself, is typical of consciousness as such. Every consciousness is properly more than it thinks it is, and because of this its knowledge divides: it is certainty (subjective) and as such is contraposed to [itself as]² truth (objective). Thus, since it must continually go beyond itself knowledge is disquieted. And this disquiet, which Hegel describes in existential terms, is unassuaged so long as the end point of the process is not reached, an end point set necessarily by the “given” of the problem: “The goal is the point at which knowledge need not go beyond itself, the point at which it discovers itself, and at which concept corresponds to object and object to concept. Hence, the progression toward this goal also has no possible resting place and is not satisfied with stopping prior to the goal.” Consciousness’ knowledge is always knowledge of an object; and if by concept we mean the subjective side of knowledge and by object its objective side, its truth, then knowledge is the movement of self-transcendence which goes from concept to object. But the whole of the *Phenomenology* shows, precisely, that this opposition is reversible. The object is the object *for consciousness*, and the concept is the knowledge of itself, the self-consciousness of knowledge. But this consciousness is deeper than it thinks; it finds the object insufficient, inadequate to it; and we can also say, even more properly, that it is the object which must be identical to the concept. In either case, this discrepancy, present in common consciousness itself, is the heart of the phenomenological development and directs it inexorably toward its goal. Thus, this whole development is characterized by an immanent finality, which the philosopher glimpses. Phenomenology is characterized in relation to ontology (the science of the absolute in-and-for-itself which will first be presented by the *Logic*) precisely by this discrepancy between consciousness and its concept, a discrepancy that is but the requirement of a perpetual transcendence. [In a footnote Hyppolite writes that “there are differences within the logos too, and there is a movement immanent in it, a dialectic different from the phenomenological dialectic. But the differences within the logos are differences ‘in content itself.’”]

(A brief discussion of the respective meanings of ‘death’ for Dasein and for consciousness follows.) Copying all that helped me understand it. But I don’t think I understand what Hyppolite means by “[the self-consciousness of knowledge] finds the object insufficient, inadequate to it; and we can also say, even more properly, that it is the object which must be identical to the concept”--for both statements, and the latter especially, seem obviously wrong. I’m willing to concede that the object of self-conscious knowledge may in some sense be inadequate to the knowledge. After all, the object is a ‘finished’, ‘given’ Dasein and knowledge is a dynamic, self-transcending activity. I’m also willing to concede (for now) that this inadequacy, as well as the ‘anguish of self-transcendence’ inherent in consciousness,³ is what drives consciousness ever forward to new levels of truth and being. But I won’t concede that knowledge *finds* its object inadequate to it. Knowledge blames its torment not on the object but on itself: it never doubts that its goal is to know the truth of the object, and therefore that it *itself* is inadequate rather than the object.⁴ There’s no imperative that the object, which is truth, become identical to consciousness; the imperative--the only *possible* “imperative”, viz. the *conscious* one, consciousness’s own self-imposed imperative--is that consciousness (knowledge) become identical to truth.

Moreover, it’s surely perverse in this context to call the concept the “self-consciousness of knowledge”. That’s the concept of *consciousness*; the relevant concept here is that of the *object* (whatever

¹ I might as well have quoted the whole passage to begin with.

² Translator’s addition. I’m having trouble understanding the *reason for* and the *significance of* the addition.

³ Surely the two ‘inadequacies’ ought to be distinguished.

⁴ (In retrospect, that statement seems foolish. I shouldn’t make claims about what knowledge ‘thinks’ until I’ve followed it through its whole course of development.)

it may be: nature, morality, God, etc.). The “subjective side of knowledge” isn’t self-consciousness; it’s the certainty attached to a particular concept of the object.¹ Sure, the object is for consciousness, but it is also *separate* from consciousness--as is presupposed by the very endeavor of seeking knowledge about it, about something external to knowledge--and its concept mustn’t be confused with consciousness’s. The concept of the object--even knowledge of the object--has (analytically speaking) nothing to do with ‘knowledge of knowledge’; and since the object is what determines the truth of knowledge, self-consciousness is (“analytically”) irrelevant to the truth of any kind of knowledge except that which is *of it* (though of course it’s empirically presupposed and so on).^{2 3}

January 23

Last night we got naked, etc. At one point she asked me what love is, and what the difference between “love” and “like” is; I told her my thoughts and then she confessed her love for me. Her affection showed itself in other, physical ways too (aside from the usual kissing), which I needn’t go into. In the morning we took showers in an inn nearby: the water hasn’t been working in my building for two days.

[...]

In section 3 (“The technique of phenomenological development”), H. begins by explaining in what sense Fichte’s and Schelling’s idealisms are “subjective” and Hegel’s is “objective”: Fichte and Schelling think that “the I always remains occupied with itself”, always reflects on itself. “It discovers itself in the object which it thought it had discovered, but in this way the object disappears.”⁴ The recognition of that disappearance is the endpoint of the development of common consciousness. In short, the first two philosophers (or at least Fichte) emphasize (1) the presence of the I in everything--that the I *is* everything--and (2) the philosophical methodology of focusing not on the object, which strictly speaking doesn’t exist, but on the element of the self-reflection of consciousness which is in all experiences (because the philosopher already knows, before he begins his exposition of the history of consciousness, that recognition of the primacy of self-reflection is the goal of conscious development). Hegel, on the other hand, thinks that in order to be scientific the philosopher must surrender himself completely to the object and its “internal necessity”. He may do no more than impartially observe the self-development of common consciousness; he may *not* ‘externally impose’ his own knowledge of the development’s endpoint on his ‘observations’. He must, in short, be objective. So much for the methodological difference. A long quotation will elaborate on the corresponding ‘substantive’ difference.

It is quite true that [consciousness’s] knowledge of the other is a self-knowledge. But it is no less true that this self-knowledge is a knowledge of the other, a knowledge of the world. Thus, we discover in the various objects of consciousness what consciousness is itself: “The world is the mirror in which we rediscover ourselves.” The point is not to contrapose knowledge of knowledge to

¹ There are two meanings of the word ‘knowledge’ that aren’t distinguished in Hyppolite’s discussion: the (usual) one relating to truth and certainty, and *awareness*. In some spots H. seems to have the first meaning in mind; in others, the second. Therefore I can’t say with certainty that I’m not misinterpreting him by understanding ‘knowledge’ in the first sense. However, eventually--*continually*--the *Phenomenology* has to concern itself with that kind of knowledge, so my remarks aren’t irrelevant.

² You may think that sentence contains a non sequitur or two--I did when rereading it--but it doesn’t. It’s a syllogism. (My mind loves to construct syllogisms unconsciously--and then tends to get confused by them, thinking they don’t make logical sense because the wording is obscure or a few (implied) steps haven’t been written down.)

³ (Practically all of what I wrote was a result of ignorance and misunderstandings.)

⁴ I can never decide whether to place the period inside the quotation marks or outside them. The former looks better, but the second is more sensible (1) when the original text doesn’t contain a period and (2) because only a period *outside* the quotation marks is really an end to *my* sentence, which began outside them and must therefore end outside them.

knowledge of the other but to discover their identity.¹ ...If we wish to conceive consciousness, we must ask what the world is for it, what it gives out as its truth. We shall objectively discover consciousness itself in its object, and we shall read its own history in the history of its objects. Inversely, and here subjective idealism is rejoined, consciousness must discover that that history is its own and that in conceiving its object it conceives itself. At the end of this phenomenology, knowledge of knowledge will not be contraposed to anything else; according to the very evolution of consciousness it will be in effect self-knowledge and knowledge of the object. Since this object, Hegel's absolute, is spirit in its full richness, we can say that it is spirit that knows itself in consciousness, and that consciousness knows itself as spirit. As self-knowledge, it will be not the absolute that is beyond all reflection but the absolute that reflects back on itself. It will thus be subject and no longer merely substance [as it is in Schelling].

Later Hyppolite summarizes Hegel's argument that the object, the in-itself, which for consciousness is truth, is not fixed but changes continually as consciousness tests its knowledge, finds it inadequate and rejects its old ideas for new ones.

When consciousness' knowledge changes, its object also changes. The latter [was] the object of a certain knowledge; this knowledge having become other, the object also becomes other. In testing out its knowledge of what it took as the in-itself, what it posited as being the absolutely true, consciousness discovers the latter to have been *in-itself* only for it. This, precisely, is the *result* of experience: the *negation* of the preceding object and the *appearance* of a new object, which in turn engenders a new knowledge.

That's surely a confusion, however.² The idea of the in-itself is always the same, because it's nothing but the abstract idea of 'truth', of what is. There's nothing in it that can change. 'Nature', 'the absolute', 'God', whatever you want to call it or whatever form it takes in the various disciplines, it's merely the contentless ideal.³ For example, the object of science, the in-itself which doesn't change and which is the truth that scientists throughout history have tried to express, is physical nature. These scientists have constructed models of nature that they have believed to be replicas of reality, and thus reality itself, but from the vantage-point of enlightened hindsight we can see it was a mistake and misunderstanding to call these models 'reality' (i.e. the in-itself), for they were in fact merely models. They were concepts believed to have been 'known'; they were not the object itself. Therefore, when they were rejected the *object* didn't change; *interpretations* of the object changed. It does make some sense to say that if the in-itself is understood in a different way it is a different in-itself, but that's misleading and not entirely true. It's also the *same* in-itself, for it's the same nature. --That applies also to the truth of philosophy, the truth of religion (God), the truth of the social sciences (the way society functions), etc. In short, the *object* isn't negated;⁴ the *meaning* of the object for a particular moment of consciousness is negated.

There are other ambiguities in the discussion, such as that inherent in the word 'truth'. 'Truth' can refer both to the thing itself and to a true interpretation of it. (That ambiguity is more relevant than you might think.)

¹ Schelling recognized this identity, but in his hands it had an artificial and unconvincing form.

² (The reason I wrote so much about this "confusion" is that I think Hegel could use it to argue that there is no fixed in-itself or in-themselves separate from consciousness. If I'm wrong about his intention, and if he means only that the in-itself has a different *meaning* for successive stages of consciousness--and that this fact has implications for the growth and self-understanding of consciousness, etc.--then what I wrote in the following paragraph doesn't matter.)

³ To say that more clearly: the truth has content, but until we discover that content the ideal of truth is effectively 'contentless' for us.

⁴ Actually, in the case of religion it is: by atheists. For them, religious truth is the denial of religious truth (i.e., the denial of religion).

January 24

I'll backtrack in Hyppolite's book and comment on section 1, "The problem of knowledge". According to Hegel, "philosophy is not a logic, an organon, which, before knowledge, deals with the instrument of knowledge". It is a science of the absolute: it ought not to remain forever in subjectivism by "halting at the point of reflection, at the knowledge of knowledge", as Kant and Fichte did. "It is necessary to pass beyond the critical point of view and, as with Schelling, to start straight off with the absolute identity of the subjective and the objective in knowledge. The knowledge of this identity is primary and it constitutes the basis of all true philosophic knowledge." Hegel also argues that any philosophy which treats knowledge (or consciousness) as a medium through which truth reaches us is condemned to relativism, "for if knowledge is an instrument, [(1)] it modifies the object to be known and fails to present it to us in its purity, [and (2)] the subject and the object are separate. The absolute would then be distinct from knowledge. The absolute could not be self-knowledge, nor could knowledge be knowledge of the absolute."

In Schelling, phenomenal knowledge is cut off from absolute knowledge. He doesn't explain how it's possible to have the former once you have the latter. To avoid this dualism--and also to avoid the arbitrariness of a philosophy that begins abruptly with absolute knowledge, "rejecting different positions and declaring that we wish to know nothing about them"--Hegel returns to the point of view of common consciousness, "which assumes the distinction between subject and object", and tries to show how it leads to absolute knowledge. "Phenomenal knowledge will be the knowledge which the absolute gradually has of itself."

I'm unclear on how Hegel reconciles his statement that a philosopher must begin with the identity of the subjective and the objective with his statement that a philosopher must *not* begin with that identity but rather with the knowledge of common consciousness, which assumes a dualism. Presumably he means that the philosopher already knows the endpoint of consciousness's development and has that endpoint in mind when he retraces consciousness's history. But then another question comes to mind: how has the philosopher arrived at his knowledge of the identity of subject and object? He can't begin his phenomenological description (history) of the absolute without first knowing that the absolute is an identity, but (according to Hegel's own account) he can't arrive at that knowledge without first experiencing all the stages of consciousness. Maybe Hegel would brush aside the question by changing the 'he' in that sentence to 'spirit' and declaring that spirit already *has* gone through all stages of consciousness (the proof of which is precisely that it (read: Hegel) has become aware of the absolute identity at its heart), but this is a specious defense, for, again, it presupposes what hasn't been established yet, viz. that at least half of the absolute's nature is *subject* (which subjecthood is necessary in order for Hegel to be what his defense presumes him to be, namely the voice of the absolute). In other words, Hegel is caught in a vicious circle. He can't make the leap from the perspective of his own isolated individuality to that of spirit without presupposing that it's actually *spirit* that is making the leap (a less self-conscious spirit to a more self-conscious spirit). He postulates and describes the absolute, and then he says that he was able to do so because the absolute was speaking through him (i.e., because the absolute's nature was as he described it). But that's a *petitio principii*. The only other defense I can imagine he'd give is that while *spirit* must pass through all stages of consciousness to become aware of its essence, the philosopher can arrive at that knowledge in a different way. But how? As far as I can tell, Hegel doesn't explain the origin of that knowledge, which means he doesn't provide a satisfactory explanation of why he's justified in starting straight off with the identity of subject and object. (What does it mean to say that that knowledge is "primary", anyway?)

By the way, in the course of writing that paragraph I lost my train of thought about thirty times, so I wouldn't be surprised if my original intentions were different from my final ones.¹

¹ I think that in the beginning I wanted only to write the last sentence (not the one in parentheses), but that somewhere between "But then another question comes to mind..." and "He can't begin his phenomenological description..." my intentions were garbled and changed.

Sunday, January 25

“*The spirit is history* for Hegel—this is a fundamental thesis identical to the thesis that *the absolute is subject*—but organic nature has no history.” In nature, life repeats itself without really developing itself; it doesn’t express itself in its history. It isn’t “a self-sufficient system of figures [or stages]”. Spirit, on the other hand, “has a past which it internalizes and a future which it projects ahead of itself because it must become for-itself what it is in-itself”.¹ However, the *Phenomenology* isn’t a history of the world, nor a philosophy of history. Nor is it, for that matter, entirely a record of temporal stages. For example, the three moments of consciousness, self-consciousness and reason are not a succession; “they are abstractions contrived from within the whole of spirit and studied in their separate development. Only the specific forms of these moments—sensuous certainty, perception, understanding, etc., which represent a concrete totality—can be considered to be successive within the moment of which they are a part.” Thus the *Phenomenology* isn’t a philosophy of history. However, in the chapters on spirit and religion there’s a much closer relation to world history than in the preceding chapters, which were concerned only with abstractions of the spirit. In these later chapters “the development of the spirit seems to coincide with a real historical development”, from the ancient polis to the French Revolution, from natural religion to revealed religion, stages which are “themselves real spirits, authentic real entities”, as the prior *abstractions* weren’t.

[...]

It’s so exciting to read philosophy again! I’m in heaven! From now on...the cramming-of-knowledge-into-my-head will brook no interruption. (I’m 23; it’s time I entered the ranks of the knowledgeable.)

Here’s a thought-provoking passage from the preface to Hegel’s book:

The specific individual must pass through the content of the stages of the formation of universal spirit, but as figures already unseated by spirit, as stages of a way already traced and flattened out. Thus, we see that in the sphere of knowledge what absorbed adult minds in earlier ages is now reduced to something familiar, to school exercises, even to children’s games. In pedagogical progress we see projected a sketch of the history of universal culture.

The individual contains history within himself; his task is to rediscover it, to ‘remember’ it. Hyppolite:

Thus there is a certain relation between phenomenology and the philosophy of history. Phenomenology is the concrete, explicit development and formation of the individual, the rise of his finite self to absolute self. But that elevation is possible only through the use of the moments of world history, moments which are immanent in that individual consciousness.Hegel seems to set a double task for himself [in the *Phenomenology*]. On the one hand, he wishes to introduce empirical consciousness to absolute knowledge....on the other hand, he wishes to raise the *individual I* to the *human I*...the abstractly specific I to the I that encompasses within it the whole spirit of its time.When consciousness progresses from one experience to the next and enlarges its horizons, the individual rises to humanity and at the same time humanity becomes self-conscious. Spirit becomes the self-consciousness of spirit.

When the individual is raised to the consciousness of spirit, spirit becomes self-consciousness in the individual. (—A paraphrase of Hyppolite.) That’s where spirit and individual meet, why each is necessary to the other. What takes place in individual consciousnesses is what allows spirit to ascend to absolute knowledge, and (world) spirit itself is not only an essential formative influence on the individual but also

¹ This is as good a place as any to note that the experiencing consciousness forgets the experiences that led to its present one (which is why its process of acquiring self-knowledge is so long and difficult). Only at the end of its history does it recollect them.

provides him with the way to become a universally human being. (To say it again: “absolute knowledge is not accessible to individual consciousness unless that consciousness becomes consciousness of the spirit of its times”.)

Incidentally, it’s now apparent that Hegel would say he *has* experienced all the stages of consciousness, for they’re implicit within him, and that’s why he’s able to know the nature of the absolute. But as I said last night, that argument seems circular. (Maybe I’m wrong, but I’m not about to rethink all that shit.¹)

It’s perhaps superfluous to note that in conceiving absolute knowledge in the way he did, Hegel was effectively translating the traits of modern society into philosophy. (1) Absolute knowledge—spirit’s self-consciousness—is achieved in an age of which extreme cultural self-consciousness is one of the defining characteristics. (2) As absolute knowledge “transcends temporal development, surmounts time itself”, so it seems to us that real, *creative* cultural development is a thing of the past, that historical time has come to an end. (3) Et cetera.

I haven’t the faintest idea either *how* or *what it means to say that* consciousness can “surmount the continuous call to transcend itself, which is essential to it, and coincide absolutely with its truth while that truth becomes self-certainty”. How can it overcome its essence? Doesn’t it then cease to be consciousness?

Another problem is that if the route of spirit is littered with contingencies, how can it be called a science? One answer is that offered by Kroner:

The *Phenomenology* appears as a science because from the route of the formation of individuality and historically conditioned consciousness it extracts the moments by means of which that path is simultaneously the path of the formation of consciousness to science, that is, the path through which consciousness becomes universal and rises above every conditioned situation.

In other words, Hegel ignores the contingencies. –Not a wholly satisfying answer.

Section 4 of the second chapter ends with an obscure discussion of Hegel’s attempt to “gather up the universal and the particular into spiritual individuality”, to show how they are united in consciousness, which is in fact “the unity of these two moments” (since in opposing itself it is universal²). Hyppolite follows Hegel in flinging around terms like “absolute consciousness”, “universal consciousness”, “individual consciousness”, “particular consciousness”, “abstractly universal consciousness”, “abstractly individual consciousness”... My conclusion: If you eat horseshit, you’re halfway down the road to becoming a Hegelian. Now all you have to do is excrete it.

Much of chapter 3 (“The structure of the *Phenomenology*”) is concerned with answering the question of what the relation is between Hegel’s book and the rest of his system. Hyppolite concludes that the *Phenomenology* of 1807 is an introduction to the system (containing both a phenomenology of consciousness (in the first half) and a phenomenology of spirit (in the second)), but that in its revised and shortened form³ in the *Encyclopedia* it’s a specific moment in the development of the philosophy of spirit (viz., the subjective—phenomenological—moment, as opposed to the moments of objective spirit and absolute spirit). Nonetheless, Hyppolite believes that the *whole* development of spirit is in effect a phenomenology, for in all three moments spirit appears to itself in one form or another (as consciousness, as history and as spirit-in-and-for-itself).

H. provides a useful “schematic account” of the final system that I’ll summarize. The three basic moments are logic, nature and spirit. “But subjective spirit itself is at first nature; it is the soul which does not yet distinguish anything about itself and which for us is only the reflection of events in the world, events which it carries within itself. This soul is spirit *in-itself*; it is not yet spirit *for-itself*. In order to become for-itself it must become consciousness.” When this happens it becomes aware of an other, an object, which it

¹ There’s no need to, anyway. Hegel’s defense can be that his *system* is the proof of his knowledge. In other words: ‘Read the system, and then decide if you agree with me.’

² Whatever that means.

³ The last three chapters are taken out.

considers the truth (so that it is no longer merely self-certainty). Thus begins the development of consciousness (subjective spirit), which is propelled both from the latter's self-transcendence and from its confrontations with the other (which are themselves possible and necessary because of consciousness' self-transcendence). This quotation summarizes the development:

The stages of [the ascent of the I] are consciousness that is consciousness of an object (the object is a general other), self-consciousness (in which the object is the I), and, finally, reason (the unity of consciousness and self-consciousness in which the object is I as well as object). ... Reason is the concept of spirit; truth which knows itself, which is no longer separated from self-certainty, is spirit in-and-for-itself.

This spirit, this unity of soul and consciousness, is in turn the subject of a psychology that leads to objective spirit, to spirit that is no longer merely internal but that has become a spiritual world existing in the shape of moral and political institutions, of peoples and states, of world history. Finally, the unity of subjective spirit and objective spirit is absolute spirit, revealing itself as art, religion, and philosophy.

The end of the chapter is a short outline of the *Phenomenology*.

January 26

Sensuous certainty. I've always wondered what the "concept" is that Hegel loves to refer to. Hyppolite has finally enlightened me:¹ it is "life" or "self-consciousness". "[The concept is] nothing other than the subject, that which is only by virtue of self-development, opposing itself to itself and rediscovering itself in that opposition."

Sensuous consciousness is immediate knowledge, knowledge of the immediate object (which is being, "or the universal opposed to determinateness or to specificity"²). In this consciousness, certainty is equal to objective truth—an equality that will also be the end of conscious development. "Whereas in sensuous certainty the immediate is, in the last chapter it has come to be what it is: it has actualized itself through an internal mediation.³ In the first chapter, truth and certainty are immediately equal; in the last chapter, certainty, i.e., subjectivity, has posed itself in being, posed itself as truth, and truth, i.e., objectivity, has shown itself to be certainty, self-consciousness. Identity is no longer immediate; it comes to be by means of the whole prior development. The true is then posed for consciousness as subject, and consciousness itself is this true... Thus we can consider the sensuous certainty with which consciousness starts as at once its highest truth and its greatest error."

"Since sensuous certainty rejects any mediation or abstraction that might alter its object", it doesn't recognize diversity in the external world. It can't say that this table is black, because that would be to introduce qualities, "which presuppose comparisons and words and thus introduce mediation into knowledge". Such concepts are abstractions, i.e. negations,⁴ for "night is what is not this or that particular night". The concept is night in general rather than *this* night; it stands "not only for what I experience immediately but also for other nights", and is thus forbidden in sensuous certainty. Hence almost all of language is impermissible in sensuous consciousness. Only sentences like 'It is', 'Here is', can be uttered.

Immediately after stating that such sentences are possible, Hyppolite/Hegel says that sensuous

¹ I suppose Findlay has an explanation of it, but I've forgotten everything in his book.

² Determinateness will be introduced with perception, when "the object becomes the thing, tied to its properties, the universal combined with the particular."

³ Sensuous certainty is an objective knowledge; its truth is the (certainty of the) object. The immediate actualizes itself when it realizes that it is self-consciousness, that truth is not the object but self-consciousness. (The object isn't the truly immediate, though sensuous consciousness thinks it is; self-consciousness is the immediate.)

⁴ Sensuous certainty is only an affirmation, so every kind of negation is foreign to it.

certainty is ineffable, on account of the fact that if it names its object it introduces a mediation. There is no contradiction between their statements, because the sentences of sensuous consciousness contain no names and are thus not meaningful. The following quotation from Hegel expresses basically the same thought (that in using words like ‘this’ and ‘it’ to express itself sensuous certainty is merely “voicing” its object rather than “portraying” it (naming it), which means it isn’t saying anything meaningful):

Assuredly we do not *portray* the universal this, or being in general, but we *voice* the universal. In other words, we do not at all speak in the same way that we *intend* in sensuous certainty. But, as we see, language is truer. It allows us to go so far as immediately to refute our *intention*, and since the universal is the true of sensuous certainty and language expresses only the true [?], it is certainly impossible for us to name a sensuous being that we intend.

Anyway, the point is that for Hegel the ineffability of this certainty shows its impotence. “That which is ineffable is only aimed at but never reached. What I experience but am unable to express in any way has no truth. Language is truer.” Hence sensuous certainty can only *experience* the object in its “ineffable uniqueness”. The object is universal, abstract being, but it’s also a specificity¹—though not an *authentic* specificity (which is the *negation of negation*, i.e. the concept). It’s only an immediate, positive, indeterminate specificity identical to the universal (while opposing it).

By saying about something only that it is an actually real thing, an external object, we say only what is most universal and we thereby state the object’s equality with everything much more than its difference. If I say “a specific thing”, I express it rather as completely universal, for every thing is a specific thing.

The most precise—‘now’, ‘here’—is also the most vague, because it can designate any moment in time and any point in space. Therefore immediate being is everything and nothing, which means it’s negation,² which means it’s identical to nothingness. “The positing of being refutes itself.”

The essential point is that “the specific aimed at by sensuous certainty is in fact its own contrary: it is the most abstract universal. To be sure, consciousness aims at something else, but it cannot say what it aims at, and it therefore fails to reach it.” Implicit in all this is a criticism of mysticism—any philosophy that tries to bring us back to pure being—which “can give no proofs and cannot even test itself lest it give up its immediateness”. It feels infinitely profound to itself, but in fact it’s infinitely superficial.

However, all these descriptions of sensuous consciousness are from a perspective outside of it. “It is essential that this consciousness itself discover the poverty beneath its apparent richness” in order for it to have its own internal dialectic. How does it do this? Well, somehow—I’m not sure how—it becomes aware of the distinction within it between knowledge and object, and of the requirement to determine the essence of its knowledge. Once this distinction between subject and object is known and consciousness recognizes that it has certainty only through the mediation of an other—while that other is in certainty through the mediation of *it*—it’s inevitable that it will direct itself sometimes toward the object (which it then considers essential) and sometimes toward itself. The first moment is that in which the object is considered essential; the second is when the subject is; and the third is when they both are, together. The third leads to the next stage, perception.

In the first moment, being is privileged over knowledge because of its permanence. Like Parmenides’ being, it is necessary. “It is because it is.”³ “Sensuous knowledge experiences its own inconstancy with respect to being”, but an analysis of this inconstancy tells consciousness that being is its essential truth only by “the artifice of negation”, and therefore that, rather than being immediate existence,

¹ After all, for sensuous certainty it’s *one thing* (supposedly concrete but not really), albeit *everything* (and nothing, since it has none of the determinations that ‘real’ objects do and is thus purely abstract).

² “...rather than merely positing, as was affirmed at the beginning.”

³ Uhh....(See YHWH’s “I am that I am!”)

being is the abstraction we've already seen it to be. Hegel examines the concepts 'here', 'now' and 'this' in presumably the same way that sensuous consciousness does. (—First a defense of using terms like 'night' and 'tree' in the following exposition, terms which are outside the vocabulary of sensuous consciousness. Hegel's justification is that... 'well, goddamn it, I *have* to use them, otherwise I can't *get* anywhere!' While s.c. can't use those words, it can be aware of what they designate, which is all that matters.) Briefly stated, Hegel's conclusion is that the now, the here and the this are different from themselves, i.e. that negation lies within them. This is because they perpetually change. In one moment the now is nighttime, in another it's daytime; the here is a tree and then (when you turn around) it's a house; the this is a tree, and then a house. Hence the now and the here, which are the two aspects of being, are not existents. They are abstractions, negations—of, for example (in the temporal sphere), day and night (for the now "is neither night nor day, and yet it can be night as well as day"). At this point we encounter the first definition of the universal: "an entity which *is* through the mediation of negation, which is neither this nor that but can be equally this or that, [is] a universal". Thus the universal is the true of sensuous certainty. This truth is indeed being (and universal space and time), but being isn't the immediate given it claimed to be. It *is* because something else is *not*.

So, my friends, we have seen the miraculous take place: specificity has transformed itself into its opposite, universality. Quality (which existed in the "ineffableness of the sensuous this") has been negated, and what remains is the abstract here and the abstract now, i.e. a dialectic of *quantity*, of heres and nows which are identical but different.

In the second moment consciousness reverses its first hypothesis. *Knowledge* is now essential. There is being because, and insofar as, I have knowledge of it. "Sensuous consciousness expects to preserve its immediateness by abandoning the dogmatism of being for a subjective phenomenalism: 'the strength of [sensuous certainty's] truth is now found in the I, in the immediateness of my sight, my hearing, etc.' The 'now is night' no longer means the immediate being-in-itself of night but its being-for-me. Truth is what I experience immediately, insofar as I experience it." (Protagoras) Of course, this position is doomed, too. It succumbs to a dialectic similar to that which put an end to the dogmatism of being. If truth lies in the I, which I does it lie in? 'I see a *tree* here, but you see a *house*.' "Each one of these truths is swallowed up in turn by the other; what remains is no longer this I, unique and ineffable, but the universal I which with regard to the subject matches the universal this, now, and here." "I indeed intend a specific I, but I can no more say what I intend about this I than I can say what I mean about the now and the here." Similarly, each I thinks it's unique, but in fact "when I say I, this specific I", I say every other I.¹ In this way my specificity becomes universality.² Although this dialectic may not seem to take us beyond the point reached by the dialectic with regard to the object, it does: "between the individual I and the universal I there is a deeper tie than in the case of the spatiotemporal object. There is not so much a juxtaposition between the universal and the specific [as there was between the universal and the specific *being*] as a more intimate interpenetration, and this interpenetration is the concrete truth toward which we are aiming."

You may be wondering, as I was before I had read the whole section, why individuals in the second moment don't conclude that other individuals opposing them are mere appearance, along with the house and the tree and everything else. The reason is that this resolve fails before the "solidity of the other I". They all oppose and limit themselves in each other, which is an important step forward. The mediation between the universal and the specific is no longer 'lifeless' (a mere juxtaposition), as it is in the object, but vital.

To summarize, both the object and the I began in immediacy and ended in abstract universality. All we can do now is return to the starting-point, i.e. "pose the relation of knowledge and its object without

¹ See my thesis, the discussion of Parfit's thought-experiment in the chapter on time. I cannot be defined, because any definition of me would define all other selves as well. (Apparently Aristotle said something similar, though not identical.)

² Another way is that "each I says the same"—that it's alone and unique. If we're all saying the same thing, we're all, sort of, one. Incidentally, "the interaction of specific I's at this stage of consciousness prefigures a higher dialectic, that of the unity of specific I's in the universal I."

trying to distinguish which of them is essential and which inessential. The essence is only the unity of this simple relation: ‘The now is day (and I know it as day)’. I refuse to leave this specific certainty and to consider another now or another self.” What is perceived is neither the work of the object nor the work of the subject but a result of the interaction of both. By this means mediation enters sensuous certainty; it is no longer something outside of it. Another mediation is introduced by temporality, into the very heart of the “claimed” immediate: “We are shown the now, this specific now. But now, when it is shown, it has already ceased to be; the now which is, is immediately other than the now that was shown, and we see that the now is precisely what no longer is when it is.” In other words, “what is posed no longer is as soon as it is posed, yet in its very disappearance it still is.” This is expressed in the following dialectic:

1. I pose the now as truth, and I negate it; it no longer is;
2. I pose as truth that it is not, that it has been;
3. In a negation of the negation, I negate this second truth [because now I’m aware of a new now], which apparently brings me back to the first truth.

“Apparently”, but not really. The first truth is on a higher level now, a more ‘self-reflective’ level. I’m aware of the second and third truths now, so rather than returning to the naïve position of the first I become aware of the multiplicity of nows in the now that always is (the present). “From this point on, we are dealing not with a unique and ineffable now or here but with a now or here that includes mediation within itself, that is a thing including both the unity of universality and the multiplicity of specific terms. ...the object is a *thing* with *multiple* properties. ...What is henceforth posed is multiplicity in the unity of being, or being that has negation within it; it is multiplicity in the I, or the I that includes negation. Such is particularity, the second moment of the concept.”

Tuesday, January 27

I’ll meet Lisa on Saturday.

If I had more free time I’d meet friends more often. But my work schedule and my sleep schedule are so unusual they get in the way of everything. Nevertheless, I’ll have lunch with Jenny tomorrow, for the first time in weeks.

In Korean culture, the ideal woman is beautiful, skinny, obedient and ‘*cute*’. Cuteness is important. A cute voice, cute mannerisms, cute shyness, cute emotional immaturity, cute everything. (The 25-year-olds act like the 15-year-olds.)

Perception. “To perceive is no longer to remain content with the ineffable of sensuous certainty but to move beyond this sensuousness and to reach what Hegel calls the universal.” The (‘thingness’ of the) object is the universal, for it can be many things—have many attributes—without actually *being* them. It is not its attributes, but at the same time it *is* its attributes, as this table is brown, large, etc. Therefore, “the act of indicating [an object] effects a mediation: it culminates in a *simple* term which, however, encloses a *multiplicity*.” The simple term is the ‘here’ or ‘now’ or ‘this’; the multiplicity is the properties that coexist in it. “They participate in universality because they express thingness”; thus, they are themselves universals, but determinate universals (particulars), for they are negations. White negates (excludes) black, large negates small. Thingness is simply the ‘substance’ in which they exist. –Which brings us to another point. We don’t perceive only thingness; we perceive also *this* thing. *This* thing is a manifestation of the determination (in thought) of “pure uniqueness”, a determination which is manifested “neither by substance in general nor by attributes, but rather by its mode insofar as it is the negation of the negation”. I’m not sure what the first negation is that it’s negating,¹ nor what the precise signification of the word ‘mode’ is, but

¹ Maybe it’s the determinate universal(s) (the attribute(s), the particular(s)). But that doesn’t make any sense. What would it mean to say that the determinate universal is a negation of the universal substance, and that the specific is a negation of the determinate universal? For neither of the two negations would “exclude” the preceding term. They all

the point is that this negation-of-negation, which is “negation bearing on itself, [expresses] the activity of the substance as an internal activity, as subject. Thingness is determinate in-and-for-itself only as a unique thing... which excludes from itself everything else...” In short, negation (as determinateness) is united with the immediateness of being.

The case is similar with regard to the perceiving consciousness. The soul is conceived as an aggregate of faculties (such as memory and imagination), as the object is composed of attributes. Refutable fictions are invented to explain the coexistence of the soul’s qualities in one place.

Common consciousness believes that in perception there is a synthesis of the object’s diversity and that the object itself is a similar, “congealed” synthesis. Now, perceiving consciousness considers the object to be truth and itself to be inessential. Moreover, it thinks that the criterion of truth is self-identity, “the equality of the object with itself and the exclusion from it of any otherness”. The object must be noncontradictory. If there *is* a contradiction somewhere, it must be in consciousness. Several contradictions are immediately obvious. The first is that the object is simultaneously *one* and *infinitely divisible*. (On the one hand, it must be a simple; on the other hand, any simple shows itself to be a composite.) The second contradiction is one we’ve already encountered (albeit implicitly), viz. that the perceived object is a “mingling” of both sensuousness and abstraction—for properties are abstract, in that they extend beyond the unique thing. ‘Whiteness’ is a universal; thus in judging an object ‘white’ we go beyond the object. The third contradiction is another we’ve already implicitly seen: how can a variety of properties coexist in one thing?

Either the thing [a salt crystal, in this case] is one and properties merge in it, or it is multiple: white, and also savory, and also cubical. In the first case, the properties are no longer each for-itself in their indifferent universality but are interpenetrable, and they reciprocally negate each other; in the second case, we would be dealing with a composite. A number of “matters”—caloric, chemical, electrical—are grouped in this particular enclosure and are there juxtaposed. Yet how can they be next to each other? They must occupy each other’s interstices. [The perceiving consciousness thinks that each piece of matter is infinitely small. But in that case] the unique thing is lost and we return to objective essence, a dust cloud made up of parts that are not the parts of anything and that are themselves infinitely divisible into parts.¹ ...Hence [perception] considers [sensuous properties] in the medium of the entity without bringing itself either to merge them or to distinguish them absolutely. It is left, then, with properties taken each for itself—the whiteness, the alkalinity, the cubical shape of the salt. But considered without their medium of thingness and without the unity of the thing, these properties are no longer properties since they are no longer inherent in a medium, and they are not determinate since they do not exclude each other. Perceiving consciousness... returns to a subjectivism of the second degree. This crystal is alkaline only on my tongue and is white only to my eyes. [The reason why I’m not forced by this subjectivism back into the dialectic within sensuous certainty that leads to perception is that] this subjectivism allows me to become aware in myself of my reflection in coming to know the thing; it will lead me to a critical position [viz. the distinction between thing-in-itself and thing-for-us]. The thing will always be the real thing, equal to itself, but the knowledge I gain of it will be disturbed by my reflection within myself. [My perception will be considered not as a pure apprehension but as an apprehension that changes the object, and thus consciousness will be considered illusory.] But consciousness is mistaken if it imagines that truth thus simply falls outside it. Since consciousness itself determines the respective proportions of its reflection and of objectivity, it unknowingly becomes the very

coexist; they’re not contradictory, as white and black are. It’s far more justifiable to think that the first negation is the universal substance, not only because that’s a negation of the ineffable of sensuous certainty but also because the specific really would, in a way, be a negation of *it*.

¹ Hyppolite notes that this contradiction is unavoidable because the sensuous property with which we start is both determinate and universal. In its determinateness “it is specific and excludes otherness”, and in its universality it is “firmly anchored in thingness....it is substance.”

measure of truth. Our starting point, according to which the perceived object was the essence and the perceiving consciousness the inessential, is already transcended, if not for consciousness which effects this critical discernment, then at least for us who philosophize. Do we not already know that the universal, the principle of all perceiving consciousness, is as much the I as it is being, and that the rigidity of the thing that sets itself up over against consciousness is merely the projection of the I outside itself?

I quote all that because it's important and it's relatively easy to understand.

"Consciousness now undergoes a double experience": first it appears to itself as the passive milieu in which properties exist. The thing-in-itself is without variety; it creates variety in us because we have multiple senses by which to perceive it. "The coherence of the thing is saved in this way, and its truth of being an entity is preserved." However, this theory doesn't account for the possibility of distinguishing between objects, because objects are distinguishable only insofar as they intrinsically have particular properties.¹ Thus we are led to the second experience, in which consciousness attributes diversity to the object and thinks that it itself is what gives the object unity. "The thing-in-itself is white, cubical, savory, etc. ... its unity is created by an act of the spirit, uniform in all its perceptions. ... To avoid contradiction in the object we say that the thing is white insofar as it is not cubical and is not savory insofar as it is white." Hence it ceases to be an entity and is instead a collection of properties, or rather the 'also' that allows them to coexist² (the "surface that envelops them").

Reflecting on its double experience, consciousness realizes that the object is different for-us from what it is for-itself—in that "it is at times single when it appears multiple, at times multiple when it appears single"—and that it therefore contains within itself the contradiction of "being simultaneously for-itself and for-an-other" (and of being *different* for-itself from what it is for-an-other).

This new opposition of form (being-for-itself, being-for-an-other) replaces the opposition of content (single being, multiple being). But can we not still avoid it and keep truth pure of any contradiction by saving the *coherence* of the thing? The thing, as we have said, is at once for-itself and for-an-other—two diverse beings—and it is different for-itself from what it is for-an-other. That is, the thing becomes thinkable as a multitude of things or of monads which exclude contradiction from themselves by assigning it to the intercourse among them. In this manner, monism becomes pluralism. ... [Each monad is a] unity within itself in its own determinations, a determinateness which is suitable only to it and which constitutes its essence. No doubt, there is also a diversity in it, for how could it be determinate without that diversity which is its being-for-an-other? But this diversity is inessential to it and is its exteriority. Contradiction is indeed avoided by this distinction between *essential* and *inessential*, an inessential that is always necessary (which is a new, concealed contradiction). But contradiction reappears in its definitive form, for this thing which is equal to itself and is for-itself is such only in its absolute difference from every other.³ And this difference implies a relation with other things, a relation which is the cessation of its being-for-itself: "It is precisely by means of its absolute character and its opposition that the thing relates to others and is essentially only this process of relating. But this relation is the negation of its independence, and the thing collapses due to its own essential property." Thanks to this dialectic we proceed from *thing* to *relation*, from the thingism of perception to the relativity of understanding. ... What disappear in this movement [from thing to relation] are the artifices that common consciousness uses to preserve the single and independent thing: the distinction between essential and inessential, the separation of being-for-itself and being-for-an-other. "From one and

¹ "If the thing is indeed determinate it is because it is determinate *within itself* and this complete determinateness is not possible without an intrinsic variety."

² 'It is white; it is *also* cubical.'

³ That is, the essence of the monad is its determinateness, its separation from other monads, which means that its being-for-itself is its being-for-an-other (i.e., that its essence is a relation).

the same point of view,” Hegel writes, “the object is the opposite of itself, for-itself insofar as it is for-an-other, for-an-other insofar as it is for-itself.”...

...Perceiving consciousness has been transcended. Since the thing is contradiction, it dissolves as thing equal to itself and becomes phenomenon. The mingling of the sensuous and thought, which the sensuous property constitutes, has decomposed into its extremes, the “also” and the “entity”, being-for-an-other and being-for-itself. And these extremes have become identified with each other in a universal that is unconditioned (by the sensuous). This universal is the new object of consciousness, which has become understanding.

I imagine it’s easier for me to understand all this than it is for you, since I have the book in front of me and you have only my short summary. Nonetheless, I don’t understand *all* of it. I’m uncertain of the exact nature of the monad. How can its essence be its uniqueness? What does that *mean*? Aristotle said, I think rightly, that an object’s uniqueness can’t be part of its definition. –I’m beset by scores of confusions, but it’s late and I’m tired, so good-night.

January 29

Understanding. Perceiving consciousness failed because it was unable to reconcile the two moments of being-for-an-other and being-for-itself. For this consciousness, the moment of thingness expressing itself in properties and the moment of the unique thing *excluding* properties were contradictory. Understanding, on the other hand, sees their unity as what constitutes the unconditionality of the universal, and it has made their “transition into each other” (their connection), in which they “transcend each other”, an object of reflection, whereas in the previous stage it was merely the *movement* of a consciousness that fluctuated back and forth between the two moments. Nevertheless, even for understanding this transition still takes not a subjective but an objective form, viz. *force*. One essential difference between force and the ‘thing’ is that the latter has no link to its properties, while force “makes sense only insofar as it manifests itself and poses what is inside itself outside itself”. Hence it’s a unity of being-for-itself and being-for-an-other--and is thus the *concept*, though in an un-self-conscious and objective form.

Understanding first believes that there are two moments of force: “force as externalization or expansion of itself into the realm of differences, and force ‘driven back on itself’, or force proper.” The first is its reality, the second is its possibility. However, these differences exist only in consciousness; force is actually a unity, identical to its manifestations. Therefore we’re still dealing with its mere *concept* rather than its reality. In reality, the independent moments of force, which are contrary to its essence, “transcend” (*aufheben*) themselves in accordance with the following dialectic: force is initially posed as the infinite expansion of itself, “but in order to exist as force driven back on itself [as possibility], an other must make it turn in upon itself...and [contrariwise] in order for it to exist as externality it must be called forth by an other”, which can only be another force. Therefore each force presupposes another that opposes it,¹ and “to every attraction corresponds a repulsion”. But that wording is misleading: these forces are in fact absolutely interdependent, such that they are a unity and exist only in their contact. Since the phenomenal world is thus an “interplay of forces”, it is an “incessant exchange of determinations, a perpetual instability whose unity and consistency lie only in thought”. --Hyppolite emphasizes that the real significance of this dialectic, which to him seems “empty and forced,” is that it shows us the dialectic of intelligence in the dialectic of the real. Later we’ll see a similar interplay of self-consciousnesses, and *then* the dialectic will be more profound and convincing.-- Anyhow, what we have now is an unstable phenomenal world the truth of which is apparently ‘internal’ to it.

This truth is the universal, but as it stands it is a kind of ‘nothingness’. For it is the beyond of consciousness, and we can know nothing about it. However, because it’s posed through the mediation of the phenomenon, “the phenomenon is its essence and, indeed, its fulfillment. The extrasensuous [the interior

¹ That’s also how the matter of the universe is prevented from coagulating at a single point.

of things] is the sensuous and the perceived posed as they truly are. But [their truth] is to be phenomenon. Hence the extrasensuous is the phenomenon qua phenomenon.”¹

[We thereby] see the world as it genuinely is--as the movement by which it continuously disappears and negates itself. What subsists throughout this instability of the phenomenon, throughout the continuous exchange of its moments, is indeed difference, but difference taken up into thought and become universal, that is, the *law* of the phenomenon. In this way, the universal is no longer the nothingness beyond the phenomenon; it carries difference, or mediation, within itself, and this difference at the heart of this universal is difference become equal to itself, the simple image of the phenomenon. This difference is expressed in law as the “invariable image of the ever-unstable phenomenon.” The extrasensuous world is thus a calm realm of laws. “These laws are, no doubt, beyond the perceived world--for this world presents law only through continuous change--but they are also present in it and are its immediate and immobile copy.”

They aren't a *complete* copy, though. The phenomenon is infinitely diverse, while laws are “the abstract unity of abstract difference”. They provide a *skeleton* of nature; between them and the real thing lies an abyss. This is a problem because the extrasensuous is supposed to be the essence of the phenomenon and vice versa, but laws ‘are’ the extrasensuous, and hence if laws don't adequately portray the diversity of the phenomenon then part of the latter is unconnected to the extrasensuous, in which case the two realms *aren't* a unity.

Hegel begins his resolution of the problem by criticizing the explanations offered by understanding, which, “in search of [a necessary relation between laws and phenomena], discovers that necessity only within itself, in its own tautologies, while leaving its object unchanged”. Hume wrote that everything (in representation) that is different is separable; “by the fact that one term is posed, the other is not posed”. Hegel thinks that in this case he was justified in denying necessity, because “necessity is only substance envisaged as relation, as the being-one of opposite determinations which are not [absolutely separate], but are in-themselves [i.e., in their essence] such as to [affect] another”.² --This quotation, by the way, already implies Hegel's solution of the problem of ‘necessity’, which will be to deny Hume's assumption that objects (determinations) are separate from each other and instead to maintain that they are infinite, i.e., other-than-themselves (*for-an-other* in their *essence*).³ This will in turn provide him with a solution of the original problem, because the reason why the question of necessity arises is that in laws of nature the terms are separate from each other, and *this* is because the totality of the phenomenon is not expressed in laws (which was the original problem).⁴ The part of the phenomenon that's left out from them, namely its instability and development, is precisely the part that is needed to render the relations between things necessary (for instability and development are results of the essential interconnections between things).

To get back to the point: Hegel criticizes the explanations that understanding puts forward by drawing attention to their tautological nature.

Seeking the necessity of law, understanding creates a difference that is not a difference and, recognizing the identity of what it has just separated, ends up with simple tautologies which it calls necessity... Why do bodies fall according to the law? Because they undergo the action of a force,

¹ That argument, specifically the penultimate sentence, strikes me as sophistical.

² I'm reminded of the monad, which has its being-for-itself in its being-for-an-other. The obvious difference is that the essence of the monad is to be *independent*, while the essence of these determinations is to be *interdependent*.

³ Thereby “relation is no longer imposed on substantialized determinations from the outside; it is the very life of these determinations [and is hence infinite]”--which must be the case in order for it to be *necessary*. Kant failed to answer Hume because he too assumed that the relative terms were indifferent to each other, which meant that relation was imposed from outside them and thus that it was not infinite (necessary).

⁴ *That* is because laws are “the first immediate elevation of the sensuous world to the intelligible”. In other words, the apparent diversity of and separation between phenomenal things is preserved in laws that are immediate expressions of them.

weight, that is so constituted as to manifest itself in precisely this way. In other words, a body falls in this way because it falls in this way. ...the procedure of explanation is a very general one: it goes *from the same to the same*. It establishes differences which are not differences in order then rigorously to demonstrate their identity. This is the formal movement of understanding, a movement that is expressed in the abstract equation $A = A$, in which A is distinguished from A in order then to be identified with it. Every explanation, then, is tautological, or formal... Cold comes from the loss of heat, etc...

...In contrast to content, which remains unchanged, the movement of explanation, then, is a pure movement, a formalism. But this formalism already contains what its object (the world of laws) lacks: it is movement within itself. "In it, however, we recognize precisely absolute change itself, the lack of which was felt in law. Indeed, considered more closely, this movement is immediately its own contrary.¹ It poses a difference where there is none; it quickly identifies what it has just distinguished. It is the contentless instability of pure form which is straightway its own contrary. When we say "A is A," we both distinguish and identify. The equal to itself repels itself but also unites itself.

The difference between content ("the interior") and form is thus overcome: "content, which is noticed through the at first formal movement of understanding, becomes the opposite of itself, and form, in turn, becomes rich with content". Presumably, because Hyppolite calls content the "interior", it is the extrasensuous, and form is not only the *movement of thought* but the *phenomenon*. So the opposition between the two is transcended.

The last four pages of the chapter on understanding are an inquiry into what Hegel calls "the inverted world", the "upside-down world". Although essence and appearance have been identified, from another perspective they are absolutely different: essence is the *inverse* of appearance. Initially, when we invented laws to express the differences inherent in the sensuous world in a 'universal' way, these differences weren't modified profoundly; now they are. Difference is the negation of difference (i.e., it isn't *really* difference, though it appears to be), and thus appearance is the opposite of its essence. "Anything in-itself is the opposite of what it appears to be for-an-other." By "anything" Hyppolite really does mean *anything*: for example, criminal punishment is essentially the opposite of what it appears to be, for, while it appears to dishonor a man, "it becomes in the inverted world the grace and pardon which safeguard the man's essence and render him honor". Therefore, "the difference between phenomenon and essence, between apparent meaning and hidden meaning, has become so profound that it destroys itself; it is, in effect, absolute opposition, opposition in-itself, that is, *contradiction*". "Each determination destroys itself and becomes its other; it is thought through as infinity..." This opposition, though, doesn't mean that the two worlds are opposed "substantive elements"; they are rather both contained in the phenomenon, which is a difference between itself and itself: it is one with essence but *appears* different from its essence. It is "simultaneously itself and its other and is grasped in its phenomenal entirety as 'absolute concept', or infinity". Stated differently, it is self-negation, "mediation of the immediate with itself". But then it's already self, because that "mediation" is precisely what the self is.

The absolute concept is universal life, the world soul... It is manifestation that is manifestation of self by self, mediation of the immediate with itself. It is already self. But if this is so for us, and if

¹ In other words, insofar as it is envisaged *only* in our understanding, the movement of our thought which establishes laws and *explains* them is formal. It is tautological: we distinguish in order then to show that what we have distinguished is identical. But insofar as it is viewed as a movement of the thing itself it becomes synthetic, for it is the thing itself that opposes itself and unites with itself. [That is, the concrete movement which is *implicitly* described in explanations ('implicitly' because the purpose of the explanation isn't to *describe a thing's movement* but (effectively) to *define a term*) actually takes place in the thing itself.] Explanation, then, is no longer *our* explanation; it is the very *explanation* of being that is identical to the self. Thus, thought and being are one. [--Hyppolite. I quote it because it's important and enlightening once it's understood.]

the concept, as universal life, presents itself to us, then consciousness has reached a new stage in its ascent; it has grasped manifestation as its own [i.e., manifestation's] negativity instead of distinguishing it from both itself and its intelligible object. This dialectic of self-identity within absolute difference at first appears to consciousness in an immediate form as self-consciousness. In self-consciousness, indeed, the I is absolutely other, and yet this other is the I. Consciousness has become self-consciousness.

January 30

I'm having trouble understanding why Bush isn't being held accountable for his scores of political fraudulences and mistakes. The enormous deficit is only the most public one; every day I'm confronted with fresh examples of his administration's dishonesty, unscrupulousness and shortsightedness. Reading the *Times*, even the *front page*, has become something I dread but do anyway out of fascination with a country--and a world--spiraling to its doom. (Actually, reading the news has never *not* depressed me.) If Clinton had been guilty of even the most harmless of Bush's baleful idiocies he would have been skewered. Part of the explanation for Bush's unaccountability is that the Republican party is inherently more conspiratorial, unprincipled and ruthless than the Democratic, but another part is the culture of fear that has been engendered by Bush's crusade against terrorism. Also, the federal government, and especially the administration, is more monolithic than it was in Clinton's time, and thus it has substantial control over the flow of information within and without it. A fourth reason is that Americans don't have the appetite for an extensive investigation into what could be--*should* be--dozens of scandals, having recently experienced the poisonous political climate created by (conservative) scandal-mongers. A fifth is the ever-increasing prevalence of apathy in a culture sick unto death of itself and everything that composes it and everything that *opposes* it--in short, *everything*. (I'm curious what stage of consciousness follows this in Hegel's phenomenology.)

The image of an orchestra playing the third movement of Beethoven's ninth symphony brings tears to one's eyes. Imagine a multitude of musicians playing in such exquisite synchronicity that they are *one being, one supra-human being*, composed of sounds as humans are composed of cells, a being that exists only in its self-expression, that vanishes when the instruments are put down but is vitally alive when they are picked up, that is the pure movement of a divine mind externalized. Imagine the *cooperation*, the *sensitivity*, the *feeling for the sublime* without which this being could not exist. Imagine the *discipline* necessary to submerge oneself so completely in collective harmony.

--"Individualism" be damned. The weak selfishness of vulgar minds--that is "individualism".

The movement of consciousness to self-consciousness. The first section, which is basically an exposition of the interpretation of Kant's philosophy that German idealists chose, is illuminating as a ('decomposed skeletal') outline of the *Critique of Pure Reason* in its own right. Two or three points were new to me. Heretofore I was unaware of the distinction between noumenon and thing-in-itself;¹ I thought they were two words for the same thing (of the nature of which I'm still uncertain). Also, I've always thought that the phenomenality of nature was a result of the subjectivity of the "categories," but Hyppolite denies this: "insofar as it is transcendental, this subjectivity is identical to objectivity". I don't understand what he says it *is* a result of, but it has something to do with the "nontranscendental subjectivity of matter...the passivity, the receptivity, which understanding cannot do without". "The finitude of our knowledge [which Hyppolite equates with the phenomenality of nature] exists because understanding conceives the idea of an unlimited understanding but finds itself limited [by its passive reception of the object]. The object of a finite subject must itself be finite."

Having arrived at this finitude of the subject, Hyppolite notes that it is different from the finitude of the object: the limit of the object is external to it (the object) and unknown by it, whereas "the subject continually seeks to transgress its limit", thereby tending toward infinity, "the unconditioned". For Hegel,

¹ I still don't know what it is, since Hyppolite only mentions it and doesn't describe it.

it isn't the concept of reason that regulates experience; it is the idea, which is "an infinite practical task in relation to which all knowledge and all knowing are organized". Self-consciousness ("the truth of consciousness") is essentially practical, a never-ending attempt to transcend itself, "the negation of all finitude and, therefore, of any consciousness of an object". *Consciousness*, which is of an object and thus finite (limited), is theoretical, while *self-consciousness* is infinite and practical.

To restate what I wrote at the end of yesterday's entry, understanding "becomes able to think the self--which by posing itself in a determination negates and transcends itself--by thinking through [the determinations of nature] and discovering in them the movement by which they become their own contrary". That's how it rises above itself.

Hyppolite thinks that the fundamental intuition from which Hegel's philosophy proceeds is not that of the motion of life but that of the self's "disquiet". His philosophy 'starts' from a conception of the human being--that it is always other in order to be itself--and then projects this conception into universal life, which is therefore also "always other in order to be itself". Life and self-consciousness are related in this way. Moreover, because life's essence is the self's essence--i.e., life *is* the self--"it reaches itself only in self-knowledge". Truth is not outside of life, and neither is it outside of self-consciousness.

If self-consciousness is the truth of life, spirit is the truth of self-consciousness. For the latter is ultimately the self-consciousness of spirit. When raised to consciousness of itself spirit is for-itself the entity, the I, of the process of multiplicity and unity in nature.¹ It manifests itself in specific "modes" which are also the negations of themselves, that is, the negations of their separation from the absolute (which separation is itself a negation), and in this negation-of-negation return to the unity of life (the absolute). Their deaths appear to be the result of an "alien negation, as though the universe were suppressing a living individuality", but in fact death originates in the individuality itself, which, insofar as it is the process of life--the unity in multiplicity, the absolute, the universal 'self' of nature and man--"must die in order to become". "Its emergence vis-à-vis the whole is its own negation and its return to unity." In non-Hegelian language: death is the absolute saying, "Come back to me, so I can grow some more."

Time for bed. In the past week I haven't gone to bed earlier than 5:00 each night.

Saturday, January 31

Self-consciousness and life: the independence of self-consciousness. Self-consciousness is desire. We have seen the world become mere phenomenon, which "subsists only in relation to self-consciousness, which is its truth". Self-consciousness is made possible by the existence of otherness, which thus in one sense exists, but only as "an object that must be negated in order [for self-consciousness] to establish its own unity with itself". "The unity of the I is reconstituted by [the negation of] being-other"; desire is this negation, for it appropriates otherness and makes it its own. "Desire presupposes the phenomenal character of the world which exists for the self only as a means."

[...]

The essence of desire isn't what it appears to be. The goal of desire isn't really the sensuous object; it is the unity of the I with itself. The sensuous object is only a means. Stated differently, self-consciousness seeks itself in its desire, which means that it seeks itself in the other (the *object* of desire)--which we already knew was the case, anyway--which means that its other must ultimately be another self-consciousness. It can't be phenomenal sensuous objects that exist for it only as means to an end, as things that will no longer exist once it satisfies its desire, i.e., things that are not independent; it has to be an *existent opposed* to self-consciousness, that is, another self-consciousness as independent as it is itself.

In other words, life is the medium in which self-consciousness experiences and seeks itself. Life constitutes the first truth of self-consciousness and appears as its other. As we ourselves have grasped it as the result of the previous dialectic [i.e., the dialectic of understanding], it is the term

¹ Nature 'for-itself' isn't spirit, because it isn't self-conscious. It is (a dormant) spirit only in hindsight.

that corresponds to self-consciousness.... Life in general is genuinely the other of self-consciousness. What does this opposition mean, concretely? What I, as self-consciousness, find facing me is life, and life is simultaneously irremediably other and the same.... Considered as other, it is the element of substantiveness with which I cannot completely merge insofar as I am a subject; it is “the universal, indestructible substance, the fluid essence that is equal to itself.” But self-consciousness as reflection signifies the break with life.... Self-consciousness, “specificity” in Hegel’s terminology, opposes universal life; it claims to be independent of it and wishes to pose itself absolutely.¹ Nevertheless, it will encounter the resistance of its object. Thus the object of consciousness is as independent in-itself as consciousness is.

The experience that reveals to consciousness that the object is independent of it results from the continuous succession of desires and objects--objects that are negated and desires that are satisfied but keep returning nonetheless. “During the course of this experience, I discover that desire is never exhausted and [therefore] that the object is needed so that self-consciousness can negate it.[Desire’s] reflected intention leads me to an essential otherness”, which can only be another self-consciousness because both I’s are for-themselves, i.e., exist in absolute opposition and are thus ‘essential others’.

February 1

Like the forces and monads we encountered in the dialectic of understanding, self-consciousness is for-itself only in being for-another. But its being-for-the-other is not the same as its being-for-itself: for itself it is absolute self-certainty, but for the other it is a living thing seen from the “outside”. It can find its truth--find itself in being, manifest in the medium of life its own essential negativity of never being what it is, of always being beyond itself--only through being recognized by the other as what it is for itself, as self-certainty. Conversely, it (or its subjective self-certainty) can become truth only if the *other also* presents itself as pure self-certainty, i.e., if self-consciousness encounters itself in the ‘objective’ world, the world of life. In short, self-consciousness must recognize itself in the other and be recognized by the other.²

What thereby ensues is the struggle of each against all, the purpose of which is to be recognized (as an autonomous self-consciousness) by the other. “One can prove [one’s autonomous self-consciousness] to oneself only by proving it to others and by obtaining that proof from them.” That one risks one’s life in this struggle shows that its goal isn’t life itself but something ‘higher’, viz. recognition. Self-consciousness is raised above life; its desire isn’t life but its desire for desire (i.e., itself³)--which is what distinguishes it from animal consciousness. What emerges from the struggle is the experience of mastery and servitude.

Not every consciousness risks its life in the struggle. The master does, preferring death to a life without recognition, but the slave doesn’t; he prefers servitude in life to liberty in death. The master rises above animal life, while the slave is consciousness in the form of ‘thingness’, of life’s positivity, of Dasein. He is the master’s *thing*. He recognizes the master, but the master doesn’t recognize him. While the being of the slave is life, “the master has shown himself raised above that being; he has considered life as a phenomenon, as a negative datum, which is why he is the master of the slave by means of thingness.he can enjoy things, negate them completely, and thus affirm himself completely. For him, the independence of the being of life and the resistance of the world to desire do not exist. The slave, on the contrary, knows only the resistance of that being to desire and cannot, therefore, attain the complete negation of this world. His desire encounters the resistance of the real, and he is able only to elaborate on things, to work on them.... The master consumes the essence of the world; the slave elaborates it. The master values negation,

¹ That is, as specificity it initially opposes universality, but (as I wrote yesterday) it will eventually negate its own negation and return to the absolute.

² Hegel says that neither can *exist* without recognizing and being recognized by the other, but I don’t understand why that is.

³ Recall that it *is* desire.

which grants him immediate self-certainty; the slave values production.” All this implies that the master’s autonomy, as well as his relation to Dasein, “depends on the mediation of another self-consciousness, that of the slave. Thus his independence is completely relative.... [Moreover,] the truth of the master’s consciousness lies in the *inessential* consciousness of the slave [inessential because it represents not the essence of the *self*,¹ which is negation-of-life, but the essence of life; i.e., “it is alien to itself...its being lies outside it”, in life, in animal existence].” It lies in the consciousness of someone he doesn’t recognize, his possession. And what’s the point of being recognized by someone who is essentially a “thing”? The master has failed to reach the goal he had in mind when fighting to the death, viz., to be recognized by *another man*. (This failure was inevitable, because the only way he could have been recognized was to be a master, and the only way he could be a master was to enslave the other.)

In spite of his debasement, the slave comes to be for-himself, to see his own essence in himself rather than in the master (who is the self-consciousness that the slave is not), through a dialectic that has three moments: fear, service and labor. In his “primordial” fear of death, in that “fundamental anguish, all the moments of nature to which he adhered as a consciousness immersed in animal existence dissolved.... The master did not fear death, and he raised himself immediately above all the vicissitudes of existence; the slave trembled before it, and in that primordial anguish he perceived his essence as a whole. *The whole of life* appeared before him, and all the specificities of Dasein were dissolved in that essence.” (This is indeed why the slave’s consciousness, in spite of its immersion in nature, contains in-itself being-for-itself-i.e., because being-for-itself is the negation of all determinate content, which is precisely what the slave experiences in his mortal terror.²) The totality of man’s being never appears to him in “organic life”, for in that life “nothingness [which is the essence of self-consciousness] does not exist as such”. The consequence of the slave’s fear is his service to the master,³ and in this service he disciplines himself and detaches himself from Dasein. In labor, however, he actually “imprints the form of self-consciousness on being [which results in his evolution from being nature’s slave--in his animalistic fear of death--to being its master]. In the product of his work he finds himself.⁴ The master attains only a transitory enjoyment,⁵ but the slave....externalizes himself....passes into the element of permanence....[and] thus attains the authentic realization of being-for-itself in being-in-itself.” Life is no longer separate from consciousness; it is “dominated by a consciousness which is not content to negate it but discovers itself within it.... Self-consciousness has thus become self-consciousness in universal being: it has become *thought*.” Thought is the freedom of the stoic, which is the next stage in the dialectic.

Incidentally, labor without the previous moment of fear is merely a specific skill that doesn’t dominate life and humanize nature. The entire content of natural consciousness must be “shaken” in order for consciousness to become separate from determinate being, in order for it to become pure “negating-negativity” (pure being-for-itself that can remake nature in its own image⁶). (But once labor has been carried out on nature--once nature has been humanized--the fear of death is overcome, because it was caused by the fear of a foreign reality that appeared overwhelming.)

¹ The self is represented by the master.

² The reason why the slave isn’t being-for-itself *for-himself* is that fully realized being-for-itself is an awareness of the self’s autonomy, its “human dignity”. The slave sees himself through the eyes of the master--who represents the humanity that he (the slave) isn’t--as something dependent and “thingish”.

³ As Kojève notes, in his fear the slave “understands” (unconsciously) the “vanity” of all determinate conditions of existence (like the master’s), and he becomes willing to do anything demanded of him. In his very being he becomes change, transcendence, transformation--while the master, not having experienced the slave’s fear of death, remains stubbornly fixed to a given condition (and thus has less insight into his humanity)--and that’s why the future of the dialectic is in him rather than the master.

⁴ He is also changed by his work. For example, it causes him to overcome his fear of death and his enslavement to nature.

⁵ “Mastery is a dead end in human experience.”

⁶ And that *has* to, because it knows that the natural world is hostile, deadly, unsuited to satisfy it.

February 2

Korean pop music, but especially rap, is even more ridiculous than American. It's more childish, innocent, rhythmically and harmonically simplistic, as though it hasn't yet reached the cynical stage of its American counterpart. The mere fact of its existence, moreover, is ludicrous. When I watch Korean rappers on television I have to laugh: their voices, their movements, their attitudes, their rhythms are taken straight from what I've seen in America, and they don't ring true. Angry Korean rappers?? What do they have to be angry about? Their country is on too small a scale! It has none of the schisms and prejudices, the poverty that clings to tens of millions, the jaded apathy, the anguish of universal confusion that America has. It's a peaceful little world of homogeneity, of cuteness and shallowness and harmless ignorance. For it to borrow from my culture is totally inappropriate--but totally inevitable.

The liberty of self-consciousness: stoicism and skepticism. Because the slave's consciousness is "able to become an object to itself without thereby losing itself and vanishing"--as a result of its externalization in nature--it becomes a *thinking* consciousness.¹ (Also because it has to think in order to work.) To think is to unify being-in-itself and being-for-itself: it means that one is an object for oneself, not as an abstract I but as an I that has content, that is in-itself as well as for-itself. The *concept* is both in-itself and "my pure being for me". I may appear to go beyond myself when I think, but "the distinction is resolved as soon as it is made. The I discovers itself in being and consequently remains close to itself in that otherness"--and thus the being of life is no longer an absolute other. Moreover, a thinking self-consciousness is *free*: "In its highest form, thought is will because it is the self-positing of self. And will is thought because it is [aware] of itself in [thought]." To be free is to "behave as a thinking being in all circumstances".

The reason why this stage--in which the I rediscovers itself in being, is externalized without thereby "leaving itself"--isn't the end of the *Phenomenology* is that the unity realized in it is only *immediate*. "The concept is not yet the penetration of thought into the variety and the plenitude of being. As yet, that penetration is only *postulated*." Therefore, the liberty of the I exists only in thought: it "leaves existence on one side and poses itself on the other". The stoic's liberty abstracts from--negates--prior relations like master and slave, rich and poor; its goal is nothing concrete but simply "the equality of thought with itself" (rationality?), or "the coherence of thought through all the various contents of experience". It is "indifferent to natural Dasein", which is why it exists only in thought and not actuality. That "the genuinely free man rises above all the contingencies and determinations of life" implies that "pure form [thought] separates itself from things, [which] manifest themselves as opposed to thought", and thus that the content of thought isn't really the content of thought. The two are *juxtaposed* rather than *merged*. Stoic doctrines, for example, are particular determinations that have been arbitrarily raised to dogma; they have no necessary connection to their form. Indeed, the two are opposed. Eventually this duality between "thought which is equal to itself"--i.e. (presumably), the abstract idea of contentless thought (or thought uncorrupted by an involvement in the determinations and contingencies of life)--and a "content it doesn't engender" manifests itself, and skepticism is born.

I'm a bit confused by Hyppolite's analysis. Aside from my persistent inability to see all the connections between all of Hegel's ideas, I can't help thinking he's contradicting himself. ...No, on second thought, he isn't. He's just glided over an important (but obvious) point: the doctrines of stoicism contradict not only their *form* but also their *content*. For their content exalts pure form and deprecates content even as it *is* content. That is, in the act of expressing itself, (Hegel's interpretation of) stoicism contradicts itself.

"The same relation pertains between stoic self-consciousness and skeptic consciousness as between master and slave. The master was only the concept of independent self-consciousness; the slave was its actual realization..." As the master was unable to actualize his independence in the midst of life, so was

¹ One question: haven't all the preceding consciousnesses *thought*? (Hegel would say that question is based on a misunderstanding. Because the *Phenomenology* isn't a history, the "previous" consciousnesses haven't been chronologically earlier. But what does it mean to say that they're logically prior but chronologically later? Especially if the unfolding of history is the unfolding of an ontological logic.)

the stoic unable to penetrate life's determinations with the I; they retained their absoluteness. The slave, on the other hand, imprinted himself on the world, as the skeptic "dissolves" all of life's determinations in self-consciousness. The world is nothing but a creation of consciousness; it doesn't independently exist. This doctrine logically grows out of stoicism, for it is the "actual experience of the freedom of thought". Moreover, form is the "absolute concept, and, as such, it is the negation of every particular determination". Stoicism didn't recognize the true nature of form; its form was something *positive* opposed to something positive--when in reality form is never 'opposed' to anything; it is the universal, which can be everything. So, the skeptic's self-consciousness reaches absolute certainty of itself, in that it negates all otherness. This isn't the 'theoretical' negation we've encountered before; it's a *self-conscious act* with a different purpose from the 'subjective idealistic' negations that happened in the first two chapters. Those were positions that consciousness was reluctantly forced into, without knowing how or why; this is a defiant and happy assertion of the liberty of self-consciousness and the vanity of everything else. However, because it is merely a joy in destruction, skepticism still presupposes the other (since it has to *negate* it). Its duality must eventually manifest itself. And so it does: on the one hand self-consciousness rises above Dasein, and on the other it is constantly immersed in Dasein.

The same is true of the man who proclaims that all is vanity.... In this very thought he rises above all vanity and poses authentic self-certainty in its sublime grandeur, but at the same time he himself appears as a contingency. By lowering himself he rises, but as soon as he rises and claims to reach that immutable certainty he descends anew. His immutable certainty is in contact with ephemeral life, and the eternity of his thought is a temporal thought of the eternal. Thus the subjectivity of self-consciousness is a double consciousness. [While it rises above the world it is caught in it as a "contingent fragment".] Self-consciousness, then, is the pain of the consciousness of life which is simultaneously beyond life and in it. But skepticism is not yet this consciousness, for it does not gather up the two poles of this contradiction into itself.Unhappy consciousness is the explicit consciousness of the internal contradiction of consciousness. Henceforth it will no longer be the case that an I will confront another I in the midst of universal life, or a master oppose a slave from the outside; with stoicism and skepticism the two consciousnesses have become the split of self-consciousness within itself. Every self-consciousness is double for itself: it is *God and man* at the heart of a single consciousness.

Tuesday, February 3

Unhappy consciousness. Consciousness becomes unhappy because it is aware of the nothingness and the contingency of its life. It is just *one* point of view among *many*--each of which is as valid as it is itself--and it must be recognized by these others in order to exist (?). It is split between awareness of its contingency (its involvement in life) and its intuitive feeling of separation from life, of being 'higher' than life--of being infinite and essential, the opposite of life's contingency and inessentiality. Thus it contains two self-consciousnesses within itself, both of which 'look into' the other but can't be unified. They indeed exist in a unity--in *one* self-consciousness--but their opposition predominates. The dialectic of unhappy consciousness has three moments: first, consciousness is changeable "in the face of an immutable consciousness"; then it recognizes this immutability as inside it but still opposed to it; finally, the problem of the union of reality and self-consciousness is posed. A historical example of the first moment is Judaism; an example of the second is early Christianity.

Initially consciousness appears to itself to be on the side of the *inessential* rather than the essential, because it is the consciousness of the contradiction within it. "By recognizing the duality of the extremes [of self-consciousness], I stand with the nonessential. I am merely nothingness; my essence is transcendent." This is the consciousness of the Jewish people, "which alienates its own essence and poses

it as a transcendent term”. However, since it is itself the unity of the two extremes¹--and since it is continuously trying to ascend to the immutable--this consciousness is bound to lead to the consciousness of Christianity, which is symbolically aware that its infinite, self-certain essence is *within* it but at the same time eludes its grasp.² Because the unity of the specific and the universal is “immediate”--unmediated, a mere “contact” (“as much external as internal”) between God and man, or Christ and man--it can’t be grasped, which means it isn’t free from contradiction (opposition).

Before proceeding I’ll follow Hyppolite in recapitulating the meaning of this dialectic. Jewish consciousness thought that essence was the “formless immutable”, the abstract universal, and its anguish was its knowledge that this lay beyond it. It was compelled to project its essence into a beyond because it couldn’t find it in the vanity of life, which it experienced itself as a part of.³ With Christian consciousness, the meaning of unhappy consciousness changes: it realizes that its essence is the unity of ‘for-itself’ and ‘in-itself’; i.e., its anguish is that of all consciousness: to be split, unable to attain itself, unable to be for-itself and in-itself at the same time. “Self-consciousness wishes to be self, to pose itself in its identity with itself. But this identity is not given as a thing; everything that is given is negated by self-consciousness. Thus, self-certainty experiences itself as a changeable consciousness, as a consciousness which can never wholly be itself.” However, in the development of unhappy consciousness self-certainty will eventually renounce itself (by alienating itself in being) and “through this self-negation reestablish an objectivity [which] is no longer the pure and simple in-itself [but] a substance that is at the same time subject, a substance that poses itself as what it is.” This will be the union of the in-itself and the for-itself.

Christian consciousness, though, is unable to *think* that union; it can only *feel* it, feel a “pious fervor which is pointed in the direction of thought but is not itself the thought of existence”. Hence it doesn’t possess the union--doesn’t possess *itself*--as an “authentic truth, a truth that would be its own knowledge”. Having failed to think through Christ’s spiritual significance conceptually, consciousness falls back into a “separation from its essence”. “Self-consciousness remains unhappy because its essence--the unity of the immutable and the specific--remains a beyond for it [in Christ]....”

February 4

There are three moments in Christian unhappy consciousness. The first is the “immediate encounter of the beyond and the here-below”, the *feeling* of being one with essence (by being recognized by God).⁴ The second is a consequence of consciousness’ continued unhappiness (from its awareness of still being separate from God--especially after the death of Christ):

Consciousness returns within itself and manifests itself externally only as negativity, in desire and in labor.... [This time, however, its desire and its labor are not negations of the world, whose goal is that self-consciousness find itself.] The world has itself become a figure of God, since God has

¹ It’s a unity not *for*-itself but *in*-itself.

² Christ is the union of God and man, of universality and specificity, of essence and nonessence. Hyppolite spends a lot of time describing the metaphor, but I won’t. It’s just a historical illustration (admittedly important to Hegel’s arguments) of Hegel’s ideas, a *metaphor* which, moreover, occasionally seems heavy-handed and hard to swallow. (‘As the essence of self-consciousness eludes its grasp, so Christ “eludes the grasp” of his disciples because he is *out there*, in space and time, a “sensuous and opaque entity, with all the rigidity of an actual thing”.’)

³ That explanation is equivalent to saying that the projection was an expression of consciousness’ experience that it could never truly be itself--an experience which it at first blamed on the (vanity/contingency of the) world rather than on its own ‘negative’, self-transcending nature, which is the real cause. Christian unhappy consciousness is different from the more primitive one, in that it is (at least symbolically) aware of its true nature.

⁴ For *us* (in-itself) the feeling is of unity with essence, but for-itself it is of contact with God.

embodied himself and presented himself as a specific self-consciousness.¹Sensuous existence becomes a symbol. It is not what it is, and if it yields itself to consciousness it does so because the immutable itself makes a gift of it to man. Consciousness, therefore, does not attain through its action a feeling of absolute domination over the here-below.

Consciousness humbles itself, because it feels separate from essence.² It renounces its freedom and its independence, in that it considers its acts to be directed by God and itself to be dependent on God. At the same time, the world--being, life--is resurrected from its former position of inessentiality to a being that partakes of the universal, that is not 'vanity' or sheer meaningless illusion. Clearly the dialectical movement that is taking place is that self-consciousness is repudiating its earlier arrogance vis-à-vis the rest of existence: it is striving for a negation of its earlier negation of the world. "Negation must go so far as to negate itself in asceticism and alienation--to be the negation of the negation--and, by so doing, reestablish the universal." Self-consciousness used to think that specificity (negation of the universal)--or more precisely, the for-itself--was essence; now it thinks that specificity is opposed to essence, so it wants to negate it (i.e., itself, its own negation). Thus, the meaning of its desire and labor is the opposite of what it once was: *now* its goal is to turn negation back on itself (self-consciousness). When it has completely negated itself, completely humbled itself, it will no longer be specificity "as such" but the universal 'manifested in' specificity, the unity of in-itself and for-itself.

Man doesn't realize this ideal in the second moment, for in his self-humiliation he in fact elevates himself. *He* poses God. He poses his own passiveness. He *freely* renounces freedom. Moreover, he intuitively feels his independence. "Consciousness feels itself here as specific existence, and it does not allow itself to be duped by the appearance of its renunciation. For the truth of this consciousness remains the fact that it has not abandoned itself." Specificity has not yet been overcome.

In its struggle to suppress itself, consciousness evolves to the third stage, in which the ascetic and the medieval church are the main characters. The ascetic is aware of the "vanity of his self"; his action is the "action of nothing"; his enjoyment is the "feeling of his misfortune". Action itself has become something "evil", something to be overcome as an expression of specificity. Tirelessly the ascetic combats his own nature, but his struggle for self-abnegation is doomed. On his own, he can't stifle himself. Only through the mediation of the clergy and the church--a mediation between specificity and universality--can individuality be negated.

At first, [consciousness] rejects itself qua specific will, it abandons its freedom of choice and of decision. Then, through the sacrament of penance, it frees itself from the guilt of action: "When action consists in following an alien decision, it ceases--with respect to acting and to the will--to be the particular action of the person." The fruit of its labor, and enjoyment, are still retained by consciousness, but it renounces these in part through almsgiving and fasts. Consciousness ends by surrendering its very independence, agreeing to what it does not understand.³

"The medieval church prefigures modern reason [the union of in-itself and for-itself], for it is a form of concrete universality." Reason, which is born in the Renaissance, takes over the church's role as mediator between the individual and the universal.

I've finished the chapter on unhappy consciousness. Its conclusion, in my opinion, is too optimistic: being-in-itself and being-for-itself can never be united. The idea of their union is ridiculous and meaningless. Self-consciousness cannot overcome itself. Absolute knowledge, absolute happiness, absolute anything is impossible, and history will never end. Until it ends.

¹ Hegel: "This actual reality is a figure of the immutable. For the immutable has received specificity within itself, and since qua immutable, it is a universal, its specificity means in general actual reality as a whole." In other words, because the universal encompasses everything, when it became specific it became the whole world.

² As I've already stated, it also feels united with essence, but only in an immediate, incomplete way.

³ Church rites and ceremonies in Latin.

In spite of the fact that his system was a total failure, completely “contraposed” to common sense, practically incoherent and fundamentally intellectually dishonest, Hegel may have been one of the greatest thinkers of the millennium. His imagination....there’s no word in the language to describe his imagination. His intellectual acuity as applied to most problems was miraculous. It’s hard to believe that an intellect of his magnitude ever existed. [*But most of what he wrote was so damn absurd!*]

February 5

Reason and idealism. In reason, “knowledge of an object is self-knowledge, and self-knowledge is knowledge of being-in-itself”. “Reason signifies a content which not only is in our representations but also contains the essence of things, a content which is not alien to the I, given from without, but is produced by the I”. Reason is idealism. Hegel’s idealism, however, is different from Kant’s and Fichte’s (for example) in that it doesn’t exalt the point of view of the *individual*; it stresses the *universality* of the I, the relation and the communication between *all* I’s. The I is a we, and the we is an I. Mutual recognition raises each self to a universal self. What Hegel means by this is elucidated by his comment that “this (universal) self-consciousness is the basis of every virtue, of love, honor, friendship, courage, self-sacrifice, and fame”. It reminds me of Marx’s idea of the “species-being”.

Reason is not yet spirit because it isn’t completely aware of itself, it doesn’t exist “for its own sake”. It does, however, signify “consciousness’ certainty that it is the whole of reality, the whole of truth, [its] certainty that this truth is not beyond but is immediately present to consciousness”. “Consciousness knows that it can discover itself in the world, and it undertakes the conquest and the science of the world.” Nonetheless, insofar as they have forgotten their process of development, reason and idealism are flawed. For consciousness “caught up in experience” they are immediate truths, mere assertions that haven’t been thought through dialectically. “The development of a truth is the in-itself of that truth, and in the absence of the movement by means of which it arises, it is merely an assertion.” If it considered its preconditions--its ‘prehistory’ in the dialectics of consciousness and self-consciousness--idealism would come to a fuller understanding of itself: it would realize, first of all, that it is a phenomenon in the history of spirit, not a ‘static’, abstract truth discovered by a few intellectuals.¹ Subjective idealism--Fichte’s, for example--is nothing but a modern form of skepticism, or of unhappy consciousness “which oscillates endlessly between two irreconcilable terms [I and other]”. “The result of this formal idealism is an opposition between an empirical realm that lacks unity--a contingent multiplicity--and an empty thought [that I = I].”

Idealism falls into this contradiction because it affirmed as true the abstract concept of reason, the unity of reality and of the I in the still abstract form of the category. Genuine reason, which we are studying at this stage of the *Phenomenology*, is not so inconsistent. It knows that it is only the (subjective) certainty of being all of reality, and does not yet take that certainty to be truth. It seeks to test it out, to raise it to truth. In this attempt it sets about learning about the world and acquiring genuine content. Concrete reason moves from the certainty of being all of reality to its truth, which is knowledge of reality. It builds up a science of nature and observes nature so as to discover itself within it and thereby advance to truth what at first was only a subjective certainty.

The difference between idealism (a philosophical system that gives out as truth a certainty that is still subjective) and the concrete reason of the *Phenomenology* is clear. In the *Phenomenology*, reason seeks its truth, whereas idealism proclaims that truth without having tested it out and without having justified it historically. Thus idealism is abstract; it remains at the stage of the category--the unity of being and I--and does not know development. It does not transcend the opposition between the a priori and the a posteriori, and it does not know genuine synthesis, which is the synthesis of the a priori and the a posteriori itself. But reason that is actually engaged in knowing nature and

¹ See my journal entry from a few years ago in which I tried to explain Hegel’s originality--no doubt obscurely and ‘skeletal’, but not incorrectly.

action will be able to discover itself and to substitute for formal idealism a concrete idealism in which the I and the universe are adequate to each other in a monism of spirit.

I don't understand how reason can search *inside* and *'behind'* things, which it does in science, and yet believe that the other is the I. If it has to investigate things themselves in order to discover their truth, how can its self-certainty be their truth? That they require laborious investigation means that they are opaque to it, and thus that they are not it.

Enough of philosophy for the moment. I haven't mentioned my job for a long time. Every day continues to have its ups and downs; no day is great, no day is completely bad. I've outgrown my initial romantic desire to 'impact' my students' lives; now what keeps me going each day is the knowledge that in a few hours I'll be free. I'm still giving private lessons to the 19-year-old. Today's was the best yet: she talked the most she ever has.

Friday, February 6

The observation of nature. The science of the modern world "is interested not in the sensuous as such but in the concept that resides in the sensuous. Reason is not passive vis-à-vis reality: it questions experience, and by questioning nature it manages to discover in experience a concept, which is nothing other than the presence of reason itself in the midst of the content. In the world that is offered to it, reason discovers itself; the knowledge of experience is a self-knowledge."¹ This science isn't a reproduction of the dialectics of perception and understanding, though at first it may appear to be. The purpose of the section on reason in the *Phenomenology* is to find in nature an image of reason, while the purpose of the sections on perception and understanding was to eliminate the thing-in-itself (by showing it to be constructed and repeatedly changed by consciousness (which, in my opinion--as you know--is a confusion)).

In the beginning, reason wants to find itself in nature as an "immediate reality". Genuine unity, however, will be dialectical rather than immediate (which 'immediacy' entails a transposition of reason into *being*, as a thing, and a loss of its *active* nature), because nature isn't self-conscious, as the I and reason are. (I don't mean that reason is initially conscious of *itself*, for if it were it would bypass the detour of observing nature--an alienated self--and simply observe itself (or self-consciousness) instead. I mean that it presupposes and is united with self-consciousness.) For now we'll have to humor it and follow its phenomenological development through natural science.

First reason *describes* things and names them. It quickly reaches the limit of this knowledge, which can't know whether what appears to be in-itself is a contingency or something more essential. So it *classifies* things next, analyzes their "characteristic signs". This form of knowledge is inadequate too, for two reasons: systems of classification are an "ideal order which nature does not realize" (boundaries between species are sometimes blurred, distinctions in reason do not exist in nature), and classification cannot proceed below the level of plants because there are not independent objects at that level but only relations. A science of *laws* is born. Eventually this science rises to an expression of the concept, viz. that nature is dynamic; it moves beyond the "static universal of description and classification". "The concept is relation, but it is also unity, the return to itself from being-other.this unity within relation appears to consciousness as a new object: the organic. The organic is no longer law as the relation of terms which lose themselves in each other. It is law as the unity of a process which preserves itself in its becoming-other." Law expressed the diversity in the concept; the organic expresses the unity in it.

....Haven't been this happy in a long time. Had dinner a few hours ago with Ji-su and her best friend. I hadn't known she was bringing someone; it was a surprise blind date. And what a surprise! Her friend, Hyejin, who's 26 years old, is not only impossibly cute but friendly, intelligent, inquisitive and (seemingly) guileless. After Ji-su left we had a labored but fun conversation--her spoken English isn't very

¹ Later we'll see that it isn't a complete self-knowledge, and theoretical reason will be forced to become practical reason. When *that* is seen as inadequate, the two will be united in spirit.

good, but she understood me--during which she repeatedly said she was having a great time.¹ We promised to study each other's language intensively in the next few weeks, starting tonight. We'll meet again for dinner tomorrow, with Ji-su. When I came home I called my informant, who'd already spoken to her 'source'; she imparted valuable intelligence about the state of mind of my potential agent of love.

Wow, I really had a good time tonight. You don't understand; you can't. You've read the words, but you can't appreciate the feeling. This girl is adorable! I felt *possessed* as I watched her speak and reflect on how to formulate her sentences. My imagination unleashed itself from my reason. I'd be embarrassed to tell you the romantic thoughts it conceived.

I told her I'd study Korean tonight, but I can't. I feel too...ethereal, too 'light'. And *this* lightness of being is far from unbearable. I think I'll return to my story and see if I can put my mood into words.

...(4:30; can't sleep.) The section on organic being, life, is hard to understand, and I doubt it's worth the effort of deciphering. It's all pseudo-science, after all, and it's less interesting than Hegel's ideas on humanity. Most of Hyppolite's discussion is concerned with the ostensible contingency inherent in life. An animal's adaptation to its environment, according to Kant, is contingent, in that it could have happened another way. There's no necessary connection between, for example, the concept of air and the concept of the structure of birds. In order to "banish" the contingency--in order really to *explain* nature--we must put forward a teleological explanation, which, in rising above the related terms (air, bird), doesn't invoke laws. The "concept" then ceases to be law and becomes *goal*. Because Kant defined nature as the "ensemble of phenomena governed by laws" he was forced to locate this goal, or goals, outside of it, in a divine understanding. Hegel, on the other hand, "tries to show that the concept is immanent in organic nature, and that the goal, the end, is neither outside nature nor outside human understanding". What is this goal? Why, spirit, of course!² Spirit (which is self-conscious wisdom) is somehow "immanent" in inorganic nature (which is unconscious wisdom), and it leads nature to the level of organic life, which, apparently, is *also* the goal. ("Organic being is in fact the real goal; and it is its own end, preserving itself in its relation to others.") In any case, the upshot of Hegel's pseudo-science is that the "instinct of reason"--so-called to distinguish it from self-conscious reason--cannot fully discover itself in nature, because "the goal immediately falls outside the thing and implies an understanding [viz. spirit, of which reason is still unaware], [but] at the same time it is objective, present to self-consciousness as a thing, [and thus] it eludes self-consciousness' consciousness and appears to it to have its meaning in *another* understanding [as Kant thought]". The instinct of reason doesn't know that nature is one vast self, and hence that its necessity is the "immanence of the self in its development, its selfsameness". Therefore, "nature is not apprehended as a first reflection of reason". Only at the end of its development will spirit/reason recognize itself (its past) in nature.

Saturday, February 7

My dinner-date was cancelled because Hyejin had to go to Seoul for some reason. I ate alone, as usual, and now I'm going to bed. Or, soon. Early, for once.

The remainder of Hyppolite's chapter on nature is too incomprehensible for me to waste time on. I've read it only once, but I'm not going to read it again.³ All I clearly recall is that Hegel critiques the popular scientific law in his day that "the exterior is the expression of the interior" and shows that it's "hollow", because in organic being there's no distinction between exterior and interior. Organic being is the concept; it's a fluid movement; there are no fixed determinations like 'interior' and 'exterior'. The

¹ That's a part of Korean culture I like. Koreans aren't afraid to be honest in situations in which Americans would feel compelled to 'play the game', to hide their real thoughts.

² Or rather, "in the concept of goal organic nature *refers* to another essence, spirit". Don't ask me what this "refers" means. (Incidentally, Hyppolite notes that if another essence has to be referred to, the first essence doesn't truly contain its goal within it.)

³ Generally I reread all the chapters at least once before quitting them.

conclusion of his intricate argument(s) is that “unlike the life of spirit, organic life is not a history that unites specificity and universality in a universal specificity. And for this reason, the instinct of reason which seeks itself in being must move from the observation of organic nature to the observation of human self-consciousness.”

...I slept for three hours but woke up to take a piss. And now I’m not tired anymore. So...I’ll read the chapter on the observation of human individuality. Observing reason is bound to fail especially in this sphere, because its practice of “immobilizing and congealing the content that it claims to grasp” ensures that it cannot grasp the nature of spirit and consciousness, which is pure movement, reason itself rather than a *thing*, a *being*. Before discussing physiognomy and phrenology Hegel briefly criticizes formal logic and empirical psychology, both of which consider the basic elements of their subject matter in isolation instead of unity--the laws of thought, on the one hand, and human faculties on the other. He also says that psychology is mistaken in postulating that the individual is determined by his environment, because the environment that acts on him isn’t ‘in-itself’ but ‘*for-him*’. “The world that acts on us is already ‘our world’; we see it through ourselves. And we can come to know an individual’s world only if we begin with that individual. We can specify an influence only if we know the person who undergoes it, and thereby determines it.” (This idea seems to make sense, but if we recall that the individual is formed by his environment primarily in the early stages of childhood, when he’s still scarcely an individual (or at least one who’s impressionable, whose development can take many paths), we’ll see that Hegel isn’t entirely correct. No doubt by the time of adolescence the individual is determining the experiences that influence him, but there is nonetheless a *reciprocal* determination--the individual of his experience and the experience of the individual.) Given this criticism of psychology, the next logical question is that of the “basic nature” of individuality. “Does something of this sort exist, and can the self be reduced to a nature that it has not itself created?” Observing reason again bases its theories on the law according to which the exterior expresses the interior, which is to say that it focuses on the body, which expresses both the *innate* nature of the individual, which he hasn’t made, and his *acquired* nature, his being-for-himself. (Reason formulates this opposition as that between the individual’s innate nature and his “active putting into play of that nature”.) The face, for example, indicates a person’s innermost thoughts. Hegel rightly says this is false: the face “can dissimulate as well as convey thought”. His second criticism is that any psychology that makes *intentions* the essential interior of a person and neglects the completed act as being a comparatively inessential exterior is “forever lost in an infinity of nuances, nuances which are never adequate for stating the interior as such. This conjectured interior is ineffable and inexpressible by its very nature. The pure interior is malleable, infinitely determinable: *it transcends its false indeterminateness only through action* [Hyppolite’s italics]. ‘This false infinity is annihilated in the accomplished act.the individual man is what the act is.’” In short, one cannot know man by analyzing his intentions “without respect to deeds and actions”, but one *can* know man by analyzing his actions, because “the interior is immediately the exterior and vice-versa”.

Phrenology is patently absurd, and Hegel has no difficulty in exposing its flaws.¹ It is yet another manifestation of reason’s dogma that the exterior expresses the interior. However, it does intuit one truth (albeit perversely): the identity of thought and being. This is idealism. Phrenology’s mistake is to not understand that “the identity must be taken as a concept and not as a portrayal”. (Thought isn’t *portrayed* in being.) Reason finally recognizes the falsity of phrenology, and in so doing it recognizes the falsity of its attempt to discover an immediate unity of itself and nature. For phrenology is the logical conclusion of that attempt: in its judgment that “the spirit is a bone” it expresses the unmediated identity of being-for-itself and being-in-itself. Hence reason will now proceed to a level corresponding to self-consciousness, to an *active* position vis-à-vis being-in-itself--in which it seeks to ‘negate’ the world, as self-consciousness did earlier--and will abandon the perspective of consciousness, in which it sought to discover itself in being.

Another reason why reason becomes active reason is that with the advent of phrenology “observing reason discovers the self as a being, or a thing presupposed by its endeavors, and it therefore turns away

¹ His criticisms aren’t the ones that we would offer nowadays. For example, he objects to its division of the spirit into “ossified faculties” (corresponding to parts of the skull).

from this positing of self, which is a negation of self, and becomes active reason". I'm not sure what the relation is between *this* reason (for observing reason's 'self-transcendence') and the one I explained in the last paragraph.

February 8

Every day I reflect that I'm grateful for not living in a time or a place in which religious or political persecution might cause me excruciating physical pain, through torture or war. Being burned at the stake, having my nose or ears cut off, having doctors do unanaesthetized 'experimental' operations on me, being forced to starve in a concentration camp, being forced to go to battle with nothing but a shield and an axe to defend myself--all these and hundreds of other misfortunes *could* have happened to me, but they didn't. For that I am grateful. Because nothing is worse than extreme physical pain.

I never cease to be amazed at the cruelties humans are capable of inflicting on each other. A species of animal that was merely cannibalistic would be far nobler than *homo sapiens*.

Byron's poem "Darkness" is so disturbing because it's true.

[...]

I was supposed to meet Jung-hee for dinner, but she cancelled again. Instead I ate with Ji-su. When I mentioned Hyejin, Ji-su revealed the reason for her trip to Seoul: she wanted to meet her ex-boyfriend, with whom she'd been in a relationship for three years and had broken up with *last week*! That fairly crushed me. I hadn't expected something like this: I'd really hoped it would work out between us. Spent the whole dinner in a haze of dejection. Asked for more details, attacked Hyejin's character--for she'd "led me on"--and complained bitterly about my luck. Later we went to a coffee shop for a couple hours, where I continued to speculate on Hyejin's intentions. Not even Ji-su knew them; she was as confused as I. On Friday night, apparently, Hyejin had been so happy with our evening together that she'd told Ji-su she wanted to get a U.S. visa!, that she was determined to learn English, etc. But the very next day she'd gone to Seoul to get back together with her boyfriend. It was hard to understand, though we thought of two or three theories. Mine turned out to be the right one. Hyejin was scheduled to be on a train to Daegu that evening, so Ji-su called her to find out what had happened in Seoul. Was told they'd finally separated for good (= for now) and that Hyejin wanted to see me again. [...]

In short: I've regained hope. A shred of it.¹

Monday, February 9

I forgot to tell you I was *nervous* on my blind date with Hyejin. That's newsworthy because it's never happened before. I'm nervous *now* too, thinking about our date on Thursday. --Please, God, let this relationship be a success!!

In spite of my tendency to be fascinated with my "dark side", I'm well aware it's less dark than most people's. It *could consume* me if I wanted it to, but I exercise such self-control--or whatever you want to call it; maybe it's cowardice, maybe complacency, maybe laziness--that it hardly exists in comparison with other people's. Theirs is a fact, in plain view; mine is a potential. They scarcely conceal, for example, their selfishness, greed, idiocy and dormant brutality; all such traits are implicit in both their daily acts and those they *wish* could be daily, like suing someone who accidentally spills hot coffee on them. (Such lawsuits are a particularly vulgar manifestation of the modern mind, which pays heed to nothing but its *appetites* and its *ulterior motives*. Individualism has the potential to be a noble philosophy, but in coarse hands it becomes a detestable creed whose sole adherents are half-wits and half-men (= businessmen)--i.e., 90% of humanity.)

[...] Goethe was congenitally incapable of thinking profoundly: he considered deep thought a sign

¹ I know it's petty to write in such detail about my social life, but I have to.

of “hypochondria” (though he phrased his opinion differently).

--Nietzsche remarks somewhere in *The Gay Science* that he doesn't trust Rousseau's autobiography.¹ I disagree. I trust *The Confessions* far more than *Dichtung und Wahrheit*. I'm inclined to think that Goethe's whole autobiography is nothing but a monumental embellishment of the truth. He was a vain man, after all, vain to the core. As a joke he even confessed his dishonesty in the title! “Poetry and truth” equals “fiction and truth” equals “not all of what follows is true”. The first sentence announces that his autobiography has one of the same purposes as Hitler's, viz. to propagate a myth of himself: its gist is that ‘I was born under a favorable alignment of the stars’, which translates as ‘I was destined for greatness from the very beginning’. Insipid little man! There's more to being a great human being than having poetic talent, talking well, being emotional and dabbling in pseudo-science. A great man shouldn't be super-endowed with complacency, vanity, arrogance, pettiness, self-blindness, intellectual shallowness, an intolerance of criticism and views opposed to his own, a Herculean capacity for unfaithfulness to his wife and perverse love-affairs with 20-year-olds when he's 70.... Nevertheless, I'll concede that Goethe was “great” if Napoleon, Byron, Beethoven, Mozart and others were too. They were all terribly flawed people--if by ‘flawed’ we mean ‘not virtuous’, and if by ‘virtuous’ we mean ‘living *approximately* in accord with the basic ideals posited in almost *all* value-systems’--but they had talents that elevated them above the masses and caused them to impact history, so they're considered great. Not noble. It's extremely rare that a person is great *and* noble. Gandhi was [no, not true], and Buddha, and Jesus.

I'm not noble either (whatever that word means). But at least I *admit* it! I don't like intelligent people who live in self-delusion.²

February 10

Active reason and modern individualism. In the beginning of the chapter there's a footnote that I'll quote here:

[Active reason produces itself by means of the negation of the world, an alien being.] This “alien being” is no longer alien in the way that it was at the stage of simple self-consciousness, a stage that has long since been transcended. It is alien only inasmuch as it is immediate, and rational self-consciousness knows that this immediateness is a pure appearance that will be transcended: “It is a certainty for which the immediate in general has the form of something transcended [*aufgehoben*], so that its objectivity is valid now *only as a superficial layer the interior and the essence of which are self-consciousness itself*”.

Reason knows it is the world, but that knowledge isn't yet *truth*. It is only subjective certainty. Reason “rises to its truth only when it is actually realized, and it is actually realized only in the development of *objective spirit*”--when it becomes what it is, viz. all of reality, which happens when it becomes spirit (“spiritual substance”, “objective spirit”, the “ethical world”, a collective organization of individuals). “Spirit is reason that is no longer merely subjective certainty but also truth and substance.” It cannot emerge (become for-itself³) until specific consciousness has undergone a series of experiences that raise it

¹ Nietzsche's insolence to that thinker, as to most thinkers, is misguided. So is his adulation of Goethe.

² I don't mock Beethoven, Napoleon, Mozart and the rest because they didn't have the self-delusions that Goethe did. They knew they were flawed--and they didn't care. (That's also a more *manly* attitude.) Goethe portrayed his flaws as signs of his ‘strength’, and he was even proud of them because they made him a “totality”. Aside from the philosophical indefensibility of that idea, its apparent ‘loftiness’ is vitiated by its hidden purpose of self-aggrandizement. --On the other hand, it remains an attractive ideal: the ‘complete’ person, acquainted with a little of (almost) everything. But in order to be a *defensible* ideal, it has to be formulated more scientifically than it was by Goethe and Nietzsche.

³ It has always been in-itself.

(consciousness) from its isolation to spiritual substance. --To be precise, Hegel traces the path by which the individual first rejects immediate (unreflective) ethical harmony, ethical substance (objective spirit)--i.e., the path by which he “cuts the tie that binds him to the whole”, of which he has hitherto been an ‘unreflective’ part--so as to be “self-sufficient in setting his own end”, and then through his experiences “*reflectively* reconquers ethical substance” and rises to *morality*. The other path that the individual can take¹ is that according to which he is “posed in his isolation and reaches substance by transcending his impulses” (for happiness, power, etc.), but in this case the result is immediate ethical substance, which is the beginning of the first path I described. I don’t know the relation between the two, though Hegel insists they’re equivalent: “We can just as well say that the individual detaches himself from the whole of which he is a part and shatters that immediateness so as to pose himself for-itself, as that he gains immediateness by engendering spiritual substance through his own movement: the two representations are equivalent.” They seem not to be: the second, surely, is logically and chronologically prior to the first. Anyway, Hegel chooses to follow the first way, “explaining that it is more appropriate to the spirit of the times”.

I should think that spirit isn’t for-itself until it “reconquers” ethical substance and rises to a self-conscious *morality*, but judging from what Hyppolite has said, Hegel thinks spirit is for-itself even in naïve, immediate social organizations like the polis (because it doesn’t really *exist* until it’s for-itself, and it exists (in some form) in the polis). (I think that every social organization except the final one represents a kind of ‘limbo’ between spirit unconscious-of-itself--in nature--and spirit completely conscious-of-itself. How these degrees of self-consciousness are possible, I don’t know.)

Individuality initially wants to enjoy its specificity, its uniqueness, which means it wants to “pose itself in being”. ‘Being’ refers here not to nature but to the social world. Self-consciousness has abandoned understanding and science; it now wants to “discover itself” in the other. It has become reflectively aware of its formerly unconscious purpose in describing nature, which was to assimilate being to itself; thus it sets about realizing itself immediately in the world. It wants to assimilate other selves, “to become a specific essence in the other self-consciousness, to reduce that other to itself.” It wants to abolish the being-for-others of the other self and become *one* with it. It knows that it has the same essence as the other; its task is to *realize* that sameness concretely. The happiness it has in mind is love, the union of two human beings. It can never really attain that happiness, though, because in every moment its specificity is destroyed, “shattered against the universal”, which in this case is time. Every instant is a death; in all enjoyment, in every moment, *we* “consume” our specificity, for we are universality as well. “The tragedy here is that this necessity appears incomprehensible to man”: he doesn’t recognize himself in it, he doesn’t realize that he (self-consciousness) is the cause of it. To him, this constant abolition of his specificity, of his enjoyment, is an “absurd power” that has no meaning. However, eventually he must “assume responsibility” for it, since it is, after all, *for consciousness*. “But in taking responsibility for it, consciousness transcends [hedonism, the pursuit of an unreflecting enjoyment of the world]....and a new figure of consciousness appears in which the universal is immediately bound to desire.” *Desire* is now universal because it confronts the universal destruction of individuality and hedonistic enjoyment. “....Necessity no longer appears as an inexorable destiny outside self-consciousness;” it becomes the necessity of the *desire for happiness*. This desire has “universal value”; it is valid for everyone, and self-consciousness knows it as such. “The universal has passed over into self-consciousness rather than remaining external to it.” Self-consciousness has thereby risen above its initial specificity, and its advance is manifested in its conviction that everyone should follow the “law of the heart”, viz. that “we must unhesitatingly follow our natural inclinations, that what drives us to pleasure is never bad so long as we have not been perverted by society”. Individuality hasn’t yet overcome its naturalness, its immediateness, so it thinks that the first impulse is always good. “If each person follows the promptings of his heart, everyone will partake of the immediate joy of living.” Unfortunately, the law of the heart comes into contradiction with the established social order, which consciousness concludes is only an apparent order because its laws are arbitrarily separated from the individual heart. Therefore the individual decides that the law of the heart must be realized in the world. This desire, too, cannot succeed, because the law is “valid only insofar as it is bound up with a specific

¹ Hyppolite says that the two paths are effectively the same, but I don’t see how.

heart. No sooner is it actualized than it escapes the particular heart that gave it life...‘it takes on the form of being and it becomes a universal power to which the particular heart is indifferent. Once the individual establishes his own order, he can no longer recognize it as his own.’” Since his action is both his own and external to him--since he has “realized himself as an individuality that wishes to be universal”--he becomes a stranger to himself, he is *alienated* from himself. He is also no longer convinced of the innate goodness of other people: because their hearts oppose his, he finds them detestable. But through his experience he has learned that the social order is the “expression of universal individuality, or of the interplay of individualities exposing the content of their own hearts, each claiming universality.” What he is faced with, then, is himself. “The social order is my deed, though it is no longer consonant with my heart.” I discover that, because I act, the social order is my own essence and deed just as my ‘heart’ is my essence. Essence is nonessence and nonessence is essence. To save itself from madness, from complete self-contradiction, consciousness invents the fiction that “contingent individualities [like fanatical priests and corrupt despots] have introduced this ill into a humanity that was naturally good”. Its explanation is obviously worthless, since contingent individualities can’t externally impose a social order on mankind, but consciousness is at least saved from “madness” by the fabrication.

This social order is both stable/universal and perverse. It appears to be consistent and regular, but it is also “a conflict of each against all...the interplay of uneasy, ever-changing individualities, each of which seeks to assert its wishes and collides with the wishes of others”. Consciousness that is cognizant of both the order’s universality (its in-itself) and its inconsistency (its manifestation)¹ thinks that “to realize the truth of this in-itself [viz., the universal order] is simply to set aside the individuality that perverts it. The new figure, then, is virtue, the consciousness that wishes to annihilate individual egoisms in order to allow the order to appear as it is in its truth.”

Hegel isn’t fond of the virtuous consciousness. He thinks it does little but make “pompous and hollow speeches” as it “vainly struggles against the way of the world [viz., the conflict of each against all]”. Virtue denounces egoism and believes that the individual should sacrifice himself completely for the greater good. Whereas in the way of the world individuality predominates over law, virtuous consciousness emphasizes law over individuality (thereby, of course, distinguishing the two, which the “law of the heart” didn’t). “For virtue, the good, the universal (law), is [an as yet unactualized] in-itself. Virtue can only believe in its ideal; this faith is the consciousness of a nonpresence.” In admitting that the phenomenal manifestation of the world is not good--that the for-itself isn’t (yet) the in-itself--virtue is making a merely verbal distinction, “for if the in-itself is not for-an-other it is a pure and simple abstraction. What does not manifest itself does not exist. The essence of essence is to manifest itself--and the essence of manifestation is to manifest essence.”² There is no invisible, ‘true’ realm of universal goodness that must eventually manifest itself. Moreover, virtue “can be actual only by dint of individuality”,³ which means that it “is inextricably linked with the way of the world, [and therefore that] the good that it proposes already exists (inheres in ethical substance)”. When the virtuous consciousness finally recognizes its inseparability from the world it admits that “the way of the world is not as bad as it seemed, since it is the realization of a virtue which without it would slumber forever in some nether region”. Virtue’s ideal already exists in the way of the world; otherwise virtue would never have appeared. Hence virtue “vanishes into the way of the world”--and, conversely, the way of the world can no longer be thought of as being-for-itself distinct from being-in-itself. For, although individuality may think that it acts purely egoistically, it’s wrong. When it acts it transcends itself and actualizes potentialities of which it was unaware; i.e., in its act, what was in-itself becomes actual (for-itself). (The in-itself is simply the potential, the “disposition”, that is actualized.) “I imagine myself to be limited to my own individuality, but in fact I more or less embody a universal that

¹ As we’ll see, consciousness is wrong to set essence and manifestation against each other.

² The obvious implication of that last statement is that if the world appears chaotic or bad, its essence has more in common with chaos or badness than simplicity and goodness.

³ Remember that individuality is the very thing virtue opposes. Virtue fails to reflect (until the end of its development) that it is itself a part of the world, and hence that in order to exist it and goodness must be potentialities in the “way of the world”.

transcends me.” Both *I* and “*the way of the world*” are not only being-for-itself but also being-in-itself, “the reality that creates itself”. At this point we reach a new synthesis: the individual’s action is simultaneously in- and for-itself. We have advanced to the final stage of reason.

At the end of the chapter Hyppolite inserts a useful footnote:

The three experiences that we have considered can be summarized as follows: Individuality began by contraposing the *for-itself*, as a *goal*, to the *in-itself*, the given reality. This *for-itself* grew progressively richer, and in the last experience (that of virtue) the *in-itself* became the *goal*. But at that point the *goal* rejoins *given reality* and the distinction between them becomes a mere abstraction. We return to actual reality, but to actual reality as *action*.

Wednesday, February 11

If I commented on every piece of music that made an impression on me I’d be writing forever. It’s arbitrary which ones I single out to praise. With that said, I’m going to be arbitrary yet again: Bach’s Partita No. 5, as played by Glenn Gould, is sheer perfection. The first movement in particular. I often listen to it four times in succession, trying to appreciate its harmonic intricacies and lose myself in the sound at the same time. It’s so light-hearted! It makes me feel so carefree!

Bach’s facility with contrapuntal harmonies is simply beyond belief. More often than not, the bass is singing a lovely melody of its own while the treble is getting all the credit.

February 12

Date with Hyejin— Waited for her in BK, stomach bubbling with nervousness, watching people walk by, expecting to see her any second, torturing myself—but fifteen minutes later my butterflies had flown away. (Har-har.) We’d written questions to ask each other in the other’s language, but that proved unnecessary.

Even so, I doubt this thing will work out. Hyejin is frustrated at not being able to communicate fluently. So am I, but.... Oh, this is a nightmare! It’s the Sin-ae debacle all over again! The worst part is I’ll have to live in doubt for the next week or two. Already it’s agonizing. I guess it was a good sign—but *only* a “good sign”—when she suggested we write letters to give each other on our next date.

I wish someone had told me that no Koreans speak English. It was a mistake to choose this country.

I’m so sick with worry I’m going to read philosophy.

Can’t read philosophy now. Have to get this weight off my chest. Will write more of my story.

....Tired but can’t sleep. How will I endure this night? I can’t banish thoughts of Hyejin, nor can I put them to good use, since I’m too tired to write.

Few things are worse than this kind of impotent despair, a despair whose object is both the specific and the universal. A girl and life.

February 13

The Fates were obnoxious today. I had to substitute-teach at a school for the children of Belial—and I wasn’t in the mood to work anyway. Sincerely wanted to quit my job. I’m sick of it. Tonight I asked Lisa if she still wanted to go to Busan next Saturday; she said she had an interview that day, so she couldn’t! I was royally pissed, since I’d already arranged to have Saturday off. She had waited for me to call her to say she’d broken her promise.

From now on—for a while, at least—I’m going to spend all my spare time learning Korean. Reading newspapers, reading children’s books, reading websites, reading textbooks, listening to tapes,

talking to friends, writing down new words. Hyejin is my best chance for happiness. –Suddenly I’m inspired! (Nothing inspires like love or its prospect.)

Saturday, February 14

Went to a coffee shop and a bar (or club) with Ji-su after work. Observed the mating rituals of *homo sapiens* for an hour—surely the most bizarre behavior of any species—and then went home and called Mom to say, “Happy Valentine’s Day!”

I’m desperate for something *real* in life. All my experiences are fake—as are those of most people. They’re an act; they can be turned on and off; they have no meaning; they’re meant to pass the time. My relationships are and have been lies, in spite of my fondness for my friends. In one moment we can be intimate and seemingly important to each other; in the next we can be mutually disdainful or even hateful. We lie to each other and ourselves, and life lies to us. Passion is surely the only thing that can put a temporary halt to the deception.

This is so depressing. If I can’t love, why should I live?

February 15

[...]

Although I know it’s impossible to learn Korean in seven months, I won’t give up yet. My goal isn’t to speak it fluently; it’s to understand it when others speak it. When Hyejin speaks it.

...Obviously when I’ve used the word ‘master’ in this journal I’ve meant it in a different sense than Hegel did. My ‘master’ is someone from whom people want recognition more than others. In the language of folk psychology it’s a person who dominates and is respected (if also often disliked) to a high degree. Bill Clinton is such a man, to an extreme.

Monday, February 16

Human works and the dialectic of action. The individuality that is “real in-and-for-itself” no longer opposes the world or wishes to negate it. It knows that it is “directly in the midst of the world [that the “world” is really nothing but the world of individuality] and it wishes only to express itself.... Thus, what is essential is to act for the sake of acting; to manifest on the outside, in the pure element of exteriority, what the individuality already is within itself, its *basic and determinate nature*. Insofar as individuality is this basic nature, it is in-itself; insofar as it expresses it, it is for-itself.... The objective world and conscious individuality are now conjoined in one reality. This reality is the deed (*Tat*).” As I wrote earlier, the in-itself of the world is simply the potentiality that is realized in action¹—or rather, it “*changes* from potentiality to action in its manifestation”, and thus it is essentially action. “There is not a world in-itself and an individuality for-itself; the world is the world of individuality, and individuality is the meaning and the expression of the world.”

In action, individuality is constrained by its own nature, its in-itself. The individual can’t transcend himself; he can only actualize himself. However, self-consciousness doesn’t feel any limitation on itself, for it is purely the act of relating to itself. It is the movement of negativity. Therefore, when the *deed* confronts it—the deed which is a determination existing “in the element of being”—a determinate Dasein (that expresses the nature of the individual), self-consciousness instantly becomes ‘universal’ in relation to it and ceases to see it (the “work”) as its own. “A difference between the work and acting consciousness [which is the pure movement of action, i.e., negativity] is introduced, a difference which contradicts the

¹ So, if something isn’t realized, then it wasn’t a potential. As Hyppolite remarks, that’s an easy way out for Hegel.

concept consciousness had of itself [viz., that consciousness—and hence action—was all of reality, that its goal was itself (the realization of its potential)].” The deed is a particular determination, different from the “self-equality of self-consciousness”.¹ “I go beyond my work, which is to say that I transcend my originally determinate nature and find it inadequate to my action qua action.” But it isn’t only the *content* of my work that opposes me; it is also the *form*, which is “*the determinateness of all reality, contraposed to the movement that determines*”. Once again, the whole of reality opposes me. (Recall that in previous dialectics this was the starting-point, and unity was the result; in this dialectic, (the conviction of) unity was the starting-point, and opposition is the result.) Needless to say, this opposition was implicit in the fact that the in-itself is a determination and action is “form equal to itself”, the negation of all determinations.

“Deposited in the alien milieu of reality, the work is shown to be contingent.” The means chosen might have been inappropriate to the task, or the goal might not have corresponded with my nature (with possibility), or “chance” might have frowned on me. At this point Hegel introduces the concept of the “thing itself”, which is the unity of being and self-consciousness. He acknowledges that each work is negated and, to an extent, contingent, but he points out that works (and actions) exist in a continuous ‘stream’ of disappearance and new appearance, a series which is itself one large and *necessary* work uniting being and action. It is “the necessity of action, the necessity of the unity of being and action. Works appear in reality as actions. They are negated by other works; they vanish. But what subsists and becomes actual reality is precisely this *negation of negation*, this infinite movement which transcends each particular deed by integrating it into a *universal essence*.” “The ‘thing itself’ is actual reality envisaged as the work of self-consciousness.” It isn’t yet spirit, though (a concrete subject). It’s still a “universal predicate”, the predicate that consciousness attaches to each of its ephemeral actions to “grant them validity”. For example, a scientist may say that his purpose is to advance knowledge; he thereby appeals to the universal *process*, i.e., the universal. However, he isn’t being completely honest; he’s really interested in the work not for its own sake but because it is his own. Therefore he isn’t interested in the “thing itself”, which he said he was. Everyone is guilty of the same dishonesty, though in different ways. On the other hand, from another perspective everyone *is* interested in the thing itself, for he enjoys creation and work for their own sake: while working he forgets his own self-interest and is absorbed in the work. The contradiction between work-as-my-thing and work-as-thing-in-general “must be resolved in a higher synthesis, in which the thing itself rises from being an abstract predicate to being a concrete subject. It then becomes the thing which, by being my thing, is everyone’s as well.” It is “a common work, in which individualities and the interplay of their mutual deceits are transcended [and] in which each rediscovers itself as universal self”. Individuality becomes aware of its participation in a common project. The thing itself ceases to be a predicate and becomes a universal subject, a *self-consciousness*. “The universal is no longer contraposed to specific consciousnesses; rather, it finds in them its own concrete content.” It is no longer *form*, the abstract ‘process’ in which all actions are submerged; it is now *content*, the movement of consciousness itself. It is also truth, which is thus identified with *certainty*. Truth is the “ethical world in which being is simultaneously [universal] self”.

However, the individual self isn’t yet a part of ethical substance. The laws that it’s supposed to obey, such as “Everyone must tell the truth” and “Love your neighbor as yourself”, seem arbitrary and contingent, because they’re expressed by a particular consciousness. (A particular person(s) formulates them.) Hence individuality examines the laws to decide whether they’re valid; Kant’s rule “that proclaims the general condition in which a maxim can be established” is such a ‘test’ of the validity of laws. But it yields only tautologies. Moreover, an examination of morality is itself already the beginning of immorality, for it signifies a separation from absolute laws and a judgment of them as “arbitrary and alien”. In reality, though, “law is the pure absolute will of everybody, and it has the form of immediate being. This pure will is not thereby a command which simply ought to be; it exists and it is valid. It is the universal I of the category [or the “concept”?] that immediately is actual reality. And the world is nothing else but this actual reality.” Thus, because law exists, it is valid. It is valid *as* an existent. Consciousness (apparently) recognizes this eventually, and in so doing it becomes the self-consciousness of ethical substance. With this development we reach spirit.

¹ The *act* is the transition from the possible to being. It isn’t a determination, but its product is.

Wednesday, February 18

I think I'd be happier dead than alive. Hyejin's refusing to see me this week; her excuse: she's studying for an exam.

...According to Ji-su, Hyejin thinks I'm going too fast. And that my 'speed' is the result not of deep fondness for her but loneliness. She's right, of course.

Actually, in America my behavior would be fairly normal—all I did, essentially, was invite a girl on a third date and give her an extra prod after she'd declined—but because I'm in a city that's thirty years behind the times (the American times) I'm going 'way too fast'. Girls here want to be *friends first*.

Tomorrow I'll resume the quest to make more friends—a second batch of friends—which is equivalent to the quest to find English speakers. In a week, Ji-su and I are going to join a gym; *there* I'll meet people. Unless the Higher Intelligence that foils all my plans persists in its malice toward me.

February 20

I've decided there's no point in trying to learn Korean. So yesterday I bought *A Moveable Feast*, *For Whom the Bell Tolls*, and *The Power and the Glory*, by Graham Greene. I'll read the first one first.

Saturday, February 21

This was one helluvan awesome day. I met Hye-gyung, the bookstore girl, at 12:30; we were together for the next seven hours. Our conversation was somewhat 'manic' until I loosened things up by singing from a pop song she said she likes. She lost her inhibitions and sang too; from that point on we didn't stop being perfectly comfortable. Nor did she stop laughing.¹ She's an intelligent, mature, movie-star-beautiful, flawless-English-speaking 21-year-old who studies economics and English literature. Her sense of humor is brilliant. Best of all, she doesn't have a boyfriend. "Why not?" I asked. "Men are blind," she answered laughingly. We began the day at a coffee shop, had lunch in an Italian restaurant, saw a movie and finally had dinner. It seemed obvious there's potential for a relationship, but the girls here are inexplicable, so I can't be certain. Anyway, at the very least I've made a good friend.

...It hasn't even been two hours, but I miss her. I've been reading *A Moveable Feast*, which is an intimate collection of tender memories of Hemingway's life in Paris in the 1920s, when he was a young man married to a charming wife and lived in simple happiness. It makes me think of a rich impressionistic painting temporarily conceived. Its mood is quiet, a little sad and nostalgic. The warm memories of his wife make me envious.

February 22

After immersing myself again in Hemingway's nostalgia, I ate lunch alone and went to the bookstore. The first person I met was an insensate middle-aged lawyer whose pastime consists in going to bookstores to annoy foreigners with his questions and his ideas on North Korea. At length I interrupted his speech with "Yes, I agree with you. But I have to meet a friend. It was nice talking to you." Hurried away; a few minutes later I surreptitiously reentered the English section to continue reading and hunting for prey of my own. For a while the situation wasn't promising—it didn't help that I had to be vigilant in dodging the lawyer's gaze—but finally I spotted a friendly-looking girl who was alone. At that moment Judy and

¹ That isn't literally true.

another teacher espied me; they came over to talk. To my dismay. The American she was with (yclept Jim) was an avatar of charisma, but I kept half my attention focused on not letting the Korean out of my sight. Eventually I told them frankly that I was stalking this girl; they applauded my morality and let me go. So I walked over. Waited for her to separate herself from the group she was next to. To my surprise, *she* approached *me*! I was standing near the Harry Potter section; thinking she wanted to browse it, I asked—

“Do you like Harry Potter?”

“I’ve never read it. But I’ve seen it.”

“Oh, you’ve seen the movies?”

“Yes.” She paused. “I’ve seen you before. Do you remember me?”

“No. We met? Where?”

“In a bookstore. A long time ago. You wanted a teacher to teach you Korean.”

I laughed in pretended embarrassment. “Oh, you saw me asking someone for lessons? Yeah, I used to want to learn Korean. I *did* learn it for a few months, but I’ve given up. It’s ‘*numoo aryuwahyo*’.” She appreciated my lambent wit. “But I do still want to make Korean friends. Would you like to go to lunch sometime?” I thought my warm smile would disarm her; it didn’t. I pressed her. “It’s so hard to meet English speakers here!”

“Well, I have plans now....”

“Oh, I didn’t mean now. Sometime later. Maybe....could I have your phone number?” She gave it to me and I said I’d call her (after getting her name: Hye-eun). I returned to the two foreigners. Had coffee with them.

February 23

Finished Hemingway’s book. On the whole, I like his writing-style—simple, reduced to the essentials—but there’s room for improvement. His favorite word is ‘very’, which is not a good word.

Last night Hye-gyung had the great idea that we write emails to each other. She sent me her address and asked for mine. = Good sign. At 4:00, in the warm and fuzzy embrace of insomnia, I wrote to her. Her response was a sophisticated version of ‘yada-yada-yada’—but a few sentences were encouraging: “To be honest, I had sort of prejudice toward American due to political or historical reasons between Korea and the U.S, but you are making me think about it different way. You are so funny and impressing me. Actually, seeing the movie ‘Lost in translation’, I didn’t have really good idea about the movie. I was just a bit bored.^{^^1} Your kind of interpretation was impressing me. You were like critic or something.^{^^} I’ll see her on Saturday.

On Friday, dinner with the girl I met in the bar (on the 19th).

By the way, the Korean school year starts in March. Winter vacation has lasted two months; it’s almost over. In a week the bars will be teeming;—they’re empty now.

Yojum I often have dinner with Ji-su.

Read more of Hyppolite.

Tuesday, February 24

Reading Graham Greene.

A moment ago I discovered a website that contains complete translations of and commentaries on scores of ancient texts from every major civilization in Europe, Asia and Africa. Philosophers, historians and poets are represented.

Anaximander, who lived at the time of Thales, was the first Greek to write a philosophical treatise, *On Nature*. In it he proclaimed that the Boundless (which is a type of matter, probably) is the origin and

¹ In Korea, ^^ = ☺.

principle of all things. He adduced at least two arguments: (1) the Boundless itself has no origin, while everything else does; (2) in order for generation and decay to be perpetual, their source must be inexhaustible. The “eternal movement” of the Boundless somehow caused the birth of the world. Anaximander had three principle ideas on astronomy: (1) the celestial bodies make full circles in the sky. The stars, the moon and the sun all describe circular paths. (2) Earth floats unsupported in space. (It has a cylindrical shape, and we live on its flat top.) It doesn’t fall because “that which is situated in the center [of the universe] and at equal distances from the extremes has no inclination whatsoever to move up rather than down or sideways; and since it is impossible to move in opposite directions at the same time, it necessarily stays where it is”. (3) The celestial bodies lie ‘behind’ and ‘in front of’ one another; i.e., the universe is three-dimensional. The sky is not the two-dimensional vault that it is in Homer. He thought the stars were nearest to us, then the moon, and then the sun. He also made a map of the world. He considered life to have begun from the moisture that covered Earth before it was dried up by the sun. The first animals were a kind of fish, from which men developed. Oceans are what’s left of the “moisture”.

February 25

Anaximenes, who was probably a pupil of Anaximander, thought that air is the source of all things. When it’s rarefied it becomes fire, and when it’s condensed it becomes wind, then clouds, then water and then earth. He gave a couple of empirical examples to support his claim. He also associated air with the soul, and thus with life and intelligence: he seems to have thought it was capable of directing its own development, as the soul controls the body. Earth was formed from air and now floats on it; the heavenly bodies were formed from evaporations from Earth, and they too float on cushions of air. He interpreted natural phenomena in accordance with his basic principles: for example, hail is frozen (condensed) rainwater, and “earthquakes are caused by the cracking of the earth when it dries out after being moistened by rain”. He may have been a material monist—‘air is the only substance; everything else is composed of it’—rather than a believer that air simply changes into different matters, but we can’t be certain.

Anaxagoras was born around 500 B.C. He wrote a treatise on nature. He thought there’s an infinite number of independent elements called “seeds”, which are indivisible and imperishable, the ultimate components of combination, and which differ in shape, color and taste. Fire, earth, air and water are composed of them. Before the world was created, “all things were together, infinite both in quantity and smallness”. This original mass was infinitely divisible, but no matter how much it was divided, every part of it would still contain a portion of all things. Thus everything has ‘portions’ of everything else in it. Seeds are distinguished from one another in that some have more of one thing and others more of another: for example, snow is both black and white, but it is more white than black. In other words, opposites are contained in everything (or rather, everything contains its opposite). The original mass became reality through the intervention of mind, which, as the source of motion, is a sort of ‘fluid’. It’s the thinnest of all elements, and it’s the only thing that doesn’t contain portions of other things. From its purity derives its ‘mastery’. Inasmuch as mind enters into certain matters and not others, nature is divided into the categories ‘animate’ and ‘inanimate’. Mind formed reality by introducing a rotary motion into the original matter; this motion ordered the world. Anaxagoras may be called the founder of theism, for he thought that mind (the source of motion and knowledge) is the only God.

Thales was born around 600 B.C. Aristotle considered him the founder of natural philosophy, since he was the first not to invoke mythology in his explanations. He founded the Milesian school, which included Anaximander and Anaximenes. (The first was a pupil of Thales; the second was a pupil of Anaximander.) His most famous philosophical idea is that water is the nature and originating principle of all things. Many facts support his belief: the sperm of all animals is moist; water can, more readily than other elements, be observed to evaporate and condense; islands in the Mediterranean were observed to be slowly increasing in size, by which it was inferred that water was changing into earth; “warmth [which is associated with life] is generated by moisture and lives by it”, to quote Aristotle; metals can be heated into liquid; the ancients thought that spontaneous generation could take place in water; etc. Thales said that

Earth floats on water, due to its wood-like buoyancy. In believing that Earth is less dense than water he may have had in mind examples of pumice-like “floating islands” which were seen and documented by ancient writers. Earthquakes he explained as results of the rough movements of oceans. He probably thought the earth is spherical, because this is the best explanation of many phenomena he would have observed as an astronomer. Apparently he predicted a solar eclipse in the year 585, though it isn’t known how, and he theorized that such an eclipse is the result of the moon passing between the earth and the sun. He determined the dates of the solstices and discovered—or heard from the Egyptians—that the year is 365 days long. It’s thought that he introduced geometry into Greece by visiting Egypt, which had invented it much earlier for the purpose of land measurement. He’s also credited with five Euclidean theorems, which he ‘proved’ by repeated demonstration rather than logic.

Empedocles was an Eleatic, a follower of Parmenides. He accepted the doctrine that *what is* is uncreated and indestructible, but he avoided Parmenides’ unacceptable conclusions by assuming the four elements of fire, water, air and earth. Love and Strife are what explain the attraction and repulsion of different types of matter. In the beginning all was one, “a God eternal and at rest”, in which all the elements were held together by Love. Strife prevailed, though, and the elements separated themselves. Organic life arose through Strife. Eventually this world will succumb once more to Love and everything will be reduced to chaos, but then a new world will be formed, and so on forever. The elements are everlasting; their combinations are not. Fire, as the rarest and most powerful, is the chief element, “the soul of all sentient and intellectual beings which issue from the central fire, the soul of the world”. The senses cannot apprehend the perfect unity of the four elements because Strife has separated them; Empedocles therefore trusted only the intellect. He distinguished between the world of the senses and its “type”, the intellectual world. (Uhh, was Plato a plagiarizer?)

February 26

I’ll ignore Pythagoras; I already know enough about him.

Zeno was an Eleatic. Through his paradoxes he tried to refute such fundamental facts about the world as motion, space and time. For example: “If there is such a thing as space, it will be in something, for all being is in something, and that which is in something is in some space. So this space will be in a space, and so on ad infinitum. Accordingly, there is no such thing as space.”

Leucippus was the founder of Atomism. He agreed with Parmenides that if there’s no such thing as a void there can be no motion and multiplicity, so he concluded that there must be a void. He didn’t identify it with the nonexistent, as Parmenides did; he said it’s a vacuum. Inside this empty space is an infinite number of indivisible atoms which are invisible because of their smallness. Their motion results in the combinations we perceive with our senses. They’re different sizes, which accounts for the phenomenon of weight. He didn’t think ‘absolute’ weight exists: weight isn’t a primary property of bodies. It’s only relative. (Epicurus was the first to ascribe weight to atoms.)

The first effect of the motion of the atoms is that the larger atoms are retarded, not because they are ‘heavy’, but because they are more exposed to impact than the smaller. In particular, atoms of an irregular shape become entangled with one another and form groups of atoms, which are still more exposed to impact and consequent retardation. The smallest and roundest atoms, on the other hand, preserve their original motions best, and these are the atoms of which fire is composed. In an infinite void in which an infinite number of atoms of countless shapes and sizes are constantly impinging upon one another in all directions, there will be an infinite number of places where a vortex motion is set up by their impact. When this happens, we have the beginning of a world. It is not correct to ascribe this to chance, as later writers do. It follows necessarily from the presuppositions of the system. The solitary fragment of Leucippus we possess is to the effect that ‘Naught happens for nothing, but all things from a ground (*logos*) and of necessity’.

I'll quote a paragraph on Democritus, who was a disciple of Leucippus:

Democritus expanded the atomic theory of Leucippus. He maintained the impossibility of dividing things *ad infinitum*. From the difficulty of assigning a beginning of time, he argued the eternity of existing nature, of void space, and of motion. He supposed the atoms, which are originally similar, to be impenetrable and have a density proportionate to their volume. All motions are the result of active and passive affection. He drew a distinction between primary motion and its secondary effects, that is, impulse and reaction. This is the basis of the law of necessity, by which all things in nature are ruled. The worlds which we see--with all their properties of immensity, resemblance, and dissimilitude--result from the endless multiplicity of falling atoms. The human soul consists of globular atoms of fire, which impart movement to the body. Maintaining his atomic theory throughout, Democritus introduced the hypothesis of images or idols (*eidola*), a kind of emanation from external objects, which make an impression on our senses, and from the influence of which he deduced sensation (*aesthesis*) and thought (*noesis*). He distinguished between a rude, imperfect, and therefore false perception and a true one. In the same manner, consistent with this theory, he accounted for the popular notions of Deity; partly through our incapacity to understand fully the phenomena of which we are witnesses, and partly from the impressions communicated by certain beings (*eidola*) of enormous stature and resembling the human figure which inhabit the air. We know these from dreams and the causes of divination. He carried his theory into practical philosophy also, laying down that happiness consisted in an even temperament. From this he deduced his moral principles and prudential maxims. It was from Democritus that Epicurus borrowed the principal features of his philosophy.

Protagoras was a Sophist. He was interested in the correct uses and meanings of words--and is thought to have written the first grammar book--but he's more famous for his idea that "of all things the measure is man, of the things that are, that [or 'how'] they are, and of things that are not, that [or 'how'] they are not". Truth is relative to each person. Judgments about qualities are not objectively valid; what is true, or good, or beautiful, or just for one person is not for another. Therefore Protagoras taught that it's permissible to criticize and change laws, which have evolved and are not absolutely valid. He also was an agnostic.

Cynicism was a school of thought founded by Antisthenes in the second half of the 400s. It was more a way of life than a philosophical system. "The key ethical doctrine of the Cynics, inspired by Socrates, is that living virtuously is both necessary and sufficient for attaining happiness. One must live virtuously in order to be happy, and living virtuously guarantees that one will be happy. Virtue can be taught." If something is pursued other than for the sake of virtue it will lead to harm: it will 'ensnare' the person. Conventional values like wealth, pleasure, power and propriety are worthless; the good life is one lived simply and according to nature. Antisthenes supposedly said he'd rather go mad than experience pleasure. Diogenes of Sinope was another famous Cynic. These "philosophers" were usually beggars. They were also anti-intellectual: they held that knowledge and art have no value. Only ethics is important. Cynicism influenced the history of philosophy by being incorporated into the more sophisticated system of Stoicism.

Zeno of Citium founded Stoicism around the time of Aristotle. The philosophy is divided into three areas: physics, logic and ethics. Stoics were material monists. They thought that only things which act or are acted upon exist, and only bodies satisfy this criterion. Nothing incorporeal exists; even mind, reason and God are material. (However, they allowed that there are other ways of being part of nature than by existing. Time doesn't really 'exist', so it is incorporeal.) If immaterial substances existed there would be no way to explain the interaction of mind and matter, for it is impossible that something physical can act on something nonphysical.

God is both eternal reason and "an intelligent designing fire that structures matter in accordance with Its plan. This plan is enacted time and time again, beginning from a state in which all is fire, through the generation of the elements, to the creation of the world we are familiar with, and eventually back to fire

in a cycle of endless recurrence. [Subsequent worlds are identical.]” Since God is omnipresent reason, the world has order and beauty and is universally governed by the law of cause and effect. Fire and air (the active elements) combine to form breath or *pneuma*, which is the “sustaining cause” of all bodies and which directs the development of animate bodies.

What is a sustaining cause? The Stoics think that the universe is a plenum. Like Aristotle, they reject the existence of empty space or void (except that the universe as a whole is surrounded by it). Thus, one might reasonably ask, ‘What marks any one object off from others surrounding it?’ or, ‘What keeps an object from constantly falling apart as it rubs elbows with other things in the crowd?’ The answer is: *pneuma*. *Pneuma*, by its nature, has a simultaneous movement inward and outward which constitutes its inherent ‘tensility.’ (Perhaps this was suggested by the expansion and contraction associated with heat and cold.) *Pneuma* passes through all (other) bodies; in its outward motion it gives them the qualities that they have, and in its inward motion makes them unified objects (Nemesius, 47J). In this respect, *pneuma* plays something of the role of substantial form in Aristotle, for this too makes the thing of which it is the form both ‘some this,’ i.e. an individual, and ‘what it is’ (*Metaph.* VII, 17). Because *pneuma* acts, it must be a body and it appears that the Stoics stressed the fact that its blending with matter is ‘through and through’.

In animals, *pneuma* is called ‘soul’, and in rational animals it’s also called the ‘commanding faculty’ (reason). “Unlike the Platonic tripartite soul, all impulses or desires are direct functions of the rational, commanding faculty. ...[Sense-perceptions] are affections of the commanding faculty. In mature rational animals, these impressions are thoughts, or representations with propositional content. Though a person may have no choice about whether he has a particular rational impression, there is another power of the commanding faculty which the Stoics call ‘assent’, and whether one assents to a rational impression [i.e., judges its content to be true] is a matter of volition.” Because the impression and the assent are functions of the same faculty, it’s possible to avoid falling into error if our reason is sufficiently disciplined. Moreover, there are no impulses to have or do something unless one assents to an impression, which means that all desires are (at least potentially; see below) *acts of reason*. In spite of their materialistic theory of the mind, some Stoics (like Chrysippus, a pupil of Zeno) held that after wise individuals die their souls continue to exist until the final conflagration--perhaps because their *pneuma* has a sufficient “firmness” to subsist as a body on its own.

Stoicism’s logic is similar to Aristotle’s. However, by the term ‘logic’ Stoics understand also rhetoric, language, truth, grammar, perception and so on. Chrysippus’s theory of the criterion of truth is that it’s an impression (called a “cognitive impression”) that produces an intense feeling of conviction that can be caused only by a *real* object. This cognition, though, isn’t in and of itself knowledge; knowledge is cognition that is “secure, firm and unchangeable by reason....and worked into a systematic whole by other such cognitions”. Mere opinion involves weak assent and changeable assent (assent to a false impression). Skeptics, such as Arcesilaus, denied the existence of cognitive impressions, saying that “no impression arising from something true is such that an impression arising from something false could not also be just like it”. Their arguments are compelling, and Sextus Empiricus, a later Roman Skeptic, proposed that a Stoic sage, who never errs, can therefore not assent to any impressions (because it’s possible they’ll deceive him). He must suspend judgment, like the skeptic.

A slightly less reliable internet article on Stoicism has its own version of Stoic logic:

All knowledge enters the mind through the senses. The mind is a blank slate, upon which sense-impressions are inscribed. It may have a certain activity of its own, but this activity is confined exclusively to materials supplied by the physical organs of sense. [Chrysippus disagreed with Zeno’s ‘imprint’ metaphor for sense-impressions. He thought that the latter are *alterations* of the commanding faculty.] This theory stands, of course, in sheer opposition to the idealism of Plato, for whom the mind alone was the source of knowledge, the senses being the sources of all illusion and error. The Stoics denied the metaphysical reality of concepts. Concepts are merely ideas in the

mind, abstracted from particulars, and have no reality outside consciousness. Since all knowledge is [ultimately] a knowledge of sense-objects, truth is simply the correspondence of our impressions to things. How are we to know whether our ideas are correct copies of things? How do we distinguish between reality and imagination, dreams, or illusions? What is the criterion of truth? It cannot lie in concepts, since they are of our own making. [The foundation of knowledge is] sense-impressions, and therefore the criterion of truth must lie in sensation itself. It cannot be in thought, but must be in feeling. Real objects, said the Stoics, produce in us an intense feeling, or conviction, of their reality. The strength and vividness of the image distinguish these real perceptions from a dream or fancy. Hence the sole criterion of truth is this striking conviction, whereby the real forces itself upon our consciousness, and will not be denied.

The goal of life is happiness. Whatever is good must benefit its possessor under all circumstances. Things like health, pleasure and wealth can conceivably be bad for their possessor; hence they aren't good but are merely indifferent. Conversely, sickness, pain and poverty need not always be bad, so they too are indifferent. "The only things that are good are the characteristic excellences or virtues of human beings (or of human minds): prudence or wisdom, justice, courage and moderation, and other related qualities." However, Stoics distinguish between what is good and what has value: wealth and the like may not be good, but they have value for self-preservation (which is the original impulse of creatures) and are thus preferable--other things being equal--to their opposites. The Stoic injunction to live according to nature means that one should rationally select things that have value, which means that they should be selected "in accordance with the virtuous way of regarding them". When they come into conflict--for example, when one can choose either to be wealthy or to preserve someone else's health--the way that is most in line with nature's rational plan should be chosen. But it's important to note that the *possession* of these things doesn't bring happiness; rather, the virtuous selection of them does. The ordering of one's preferences makes one happy. When I perform an action that is valuable (or "according to nature") I perform a "proper function", i.e. something that nature intends me to do. All animals and plants have proper functions peculiar to them. When I perform a proper function virtuously, I perform a *perfect* function or right action. Only the wise and entirely virtuous person has this kind of 'moral knowledge'; the rest of us are equally vicious and ignorant. (That follows from the idea that virtue is the only good and vice the only evil. Since there are no gradations in goodness or virtue, people are simply either *virtuous* or *vicious*.) The sage--who is incredibly rare--subordinates himself to the universe and recognizes that he is basically nothing. Suicide, by the way, is permissible in some circumstances because life isn't a 'good'.

Stoics distinguish two primary passions: appetite and fear (which are related to what is pleasurable and distressful). They are "excessive impulses which are disobedient to reason". They're also opinions, i.e., assent to false impressions--because the only time that something 'good' or 'bad' is really present is when something favors or threatens virtue. Everything else is indifferent and so shouldn't cause excessive desire or fear. The wise man feels only well-reasoned emotions like "joy, watchfulness and wishing"--so that kindness, for example, results from the knowledge that other people are 'valuable', 'appropriate to one's nature'. Later Stoics modified these severe doctrines of Chrysippus.

I'm confused about two things: how can irrational emotions be expressions of a rational commanding faculty? Maybe this objection can be answered by recalling that emotions are *errors*, and having a rational faculty doesn't imply infallibility. However, they're also said to be "disobedient to reason", which seems contradictory in a rational faculty. Secondly, if Stoics believe that humans necessarily live in accordance with the laws of nature, which are rational, what does it mean to exhort people to live rationally? Their (inadequate) answer is that, although we will always act as the necessity of the world compels us, we can *assent* to our involuntary obedience and thus follow the law consciously and deliberately.

Epicurus was born seven years after Plato's death. He agreed with Democritus that indivisible atoms are the basic constituents of the world and that they exist in empty space--because (1) without empty space, movement wouldn't be possible and (2) if compound bodies were infinitely divisible they would dissolve away into nothing. He also agreed that the universe (which is unlimited in size) has always existed,

because it's impossible for something to emerge out of nothing. *This* universe, however, is a temporary one; gradually it will dissolve and a new one will be formed, and so on. To answer the question of why atoms move at all, Epicurus postulated that they have an absolute weight that pulls them in a downward direction. His second departure from Democritus was in his idea that atoms do not only fall downward; they also occasionally swerve to the side and thereby collide with each other. (Otherwise they would never meet and compound bodies wouldn't exist.) This idea of random atomic motion also allows for human freedom, which was denied by Democritus. His third departure was his avoidance of Democritus's skeptical conclusions, which resulted from his distrust of the senses and his belief that qualities are unreal, existing merely as perceptions and not in things themselves. (The conclusion in question is that senses cannot give us reliable knowledge.) Epicurus agreed that properties don't inhere in things, but he thought that objects do have inherent 'potentialities' for causing certain perceptions--potentialities based on their atomic structures. The tendency of his philosophy is to explain natural phenomena mechanistically rather than teleologically, so that, for example, lightning is the result not of gods but of atoms, and the apparent purposiveness of nature is due to a process of natural selection. Through arguments like these, as well as the argument that if the world were under the care of a loving god it wouldn't contain so much suffering, Epicurus finally relegates gods to the status of blissfully happy beings who are unaware of our existence.

The mind is located in the chest, and mental processes are atomic processes. (If they were incorporeal they couldn't act on the body.) A consequence of this union of mind and body is that death is annihilation. The atoms composing the mind disperse. Because death affects neither the *present* self nor the *dead* one--which doesn't exist--it shouldn't be feared. Epicurus explained perception in the same way that Democritus did. His anti-skeptical faith in the senses derived from his belief that only *judgments* can be in error, since sensation is a passive reception of data. All ideas are formed ultimately on the basis of sense-experience. (There are no innate ideas, as Plato thought.) Epicurean ethics are hedonistic: pleasure is intrinsically good and pain intrinsically bad. Like Benthamite ethics, they're based on a theory of psychological hedonism, viz. that pleasure is the only thing people pursue for its own sake. Hence virtues should be followed only for the sake of 'prudence'. Two types of pleasure are distinguished: 'moving' pleasure and 'static' pleasure, the process of satisfying desire and the cessation of desire. An example of the first is the activity of eating, of the second the subsequent state of satiety. The second is superior. Thus tranquility is the greatest pleasure. To attain it we must overcome our anxiety about the future, which is the greatest destroyer of happiness. We must also reduce our desires to an easily satisfied minimum, i.e., suppress vain, unlimited, unnatural desires like those for fame and wealth. Epicurus had a contractarian theory of justice: he defined it as an agreement "neither to harm nor be harmed". People enter into communities for the sake of protection and justice, and justice exists only in those communities. He praised friendship highly, as providing men with security and happiness. A wise man should even be willing to die for his friend.

Friday, February 27

There were two forms of ancient skepticism: Pyrrhonian skepticism, nominally founded by Pyrrho (who was born in 365) but really founded by Aenesidemus, which flourished between the first century B.C. and the third century A.D., and Academic skepticism, which flourished between 273 and the first century B.C. I'll discuss the Academic variant first. After Plato died, his followers in the Academy directed their efforts toward developing an orthodox Platonic metaphysics. The sixth head of the school was Arcesilaus; he turned it toward skepticism, largely by attacking the Stoic idea that sense-perceptions are infallible. His argument may be summarized as follows:

For any sense-impression S, received by some observer A, of some existing object O, and which is a precise representation of O, we can imagine circumstances in which there is another sense-impression S', which comes either (i) from something other than O, or (ii) from something non-existent, and which is such that S' is indistinguishable from S to A. The first possibility (i) is

illustrated by cases of indistinguishable twins, eggs, statues or imprints in wax made by the same ring (*Lucullus* 84-87). The second possibility (ii) is illustrated by the illusions of dreams and madness (*Lucullus* 88-91). On the strength of these examples, Arcesilaus apparently concluded that we may, in principle, be deceived about any sense-impression, and consequently that the Stoic account of empirical knowledge fails. For the Stoics were thoroughgoing empiricists and believed that sense-impressions lie at the foundation of all of our knowledge. So if we could not be certain of ever having grasped any sense-impression, then we cannot be certain of any of the more complex impressions of the world, including what strikes us as valuable. Thus, along with the failure to establish the possibility of katalepsis [--which is a mental grasping of a sense-impression that guarantees the truth of what is grasped--] goes the failure to establish the possibility of Stoic wisdom.

Because of this lack of knowledge, and because Arcesilaus was able to argue convincingly for both sides of every position, he concluded that we should suspend judgment about everything. (Of course, this is itself a judgment and is thus self-refuting, which is why some commentators think that Arcesilaus was concerned only with refuting the possibility of *Stoic* knowledge, not of *all* knowledge.) In response to the Stoic objection that life can't be lived in a perpetual suspension of judgment, Arcesilaus said that a person can do what is merely *reasonable* rather than *certainly right*.

Carneades was an eminent skeptic who lived almost a hundred years later. He adopted the dialectical method of his predecessor, according to which he argued for both sides of a position. Attacked not only Stoicism but every Hellenistic philosophy that claimed to have certain knowledge or to have discovered a criterion of truth. He argued, first of all, that there can be no certain truth because reason, the senses and everything else sometimes mislead us, and, secondly, that impressions are not completely objective but rather reflect their own subjective nature as well as the nature of reality. According to Sextus Empiricus, his practical advice for living in a philosophically defensible way is that we should trust most sense-perceptions because they're *plausible*: not only do they feel convincing, but they've been repeatedly tested. They may be wrong, but practically that's irrelevant: what matters is that they "hold" for the most part. Thus, Carneades (probably) admitted that certain sense-perceptions *may* be true. (Some commentators think that Carneades was so much of a dialectician that he didn't believe even these views; he merely proposed them for the sake of argument. On this interpretation he was a 'negative' skeptic, i.e., he held no positive views whatsoever and thus avoided the inconsistency that Arcesilaus fell victim to.)

Philo was head of the Academy in the first century B.C. He thought that some sense-perceptions may be true but that we have no way of knowing which they are. He also believed that truth must exist if some things are held to resemble it, and he advised that people should *tentatively* accept philosophical positions that are well supported. Cicero was his student.

Aristocles reported the following about Pyrrho's beliefs:

[Pyrrho] himself has left nothing in writing, but his pupil Timon says that whoever wants to be happy must consider these three questions: first, how are things by nature? Secondly, what attitude should we adopt towards them? Thirdly, what will be the outcome for those who have this attitude? According to Timon, Pyrrho declared that [1] things are equally indifferent, unmeasurable and inarbitrable. For this reason [2] neither our sensations nor our opinions tell us truths or falsehoods. Therefore, for this reason we should not put our trust in them one bit, but we should be unopinionated, uncommitted and unwavering, saying concerning each individual thing that it no more is than is not, or it both is and is not, or it neither is nor is not. [3] The outcome for those who actually adopt this attitude, says Timon, will be first speechlessness, and then freedom from disturbance.

Thus, Pyrrho abandons philosophy. His position, incidentally, like Arcesilaus's, seems self-refuting. Why should we arbitrarily exempt *its* propositions from the otherwise universal law that propositions are neither true nor false? If things can't be "measured" (described), how is it possible to say they can't be measured?

Even if the metaphysical interpretation of his thought is rejected--according to which things *really are* undefined--in favor of the claim that he's describing only appearances, he isn't saved from self-contradiction, for he's still making a definite statement about them when he says we can't make statements about them. Moreover, how can you live if you don't trust your senses? Timon suggested that the Pyrrhonian *does* guide himself by appearances and therefore doesn't completely mistrust them (nor sentences that describe them); he mistrusts metaphysical statements based on them. But that surely contradicts the fragment above.

Anyhow, in the first century B.C., Aenesidemus, a philosopher in Plato's Academy, revived Pyrrhonism as a reaction against the Academy's dogmatism which confidently affirmed some beliefs and rejected others. His alternative was not to assert anything unconditionally, not even the claim that he asserts nothing unconditionally. "The Pyrrhonist will only assert that some property belongs to some object relative to some observer or relative to some set of circumstances. Thus, he will conditionally affirm some things but he will absolutely deny that any property belongs to anything in every possible circumstance." Aenesidemus refused to say that anything *by nature* has a particular quality. He advanced a set of ideas called the Ten Modes to elaborate his basic hypothesis. Briefly, they are as follows: 1. The world appears different to humans and to animals, and there's no reason to think that one is more 'accurate' than the other. 2. How it appears to some people is different from how it appears to others. (This targets the endless disagreements among dogmatists as to the nature of the world.) 3. At times, objects appear to the senses of an individual in incompatible ways. Perfume is pleasant to smell and disgusting to taste, so in itself it is neither pleasant nor unpleasant. 4. A person experiences the world differently according to his emotional and physical state. 5. Appearances vary according to the position of the object. An oar looks bent in water and a pigeon's neck changes color as the pigeon moves. Why should we privilege one appearance over another? 6. Nothing is ever experienced in its purity; it is always mixed together with other things. Hence we are unable to experience the nature of things. 7. Different effects are produced by altering the quantities of things. (A grain of sand is rough but a pile is smooth.) 8. Something appears to have a property only relative to certain features of the subject or the object. (This is a paradigm of all the modes.) 9. The frequency of encountering a thing determines how it appears to us. 10. The value of things differs from person to person. For some people homosexuality is good while for others it is bad. Things are not good in and of themselves; hence we should suspend judgment about them. The relativism of these attacks on Essentialism is probably epistemological rather than ontological: Aenesidemus meant that we can't know the essences of things, not that they don't have essences. Like Pyrrho, he thought that a suspension of judgment would result in tranquility. We must accept our limitations.

Sextus Empiricus lived in the second or third century A.D. He distinguished three types of philosopher: "dogmatists, who believe they have discovered the truth; Academics (negative dogmatists), who believe the truth cannot be discovered; and skeptics, who continue to investigate, believing neither that anyone has so far discovered the truth nor that it is impossible to do so". However, he claimed that even if he discovered a philosophy that apparently had no faults he wouldn't believe it because it might be disproved in the future. So, practically speaking, for Sextus it seems impossible to discover truth.

According to Sextus, one does not start out as a skeptic, but rather stumbles on to it. Initially, one becomes troubled by the kinds of disagreements focused on in Aenesidemus' modes and seeks to determine which appearances accurately represent the world and which explanations accurately reveal the causal histories of events. The motivation for figuring things out, Sextus asserts, is to become tranquil, i.e. to remove the disturbance that results from confronting incompatible views of the world. As the proto-skeptic attempts to sort out the evidence and discover the privileged perspective or the correct theory, he finds that for each account that purports to establish something true about the world there is another, equally convincing account, that purports to establish an opposed and incompatible view of the same thing. Being faced with this equipollence, he is unable to assent to either of the opposed accounts and thereby suspends judgment. This, of course, is not what he set out to do. But by virtue of his intellectual integrity, he is simply not able to arrive at a conclusion and so he finds himself without any definite view. What he also finds is that the

tranquility that he originally thought would come only by arriving at the truth, follows upon his suspended judgment as a shadow follows a body.

Arriving at definite views is one of the main sources of psychological disturbance. Sextus reported a second set of modes called the Five Modes of Agrippa (with which he may or may not have agreed):

Agrippa's Five Modes relies on the prevalence of dispute and repeats the main theme of Aenesidemus' Modes: we are frequently faced with dissenting opinions regarding the same matter and yet we have no adequate grounds on which to prefer one view over another. Should a dogmatist offer an account of such grounds, the skeptic may then request further justification, thereby setting off an infinite regress. And presumably, we should not be willing to accept an explanation that is never complete, i.e. one that requires further explaining itself. Should the dogmatist try to put a stop to the regress by means of a hypothesis, the skeptic will refuse to accept the claim without proof, perhaps citing alternative, incompatible hypotheses. And finally, the skeptic will refuse to allow the dogmatist to support his explanation by what he is supposed to be explaining, disallowing any circular reasoning. And of course the skeptic may also avail himself of the observation that what is being explained only appears as it does relative to some relevant conditions, and thus, contrary to the dogmatist's presumption, there is no one thing to be explained in the first place.

Sextus extended Aenesidemus' suspension of belief, which countenanced relativistic beliefs like 'in its nature X is no more F than not-F, though it is F in these circumstances', to apply also to *those* beliefs. He didn't allow us to believe even that X is no more F than not-F. Thus his form of skepticism is more a practice than a doctrine, since it rejects all doctrines. (That isn't strictly true, of course: unless a philosophy has *some* kind of a doctrine it isn't a philosophy. Sextus' doctrine, put crudely, is that all doctrines ought to be rejected. Thus, like other skeptics, he is inconsistent.) But the question arises of how the skeptic can live if he rejects beliefs. Sextus had an answer: "the skeptic will guide his actions by (1) nature [=perception and thought], (2) necessitation by feelings [=hunger, thirst, etc.], (3) laws and customs [which tell us how to evaluate things appropriately], and (4) kinds of expertise [=trades and professions, i.e. *skills* that don't rely on theories]".

To conclude, "a unifying feature of the varieties of ancient skepticism is that they are all concerned with promoting, in some manner of speaking, the benefits of recognizing our epistemic limitations. Thus, ancient skeptics nearly always have something to say about how one may live, and indeed live well, in the absence of knowledge." Secondly, ancient skepticism is more radical than modern skepticism: it isn't afraid to hold extreme views like the idea that every impression and opinion is false (which Xenias of Corinth believed). Thirdly, although it seems as if ancient skepticism is fatally inconsistent--in that, for example, it suspends judgment on all questions while making the judgment that there are equal arguments for and against every position¹--that's possibly wrong, because this kind of skepticism denies *realist* truth (that there are truths which correspond to an objective world)--the only form of truth that was recognized in that age--and doesn't take into account other kinds of truth invented in the modern age. Therefore, truths affirmed by skepticism are perhaps not realist but anti-realist ('coherentist', maybe, or pragmatic), and thus skepticism's arguments might not apply to them. I don't think this idea has much potential, though.

¹ That may be a bad example. For if there is a good argument for every position we will be forced to suspend judgment, whether or not we articulate that necessity. It's peculiar, to say the least, to call an *expression* of an absolute necessity 'inconsistent' while the necessity itself (when not articulated) is not called into question. The necessity is granted by everyone--at least, it makes no sense *not* to grant it given the premise--but its verbal expression is attacked. What's disturbing about this is that I understand why the statement is criticized (it's a definite position and thus apparently contradicts the resolve not to have a definite position) and I also understand why it's perfectly in order and ought not to be criticized. Maybe the point is that the complete justifiability of their advice testifies against the skeptics that it's possible for doctrines and maxims to be *incapable of being wrong* (given certain premises, which in this case are not in question--and that's another inconsistency in the skeptic's position!).

February 28

I can't describe my pain, so I won't. Had dinner with Hye-gyung and then we saw a movie and then we drank until midnight. When she told me she doesn't want a boyfriend I fell into sadness, and it showed. She asked what was wrong. For a while I said nothing, but finally I was honest and said I didn't understand Korean girls and I liked her and had hoped we could date and why didn't she want to and why is it so hard in Korea. She said something about Korean stereotypes of Western guys as only wanting sex or being relentless pursuers of women and I answered that everyone tries hard to find someone and sometimes s/he succeeds and sometimes s/he doesn't but the pursuit itself isn't bad it's universal, but she told me a story of a Canadian guy who liked her and when he was turned down he said the same things he'd said to her to another girl he met and that was where she'd got her stereotype from and that I've probably said *my* things to other girls here and therefore don't mean them and I said well sure sometimes a person meets someone he likes and sometimes not and sometimes several people in succession and if so what's wrong with wanting to be intimate with a girl after a previous one has turned him down and it doesn't mean I'm not sincere and besides I've only "liked" a couple others here before her so I'm not a "playboy" but a person who wants *love*, not sex for its sake, and I'm not like other guys who chase girls for sex. [Hmm...] But before all that she told me she doesn't know me and therefore we shouldn't date and I laughed and she said why and I said that's not a reason for not dating but for seeing me more and she smiled but didn't have an answer. And then came her spiel about stereotypes that she admitted to having. And then we talked more about the same things and a few others and I had to fight back tears the whole time. She wanted to discuss something else like philosophy but I was in such pain I couldn't give it up, though I acted very detached and intellectual and unisistent the whole time. She said some stupid nonsensical things that made me think maybe she's right we wouldn't be good together, and her callousness and idiocy finally showed so clearly that I gave up trying to understand her. We talked about other things, she was oblivious to the pain I was in or maybe chose to ignore it, and then we left and I walked her to a taxi and didn't talk and we said good-night. We'll meet again on Tuesday and she'll introduce me to her friend, but the senseless things she'd said had made me lose respect for her and affection and I don't care anymore and there comes a point at which the pain all bleeds together, all the different kinds of pain, and the complaints lose their point because they're superfluous and totally inadequate to the pain which is no longer common and vulgar but sublime and elevated and universal and beautiful but ugly enough for suicide. The pain the envy the frustration the anger the contempt the self-contempt the boredom the floundering the hateful irony the separation from everyone the uncertainty about everything the concerted divine effort to slam me again and again.

No more meetings in bookstores. Only bars.

I have to get out of this country.

It's so tempting and so easy to end oneself. What holds me back? Why do I grasp tenaciously a life that brings me sorrow? The reasons are foolishly optimistic, though one is selfless and pessimistic and surprisingly powerful: my parents.

I've never *really* been *really* close to another human being.

....Great, now I can't sleep. I'm desperate to be unconscious as the only remedy for my torment, but my torment is precisely what prevents me from being unconscious.

There are a dozen thoughts (unrelated to the preceding) that I want to unburden myself of, but instead I'll summarize more ancient philosophy to wear myself out. Origen, who was born in 185 A.D., was "the first systematic theologian and philosopher of the Christian Church" and composed the "seminal work of Christian Neoplatonism", his treatise *On First Principles*. In the beginning of this treatise he introduces the doctrine of the Holy Trinity, which hearkens to his Platonic heritage. (Platonism made much of the "divine hierarchical triad".) But rather than calling the three principles "monad", "dyad" and "world-soul", he calls them "Father", "Christ" and "Holy Spirit".

The first of these principles, the Father, is a perfect unity, complete unto Himself, and without

body--a purely spiritual mind. Since God the Father is, for Origen, "personal and active," it follows that there existed with Him, always, an entity upon which to exercise His intellectual activity. This entity is Christ the Son, the Logos, or Wisdom (*Sophia*), of God, the first emanation of the Father. The third and last principle of the divine triad is the Holy Spirit, who "proceeds from the Son and is related to Him as the Son is related to the Father" (A. Tripolitis 1978, p. 94). Here is Origen explaining the status of the Holy Spirit:

The God and Father, who holds the universe together, is superior to every being that exists, for he imparts to each one from his own existence that which each one is; the Son, being less than the Father, is superior to rational creatures alone (for he is second to the Father); the Holy Spirit is still less, and dwells within the saints alone. So that in this way the power of the Father is greater than that of the Son and of the Holy Spirit, and that of the Son is more than that of the Holy Spirit, and in turn the power of the Holy Spirit exceeds that of every other holy being.

This graded hierarchy reveals an allotment of power to the second and third members of the Trinity: the Father's power is universal, but the Son's corresponds only to rational creatures, while the Spirit's power corresponds strictly to the "saints" or those who have achieved salvation.

God's first creation was a collectivity of rational beings. (Although they had a beginning, they weren't created *in time*--whatever that means.) Their number was limited because an infinite creation would have been incomprehensible and unworthy of God. His intention was that they should "explore the divine mysteries in a state of endless contemplation", but gradually they grew tired of this contemplation and 'fell' away from their creator. (That was when they acquired material bodies.) This fall wasn't the result of an inherent imperfection in them; it was the result of a misuse of "God's greatest gift", their freedom. The only creature who escaped the fall and remained with God was Christ. His soul was no different from ours; he merely made a different choice than the rest of us.

Origen didn't believe that sinners will suffer in hell for eternity. Having been created in the image of God, they will eventually choose salvation over oblivion. Even the devil will. This inevitability may seem to contradict free will, but Origen's conception of freedom was Platonic: it is the ability to choose the good. Because evil is merely the absence of good and thus has no real existence,¹ "to 'choose' evil is not to make a conscious decision but to act in ignorance of the measure of all rational decision, i.e., the good". Some souls require a longer time than others to be educated on the good (because God allots different abilities to different individuals), but since God created them they're bound to learn someday. Multiple lifetimes are necessary for this education; hence Origen believed in the transmigration of souls. At the end of history everyone will be reunited with God, and things will be the way they were before the original fall.

Regarding freedom, the following is illuminating:

Origen recognized freedom only in reason, in rationality, which is precisely the ability to recognize and embrace the good, which is for him God. Irrationality is ignorance, the absence of a conception of the good. The ignorant person cannot be held responsible for his ignorance, except to the extent that he has been lazy, not applying himself to the cultivation of reason. The moral dimension of this conception of freedom is that ignorance is not to be punished, but remedied through education. Punishment, understood in the punitive sense, is of no avail and will even lead to deeper ignorance and sin, as the punished soul grows resentful, not understanding why he is being punished. Origen firmly believed that the knowledge of the good (God) is itself enough to remove all taint of sin and ignorance from souls. A 'freedom' to embrace evil (the absence of good) would have made no sense to Origen who, as a Platonist, identified evil with enslavement and goodness with freedom. The soul who has seen the good, he argued, will not fall into ignorance again, for the good is inspiring and worthy of eternal contemplation.

¹ I've often wondered what the idea of evil as "nonbeing" means and how it originated. Now I know.

Origen was perhaps the first philosopher of history, for he understood it as a process that leads to a final culmination. (It isn't the orthodox Christian culmination of a divine judgment and revelation.) He didn't agree with Platonism that a knowledge of the good brings complete rest; he thought that souls will eternally engage actively with God, whose infinite nature ensures that his mysteries are inexhaustible to finite beings like us.

The Church condemned Origen in the fifth century, so most of his doctrines fell out of favor with theologians. But they were revived during the Renaissance and by some Christian Existentialists, for whom his emphasis on the unique nature of every individual was attractive.

Sunday, February 29

I may or may not have mentioned that Eun-sung went to Thailand in January. Today I saw her again (and Eun-young); we had lunch. While waiting half an hour for E-s in the coffee shop I befriended a four-year-old boy—bounced his balloon on his head, tickled him, chased him; he finally came to like me so much that he sat on my lap and wrestled with me, his family sitting nearby laughing. Until playing with him I talked to E-y listlessly, depressed and lonely and wanting her to know I was depressed and lonely, which she did most emphatically. I felt a refreshing equanimity in her company and the company of my pain (to which, like Nietzsche, I've given the name 'Dog', in honor of its loyalty), not caring about acting the 'right' way but not being rude either. E-s apparently has no compunctions about being rude—to children, anyway: my new friend continued to toss his balloon at me and gibber at us after E-s had arrived, so she shooed him away with a cruel "Go! Go!" Distasteful. I can't like someone who doesn't like children. —But I'll meet the two Euns every Wednesday and Friday for dinner and a bar.

After lunch I slowly ambulated home, wanting to stall the return to solitude; just as I was about to have to enter my dreaded dorm I spotted Judy and Jim on the same street. That was the first time I've ever been glad to see Judy. They were on their way to dinner, so I joined them. If I were a female I'd be infatuated with Jim. We ate delicious bulgogi. Peter and fat slob Troy met us in the restaurant—which was irritating: I wanted to go to a bar with Jim and they wanted to go to a 'board game café'—yes, that's what it is—to play Risk. We were there for two hours before my armies were annihilated, which gave me a good excuse to go home, being bored out of my skull. Called Jean to confirm the details of our Busan trip tomorrow. (We and her friend and another teacher (Greg) are going to the coastal city for a day.)

In *A Moveable Feast*, Hemingway's writing doesn't always come across well. He tries to be witty, but the words drag their feet and he seems more obtuse than funny. At those times his style doesn't compare favorably with Nietzsche's, which sprints effortlessly ahead of the led [lead] eye and gives the impression of lightning wit.

March 1

We left at 9:00 in the morning and returned twelve hours later. Jean's friend, Jamie, is personable and cute. Made too much of an impression on me: I dreaded the moment when I'd have to leave her. Jean said hardly twenty words the whole time, but Jamie compensated for that.

When we arrived we went to Busan Tower first, from which there's a panoramic view of the city; then we went to a famous beach, which couldn't compare to the best beaches in America; then we had an expensive lunch at Bennigan's; then we went to a spectacular aquarium that had sea-creatures from other planets; then we went to a park on a mountain (the whole city is mountainous/hilly); then we had a small dinner, and then we went home. On the way home we played cards and had a grand ol' time. Poor Jean was upstaged the whole day by her friend.

Tuesday, March 2

Didn't do much today. Stayed inside except to eat meals and register/exercise at a health club. Skimmed articles in the Internet Encyclopedia of Philosophy: logical positivism, Carnap, Derrida, functionalism, etc. If I could find English books in this country I'd read those instead.

Here's a succinct summary of the differences between rationalism and British empiricism:

Two key points distinguish Rationalism from British Empiricists. The first involves differing theories about the origin of ideas. Rationalists believed that an important group of foundational concepts are known intuitively through reason, as opposed to experience. Descartes describes such concepts as innate ideas, the most important of these including the ideas of oneself, infinite perfection, and causality. British Empiricists staunchly rejected this view, and argued that all ideas trace ultimately trace back to experiences, such as sense perceptions and emotions. The second distinguishing feature between Rationalism and Empiricism concerns their differing methods of investigating problems. Rationalists maintained that we could deduce truths with absolute certainty from our innate ideas, much the way theorems in geometry are deduced from axioms. Mathematical demonstration was seen as the perfect type of demonstrating truth and, accordingly, mathematical proof became the model for all other kinds of demonstration. Although empiricists also used deductive reasoning, they put a greater emphasis on the inductive method championed by fellow British countryman Francis Bacon.

It isn't easy to extrapolate from the article on Derrida the essential aspects of deconstructionism-- probably because deconstructionism claims not to have much of an essence in the first place. It's really just a critical analysis of texts, in which alternative 'unconscious' meanings are elaborated. Its purpose, insofar as it can be said to have one, is basically to reveal and undermine "dualistic hierarchies" that have permeated Western philosophy since its inception.

Derrida, like many other contemporary European theorists, is preoccupied with undermining the oppositional tendencies that have befallen much of the Western philosophical tradition. In fact, dualisms are the staple diet of deconstruction, for without these hierarchies and orders of subordination it would be left with nowhere to intervene. Deconstruction is parasitic in that rather than espousing yet another grand narrative, or theory about the nature of the world, it restricts itself to distorting already existing narratives, and to revealing the dualistic hierarchies they conceal. While Derrida's claims to being someone who speaks solely in the margins of philosophy can be contested, it is important to take these claims into account. Deconstruction is, somewhat infamously, the philosophy that says nothing. To the extent that it can be suggested that Derrida's concerns are often philosophical, they are clearly not phenomenological (he assures us that his work is to be read specifically against Husserl, Sartre and Merleau-Ponty) and nor are they ontological.

Deconstruction, and particularly early deconstruction, functions by engaging in sustained analyses of particular texts. It is committed to the rigorous analysis of the literal meaning of a text, and yet also to finding within that meaning, perhaps in the neglected corners of the text (including the footnotes), internal problems that actually point towards alternative meanings. Deconstruction must hence establish a methodology that pays close attention to these apparently contradictory imperatives (sameness and difference) and a reading of any Derridean text can only reaffirm this dual aspect. Derrida speaks of the first aspect of this deconstructive strategy as being akin to a fidelity and a "desire to be faithful to the themes and audacities of a thinking". At the same time, however, deconstruction also famously borrows from Martin Heidegger's conception of a 'destructive retrieve' and seeks to open texts up to alternative and usually repressed meanings that reside at least partly outside of the metaphysical tradition (although always also partly betrothed to it). This more violent and transgressive aspect of deconstruction is illustrated by Derrida's

consistent exhortation to “invent in your own language if you can or want to hear mine”.... In suggesting that a faithful interpretation of him is one that goes beyond him, Derrida installs invention as a vitally important aspect of any deconstructive reading. He is prone to making enigmatic suggestions like “go there where you cannot go, to the impossible, it is indeed the only way of coming or going”, and ultimately, the merit of a deconstructive reading consists in this creative contact with another text that cannot be characterised as either mere fidelity or as an absolute transgression, but rather which oscillates between these dual demands.

....Deconstruction contends that in any text there are inevitably points of equivocation and ‘undecidability’ that betray any stable meaning that an author might seek to impose upon his or her text. The process of writing always reveals that which has been suppressed, covers over that which has been disclosed, and more generally breaches the very oppositions that are thought to sustain it. This is why Derrida’s ‘philosophy’ is so textually based and it is also why his key terms are always changing, because depending upon who or what he is seeking to deconstruct, that point of equivocation will always be located in a different place.

Deconstruction(ism) both *reverses* hierarchies (such as speech vs. writing, where speech is considered more “pure” than writing, which is “derivative”) and attacks the oppositions on which they’re based.

I don’t understand the ‘theory’ and I’m bored. I read too much philosophy today.

....5:00 a.m. After I discovered the *Stanford Encyclopedia of Philosophy*, which is better than the other one, I rewrote my summary of Stoicism. Tomorrow I’ll revise what I wrote on Skepticism.

March 6

Evening with Ji-hong. After dinner, bookstore; then a board game café. ’Twas one of those nights that can redeem a misspent year. I think I’m getting a crush on this girl. I haven’t had a crush in years. We had so much proto-romantic fun that the logical conclusion, in my mind, was *at least* to kiss. In America we might have done just that, but in Korea I have to walk with baby-steps. We bought each other gifts; I gave her a Rachmaninoff CD, since she likes classical music. I’ll tell you more about her: she’s 22, she’s a nurse who works with cancer patients six days a week, she gives private lessons in math and science to kids six days a week, she hasn’t used English since high school but can speak well, she goes swimming three times a week, her sense of humor is spirited and cheerful, the irises in her large eyes are almost as dark as her pupils, her nose is as long as Liszt’s but flatter, her smile is so broad it effects a revolution on her face, her silken hair reaches to her shoulders, her face is narrow and her body is slight but fairly tall. She certainly qualifies as ‘stunning’.

[...]

Wednesday, March 10

Health club. While waiting for the bus that was to take me to work I talked to a fluent English-speaker. Easy and friendly conversation. But she wouldn’t give me her phone number. Her reason: “I’ve never been met this way before.” At work I finally introduced myself to a two-week-old employee; she wants to have dinner.

Relativistic theses take the form of ‘Y is relative to X’. X is the independent variable--usually a broad “framework” like culture or language--and Y is the dependent variable. “*Descriptive relativism* is a family of *empirical claims* to the effect that certain groups in fact have different modes of thought, standards of reasoning, or the like.” “*Normative relativism* is a family of non-empirical *normative* or *evaluative claims* to the effect that modes of thought, standards of reasoning, or the like are only right or wrong, correct or

incorrect, veridical or non-veridical, *relative to a framework.*”

Each species of normative relativism is a Janus-faced view. First there is an *anti-realist face*. The normative relativist about morality, for example, agrees with the anti-realist about morality that there are no absolute, completely objective, framework-independent facts about moral truth or moral justification. Similar points hold for normative relativism and anti-realism about other things like epistemic standards or truth. But, second, each species of normative relativism also has a *realist face*. Its message is that *once we relativize things to frameworks*, there *are* facts about morality, epistemic justification, truth, or the like.

In some cases it's hard to explain what it means for there to be a normative “fact” about something *within* a framework but not *outside* of it.

Relativism presupposes a kind of realism, viz. that there are objective causal connections between frameworks and dependent variables.

A version of relativism is said to be *local* if it applies only to limited aspects of cognitive life, e.g., moral values, and *global* if it applies to broad areas like epistemic standards or truth.

The rest of the article is concerned only with specific theories included in the category of Relativism.

Started to read the article on Plotinus; stopped when I realized I wasn't interested at all. The man's ideas are weird.

Saturday, March 13

Yesterday and today were shit. On top of the fact that I'm starting to really fucking loathe my job, Ji-hong decided against seeing me this weekend.

Dinner with the two Euns; afterwards we went to a “song room”--karaoke room (noraebang). Song rooms are frighteningly popular in Korea. They're *everywhere*. It was the first time I've been to one. At 10:30 I met Jim. Bar.

...Finished my story. Don't know what to think of it.

Toward the Summit

I saw her in New Zealand, on New Year's eve. In a town called Dunedin. To describe nature's handiwork in that privileged spot on the globe would be to insult it, for no description could do it justice. Dunedin itself is nestled in a valley whose walls are hills that hide the Pacific from view. One might lament this false modesty of Mother Nature, which contrives to conceal what is over-awesome from splendor-starved human eyes, but that would be unjust: Her mischief was done with an end in mind. She knew that delayed gratification is *more* gratification—that a climb enables one to savor the pleasures of the summit more fully. In the meantime, there are the hills and the harbors to overawe one. For they are indeed beautiful, though not in the sublime sense that the ocean is; they are instead merely *perfect*, that is, both epitomizing and existing outside human standards of beauty. Against the backdrop of this scenery I saw the girl who seduced and captured my imagination as fireworks streaked across the night sky, which hung above us unperturbed.

People milled about the square, staring at the sky, jostling one another as they simultaneously fought against and surrendered to their quieter side, feeling an instinctual sympathy with the stars. Their thoughts were erratic—now lofty, now earth-bound—but beneath them was a self-consistent Order that absorbed and reconciled all paradoxes. A flowing, vital order that drained itself into the world and replenished itself from the same; that was in constant flux; that was discrete in each mind yet infinite; that monitored itself so meticulously as to be in continuous concord with everything while being grounded in contradiction. It was unknown and unfelt, but it was as real as

the invisible night that enveloped us. We who sat on the wet grass with our heads upturned, feeling peaceful in the contemplation of that immensity—featureless but for pinpoints of molten alabaster—were unaware that in those moments our inner strife had slackened, had flowed into the night air and left in its place the soft psychic soil of a child’s mind, ready to be imprinted with any impression that was strong enough to take advantage of our defenselessness.

I began to daydream, drowsily. Lazy thoughts wormed their way around and through each other. For a while they privileged the presence of the pulsating body around me, which pressed upon itself in fluid unrest, but soon they forsook it for a more elevated and worthy object of attention. A shooting star flickered in and out of existence; its residual trail in my mind became its offspring, which I grasped as it sped me across the sky, past Moon and Earth and Sun. Past planets, stars and galaxies. Past stretches of desolation conceived by no mind. My journey took me to the heart of the nocturnal void, where the secrets of an empty world were revealed to me and I recoiled in incomprehension. Eternities of nothingness flowed past; I shrank from them in disbelief. A moment later my comet returned me to Earth and evaporated, leaving me sitting on the dewy grass and smelling the cool air. I inhaled it deeply and felt a swell of freshness in my chest. Suddenly I sensed an amorphous current of electricity passing through the atmosphere; the hairs on my arms tingled and I looked around in exquisite contentment. At that moment I saw the girl, standing four feet away, her face inclined as mine had been a minute earlier.

What struck me first was her this-worldly otherworldliness. She looked serene and contemplative, unaware of the subdued hubbub around her, but at the same time she looked childlike enough to enjoy nothing more than laughter. Her beauty was a portrayal of the same schism. Strands of russet hair dangled playfully onto a forehead the embryonic ironic wrinkles of which suggested a wise and compassionate skepticism; her eyebrows, arched and amused, possessed a comparable wisdom. Her smile, though, was just a little too broad to be merely ironical. An imperceptible widening would have changed it into suppressed laughter, not dry but exuberant. Her eyes were as mysterious as eyes are wont to be; they were clearly suspended between the divine and the human, like all her features. I continued to gaze at them as she ended her meditation, if such it was, to look curiously at the people who momentarily had no significance for me. I tried to read her thoughts on her face, but all I could glean were potential personality traits. Was she an introvert or a reflective extrovert? Was she intellectual or artistic? Was she a poet or a child? I couldn’t decide, and I would have talked to her had I not been intimidated. I was worried she would walk away in a moment from boredom of being the passive stimulant of my imagination, to find a more active activity, but my fear was proved baseless when she sat down on the grass beside me.

“It’s a beautiful night, isn’t it?” she said. I was grateful. A breeze rustled the leaves on the trees and disarranged the tresses on the girl’s head.

“Yes,” I said. “It’s a good night for the start of the new year. Did you see the shooting star a minute ago?” Her fingers played with threads of grass and seemed to flirt with the thought of pulling them from the ground.

“I imagined it carried me far away from here.”

“Where?”

“I don’t know. A bright place. Heaven, maybe.”

“I imagined it took me to hell. Or something like it.” Her fingers had stopped playing with the grass and were resting quietly on her lap.

“I wish it were quieter. There are too many people.”

“They don’t matter. They don’t exist if you don’t want them to.”

“And how is that?” She smiled, her eyes calmly expectant as if they already knew the answer and wanted to see how I’d express it.

“Only let the night exist for you. Ignore the rest.”

“Can you do that? Ignore it?”

“In some moments. Not in all.” Her look was inquisitive and intense, as mine had probably been a moment earlier. Perhaps it still was. The momentary silence drew me to her, and I thought

again of her enigmatic beauty.

“If I concentrate I can’t. It has to come suddenly, by itself, and I can’t think about it.”

“Right. The whole point is to lose yourself.” As I said it, I felt that sentence was too didactic, that it betrayed the mood of the night sky and made it a means to a vulgar end, but the soft presence of the girl neutralized it. She was content to raise her eyes toward the blue-black canopy and sit in silence. I tried to do the same, but my equilibrium was gone. She had banished it. I could think only of her.

“I wonder how far away they are,” she said at last. “The distances we’re told have no meaning.” Her eyes didn’t waver from their transcendent object.

“It almost makes you want to believe in God, doesn’t it?” I smiled lightly. Hers was more of a sigh.

“Yes...” Her hands suddenly felt the ground, as if they needed reassurance.

“But we don’t need him.” Mine sat still on my crossed legs.

“So it seems...” She watched treetops sway with a gust of wind.

“There’s enough beauty without him.” I leaned closer to her half-consciously.

“How much is enough?” She turned to me in response.

“If it makes me happy...” I could see the tiny blemishes on her skin.

“Does it make you happy?” The movement of her lips was soundless.

“Love does.” The words hovered momentarily in the air.

“Have you been in love?” Her voice was thicker.

“I sometimes think so.” Mine was quieter.

“Some people think love implies God.” Her hands had frozen.

“I think it implies nothing but itself.” I was aware of nothing but her.

“I think you’re right.” A wisp of hair fell into her eye unnoticed.

“And another human being...” I felt disembodied.

At that moment a guy came over to us, looked curiously at me and told the girl it was time to go. She was reluctant but followed him. She looked back at me, an almost blank look that hadn’t had time to create itself, that reflected my stunned silence and equally blank thoughts. There was nothing to say and no time to say it. So we extended imaginary arms and touched imaginary fingertips in farewell. A minute later she was lost in the crowd, as I was lost in my solitude. I sat dumbly there on the trampled grass and groped for a thought appropriate to my feeling. Futilely. ‘And so the vision dissipates...,’ I ended, ‘...and the world with it.’ I returned to the stars. They looked placid, flickerless, inhumanly constant; I could find no companionship there. I looked at the bobbing heads around me, sitting and standing, shaking and nodding, smiling and frowning. They wore masks painted in chameleonic colors; I could find no companionship there. I looked inward, toward an infinitesimal self, toward sadness and the asceticism of self-sufficiency, but then there was nowhere to go. There was no companionship. Again I thought of the dissipated vision, and suddenly blood rushed to my face, pressed behind my eyes and helped me recall, softly, Byron’s line, “The tide rises in my altered eye...”

Sorrow, anger and nascent love merged in my mind. The tide continued to rise, delicately, pushed by the absence of the nameless girl, and finally spilled over, blurring the world. I made no attempt to dry my face. My chin quivered, my lips curled, I felt alone. Deprived of something precious. Terribly alone. I remembered the dream I’d had of nothingness and realized there was nothing phantastic about it, nothing except its presumed distance from me. It was at the center not only of the universe but of *me*. I was a mere elaboration of a mathematical point. I was hollow. I envied the bustling people around me who were ignorant of themselves, not-hollow because they didn’t know they *were*. Such blissful passionlessness! Such innocent contentment! Virtuosoic in self-denial. Among them, though, walked an angel, a girl who had thrilled me, who had given me *substance* for a moment—and who was now walking hand-in-hand with a mortal who didn’t understand her. Was she thinking of me? Was she as forlorn as I was? Or did I mean nothing to her? Would I ever see her again?

I thought along those lines for a while, unconsciously curing myself, through catharsis, of despair. At length I felt calm enough to gaze at the reassuring sight of the hills that hemmed us in and concealed the Pacific from view. I wished I could see the waves lapping at their base, or the watery horizon at the far end of the ocean's moonlit avenue. I felt that would have coaxed tears out of me for an altogether different reason than they had been coaxed earlier. But I lay back on my elbows in resigned contentment, even happiness, and mentally traced the silhouettes of the hills around me. After all, I thought, it's probably better this way. Easy exposure to the sublime numbs one to it: in the absence of effort one loses one's respect. In the absence of suffering one forgets the ideal. The summit is indeed demanding: unless one is prepared for a climb, one will never reach it. Fortunately, a generous amount of beauty exists beneath it as well, and the climb is not fated to be a wholly unpleasant one. I could see this clearly as I surveyed the lively scene lit up by fireworks. We were all happy down here, down under, happy to live our lives against the backdrop of such perfect scenery. We were all dancing, motionlessly but exuberantly, joyfully even when sorrowfully, freely, *chaotically*—dancing together as, high above us, the sky hung comfortably, unperturbed.

The paragraphs are all approximately equal lengths to contribute to the overall tranquilizing, surreal effect—or what I *intended* to be a tranquilizing, surreal effect. I don't know how well I succeeded. As I said before, the story strikes me as pedantic and sentimental.

I got impatient at the end.

Didn't go out tonight. Instead I took advantage of my appalling loneliness to write the last three paragraphs.

March 14

The sheer magnitude of my pain does make me feel strangely noble, but that doesn't make it any less unbearable. It's as though everybody is cooperating in ignoring me, in shunning me and behaving maliciously towards me. [...]

I'm turning into a vessel for anger. I have to smash something, smash the world out of existence.

I'm also angry with myself for being too shy to talk to random people in the street.

I wanted to release my anger in the gym today, but it was closed.

I'm so depressed I might call in sick tomorrow.

I don't want to be alive; I'll try to sleep.

....Just remembered that I have Bach's Chaconne to keep me company! I don't know how it sounds on the violin, but on the viola it's memorable. To say the least.

I'm glad that episode has passed. I feel better. I feel--nothing. Perfect apathy.

Monday, March 15

I can go the whole day feeling nothing but love for people--my students, my coworkers, my friends, the female sex--but when I come home I can suddenly revert to anger.

...I watched *Thirteen Days*. Assuming the movie is accurate, I'm amazed at how close the world came to nuclear war. Through the merest *chance*--a series of chances--and the efforts of three or four men we're alive now.

While I was watching, it occurred to me, for some reason, that *every single person* has problems and *every single person* is liable to concentrate on them while forgetting his 'comforts', his happinesses and successes. These aren't revolutionary truths. Though I've always known them, I ignore them in the ecstasy of sadness--when I most need to remember them. I *choose* to ignore them, precisely because of the ecstasy of sadness. But henceforward I'll make an effort not to. There's no reason to envy JFK his popularity

with the ladies, because for him that was a *constant*, something he took for granted, and as such had less meaning than suffering. It's comparable to my freedom from financial problems, which isn't a positive happiness but a freedom from pain. It's a negative happiness, the effective function of which is to make room for *other* pains. If my erotic desires were fulfilled they would gradually lose their significance¹ and I'd concentrate on other invented problems, losing sight of my good fortune. Hitherto when I've thought of that I've thought, "Yes, but requited love--or even lust--is such a pleasure that in its presence no problem would have the emotional power of my current one." But even then I've known I was deceiving myself. Undoubtedly love is happiness, and for a while it eclipses almost everything else, but eventually pains will creep up and infiltrate my mind. Undoubtedly it's a *positive* happiness, but so are many other of my daily experiences. And not even love is a *constant* positive happiness that 'crowds out' pain.

Thus, the best criticism of envy isn't that it's *petty* or *weak* (for it's an understandable and human emotion); the best criticism is that it's *ignorant*. It's ignorant of the conditions of life. It thinks that some people really are much happier than others, and that happiness is a constant in one person and is not in another.² It makes wrong judgments about the *quality* and the *quantity* of happiness. In extreme cases it's right--in cases of suicide and the like--but those are rarer than you might think.

I have to be stronger. Less indulgent of my whiny side. I have to *act*, not *brood*.

[...]

In any case, all this doesn't take into account that suffering has its beneficial sides too. You shouldn't envy a lack of suffering because that leads to such unenviable things as complacency, weakness, a loss of perspective and a loss-of-touch with life.

March 16

Lunch with Ji-su. It was the first time we've seen each other in two weeks. (She's never not busy.) Wasn't much fun, but I hadn't expected it to be. At 9:00 I met Ji-hong. The conversation was slow, but that hardly dampened our pleasure in being together. I experienced the predictable loss-of-self looking at her face as she talked with those delightful mannerisms and accents unique to her. She gave me a couple of small presents. We'll meet again on Sunday.

Thursday, March 18

I'm reading Kojève's lectures on Hegel. I'll return to Hyppolite someday, but now I want to read something more general, i.e., interesting.

The first chapter is a translation of and commentary on the master-slave dialectic.-- Man is self-consciousness. To understand his origin is to understand the origin of the word 'I'. It arises in the moment of desire. The man who *contemplates* is "lost" in the object, absorbed by it; the man who desires thinks "I..." and thus asserts his self-consciousness. Hence man's self is the self of desire, and his existence must be a biological one. But that isn't a *sufficient* condition for his existence. In moving man to act, desire causes him to negate/transform the object, which at the same time is a transformation of himself because

¹ Even when they're *being* fulfilled, in an erotic act, they lose their significance for me!

² That assumes that in envying a particular experience or character trait you're ultimately envying the happiness it brings rather than the experience or trait 'for its own sake' (whatever that means). Surely it isn't a problematic assumption. After all, the reason you want the experience or trait is for the sake of the pleasure it would bring. --You might call the assumption into question by noting that if you see an apparently happy man who possesses (is in love with) a physically undesirable woman and then you see a man who possesses a beautiful woman you'll envy the second but not the first, because this seems to suggest that you envy not the man's *happiness*--since they're both happy--but his *possession*. I think that's wrong, though. The point is that *you* couldn't be happy with the first woman while you could with the second. Maybe on an unconscious level you even doubt the first man's happiness.

he “assimilates” the object and makes it a subjective reality. In the act, the empty I of desire “receives a real positive content” through this assimilation of an external element--and its content is a *function* of the content of the negated non-I. Therefore, if the desire is directed toward something “natural” (biological), the I will be merely natural, i.e. animal. “The I created by the active satisfaction of such a desire will have the same nature as the things toward which that desire is directed: it will be a ‘thingish’ I, a merely living I, an animal I.” This I will not attain self-consciousness because its object is not self-conscious.¹ In order for the self to be human, desire’s object must be non-natural, i.e. desire itself--which, in being “the revelation of an emptiness, the presence of the absence of a reality”, is the only thing that is not natural, not identical to itself. A desire that desires desire will give rise to an I that is essentially desire (because the content of the I is a function of its object). “And since desire is realized as action negating the given, the very being of this I will be action.” It will not be equality to itself, like the animal I, but “negating-negativity”. “In other words, the very being of this I will be becoming, and the universal form of this being will not be space, but time.” The I is “intentional becoming”: “the act of transcending the given that is given to it and that it itself is”.

Since human desire is directed toward another desire it can exist only in a multiplicity of desires. “That is why the human reality can only be social.” In saying that humans desire each other’s desire Hegel means that they want to be *recognized* in their human value. For example, in the relationship between man and woman, desire is directed toward the possession not of the other’s body but of his/her desire; it is a wanting to be desired, to be loved, to be recognized.

Likewise, desire directed toward a natural object is human only to the extent that it is “mediated” by the desire of another directed toward the same object: it is human to desire what others desire, because they desire it. Thus, an object perfectly useless from a biological point of view (such as a medal, or the enemy’s flag) can be desired because it is the object of other desires.

A man is truly human only if his human desire “wins out” over his animal desire, which is for the preservation of his life. Therefore, he completely affirms his humanity only if he risks his (animal) life for the sake of his human desire (for recognition). (Incidentally, a more precise definition of the desire for recognition is that it is “a desire to substitute oneself for the [supreme] value desired by [another] desire”, i.e., to represent the other’s self-ideal, that which he wishes *he* could be.) However, not everyone is willing to risk his life. Indeed, if he were then all the fights for recognition would result in the death of either both adversaries or one--in both of which cases the realization of the human being would be impossible, since either everyone would be dead or there would be no one left to recognize the final survivor. Fortunately for the continued existence of mankind, some people are cowards. They fear their adversary and refuse to risk their life for the sake of recognition. In so doing they give up their desire and recognize the other as their Master.²

Thus, in the beginning of his history man is never simply man. He is necessarily either Master or Slave, because this is the only way the human reality can come into being.

Saturday, March 20

Worked at a different school today. Delightful kids. Was supposed to meet Hye-gyung, but she cancelled because of a “serious family problem”.

I won’t summarize all of chapter 2, since much of it isn’t new to me.

The explanation of self-consciousness as desire for desire intrigues me. But it’s hard to evaluate.

Kojève has a different spin on Hegel than Hyppolite does (or, *many* different spins). First of all, he

¹ “The animal raises itself above nature that is negated in its animal desire only to fall back into it immediately by the satisfaction of this desire.”

² It’s funny that Hegel ignores women. They don’t exist!

emphasizes that the end of history is universal recognition, and that the desire for recognition is what continuously propels humans to create their history. He also says that all of history is created by the slave who desires recognition from the master. (Both the master and the slave exist through the whole of history, but one is idle--merely negates--while the other is productive.) When the master and the slave are synthesized, when they cease to exist as such, history will come to an end.

Kojève portrays the stoic, skeptical and Christian consciousnesses as reactions of the “educated” (through work) slave against his continued slavery. In order to *realize* his newly formed idea of freedom--formed in the crucible of work done for a master--he will have to fight against the master, “risk his life in a fight for freedom”. But before he dares to do that he imagines ideologies “by which he seeks to justify himself [and] his slavery, to reconcile the *ideal* of freedom with the *fact* of slavery”. The first of these is stoicism. “The slave tries to persuade himself that he is *actually* free simply by *knowing* that he is free--that is, by having the abstract *idea* of freedom.” The real conditions of existence don’t matter; he is independent of them. This ideology, which justifies the slave’s inaction, fails because, in the end, it’s *boring*. Man is fundamentally an active creature: if he doesn’t act--if he remains identical to himself, does not negate (which is his essence)--he becomes bored. Therefore, he moves on to the next stage, that of skepticism-nihilism, in which “he is content to activate his thought in some sense”, viz. by making it negate the given world. This attitude culminates in solipsism: “the value, the very reality of all that is not I is denied”. However, it’s impossible to live while believing this, since it doesn’t allow for action. When the slave becomes aware of the contradiction--which is still essentially that between his idea of freedom and his reality of slavery--he invents the Christian consciousness, in which he justifies ‘his’ contradiction by saying that “*all* existence necessarily implies a contradiction”.

He imagines an “other world”, which is “beyond” the natural world of the senses. Here below he is a slave, and he does nothing to free himself. But he is right, for in *this* world *everything* is slavery, and the master is as much a slave here as he is. But freedom is not an empty word, a simple abstract *idea*, an unrealizable ideal, as in stoicism and skepticism. Freedom is *real*, real in the *beyond*. Hence no need to fight against the master, since one already *is* free to the extent that one participates in the beyond.... No need to fight to be recognized by the master, since one is recognized by a God.One can maintain the stoic attitude....without being bored, for now one does not eternally remain the same: one changes and one *must* change, one must always go beyond oneself in order to rise above oneself as something given in the real empirical world, in order to attain the transcendental world....

Thus the Christian obtains equality with the master. Inequality is an illusion. This ideology persists through the centuries, but Hegel rejects it because it doesn’t take into account that originally the slave was made such because he refused to risk his life, and that he will *continue* to be a slave *until* he risks his life (against the master)--until he accepts the idea of his death. Moreover, the Christian frees himself from the human master only by enslaving himself to the divine master, God. “He is the master’s equal only in absolute slavery.” And the new master “is such that the new Christian slave is even more a slave than the pagan slave”. *Furthermore*, he accepts his slavery for the same reason that the pagan slave did: fear of death. Before, it was for the sake of *biological* life; now it’s for the sake of *eternal* life. The motive has always been “the slavish desire for life at any price”.

Consequently, in order to realize freedom, one must accept the idea of death and thus atheism. This is what happens in the French Revolution, when Christian theology is overcome and the Christian era (the heyday of slavery¹) comes to an end, giving way to the third and last historical period, in which *realized* freedom is conceived by philosophy (German philosophy, and ultimately Hegel). In order for the Christian ideology to be transcended, its ideal must be realized on earth. Everyone must be recognized. To explain how this can happen and what it means, Kojève gives an historical analysis of the pagan state. But first he says that, because a man wants his own *particular* value to be recognized *universally*, he can be satisfied

¹ The pagan world was the heyday of mastery.

only in a society that has a universal State that recognizes each person's unique value and in which (society) he recognizes everyone else through the medium of the State. "Such a synthesis of the particular and the universal is possible only after the overcoming of the opposition between the master and the slave, since the synthesis of the particular and the universal is also a synthesis of mastery and slavery." (See the next paragraph.) That's why it's impossible in the pagan and Christian eras.

The pagan state is dominated by masters. Only masters--warriors--are citizens; only they are recognized. Now, the master represents the element of universality, because the only reason he is recognized is that he risks his life, and the man who risks his life is (by that act) no different from everyone else who has done the same. To the state he is merely an anonymous warrior; his "particularity" means nothing. Hence he cannot be satisfied--because man's desire is to be recognized as an individual, not as a function of the State. The slave, on the other hand, represents particularity. Work is an essentially particular activity because it depends on the concrete conditions in which it is carried out. Moreover, "it is by work that the differences between men are established, that the 'personalities' are formed". (Therefore it is the slave who becomes conscious of his personality and imagines individualistic ideologies.) The slave isn't satisfied because he's the only one to recognize his particular value.

There is indeed a "particular" aspect of the master's existence: his family. It doesn't satisfy him, though. He's recognized (loved) in it not as who he is but as *existing*. Because he exists, he's loved. His actions don't much influence this love one way or the other. In short, his human value isn't recognized; his biological being is.¹

[If nothing else, these summaries of Hegel's thought are useful for showing how incredibly absurd idealism is.]

Sunday, March 21

I met Jung-eun, the girl I work with, for lunch. Her personality is a massive expression of extroverted self-confidence.

In principle, a synthesis of the familial Particular and the political Universal could satisfy man, but it's impossible because the two entities have different supreme values. The value for the family is the life of its member; the value for the state is the *risk* of his life. His death serves the universal cause. "To fulfill the duty of the citizen, therefore, is necessarily to break the law of the family; and inversely." This conflict is inevitable, and in the end it causes the ruin of the pagan world. "In the final analysis, the pagan world perishes because it excludes work. But the immediate agent of its ruin is woman. For it is the woman who represents the family principle--i.e., that principle of particularity which is hostile to society as such and whose victory signifies the ruin of the state." The young military hero who comes to power is still under the influence of woman and the family, and "he tends to transform the state into his private property, into a family patrimony, and to make the citizens of the state his own subjects". He succeeds because the state excludes work. As the stronger state swallows up smaller ones it becomes an empire, and the masters, being too few to defend it, are pushed into the background by mercenaries. Eventually war is conducted almost exclusively by mercenaries, and the masters lose their power to resist the particularism of the emperor (because, again, they don't *work* either). They become his "slaves".² (In the Greek city they were "citizens"; in the Roman empire they're "subjects".) Therefore they accept the ideologies of their slaves, and the pagan world evolves to the Christian one without a violent revolution.

The former masters are not slaves properly so-called, for they don't work in the service of another. They're "pseudo-slaves"--as are their former slaves after they've freed them (which they do on a large scale). The Roman world becomes a society of pseudo-slaves, whom Hegel calls "bourgeois", private property-owners. Even the emperor isn't a true master, since he doesn't risk his life; he's a bourgeois. The

¹ That's why parental love has never truly satisfied me and why I attach so much significance to the other kind of love. I want to be loved for who I am, not *because* I am!

² In effect, they already *are* slaves, since they've ceased to risk their lives.

character of Roman civil law supports Hegel's analysis:

The fundamental notion of Roman legal thought, that of the "legal person", corresponds to the stoic conception of human existence, as well as to the principle of family particularism. Just like the family, civil law attaches an absolute value to the pure and simple *being* of man, independently of his actions. And just as in the stoic conception, the value attributed to the "person" does not depend on the concrete condition of his existence: a man, and every man equally, is everywhere and always a "legal person". And we can say that the bourgeois state founded on the idea of civil law is the real basis of stoicism, of stoicism taken not as an abstract *idea*, but as a social, historical *reality*.

Similarly, private property is the real basis and the reality of nihilistic skepticism, for the property-owner subordinates everything, even the state, to the absolute value of *his* own property.

To explain how Christianity was made possible by Roman society, Kojève describes the existential plight of the bourgeois. To be a truly human being he must *work*, like the slave. But he doesn't work for another; he believes he works for himself. According to Hegel, work is a specifically *human* action only if it is carried out in relation to an *idea*, "something other than the *given*, and, in particular, other than the given that the worker himself is". The slave was supported by the idea of the master, but the bourgeois has no such idea. He doesn't even have the idea of the State, because the bourgeois world is an agglomeration of private properties without a true community. His problem, therefore, is that he needs to work for *another* but can work only for himself. The idea of property resolves the problem: the bourgeois works for property that has become money. He works for Capital. In other words, he alienates himself by projecting himself into the idea of capital, which (while being his own product) "becomes independent of him and enslaves him just as the master enslaved the slave; with the difference, however, that the enslavement is now conscious and freely accepted by the worker". (Thus Hegel 'agrees with' Marx that not only the poor man but also the capitalist is enslaved by capital.) This bourgeois alienation is reflected in the dualistic Christian ideology. The transcendent world of Christianity corresponds to Capital, to which man is supposed to devote his actions and for the sake of which he sacrifices his sensuous, biological desires. The structure of the Christian Beyond is formed in the image of the relations between the emperor and his subjects. The reason why the religion is accepted by the pagan "master" is that he is politically impotent and has nothing to lose by accepting a theology in which all men are equal.

If the bourgeois property-owner is particularistic (along with the slave and the family), so is Christianity (because God is incarnated in Jesus Christ and He has a direct relation with each man taken separately, "without passing through the universal--i.e., social and political--element of man's existence"). However, it is also clearly a *synthesis* of the universal and the particular. As such, it finds the solution to the pagan tragedy. "Since the coming of Christ there is no longer an inevitable conflict with truly no way out." The problem now is to realize the Christian idea of individuality (its synthesis of the universal and the particular, which is supposed to occur in the Beyond). According to Hegel this requires that man liberate himself from God. Individuality cannot exist in the "Beyond" because the conception of Heaven presupposes immortality, which is incompatible with the essence of the human being. If it is to exist it must be on earth, which means that the universal God (who recognizes the *particular*) must be replaced by a universal on earth, which can only be the State. The absolute State that realizes the Christian kingdom of heaven is Napoleon's empire.

The history of the Christian world is the history of the progressive realization of that ideal State, in which man will finally be "satisfied" by realizing himself as individuality.... But in order to realize this State, man must eliminate the Christian idea of transcendence. And that is why the evolution of the Christian world is dual: on the one hand there is the *real* evolution, which prepares the social and political conditions for the coming of the "absolute" State; and on the other, an *ideal* evolution, which eliminates the *transcendent* idea.... This ideal evolution, which destroys Christian theology, is the work of the intellectual. Hegel devotes all of chapter V [to a discussion of the Christian or bourgeois intellectual].

This intellectual can subsist only in the Christian bourgeois world, in which a man is able not to be a master--that is, not to have slaves and not to fight--without thereby becoming a slave himself. But the bourgeois intellectual is nonetheless something different from the bourgeois properly so-called. For if, just like the bourgeois, he is essentially peaceful and does not fight, he differs from the bourgeois in that he does not work either. Hence he is as stripped of the essential character of the slave as he is of the master.

Not being a slave, the intellectual can liberate himself from the essentially slavish aspect of Christianity, namely from its theological, transcendental element. But not being a master, he can preserve the element of the particular, the "individualistic" ideology of Christian anthropology. In short, being neither master nor slave, he is able--in this *nothingness*, in this absence of all given *determination*--to "realize" in some way the desired synthesis of mastery and slavery: he can *conceive* it. However, being *neither* master *nor* slave--that is, abstaining from all work and from all fighting--he cannot truly *realize* the synthesis that he discovers: without fighting and without work, this synthesis conceived by the intellectual remains purely *verbal*.

In the French Revolution the conditions were created in which this synthesis would be possible. Work was joined with the fight for life and death: the working bourgeois became a warrior while knowing that he was mortal. The fight wasn't between master and slave, though, because there *were* no masters. The bourgeois is his own slave, since he is ruled by Capital. "It is from himself, therefore, that he must free himself. And that is why the liberating risk of life takes the form not of risk on the field of battle, but of risk created by Robespierre's Terror. The working bourgeois, turned revolutionary, himself creates the situation that introduces into him the element of death." Thanks to the Terror, the final synthesis is realized. The State that will liberate man is born, and it comes to maturity in Napoleon's empire. Napoleon, however, isn't conscious of his historical role--the State and the society aren't "self-conscious"--which is why Hegel is necessary to complete history.

Chapter 3 of Kojève's book is a three-page long interpretation of the chapter on religion in the *Phenomenology*. It's enlightening, but I won't summarize it.

Spent the evening with Ji-hong. The main reason I like being with her is that her beauty shames Kate Moss's. But her personality is great too. When we were walking to the subway station at the end of the night I asked about our relationship for the first time. She didn't give a clear answer. Said she likes me but it's hard to communicate. "So...*chingu man*?" I asked. (Friends only?) "No," she answered. "But if we were a couple, communication difficult." There was no conclusion because she was in a hurry to catch the last train.

I gave her a birthday present: a CD of Chopin's nocturnes. And I'm letting her borrow *The Gay Science*. In the middle of dinner she suddenly ran outside with no explanation: five minutes later she came back with a box of cookies for me.

March 22

Health club. Work was surprisingly fun--surprising because I was so tired. (Somehow I transform when I enter the classroom.)

Last night Ji-hong wrote something in Korean on a napkin and told me to ask a friend to translate it. Today I did. It was along the lines of "Thanks for always being so kind to me. We have trouble talking, but just being together makes me very happy."

Chapter 4 expounds the Hegelian conception of the wise man. I'll give the barest outline. Wisdom has three common definitions. The first is perfect self-consciousness, which implies the ability to answer in a comprehensible manner all questions concerning one's acts--which, in the end, is the ability to answer *all* questions. The second is that wisdom consists in being perfectly satisfied by what one is. (The wise man desires nothing, wants to change nothing, and no longer *becomes*. He simply *is*.) The third is *moral perfection*. Hegel tries to show that the second definition is equal to the first and the third is equal to the

second, and therefore that all three are equal to each other, and therefore that there is only *one* possible type of wisdom. I won't reproduce Kojève's arguments--with one exception--because this all seems rather scholastic to me. Here's the exception:

The wise man is the perfectly self-conscious man--that is, the man who is fully satisfied by what he is--that is, the man who realizes moral perfection by his existence, or in other words, who serves as the model for himself and for *all* others.[He is] universally recognized. This is to say that there is only one possible type of wisdom[--which is in contradiction with the widely held ideas of relativism]. [Hegel proves his thesis by] starting from the first definition of wisdom, put as an axiom. As for the proof, it is very simple. Let us admit that the wise man is *perfectly* self-conscious. We have seen that perfect self-consciousness equals omniscience. In other words, the wise man's knowledge is *total*, the wise man reveals the *totality* of Being through the entirety of his thought. Now, since Being obeys the principle of identity to itself, there is only one unique totality of Being, and consequently only one unique knowledge that reveals it entirely. Therefore there is only one unique possible type of (conscious) wisdom.

Kojève adds the parenthesis because it's possible to deny--and it has been denied (by Hindu thinkers, for example)--that satisfaction-perfection is identical to self-consciousness. Hegel cannot really argue against these people, because they already place the highest existential value on silence or unconsciousness and thus have no reason to engage in discussion. Hence the Platonic-Hegelian ideal of wisdom is such only for a person who already values self-consciousness most, i.e., a philosopher. This philosopher is distinguished from the wise man in being discontented, in *asking* questions rather than giving them the answers that the wise man does, in wanting to change himself, in *striving* for wisdom. Philosophy is meaningful only to the extent that it is guided by the ideal of the wise man. Now, there are two attitudes toward this ideal: one can believe, with Plato, that its realization is humanly impossible, or one can believe, with Hegel, that it's possible. (Hegel in fact thought that *he* had realized it.) If it's impossible, then the philosopher is either a madman who wants to be what one can *not* be (and he may even *know* that one cannot be it), or he is not a madman and he thinks that his ideal is realized by something nonhuman, that is, God. But in that case he's a theologian. Therefore, in order to believe that philosophy is separate from theology, one must accept the possibility of some day realizing wisdom. Hegel provided the first-ever criterion of absolute self-consciousness (or wisdom): circularity. "To start with a question and to proceed logically [must] lead to the starting point"--only thus is it clear that "all possible questions-answers have been exhausted", i.e. that the knowledge obtained is total. Indeed, Hegel thought that circularity is both the necessary and the sufficient condition of absolute truth. However, he also thought that circularity could be realized only in a perfect, universal, homogeneous (conflictless) society, because the wise man, in no longer *becoming* (i.e., in knowing everything and thus being entitled to a circular wisdom), has passed through all stages of consciousness, which is possible only at the end of history and in a perfect society.

Chapter 5 is on time, specifically the relation between time and the Concept. The Concept is the "coherent whole of conceptual understanding that lays claim to the truth", "the integration of all concepts, the complete system of concepts, the 'idea of ideas'", "the Logos, the *word*--or discourse endowed with a meaning". In the preface and the last chapter of his book Hegel defines time as "the Concept itself which exists empirically". To explicate this statement Kojève proposes to review the Platonic, Aristotelian, Spinozistic and Kantian solutions to the problem that Hegel wants to resolve. He begins by noting that there is only a limited number of possibilities: either the Concept *is* eternity¹ (and *relates*--or "corresponds"--to nothing), it *is* time² (and relates to nothing),³ it is *eternal*, or it is *temporal*. The fourth possibility is a skeptical abandonment of philosophy, for it means that truth *changes*. If the Concept is eternal it can relate either to time or to eternity, and eternity can exist either *outside* of time or *in* it. Spinoza (and Parmenides)

¹ Or an eternal entity.

² Or a temporal entity.

³ Time and eternity, being essentially different, are not related to each other.

think that the Concept is eternity. Hegel thinks it is time. Plato thinks it is eternal and relates to an eternity *outside* of time. Aristotle thinks it is eternal and relates to an eternity *within* time. Kant thinks it is eternal and relates to time.

Kojève discusses Plato's view first. Existence is essentially change; it is temporal. In fact, it is time itself, because change is *only* in existence. The Concept (truth), on the other hand, does not (*essentially*) change, which means it is other than temporal and other than time. It is eternal. (Concepts are eternal, though they exist in time.) Being eternal, it is related to eternity rather than time--and, furthermore, eternity is outside of time. The relation between the eternal Concept and eternity (or an eternal entity) has two aspects: the Concept's meaning reveals the eternal entity, and the entity gives the Concept its meaning. To take a concept as an example: "the word 'dog' reveals the *essence* of the dog, and without this word this essence would not be revealed to man; but the essence of the dog is what realizes the meaning of the word; the *dog* is what allows man to develop the word 'dog' into a judgment, saying 'the dog is an animal with four feet, etc.'" "Generally speaking, there is a movement from the word to the thing, and a return from the thing to the word." This double relation is the only thing that constitutes the truth or the revelation of reality. Truth has no relation to time, even though it exists in it.

Incidentally, any philosophy that doesn't *identify* the Concept with eternity or time--that says that the Concept is merely *related* to one or the other--is necessarily transcendentalist, in that it situates reality outside of knowledge, outside of discourse. It defines truth as correspondence. The two philosophies that are *not* transcendentalist are Spinoza's and Hegel's. Kojève calls any system that relates the Concept to an eternity outside of time--which eternity can be described (as it cannot in mysticism)--"theological".

The next question he asks is "what does the theological system mean for understanding of the temporal world?". His long answer isn't easy to understand, partly because the doctrines it attributes to various philosophies are ridiculous. First he says this:

In principle, *everything* can be said about the world and man. Knowledge that relates to them is *total*. However, in itself, knowledge relating to time and the temporal remains relative: it is a *doxa*.
[?] Only by relating it in its entirety to *eternal* knowledge related to eternity can one say something *definitive* about the temporal.

Then he says that, in theology, the only science of the world can be geometry, because everything else is temporal or presupposes time. Arithmetic (for example), as Kant showed, relates to time; geometry relates to space, which is nontemporal. Thus, you can say that the earth is round, but you can't say *why* it is round, or why it attracts heavy objects, or anything else that relies on the concept of force (which presupposes not only space but time). In short, "theology's" explanation of the natural world is totally inadequate. It's the same in the case of man. "There is [absolute knowledge] concerning him only to the extent that he is related to eternity." The existence of God can be proven because he is an eternal truth, but the existence of man cannot (because he isn't)--unless man conceives of himself as an eternal idea in God. "In short, there is an absolute knowledge in and through consciousness, but there is no absolute knowledge in and through *self-consciousness*." Theological (i.e., Platonic) anthropology is equally problematic, for it cannot really explain freedom.

The free act is situated outside of the line of temporal evolution. The *hic et nunc*, represented by a point on this line, is *determined, fixed, defined* by the past which, through it, determines the future as well. The *hic et nunc* of the free act, on the other hand, is *unexplainable*, on the basis of its past; it is not fixed or determined by it. Even while existing in space-time, the being endowed with freedom must be able to detach itself from the *hic et nunc*, to rise *above* it, to take up a position in relation to it. But the free act is related to the *hic et nunc*: it is effected in given determined conditions. That is to say: the *content* of the *hic et nunc* must be preserved, while being *detached* from the *hic et nunc*. Now, that which preserves the content of a perception while detaching it from the *hic et nunc* of sensation is precisely the Concept or the Word that has a meaning. (This *table* is bound to the *hic et nunc*; but the *meaning* of the words 'this table' exists everywhere and always.)

And that is why everyone agrees that only a *speaking* being can be free.

Now, because the Concept is eternal and related to eternity, which is outside of time, the free act--like the Concept--is impossible in (or *unrelated to*) a temporal world. "In and by the free act, man relates himself to something that is situated outside of time." The free act, the choice, is made outside of temporal existence, "which is absolutely *determined* in its evolution". Because in the Platonic system the nontemporal admits of no variations, the choice must be *one unique act*. After this choice has been made--Plato says in a myth that the soul chooses its destiny before its birth, that is, outside of time--the person's existence is *determined*, and he can never act freely again. He is who he is; his destiny has been chosen. (Origen might say that in one decision, outside of time, the soul chooses to stay with God or to reject him.) Obviously, this theological conception cannot adequately explain history: history becomes essentially a comedy rather than a tragedy, something without meaning and value, something unfree. The "tragic" act, the free act, is outside of temporal life. (Don't ask me what it means for an *act* not to be *temporal*.)

In conclusion: the Platonic system must be discarded because it can explain neither the natural world (except its geometry) nor human existence.

Tuesday, March 23

In defining eternity as *outside* of time, Plato reasoned as follows: "All real dogs change; the concept 'dog,' on the other hand, remains identical to itself; therefore it must be related to an eternity situated outside of real dogs--that is, outside of time." Aristotle answered, "the concept 'dog' is indeed related to eternity; but eternity subsists *in* time; for if real *dogs* change, *the* real dog--that is, the *species* 'dog'--does not change. Since the species is *eternal*, even though it is placed *in* time, it is possible to relate the Concept to eternity *in* time. Therefore there is an absolute knowledge relating to the temporal world, to the extent that this world implies eternity." The *telos* of plants and animals and things is what is eternal. But so is the Cosmos, which means that time itself is eternal--and that the Cosmos has the same structure as does the animal. "The Aristotelian system thus gives an explanation of life and a biological conception of the world." However, it doesn't explain man's historical existence, his *individual* existence. The eternal truth is the species, the *telos*, not the individual. The system's failure is seen more clearly if we again pose the problem of freedom. Quite simply, freedom is impossible in Aristotle's system: a *creative* God cannot exist because "eternity in time signifies *eternity* of the world, *return*, and *eternal* return". If God isn't free, neither is man: "man undergoes history but does not create it". In fact, because for Aristotle eternity is in time, there is no possibility even of a *transcendent* free act (outside of time), as there is in Plato.

March 24

Parmenides and Spinoza think that being and thought (or the Concept) are the same. In Spinoza's words, thought is the attribute of substance, and substance is not different from its attribute. As in Hegel's system, absolute knowledge that reflects the totality of being is just as "circular" as being itself in its totality: "there is nothing outside of the knowledge, as there is nothing outside of being". The difference between Hegel and Spinoza is that the Concept-Being of the former is time, while that of the latter is eternity. "Consequently, Spinozist absolute knowledge must *be* eternity", which is to say that it excludes time, which means that the *Ethics* must be thought, written and read "in a trice". And that's absurd. Admittedly, it could be written by a being outside of time, that is, God, but it wasn't; it was written by a temporally existing man. It's inconceivable because it's not a pantheism (as is usually thought) but an a-cosmism, that is, its universe is reduced to God alone, a God without world and without men. (The *Ethics* describes men, but it cannot account for them. By rights they shouldn't exist.)

Kojève illustrates all his ideas with drawings (and detailed explanations of them) that represent and compare the systems he's discussing. They're illuminating, but I won't try to reproduce them.

“The Parmenidean-Spinozist (and Hegelian) Concept, which is not *in relation* with a Being *other* than itself, but which *is* Being revealing itself to itself--this Concept is called the ‘transcendental I’ or the *transcendental synthesis of apperception* in Kant.” The transcendental is what makes experience possible, and since experience is temporal, it is what makes the temporal possible. The transcendental entity is outside of time; it is eternal or *a priori*. “To say that there is absolute knowledge is to say that there are universally and necessarily valid concepts--that is, concepts that on the one hand are valid at *every* moment of time, and on the other hand *exclude* time from themselves (that is, can never be *modified*); therefore, it is to say that there are *a priori*, or transcendental, or *eternal*, concepts.”

The transcendental I is not merely eternal; it is eternity. This is because it is the origin of the eternal Concept, and such a Concept is eternal not in and by itself but through its *origin*--that is, because it comes from eternity--and therefore the transcendental I must be eternity. This means that Kant’s “transcendental self-consciousness” is Parmenides’ Substance conceived of as spiritual subject (God). “It is the real eternity, which reveals itself to itself in and by the Concept [as Spinoza’s and Parmenides’ eternity did]. It is the source of all Being revealed by the Concept, and the source of all conceptual *revelation* of Being; it is the *eternal* source of all temporal Being.” Kant’s twelve categories (Being, Quantity, etc.) are the twelve aspects of the self-conscious unity of eternity. They precede time and everything in it; they are *a priori*. Spinoza’s and Parmenides’ mistake consisted in believing that these eternal concepts are *attributes* of eternity rather than mere ‘creations’ of it--i.e., that they “determine” eternity, that eternity can be described by them (= by the Concept), that they *are* eternity. Kant, on the other hand, agrees with Plato that nothing can be said of eternity (the One). Plato’s reason was that speech presupposes time (and therefore the Concept cannot be eternity); Kant’s reason is more complex:

“A determination of eternity by the eternal concepts-categories would be possible only by an understanding through the *self-consciousness* of which the whole Manifold would be given at the same time”, i.e., “an understanding which, by thinking of *itself*, thinks of *everything* that can be thought, and which creates the objects thought by the sole act of thinking of them.” (In other words, God.) I’m having trouble understanding why. But all of this is scholastic anyway, so who cares?-- For us who are not God, to apply our concepts to God is to relate them to something they aren’t. Only God can apply concepts to himself; *we* cannot apply them to him. But who’s to say Spinoza wasn’t God? Well, Kant says he couldn’t have been, because man’s self-consciousness is empty: the manifold content of the world must come from somewhere else. That is, in order for there to be *true* knowledge, the object that man thinks of must *exist*, and it must exist *independently* of his thinking of it. Thus, there are two elements in consciousness: there is the Concept, and there is the Intuition that presents to man a content not produced by him. Hence, “the Concept possessed by a being that is not God is a *relation*.”

The last four pages of the section on Kant are pretty dense; I won’t spend hours deciphering and regurgitating them.

I remember way back in the beginning of my Korean sojourn how necessary I thought it was to clarify my purposes in teaching children. Was I doing it for them or for me? For *their* growth or for *mine*? The question bothered me because, as I remarked in January, I’m similar to Alyosha Karamazov in that I crave a *wholehearted* involvement in whatever I’m doing. I need *certainty*. I never answered the question, though; I got into a routine (‘I teach because it’s what I’m paid to do’) and occupied my mind with other things. I guess my answer now would be: the fundamental purpose is self-growth--self-perfection--and one measure of this growth/perfection is the extent to which I educate and connect with the children. Thus the main reason for (beneficially) impacting their lives is selfish.¹ But I do have a genuine urge to help them, an urge separate from my knowledge that it reflects well on me, a spontaneously compassionate desire to improve my students in whatever way I can. I’m not sure of the depth of the desire, since I never think about it. But when I’m teaching at least some of the kids I know from the way I *feel* that I care about them and would gladly spend hours tutoring them. A third reason for my “altruistic” desire is less noble than even the first (though it’s related to it): when Dave worked with me I sometimes felt as though I was

¹ On the other hand, I never think about “self-growth” when I’m teaching. I never think, “Well, at least I’m broadening myself.” The desire is always directed toward the future; I ignore it when *acting*.

competing with him; therefore I had to teach the kids as well as I could and preferably get them to like me in the process. (I really wanted to be liked! I still do, but I care less than I used to.) I was conscious, as always, of Foucault's "panopticon": I wanted to do a good job in the eyes of God (or, me and my imaginary observer). The all-seeing eye is also an impetus behind my desire to be a "great man"--and it's even more a method of monitoring my progress toward the ideal, or of keeping myself on the right track. "What would an outside observer think of this?"--whatever "this" is. That thought follows me like a shadow (though I tend to ignore it). Taken to its logical conclusion it would turn into a ceaseless self-vigilance, akin to that of a Christian ascetic, which would in the end leave me no peace (no time alone) and maybe drive me insane. For we all periodically need a break from our ideals. --The contradiction in morality is that if a person tries to abide by it at all times--not just superficially but consistently and *severely*--he will in all likelihood lose his mental balance or even kill himself, in both of which cases it will no longer be possible to be moral. So its triumph is its defeat. For it to be *realistic* and, indeed, *possible* it must coexist with amorality or immorality. In fact, the best morality would allow for and incorporate elements of what has traditionally been called the negation of morality, that is, *normality*. Not only would they be "acceptable"; they would be desirable, considered an *achievement* (as long as they were offset by their 'opposites'--the rationale of which 'offsetting' (and the reason for the judgment that they were achievements) would be to realize an approximate *totality* in oneself).

"Totality"--*breadth* and *depth*--is the most mentally healthy ideal.

The problem is, it's dishonest. For it's sort of an excuse to indulge in our weaknesses. Hopefully it induces us to moderate them--but if we do, it's probably not because of our self-proclaimed ideal but because we already feel a little disgusted by them, as if they're bad 'in themselves'. And if we feel that way, we're bringing another ideal into the mix (because 'totality' in and of itself is neutral toward the question of whether an action is virtuous or not). Several ideals will always coexist in every psyche, and the conflicts between them will always cause doubt and confusion.

Thursday, March 25

Kojève has shown that philosophers who do not identify the Concept and time cannot give an account of freedom and history. Hegel's principal aim, then, in identifying the two is to explain history. The time he has in mind is historical time, not cosmic or biological time: in fact, in the *Phenomenology* he denies the existence of all time except the historical kind, when he says that "nature is space, whereas time *is* history". Without man, nature would be only space. "Only man is in time, and time does not exist outside of man." (See below.)

Historical time is characterized by the primacy of the future. In pre-Hegelian philosophy, the movement of time was from past to present to future; in Hegelian time the movement is from future to past to present. "The movement is engendered in the future and goes toward the present by way of the past." It arises from human desire, which, in desiring another desire, is directed toward an absolutely nonexistent entity (the only such entity in nature, since it is a negation, the presence of an absence). The future is also nonexistent, since it does not yet exist and has not existed. Hence desire and the future are essentially similar. Therefore, acting in terms of the desire for a desire, which is acting in terms of what does not exist, is essentially acting in terms of the future. Animals, on the other hand, desire something that *is*, for example, water, which means that they act in terms of the present. For the human being the future has primacy over the present.¹ Furthermore, because the desire for desire is the desire for recognition, and this desire engenders history, the time in which the future takes primacy creates history and lasts only as long as history lasts (or as long as the desire for desire lasts, which is the same thing).

¹ In my thesis I wrote that protention is a 'product' of--or coexists with--self-consciousness, i.e., that it makes possible the specifically human way of experiencing time. Retention, I said, is present in animals, though it takes a different form than it does in humans. (Its different form in humans is due precisely to the presence of protention, viz., an awareness of the immediate future.)

“Desire is necessarily the desire to negate the real or present given. And the *reality* of desire [i.e., its satisfaction]¹ comes from the negation of the given reality. Now, the *negated* real is the real that has ceased to be: it is the *past* real. Desire determined by the future appears, in the present, as a reality (that is, as satisfied desire) only on the condition that it has negated a real--that is, a past. The manner in which the past has been (negatively) formed in terms of the future is what determines the quality of the real present.” In this (historical) time, action “realizes in the *present* a project for the future,² which project is formed on the basis of knowledge of the *past*.”

Hegel says that time empirically exists. This statement can be deduced from the preceding analysis. “Time in which the future takes primacy can *exist* only provided that it negates or annihilates.” For it to exist, therefore, there must also be something other than time, viz. space. For space to be negated it must *really exist*--i.e., “*resist*”--i.e., be full of matter--and thus the existence of the empirical world can be deduced. “Time annihilates this world by causing it at every instant to sink into the nothingness of the past. Time *is* nothing but this *nihilation* of the world; and if there were no *real* world that was annihilated, time would only be pure nothingness: there would be no time. Hence time that *is*, therefore, is indeed something that ‘exists empirically’--i.e., exists in a real space or a spatial world.”

To repeat: time *is* man and man *is* time. A nature without man would be space, for it would be identical to itself, and human time, arising from the desire for desire, is *not* identical to itself. It is a negation, made possible by the *desire* for negation (desire). (Kojève admits the possibility--the *probability*--of biological time, but he agrees with Aristotle’s conception of it as circular, as eternal return, as a time in which everything changes only to remain the same.) The only thing left to be explained is what Hegel means by identifying the *Concept* and time.

March 26

The reason it’s possible for there to be abstract concepts, whose meanings are, strictly speaking, not in empirical beings but in the concepts themselves, is that the empirical beings to which the meanings ‘refer’ are constantly annihilated by time. If, for example, dogs were immortal--lived outside of time--it would be impossible to detach the meaning of the concept from the dogs themselves, because to detach the meaning is to “cause the meaning that is embodied in the *real* dog to pass into the *nonliving* world--into the *word*”. Thus, empirical beings must die in order for there to be abstract concepts of them. Their death occurs not only at the end of their natural lifespan but in every instant: in every instant they disappear into the past, they are annihilated.

At the moment when the present Real sinks into the Past, its Meaning (Essence) *detaches itself* from its reality (Existence); and it is here that appears that possibility of retaining this Meaning *outside* of the reality by causing it to pass into the Word. And this Word reveals the Meaning of the Real which *realizes* in the Present its own Past--that is, this same Past that is “eternally” preserved in the Word-Concept. In short, the Concept can have an empirical existence in the World (this existence being nothing other than human existence) only if the World is *temporal*, only if *Time* has an empirical existence in the World. And that is why it can be said that Time *is* the empirically existing Concept.

Three long footnotes elaborate on the identification of the Concept with time, the first two by comparing it to Aristotle’s and Kant’s ideas. Aristotle thought that the concept of “dog” was possible because there is an “*eternal* real dog”,³ which is the *species* and which always exists in the present. Hegel thinks it is possible

¹ Desire isn’t empirically “real” until it’s been satisfied because it’s an *absence*, a negation, something negative rather than positive (or real).

² That is, the purpose of the project is to be realized in ‘a’ present.

³ “Eternal” in the literal sense, since there is eternal return.

because the real dog is a *temporal* entity that is constantly annihilated. Time is this nihilation, but, in a way, the Concept is too, for it is the ‘negation’ of *real being*. Approaching the issue from another perspective, Kojève says in the third footnote that in order for there to be time there must “be” a past, but something *is* only in the present, and the presence of past being is the Concept--and therefore the Concept actually makes time possible. (Kojève doesn’t explicitly draw that conclusion, but it’s implied. It’s also wrong.) Moreover, both the Concept and time are the existence of the past in the present, which seems to imply that the two are equivalent. (The rest of the third footnote and the one on Kant are too involved for me to summarize here.) Of course, in spite of what Hegel and Kojève say, it’s obvious that the two are *not* strictly equivalent. For example, Kojève isn’t entitled to his conclusion in the passage I quoted. “It can be said...”: yes, it *can* be said, and it has *some* support from the analysis, but it’s really just sloppy thinking and isn’t even enlightening. The argument is that because the Concept presupposes time, time *is* the (“empirically existing”) Concept. Clearly that’s flawed reasoning. In the third footnote, (part of) Kojève’s argument implies that *time* presupposes the *Concept*, but this conclusion is a result of the mistaken premise that the Concept is the only thing that preserves past being in the present. *Memory* does so as well, and it’s really *memory* that time relies on. Not *words*. Also, in saying that both the Concept and time are the existence of the past in the present--and in using that premise to draw his conclusion--Kojève ignores his own previous analysis of time, in which time was seen to be much more than merely the coexistence of the present and the past. Time is *negation*; and if the Concept is also, in a way, negation, it is so in a less ‘active’ way than time is. It is really a negation that is *made possible* by temporal negation. My last critical point is that there isn’t much theoretic value in identifying time and the (empirically existing) Concept. It doesn’t *tell* us anything (partly because it’s so vague). All the philosophically rich ideas come before that one; we might as well stop with them rather than proceed to a problematic and virtually empty conclusion for the sake of theoretic symmetry.

Kojève disagrees with Hegel that dialectic (which is a *temporal* understanding and supposedly results from the identification of the Concept with time) reveals not only history but also nature. In fact, Hegel was inconsistent: he said that nature is space, but he examined biology as a temporal phenomenon. Kojève thinks that Hegel was right to say that truly human existence is possible only by the *negation* of (biological) life--in the fight for recognition--and he concludes from this opposition that life is not “historical” (i.e., temporal in the human way) and that therefore a biological dialectic is impossible. I think I agree with his conclusion, but for different reasons.

Saturday, March 27

Since reading Hyppolite’s book I’ve thought that Hegel’s system implies a kind of realism. Kojève agrees. While many of his ideas embody a Kojèvean philosophy *based on* Hegel, and are probably not Hegel himself, this opinion is surely pure Hegel. Otherwise Hegelianism is incoherent. (It *is*, but for different reasons.) For it posits a dialectic between the object and the subject and a synthesis of them at the end of history, and in order for both the opposition and the “synthesis” to exist there must be a real object that exists independently of the subject. A distinction between man and nature permeates the whole *Phenomenology*. In fact, in his philosophy of nature Hegel describes what nature is independently of humans! That Spirit is the synthesis of objective being and subjective revelation doesn’t mean that the former exists only in the latter (as Fichte and, in a way, Schopenhauer believed). I don’t know *what* it means, but presumably it has something to do with nature’s being the externalized or alienated essence of Spirit and collective humanity’s self-consciousness’s being the ‘authentic truth’ or goal of Spirit. Spirit is absolute Being--which (along with its implications) is where the designation of Hegelianism as “idealist” came from--but man is only the self-conscious part of Being. However, because Spirit is (in the end) self-conscious, man is the essential part of it.

Incidentally, I don’t blame Schopenhauer for his diatribes against Hegel. I might have behaved the same way. The *Phenomenology* is practically gibberish: it’s a miracle that anyone was able to glean concrete, systematic thoughts from it.

Hegel's realism is new in that it opposes space and time rather than being and thought. That opposition might seem equivalent to the second if you remember that, for Hegel, space is objective being and man is time, but actually it's more insightful. It explains *why* man and being are opposed, namely because man (time) exists in space but annihilates it. He is a "hole" in space. It also implies that man is necessarily Error: "a thought that does not coincide with being is false", and if man annihilates being he most certainly does not coincide with it. With the arrival of the Science, then--i.e., absolute truth--man ceases to exist as man and history comes to an end. Man (action, time, work) is overcome in favor of static being. No more self-consciousness; man regresses to an animal. *This*, incidentally, is another of the many absurdities that plague Hegel's system. An overcoming of self-consciousness and time on the basis of *acquired knowledge*? *Huh??* Did Hegel think that was possible?? Did he think he had overcome self-consciousness? And if he didn't, why not? His absolute knowledge necessitated it. So either he was a madman or he was inconsistent. (It amazes me that Kojève agrees with Hegel about the nature of "post-historical" man.)

March 28

Last night I got the phone numbers of two employees at a restaurant (the sandwich place where I often have lunch because of the *delicious* egg toast). College students.

On Friday Eun-sung told me I might be able to meet people if I posted a message on her university's website advertising myself. There's a bulletin board where students write questions or ideas or try to recruit members for clubs and so on. I wasn't able to access it because I'm not a student, but I emailed Eun-sung my message and she'll post it for me.

Met Ji-su and Jim last night. Until 2:00 we roamed the streets and explored bars. Again I felt 'uplifted' talking to Jim--self-confident, funny, etc. It's incredibly rare that I meet someone as intelligent and easygoing as he.

I've started an essay on literary criticism.

March 29

Already, eight readers of my bulletin board message have contacted me, and I've received an offer to work part-time at another English school. Tomorrow I'll meet a girl who wants private lessons.

[...]

Tuesday, March 30

[...]

Work was bad today (though great yesterday). I sympathize with Wittgenstein's reason for quitting his job as an elementary school teacher: he got so angry he wanted to beat his students.

I've long since decided that Ivan Karamazov was wrong to reject the Christian belief that even children are tainted with sin. They may be somewhat innocent, but the seed of devilry is planted deep within them.

The gym is starting to lose its charm.

March 31

Dinner with the Euns was a good antidote to work.

I'd gladly have simple conversations with the students or do anything to branch out from the usual

lesson plan, but most classes are so noisy that if I tried to be creative all hell would break loose. And since they speak English as well as I speak Greek, I can't explain even the simplest rules of a game or carry on the most rudimentary conversation.

Another problem is my insane desire to *teach* them rather than just pass the time, as other teachers do, by playing games unrelated to the lesson. Fortunately, I think I'm outgrowing my quixotism.

[...]

April 5

Lunch with a 25-year-old named Hyunmi and her friend, both of whom are married. Kyungbook university afterwards; toured the campus. Pristine weather--cloudless--cherry-blossoms everywhere--children on the swings. Board game café in the evening.

No work today or tomorrow: Arbor day.

Korean high schoolers go to school at 7:00 a.m. and come home at 10:00 p.m. When they're seniors they come home at 12:00 a.m. In elementary school, students are busy till late in the evening (going to private schools that specialize in English, music, math and science after they leave their public school in the afternoon). In college they wake up early in the morning and study till late at night. --Koreans are machines. Why? Because after they finish their education they have to worry about their social status. They spend their whole youth preparing for the TOEIC. In their last year of high school they take a single test, offered on *one day*, which determines what university they'll attend and what major they'll study. They have no choice: their score determines their future. If they don't do well, they go to a bad school and study a bad subject. Eun-sung and Eun-young were assigned German literature--though they wanted to study English--because their scores were mediocre.

Tuesday, April 6

Lunch with two women, 26 and 27. From their behavior I would have guessed they were 6 and 7. They didn't talk. Their excuse: lack of English--though they've studied it for fifteen years and majored in it in graduate school. I gave up trying to have a conversation. Wanted to get away from them, but they prolonged lunch by ordering coffee again and again--forcing us to sit in silence and try not to look at each other. Then they took me to a beauty salon, where I had my hair cut as they waited. Couldn't go home afterwards--that would have been bad form--so I suggested the next best thing: go to a movie. *The Passion of the Christ*. It was a helluvan experience. The most brutal movie I've ever seen. But the controversy surrounding it is unreasonable. Mel Gibson's intention was to portray Christ's last hours realistically, and he succeeded. Admittedly, even in art that's supposed to be realistic there ought to be *some* subtlety. At times we were hit over the head and I grew numb to the violence, which means that, from an artistic point of view, there was too much of it. But the *moral* objections to the movie are silly. The most common one is that it'll fuel anti-Semitism around the world. Aside from art's having nothing to do with morality--"That an artist is a poisoner is no argument against his prose"--it's idiotic to think that the movie will give anti-Semites ammunition or that it will convert people to anti-Semitism. It's a *movie*, for God's sake! "When I saw this movie I realized how bad Jews really are, and I decided to go out and kill a few." America is the home of the Prudish. Morons like William Safire who fume over an ambiguous gesture at racism when the real point is that what was done to Jesus actually *happened*--and *happens*! Mankind is at the same time so barbaric that disgust is overwhelmed and so noble that salvation isn't an empty word. The movie left me feeling not *anger*, as one critic said--anger is totally inadequate to the experience--but *awe* and *pity* and an emotional knowledge of pure suffering. I even came close to feeling forgiveness for the Roman soldiers, forgiveness resulting from horror so profound, from disgust at brutality so extreme, that it made me realize

the soldiers were *animal* enough to “know not what they did”. Had there been English subtitles I probably would have felt the same, but more so.

You want to talk about prejudice, Safire? Talk about the furor over gay marriage. Talk about how the “constitutional” objections, the religious objections, the social objections are masks for visceral prejudice. Talk about a prejudice that actually *does harm* rather than a prejudice--*not* represented in a *harmless movie*.

April 7

I’m taking the plunge. I’ve half-abandoned hope that I’ll ever not be lonely in Korea, but an intensive search for a soulmate is itself somehow satisfying. It’s a victory over shyness, it gives me a mission, and it puts sheer numbers of experiences under my belt, which you know I’ve always wanted. The more experiences I have, the more self-satisfied I am! No more dilly-dallying. No more not putting my heart and soul into it. If I don’t have a girlfriend by the end of this month, it won’t be *my* fault. That’s my goal. To be able to say that. I’ll talk to people everywhere—in bookstores, in restaurants, on the street, in buses. I talked to three today. Yesterday I would have been too shy. It got me nothing, since they didn’t speak English—nothing, that is, except certainty. Had I kept silent the question would have always been there, “What if I’d talked to them?”

Reading *Dubliners*.

April 8

When Peter told me at work today that Jim had been “ambushed” by two women at the nightclub he and the rest of the group had gone to on April 4th after I’d left them, I realized that only if I frequent clubs will I, possibly, get laid. (Not bars!) When I’ve gone to them in the past I haven’t had success—and haven’t enjoyed myself—but if I go often enough I’m bound to meet someone eventually. There are only two or three good clubs in Daegu, but they’re within walking distance from home.

Tonight I’m meeting Joo-hee, a girl who wants English lessons. Maybe later I’ll go to the club I *should* have gone to on the 4th.

Last night began a story based on a childhood incident. It’s written in a different style than the last, similar to Hemingway’s. Sort of.

Friday, April 9

After the Joo-hee hooley I went to the club for almost four hours, maugre my bad cold.

There’s a new teacher at work, an American my age. Bobbi. Like most Western girls in Daegu she’s blobby and unattractive—and she talks too damn much.

Dinner with the Euns and their friend (Hyo-jung). Then board game café. I always have (some) fun with them because it’s easy to make them laugh. When I was about to take a taxi home I heard someone say, “Hi Chris!” It was Jamie, Jean’s friend. That fortuity pleased the hell out of me. We exchanged phone numbers.

Sunday, April 11

The romance of life is slowly disappearing for me. “The canker and the grief are mine alone.”

Wrote more of the story. Excruciatingly slow process. Dinner alone, then bookstore, where I talked

to an unfriendly girl before I saw Denise, a fellow teacher. I'll ask her to dinner soon.

Writing stories is how I wring pleasure out of life despite loneliness.

It was intimidating to read in the bookstore the melodious letters V.S. Naipaul wrote to his father when he was 18. His talent soared above mine. (Admittedly, he had a much better education than I did. And his father was a brilliant mentor. One thing I can be proud of is that to an unusual degree I've *created myself*. I've had no mentors, no exceptional teachers, no classical education, as so many writers and thinkers have.)

Monday, April 12

There are two reasons why I don't want to leave this country immediately. First, I don't want to have to say that my Korea trip was an unmitigated failure. I keep hoping that something will happen to redeem it. Second, if I stay at my job a whole year I'll get severance pay and a free flight home.

I spend all my waking hours in a state of depression. When I walk by cars and stores I want to smash a window because I'm so angry. I picture myself thrusting my fist or my foot through the glass.

Wrote an email to Sofia complaining about this state of affairs. She's in Spain now; has found a Spanish boyfriend. I'm happy for her.

On Thursday night I'll meet a 25-year-old guy named Jae-woon.

...When you need excitement and can't find it in respectable channels you must turn to the disreputable. I *could* live for years without sex and love, I *could* go on as I've been going on, but that would be a betrayal of myself. I've been inactive too long. I've pined too long. I've *hesitated* and *hesitated* my whole life. No more. If the world would deny me a taste of the sublime, I will steal a touch of the salacious. Nihilism is my religion, hedonism my sect. I am forsaking myself and becoming myself. Prostitution and its relatives are for me.

I've been reluctant to take this step because I haven't wanted my "first time" to be with a hooker. But that's sentimental rubbish. I lost my virginity years ago. This is a formality.

Mankind is a whore. If I go through with this, it is an act of rebellion against the great hypocritical Whore. It is an act of despair, appropriate to a despairing time of life.

First I'll sample a taste of it at a massage parlor. Maybe tomorrow.

I would have you know that *my* and *your* inaction is not a manifestation of high moral principles. It is a manifestation of laziness and cowardice. It is a manifestation of the bourgeois curse of the Monotone Existence. To indulge in one's instincts when one is a domesticated dog is *strength, courage*. To descend to the carnal is to rise to the human. It is also a step along the path to totality.

I feel liberated now that I've made a decision. Inspired. Tomorrow will be a good day because of this decision.

A few weeks ago Jim and I discussed prostitution. Part of the conversation—all in jest—went like this:

Jim: "If you went to a prostitute no one would have to know. Just keep it a secret."

"Well, it would be in my journal."

"Then don't let anyone read your journal."

"That's possible, I suppose...."

"Or don't write it."

"No, I'd have to write it. It might seem strange to you, but it would be impossible for me not to write it."

"So just don't let anyone read it."

"The problem is, when I'm 70 or 80 I want to publish it."

"Oh! Well then you *need* a prostitute in there!"

"Hey, that's a good point!"

Tuesday, April 13

I have trouble coming to terms with my youth. Especially with my never having experienced the innocent pleasure of Don Juan and Haidée or Don Juan and Julia. Two young lovers ignorant of the artifices of love, certain only of pure joy in the other's presence. I've never known the bewildered happiness of a loss of virginity when one is still a virgin in the true sense, the confusion, the fumbling, the glorious awkwardness. And I never will, because now I'm too old. Life has made a cynic of me. Eden is gone forever. Spring is passing into summer.

Among my several comforts is one that stands out: I still have the ability to love. It may not be the lily-white love of a 16-year-old, but *as* love it can lead me to a surrogate childhood.

Another comfort is that my youth hasn't been a waste. I've accomplished a lot, not just in philosophy and writing. I've *experienced* a lot. I have regrets but not many. And I'm still fairly young.

...When I got off the bus on the way home I walked to the first massage parlor whose location I could remember. It was closed. I looked for others. Found one. Descended stairs to a small platform surrounded by doors. One mysteriously opened and I was let in. Inside was dark and close; the moment I stepped over the threshold I felt sleazy. An elderly woman asked "Service?" to clarify whether I was there for a haircut or a massage. I assumed "service" meant massage, so I said yes. She said it cost 80,000 won, which is \$80, which is too expensive, so I left. Ten minutes later found another place. It looked more respectable, but I still felt dirty. Waited in the 'lobby', on the walls of which were pictures of naked women, and watched as businessmen emerged from the interior. Finally a man came over, I thought to tell me the price, but really to shoo me away. Evidently foreigners aren't welcome. Annoyed but relieved, I hailed a taxi and went home.

Had the price been reasonable I would have gone through with it despite the seedy feeling that clung to me. I might try again somewhere else, but if so I'll have to *force* myself—though part of me is eager. *Two* parts are: the frustrated id and the part of me that values the accumulation of experiences. I'd prefer not to go alone, though!

I'm glad I feel uncorrupted again. It took a confrontation with the underworld for my good side to remember itself. I doubt—*highly*—that I'll lose my virginity with a prostitute. [Whoops. You were wrong.] I was doubtful even as I wrote yesterday's entry, though at the time I thought I could *force* myself to do it. I still think I can, but I don't think I will. Cowardice? Call it that if you want, but at best it's a half-truth.

In short, I'm not ready to declare war on myself.

Thursday, April 15

One of the essential ingredients of the fascination and love that men have for women is also one of their most common criticisms of them: they're like children. They're adorable, innocent, gay, 'weak'—which means they're fickle, juvenile, whiny, needy. (At times.) But we still love them, because their good can outweigh their bad. A man's attraction to children and his attraction to women share many features, which is why pedophiles are not at all rare. Both objects of love inspire the urge to *protect*, both can make us feel strong, and both charm us with their adoring ingenuousness. Last night when Hyo-jung and I were watching *Taking Lives*, she instinctively grabbed my arm in a moment of shock. *That's* what I'm talking about. A child would do that and a woman would do that.

I'm still bothered by one of the problems I wrote about in Austria: what's the relation between phenomenological, empirically psychological, and biological explanations of human actions? How do they fit together? Considered in isolation, each seems to have explanatory precedence: Hegel's ideas (and my slightly derivative ones) are intuitively compelling; explanations invoking instincts like sex seem *obviously* true; biology is surely the basis of the mind, so its explanations *must* be essential. How can order be imposed on this theoretic mess?

Ji-su called last night during the movie; she wanted to go dancing. Today I was startled to receive this message on my phone: "I wanna apologize for everything. Sorry. You are such a good guy." I have no

idea what provoked that. We'll probably go clubbing tomorrow.

(5:00 a.m.) I'm reading Richards' *Principles of Literary Criticism*, which was first published in 1924. Chapter 1 places the book in the context of a "chaos" of literary theories from Aristotle to the twentieth century. No satisfactory answers have been given to such basic questions as What makes a poem good? and How is one (literary) experience better than another? and What is value? and How can experiences be compared? Because the last question is preliminary to literary criticism it must be answered first. One might think that because isolated words arouse such different reactions in readers it is impossible to compare experiences and therefore criticism is stillborn, but this conclusion is unwarranted. Words in an elaborate context like a poem cause (in competent readers) a more limited range of responses than isolated words do. The context restricts the possible range. Hence, experiences can probably be compared.

Chapter 2 objects to the idea of a *sui generis* aesthetic state, a mental state unlike any other. The origin of the mistake was in Kant's distinction between sensuous pleasure, emotional pleasure, and aesthetic pleasure (which he said was disinterested, universal, and unintellectual), as well as in his division of the soul into the faculties of knowledge, desire, and feeling. The judgment of beauty was a function of the latter. While his postulated connection between beauty and feeling was abandoned (?), his tripartite division between the faculties was not. The aesthetic was distinguished from the theoretic and the practical faculties, though its nature wasn't clearly understood, and the aesthetic *state* was described as detached, impersonal, and serene. The point is that all this is a confusion. There is no good reason to focus analysis on an aesthetic state, and there are several good reasons *not* to. Aesthetic contemplation is not a unique experience; it's similar to ordinary mental states.

Friday, April 16

Every single morning since the day I arrived in this perverse country I've had to listen to the loudspeakers on small trucks that drive through the streets selling fruits and vegetables. The messages are recorded: "Here are strawberries! Here are strawberries! Here are strawberries! Here are strawberries!..." The trucks drive at one mile an hour and frequently stop for five minutes, near my window—often right below it—while I'm trying to sleep. I wake up to something that sounds like the German propaganda vehicles of the 1930s, with the difference that it's more annoying because I hear the same sentence *over and over and over* and the truck doesn't pass quickly. It incenses me every time.

Chapter 3. Qualities like beauty don't inhere in works of art. When we say that something is beautiful we're really saying that it causes a certain experience in us, even if we *mean* that the quality of beauty is embodied in it. The only sense that our judgment can have is that we like the object; the typical intention behind the statement, practically forced on us by the form of language, is incoherent. Criticism is not primarily concerned with works of art themselves; it is concerned with states of mind. For example, if someone says that the masses in a painting of Giotto's exactly balance one another he isn't talking about a canvas and pigments; he is obliquely referring to his state of mind upon observing the painting. This applies to all such terms as 'form', 'balance', 'plot', 'character', 'design'—in short, most words that are supposed to name objective qualities in works of art. However, the critic also describes features of the object that cause its effect on him, and, while this kind of criticism is of the utmost importance, it can be truly useful only if the object's features are carefully distinguished from the experience of contemplating them. The description of the *value* of a work of art refers to experiences, and Richards calls this the *critical* part of criticism; the description of the work of art itself is the *technical* part and doesn't refer to experiences. The two are often blended together. For example, "Meter is more suited to the tender passion than is prose" is a technical remark that contains a hidden critical element. "All remarks as to the ways and means by which experiences arise or are brought together are technical, but critical remarks are about the values of experiences and the reasons for regarding them as valuable."

...I was supposed to meet Eun-jin for dinner, but at 5:00 she cancelled because she wanted to study for midterm exams with her friends. It was beyond predictable. It was inevitable. I'm glad it happened, though, because it allowed me to meet a lovely girl (named Eun-jin) on the street on my way home. I'd

talked to her last week; tonight we met by coincidence. She lives near my dorm.

All university students have been studying for midterms for three weeks. They study day and night and can't have dinner with friends because they have to study. For three weeks. Such dedication is not *admirable*; it's *insane*. When I had exams I studied for two hours, if that. They study for two hundred.

Chapter 4. Although artists ought to be thought of as communicators, they usually aren't consciously concerned with communication (or communicative efficacy). They want to get the work 'right', or they want to amuse themselves, but they don't tend to emphasize the communicative aspect of their work. Nevertheless, the main purpose of art *is* communication, and a theory of criticism must rest on an account of it (as well as an account of value). Artists are wise not to concentrate on the communicative aspect of their work because for it to succeed it must accurately portray their *own* "experiences"—mental states or ideas—which the reader can then 'identify' with. "The degree to which the work accords with the relevant experience of the artist is a measure of the degree to which it will arouse similar experiences in others." Criticism isn't concerned with the artist's private, conscious motives; it is concerned with how well and what he communicates. And in most cases he communicates best if he doesn't worry about communicating.

Sunday, April 18

Chapter 5. Criticism ought to be grounded in a general theory of value, not only because it constantly makes value judgments but also in order to rebut attacks on the arts by inept censors and moralistic puritans. People who think that the arts are of value ought to be able to defend their position.

Chapter 6. G. E. Moore's opinion that 'good' is an irreducible, unanalysable quality is objectionable. He thinks that we know by immediate intuition what things are intrinsically good—for example, knowledge—and that if we try to explain value in terms of something else (e.g., approval) we can immediately tell that the two are different, because the statement 'This is good' is different from the statement 'This is approved'. Moreover, that one can ask 'Is what is approved *good*?' shows that approval is not the meaning of good. The same applies to all possible 'reductions'. The problem with this refutation (according to Richards) is that people who hold a psychological theory of value—which is considered by modernity to be the most plausible alternative to Moore's position—might deny the premise that the statement 'This is good' is different from 'This is approved' (or 'This is desired', or what have you). Richards elaborates and gives a few more arguments, but they aren't convincing. The two statements, in fact, really are different, simply because 'good' is so much vaguer than 'desired'. (Of course, Moore is wrong to think there's some kind of universal "immediate intuition" that tells us what's good.)

I met Ji-hong this evening. During dinner we didn't have much to talk about, and I decided we had nothing in common and was no longer interested in her. When we went shopping, though, my lust was kindled. Lust and *affection*, I should say. She was so cute advising me on what clothes to buy and following me and touching me and joking with me that I admired and resented my self-control at not kissing her. 'We'd be such an adorable couple!' I thought. Later we drank in a bar. The flirting continued; what was novel was that she asked meaningful questions. One regarded my impressions of Korean women. I gave a muddled, embarrassed, blundered answer, trying to be honest yet delicate. She told me she thinks she's different from other girls, and I agreed sincerely. [...]

Chapter 7. Both parts of Moore's position—which is the only plausible alternative to a psychological theory of value—have been rejected. (1) We can't justifiably conclude that good *necessarily* can't be reduced to something else, and (2) good is not a quality revealed to us by immediate intuition. (Notions of good are determined by social conditions; we ought to distrust "immediate intuitions".) Richards now offers a utilitarian theory of value. First he says that anything is valuable which satisfies an "appetency", whether it be conscious or unconscious. Next he says that people always prefer to satisfy *more* appetencies rather than *less*, which causes him to extend his definition of value: "anything is valuable which will satisfy an appetency without involving the frustration of some equal or *more important* appetency". Thus, morals are purely prudential. Later he defines the importance of an impulse as "the extent of the

disturbance of other impulses in the individual's activities which the thwarting of the impulse involves". If many impulses are frustrated by not satisfying a particular one, then it is important. Hunger is an obvious example, but because humans are complex, even apparently minor impulses may in fact be important. The merit (or rather, the defectiveness) of a "systematization" or organization of dispositions is judged by "the range of impulses it thwarts or starves and their degree of importance", i.e., the extent of the loss which the organization entails. The "debauchee" and the "victim of conscience" live in a "muddle" of impulses, and many are frustrated, which means that the psychological organizations are bad. The best person is one whose psyche is well-ordered. Richards expands on all this, but I'll quote only the end of the chapter because it reintroduces the arts into his discussion:

We pass as a rule from a chaotic to a better organized state by ways which we know nothing about. Typically through the influence of other minds. Literature and the arts are the chief means by which these influences are diffused. It should be unnecessary to insist upon the degree to which high civilization, in other words, free, varied and unwasteful life, depends upon them in a numerous society.

Richards' idea(s) are obvious and attractive, but they're hard to apply to concrete situations. We don't know enough about the psyche. Nevertheless, they're so irresistible that versions of them have been put forward repeatedly throughout history, and they'll always be around. Goethe, Nietzsche, Bentham, the Greeks and God knows who else favored them. Richards states them in a comparatively scientific form.

I wrote more of my story. It's almost finished.

Monday, April 19

Dinner with various fools and losers. Fellow teachers who live in my dorm. We went to Bennigan's. The poor waitress had to put up with the boorishness of the curmudgeon sitting next to me. I made sure to be exceptionally kind to her and dull the edge of his insolence by following up his demands and complaints with helpful elaborations. I wanted to talk to her but couldn't because I was stuck with all those hicks.

It's sadly appropriate that Mozart's last composition was the first eight bars of the "Lachrymosa". Süssmayr did a fantastic job of completing it.

Chapter 8. From the last chapter we know that a good experience is one in which the impulses that make it are fulfilled and successful. Now, there is no one 'best' systematization of impulses. "Men are naturally different and in any society specialization is inevitable. There are evidently a great number of good systematizations and what is good for one person will not be good for another." Nevertheless, the artist's experiences "represent conciliations of impulses which in most minds are confused". His work and (some of) his experiences are orderings of what is typically disordered, and in that respect he is superior (because confused impulses are frustrated, while ordered impulses are satisfied). Moralists have been wrong to find value in a "conformity to abstract prescriptions and general rules of conduct"; "it lies in the 'minute particulars' of response and attitude", which the artist is an expert in.

Since the fine conduct of life springs only from fine ordering of responses far too subtle to be touched by any general ethical maxims, the neglect of art by the moralist has been tantamount to a disqualification. The basis of morality, as Shelley insisted, is laid not by preachers but by poets. Bad taste and crude responses are not mere flaws in an otherwise admirable person. They are actually a root evil from which other defects follow. No life can be excellent in which the elementary responses are disorganized and confused.

I enjoy Richards' elitism and disdain for philistines. But I'm skeptical of his notion that artists have uniquely ordered impulses, even in moments of creation. Most artists are frustrated and *dis*organized. I don't even think their *unconscious* urges are satisfied.

Chapter 9. A possible misunderstanding of Richards' position is that the arts are "merely concerned with happy solutions and ingenious reconciliations of diverse gratifications". Their essential purpose isn't to delight or to instruct. It's wrong to think that the satisfaction of an impulse is the same thing as 'pleasure'. (This will be elaborated in a separate chapter.) Tolstoy's theory of art, according to which only that work is valuable which directly unites all men through certain feelings it provokes, is one of the possible bastardized versions of Richards' theory (which, like Tolstoy's, appeals to ordinary values).

Tuesday, April 20

Most Koreans are interested in me only because I'm a foreigner. I'm an object of amusement and fascination for them, something exotic, not a real friend. A novelty.

For weeks I've only been going through the motions at work. I can truthfully say I don't care anymore if the kids like me. I have no new ideas and if I did I wouldn't have the energy to apply them: the ten- and fifteen-person classes are too loud and obnoxious. Work is just something I have to do. I go there, go to the classes and teach (almost) colorlessly, try to impose a structure on the little shits, don't play with them, don't show much personality because I'm not inspired and I don't like them and they don't like me and they wouldn't understand anyway, leave the classrooms gratefully, leave the school gratefully every day. When I do play with them or act silly it feels unnatural because my heart isn't in it.

Thursday, April 22

I think that if I had sex regularly I'd act differently much of the time. At school I'd be more energetic, in society I'd be more confident. To a degree, unconsciously, I'm introverted because I don't have sex—and I don't have sex because I'm introverted! It's a vicious circle. Were I capable of feeling pride (I rarely am, or only in a fickle, fragile way; pride is irrational), I'd be proud that I'm good-natured despite ten years of relentless sexual frustration.

Friday, April 23

Finally finished that damned story. Was getting sick of it.

The Passing of Spring

It was spring. It was a fresh spring, and winter's memory had dissolved in the sunlight that mottled the leaves of old trees reborn. Packs of schoolchildren erupted every time the last bell rang every day and streamed into the streets as one. It was early afternoon and they were free for the rest of the day to roam and explore and play and fight and huddle in shadowed corners to kiss their sweethearts. –Chaos ensued when the last bell rang, screaming running joyful chaos across the schoolyard on the way home to old New England houses with spacious backyards with gardens tended scrupulously. Mothers and fathers could be found outside on their hands and knees on the dirt planting flowers, pulling weeds, trimming bushes, waiting any moment now for the front door to burst open and their child to announce his presence. He would race outside upon hearing their voices and ask them what they were doing, whereupon he would not wait for an answer because he had to meet his friends in the field near the forest where they would play football or cops and robbers. The daughters and their friends would assemble somewhere, most likely in secret, to gossip and tell each other who they liked, after which they would ride their bikes on the trail that followed the contours of the harbor and ended in a park where they could watch their boyfriends play soccer and maybe join in. The little soccer league was one of the hubs of the town's culture, an attraction

for all ages, from 5 to 85. The parents of the children were often more interested in the games than the children were, shouting at them and cheering wildly when their son did something that looked good, as if their dreams of glory rested on the shoulders of this little boy who knew only that he was having fun. Fun was his categorical imperative. All else was subordinate.

One boy who lived in an otherwise childless neighborhood had his own peculiar brand of fun. While his peers were mimicking hyenas laughing and scavenging the resources of the town for their spiritual sustenance, he was akin to a solitary owl perched on a thin branch far away from the trunk and staring with globes for eyes at the world that fascinated him. He would hurry home from school not to hurry away from home but to sit in a lawnchair on the patio beside the glass table and gaze into his cracked terrarium that housed animals of all kinds. Beetles, worms, centipedes, a tarantula, sometimes a snake—but his favorites were jumping spiders and praying mantises. He was enthralled by their intelligence, their lightning speed, the thrill of their kills, the ability of the mantis to cock its head and eye him suspiciously as he moved. He would sit back luxuriously and watch the plot of the drama he had set in motion unfold, while on his lap lay *A Portrait of the Artist as a Young Man*, which he would peruse in moments when the plot was dragging. He understood it not at all except that between him and Stephen Dedalus was a kinship he could not have described but he knew with a sixth sense existed. The light sorrows of his seclusive soul he mingled with the heavy musings of Stephen's without knowing he was doing so. But then his peripheral vision would glimpse the pensive swaying of a mantid back and forth with pincers cocked as though praying and he knew without thinking that a kill was being pondered and he dropped his book to feel the suspense and crouched closer as the predator inched toward its prey with superb patience, finally to unspring its claws in a fraction of a second and pierce the body of the victim and draw it toward its mandibles and begin eating. Then he would exhale. After the meal was consumed he would jump up from his chair, grab his small net and bound across the driveway to catch another bluebottle fly, Dedalus forgotten. For hours he would do this, day after day.

Some days, though, were special. Some days he came home with a friend or with someone he hoped would be a friend and they played together the whole afternoon until supper. Today he was with a boy named John. This boy was quiet like him but in a different way, a more confident way. He had many friends. He was also a talented athlete, which won him the starry-eyed affection of many girls. The two boys had an instinctive liking for each other.

"We're here, Mom!" Adam shouted as he pushed open the front door expansively. "John's here too."

"Hi Adam! Hi John!" she yelled back from the kitchen. "Come in. How are you?"

"I'm good thanks."

"You boys are home early."

"Yeah, we took the bus," Adam said. "What are you cooking? Macaroni and cheese?"

"Yes, I thought you might be hungry when you got home. It smells good, doesn't it?"

"Yeah," Adam said. "I'm hungry."

"You want some too, John?"

"Yes please."

"Okay, just a few minutes. Want a hotdog too?"

"Yes please."

"Adam, could you get out the hotdogs and the ketchup? They're in the top drawer. We'll put 'em in the microwave so it'll be faster."

As the boys waited for their afternoon snack Adam's mother conversed like a good hostess with John, who answered her questions about school and sports in shy monosyllables. Adam, who was brimming with delight at having a friend in his house, was happy to relieve the pressure on John by volunteering answers himself. He talked about how Eric had put a piece of chalk between the folds of the blackboard eraser and when Mrs. Wood had tried to erase something she had discovered that her eraser had been sabotaged and then she demanded who was the culprit and no one answered and she yelled. He talked about how noisy band practice had been today with

everyone playing at the same time and no one knowing what notes to play and the conductor yelling at them to *practice practice*. He talked about playing tag with John and other boys during recess when he saw two girls fighting over a boy, pulling hair and clawing and scratching and screaming. His mother and John listened attentively and Adam basked in the glow of their attention.

Afterwards they went outside onto the patio and sat in the soft green lawnchairs because neither knew what to do.

“What do you want to do?” Adam asked.

“I don’t know. What do *you* want to do?”

“I don’t know.” Silence. “I have a baseball and two gloves. We could play catch.”

“Yeah, let’s do that! Where are they?”

Adam ran into the garage and rummaged through the abandoned sports equipment in the basket that was as tall as he was. He had to stand precariously on the rusty canoe propped against the wall in order to reach into the basket and search with his hands more than his eyes for the gloves and ball he hadn’t used in months. Bat...tennis ball...racket...soccer ball...croquet mallet...wicket... Finally he felt the gloves and grabbed them. A moment later he found the ball.

“Okay, where should we go?” he called out. “In the driveway or the lawn?”

“The driveway’s good.”

“Okay, I’ll stand at this end and you can stand over there.” After being thrown his glove John moved into position. “Ready?” Adam said.

“Yep!”

Adam was no baseball player, but he knew how to throw and catch. Nevertheless he was nervous as he readied for the pitch, afraid he would throw the ball too high or too low and look stupid. He was painfully conscious too that his throw was girly. Fortunately it was accurate. “Good one!” John said. Adam was extremely pleased when he caught the ball on John’s first throw. His newfound confidence lent him extra strength and in his next throw the ball flew a bit too high and too hard over John’s head and down the driveway into the street a hundred feet away. “Oh sorry!” Adam said. “I’ll get that, don’t worry!” But John got it, dodging cars, and hurried back to his spot. After that there were no more mishaps and soon they got into a rhythm, comforting, relaxed, hypnotic—throw catch...throw catch...throw catch...throw catch, with grounders interspersed for variety. Not much talking was involved, for there was nothing to say, and anyway Adam felt it would have disrupted the rhythm and made him concentrate less on the satisfying *slap* of the ball in the glove. He was aware that this situation was making him quite content, this formula of friend plus ball and glove, which he was unused to. He wondered if John was getting bored and if he should suggest that they do something else even though he didn’t want to, but he was too affected by the symmetry of the game to open his mouth. At length another accident occurred that forced them to stop playing. John threw a particularly fast groundball that Adam crouched to catch on one of its erratic jumps, but he didn’t foresee that it would hit a bump on the pavement and leap up prematurely over his glove and hit him on the nose. The sharp pain made his eyes water. He checked to see if his nose was bleeding but it wasn’t, so he looked up at John and gave a feeble smile.

“You okay?!” John said while running to him.

“Yeah, I’m fine.”

“Is it bleeding?”

“No.”

“Good. Maybe this is a good time to stop.”

“Okay.” Adam was still tending his wound, so John put the gloves and ball back where they’d come from, whence they wouldn’t emerge for months.

“What now?” John asked.

“I don’t know.”

“You have no ideas?”

“Not really. Do you?”

“Can’t think of any.”

“I have some board games inside.”

“No, it’s too nice to go inside.”

“We could take them out here.”

“Nahh.”

The mid-afternoon sun was scorching the black pavement and Adam felt the heat rising through the soles of his sandals into his feet. He gazed obliquely at the blinding sphere as though hoping it would illuminate an idea of an activity. Suddenly it did.

“Have you ever roasted ants?” he said.

“Roasted ants?”

“With a magnifying glass.”

“Oh yeah! I’ve done that. You got a magnifying glass?”

“Yup! One second.” He raced into the house to get the magnifying glass he typically used to observe small spiders. He had received it at a nature camp he’d attended last year; it was a prized possession.

“Now let’s look for ants,” he said. They weren’t hard to find.

“Here’s one!” Adam ran to John and gave him the magnifying glass. Placing it a few inches above the ground he manipulated the refracted beam of sunlight into a tiny, intensely hot point that he carefully moved onto the body of the ant. It scurried away, but the beam of light chased it until finally the heat had made it too weak to attempt escape. As John kept the dot pinpointed on the ant, its abdomen swelled to such a size that it popped. This delighted the boys, who promptly sought and found another victim. Adam let his companion have most of the fun, explaining that he had done this before and would rather watch. But the real reason was shown by the happiness on his face as he observed John’s glee. He could think only that he was playing with a popular boy in his backyard and they were having fun and he had made a good friend that day. He had so few good friends that to make a new one was momentous. He couldn’t stop grinning. What’ll we do next? He didn’t know but he didn’t want to think about it because he was too happy. Maybe we could toss the football or climb trees. Or look for snakes at the river. Or— “You smell that?” John interjected.

“Yeah.”

“Do they always make that smell?”

“Yeah. I don’t know why.”

“Maybe it’s some kind of chemical reaction.”

“It must be.”

“You wanna try now?”

“Sure.” Adam took the glass out of a sense of duty more than anything else, since the only reason he wasn’t bored was that John was having such fun burning ants himself.

“I wish I had a magnifying glass at home,” John said.

“You don’t have one?”

“No.”

“Well then you can have this one.”

“Really?”

“Yeah, I have others,” he lied.

“Wow, thanks! Cool!” Adam gave it to John, who resumed his roasting of insects. He had by now broadened his range of prey to include not only ants but also spiders, worms, beetles and anything else he could catch, which Adam found rather disconcerting but didn’t contradict for fear of offending his new friend. As he sat on the ground in a posture of patience he recalled their past interactions at school, their shy respectful smiles and hellos and nods to one another, each esteeming the other’s intelligence and kindness. Their relationship would have remained on this level of warm politeness had Adam’s mother not encouraged him to invite John to his house. It hadn’t been easy. He had procrastinated and made fruitless attempts to marshal his courage for days until finally last week during recess, after a game of football with the other boys, he had as casually

as possible suggested that John come home with him one day because he had lots of sports equipment in his garage. John had looked pleasantly surprised and had agreed.

This reverie was interrupted by Adam's mother.

"What are you doing?" she asked upon opening the back door and seeing the boys sitting on the ground.

"We're cooking ants," Adam said.

"Oh! Is it fun?"

"Yep. Except it makes a bad smell."

"I'll bet. John's mother just called. She said that Eric, Greg, Jeff and some other boys are playing football in the field near the playground and they want you to join them. But it looks like you're having fun here."

"Yeah," Adam said.

"Anyway, if you get bored you can go over there."

"Okay."

After she'd left John said, "Wanna go over there for a little while?"

"Do you?"

"Maybe for a few minutes. Just to see what they're doing."

"Okay." John put the magnifying glass in his pocket and they walked the short distance to the field. Adam felt trepidation.

"You know how bad I am at football, right?" he said.

"No, you're not bad. I've seen you make some good catches. But you should play more. You usually watch us and don't play."

Within a few minutes they were approaching their friends and could hear shouts carried on the wind. "Offsides!"... "Five yard penalty!"... "Third down!"... "Here! I'm open!"... John smiled and quickened his pace; Adam frowned and quickened his too. There was a nervous fluttering in his stomach.

"Here they are!" shouted Jeff. "Hi John! Hi Adam! Glad you could come!"

"We're playing four on four now," said Greg, "so one of you can join each team. You want to play, right Adam?"

"Sure. Yeah I can play."

"Good. Why don't you go on Eric's team and John can be on our team."

"Okay."

"John, you're over here."

"Hey, what have you and Adam been doing all day anyway?" Simon interjected.

"What do *you* care?" John said.

"Just curious."

"We were just playing catch and eating lunch," John replied curtly.

Adam noticed that he didn't mention the ants.

"Okay!" Eric said. "Let's go." The boys assumed their positions. "Ready, set, *hike!*" Eric's team dispersed across the field, running in every direction to flee opposing teammates who guarded them. Eric looked frantically for anyone who had a reasonable chance of catching the ball. He found James, who caught it and was tackled. "Second down." The boys lined up behind their quarterback. "Ready, set, *hike!*" They sprinted and dodged their opponents but someone said "Blitz!" and Eric was chased and tagged and his team lost ten yards. "Third down!" They assembled at the line of scrimmage. "Offsides!" someone shouted pointing at Adam. He backed up behind the quarterback. "Ready, set, *hike!*" Everyone zig-zagged across the field and yelled at Eric that he was open, but the blitz having been already used, Eric could take his time. Adam repeatedly outran his opponent, but Eric didn't pass to him. He was waiting for Jeff to be open. The moment he was he hurled the ball in his direction and Jeff caught it and ran five feet before being tagged. Eric's team assembled for the last play. "Fourth down. Everyone go long. Ready, set, *hike!*" They ran towards the endzone. Adam was the only one whose attempt to escape his follower was half-hearted. He was afraid of

being thrown the ball because at this distance he thought he'd drop it, so he paid lip-service to the appearance of being a dedicated player while carefully contriving not to stray far from his counterpart. Suddenly, though, he found himself alone: the other boy had collided with someone. Eric scanned the field one last time and threw the ball to Adam, who turned his head just in time to see it hurtling toward his chest. He prepared for the catch with all the anxiety he was capable of feeling in that moment. But as the ball was about to land in his hands another body appeared out of nowhere and snatched it from him. Somebody yelled "Interception!" and Adam grabbed the body with both his hands in shame. He glanced at Eric who looked angry and at John who didn't look anything and at his teammates who looked disappointed and he blushed. The other team lined up now and his was on the defensive. Greg took the ball from Eric and the play began...

The game dragged on for an hour. Adam's thoughts continually wandered toward his home—his books, his piano, his animals, his homework, his mother's cooking. He watched with impatience the sun send incarnadine veins across the sky. What's for dinner? he wondered. The player he was supposed to be guarding caught the ball and almost scored before he was tagged. I wouldn't mind this game, Adam thought smiling, if I were any good at it. I wonder what the score is. Why is a touchdown worth seven points? The boy next to him caught the ball in the end-zone. "Oh, come on!" Eric shouted, jerking him back to reality. "Sorry," he said. "I suck," he added, hoping to mollify his teammate. "Yeah, you do," Eric answered, surprising him. "Hey, you don't have to be a prick!" John yelled at Eric; "what's your problem? It's just a game." Eric was silent, too sullen to respond. Bastard, Adam thought, stung by the insult. When is this gonna be over? Aren't they bored yet? The teams walked to the far ends of the field for another punt. Adam saw with jealousy that John was talking and laughing with Greg. He wondered what was so funny and wished he were in on the joke.

"Ready?" Eric yelled. "Let's go! Kick it!"

"No," Jason yelled back. He walked closer. "We figure there's no way you can possibly win. Let's go home."

"You're forfeiting?" Eric said gleefully. "If you forfeit you lose!"

"Whatever. I'm hungry. And tired. And the score's 35 to 14. Give it up."

"No. We'll *never* give up, right guys?" Eric asked his team. They laughed.

"I'm with Jason," Alex said. "It's getting dark."

"Eric's just a bad loser," said John, to laughter. The consensus was forming that they should go home.

"Where are you headed, Jason?" someone asked.

"My bike is over there."

"Mine too."

"Where are you going, Adam?" asked John.

"Back home I guess."

"Okay. I'm gonna follow these guys."

"Okay."

"See ya tomorrow."

"Have a good night."

"Bye Adam," said various voices. The boys separated, most walking in a group towards the playground, a couple walking towards the harbor, Adam walking across the field. He turned around in case John was waving to him, but he wasn't. The evening was windy and Adam shivered, but his steps remained slow and heavy. He looked at the boys again as they stood next to the bikes talking. After a minute John and Greg left together as the others rode their bikes home along High Street. Adam continued to put one foot in front of the other. Suddenly he felt a hard object on the ground. He knelt to see what it was. The magnifying glass. It must have fallen out of John's pocket. He picked it up and put it in his own.

At length he stepped off the dark field onto the sidewalk that led to his house. He wondered if his father was home yet. I'm glad I still have the magnifying lens, he thought blankly. I would

have had to buy another one. I hope we're eating chicken tonight. I wonder if John's taking Greg home for dinner. Adam thought contentedly of the Nocturne lying on the piano bench and the Sherlock Holmes stories lying next to his bed. And the praying mantises in the terrarium. I'll take them inside tonight, put them on the plant in the living room. He thought of the day spent with John. It was okay. Don't let it bother you. He's a cool guy. I'll see him tomorrow anyway. I'll watch them play football at recess.

His pace quickened. He inhaled the night air. It's spring, he thought. Think of the months ahead!

It's not a mistake the story is called "The *Passing* of Spring". Its end refers the reader to the title, and if he's intelligent he should realize that the title goes beyond the story. The story is about spring, but its real purpose—or its second purpose—is to depict the tragedy of the *end* of spring, when the thought of the "months ahead" is not comforting (making possible *endurance*, which Adam, the outcast, needs) but sad. However, it depicts it without containing a single word depicting it. The device is very subtle and is perhaps the more effective for its subtlety. In the story there isn't one word relating to its ultimate meaning. Its meaning is in the space between its title and itself. But I allow less perceptive readers to feel uplifted by the more obvious, happy theme(s) of innocence and resilience.¹

Saturday, April 24

Obviously my emotional problems can be reduced to one: a lack of recognition. Sex is recognition, love is recognition, friendship is recognition. Spurting one's juices into/onto a girl is practically claiming her as one's property: it is quintessential recognition, half-similar to the kind involved in the Master-Slave dialectic.

Sunday, April 25

Chapter 10. The formula "art for art's sake" is wrong. Art cannot and should not be considered in isolation from its 'ulterior' effects on the mind, such as softening of the passions: these effects are part and parcel of the artistic value of the work. Some ulterior ends (e.g., the artist's fame) are irrelevant to the value of art, but others (e.g., those for which the New Testament was written) are essential to it. (I don't understand that. Why can't there be a purely aesthetic or poetic approach to the "Sermon on the Mount", "by which no consideration of the intention or ulterior end of the poem enters"? Surely its poetic qualities can be judged in abstraction from its edifying purpose! Richards thinks, though, that if we distinguish between the poetic value of an experience and 'ulterior' values, in most cases "the word 'poetic' becomes a useless sound". One of his defenses for this idea is that the experience of reading a poem in fact draws on the 'ulterior' ingredients of more common experiences, so that to suggest there are two types of experience is to make a spurious distinction. I'm not comfortable with Richards' conflation of poetic value and poetic experience, i.e., his insistence that the first depends entirely on the full content of the second.)

Monday, April 26

I have such trouble thinking of ideas for short stories that I've decided to go about it differently. I'm going to choose a word in Eugene Ehrlich's "dictionary for the extraordinarily literate" and invent a story around it. 26 stories in all. When they're published, they'll be arranged in alphabetical order based on their (one-word) titles. They'll all be satires, partly because such a comical method of writing is compatible

¹ [On second thought, the distinction between the title and the story doesn't work.]

only with comical *content*, and partly because of the symbolism of ‘A to Z’. I’m making fun of everything. The first one will be called “Atrabibulous”—a combination of atrabilious and bibulous. Its target will be melancholic drunks.

I’ve started to resent my job for a new reason: it’s a waste of time. I could be *writing* in those hours when I’m at work.

Researching jobs in India and the Philippines. Don’t want to teach again—’tisn’t my bailiwick—but don’t know what else I can do.

Friday, April 30

Currently I have no interest in life. Absolutely none. I could live, I could die...it’s all the same to me. It would help if I had definite plans for the future, for the rest of my life. But I haven’t any idea where I’m headed.

On top of everything, the Forrest Gump clone I work with, Bobbi, has been sick lately, so I’ve had to teach *her* classes as well as mine.

Saturday, May 1

Last night I went to Pizza Hut with Hyo-jung, the Euns and their friend Byung-su. He’s a personable, goofy, entertaining guy, and he doted on me. Speaks English well. After dinner we drank until 1:00—played a drinking game, which got us all drunk. Then we went to Gypsy Rock and danced till 3:30. [...]

There seem to be two basic kinds of Korean popular music. There’s the genre that tries its best to copy Western models (whether they be rap, pop, or rock), and there’s the genre that mingles traditional Korean music with Western pop. Both are awful to listen to, but the second is noxious. The wobbly voices, the caterwauling, the non-melodies.... Traditional music here is infuriating. I want to scream in protest or plug my ears when I hear it. How can it be popular??

Classical Asian music is quite uncivilized compared with classical Western. It’s—*childish* compared to the massive, intricate constructs of musically ingenious Western minds.

Another oddity is the Korean (or Asian?) obsession with karaoke. There are actually radio stations devoted to karaoke—and *people like listening to them!*

Monday, May 3

I’ve almost finished *Dubliners*. Its stories, especially “The Dead”, seem perfectly written. Joyce never fails to find *le mot just*. I can’t help comparing my writing with his and being ashamed by the contrast. I ask “Would Joyce have written this paragraph?”—and the answer invariably is that he would have improved on it. Or when reading his book I ask “Could I have written this paragraph?”—and the answer is No. I keep hoping that a few years of practice will turn me into something of a great writer. Or at least a good one.

Tuesday, May 4

Hung out with the Euns. Thank God I know Eun-sung! Though she isn’t a truly *close* friend—we can’t communicate well enough for that—she’s probably my best friend in Daegu. That would surprise her. It’s rather sad, in fact. I don’t have much to show for seven months of continuous effort.

No work tomorrow and Thursday. Because of Children’s Day, a Korean holiday. As if children

need their own holiday!

Thursday, May 6

I read the first two books of Augustine's *Confessions* on the internet. The Harvard Classics edition. It's an intensely poetical work. Truly great literature. I could do without the incessant obsequious prayers, but they aren't as bothersome as I'd feared. I can forgive piety.

I also wrote.

Friday, May 7

[...]

I tentatively ate a bowl of ramyun in a restaurant downtown, worried I'd vomit it out, but since it stayed down I went to the bookstore to skim a book on the Philippines. [...] I read till 7:30, postponing the return to Timonism as long as possible, dreading the remainder of the night—but suddenly Hyo-jung called me to ask if I wanted to meet! It was a blessing from heaven. I took a cab to the university and had dinner with Hyo-jung; then we met Eun-sung. Played pool and spent the rest of the night (until 2:00) in a bar. 'Twas highly enjoyable.

My diarist's conscience insists I describe for you the ways in which a Korean nightclub differs from a Western one. First of all, it's more expensive. You sit down at a table shrouded in darkness, around which are many other tables, and a free pitcher of beer is brought to you. If you want to dance you go to a stage, where the DJ is, and where there are lines of people facing each other, separated by five or ten feet of no man's land, barely dancing out of shyness. You feel damn awkward, especially since you're the only foreigner who's been there in the last year and everyone's gaping at you. After twenty minutes slow music comes on, for the sake of couples, and everyone leaves the stage. This is the time when you can ask the waiter to bring to your table a girl you've seen who interests you and whom you want to meet. He goes to her table and tells her your request; she accepts and sits next to you, because this scenario is a common custom. It is, indeed, the reason why you've come to the nightclub in the first place. Predictably, she doesn't speak English, so after a few minutes she politely takes her leave and you ask the waiter to bring you someone else—who doesn't speak English either. Then loud music begins again and dancers trickle onto the stage until there are several long lines opposite each other. Finally you get tired and go home.

Sunday, May 9

[...]

The nodes of emotional response in me have calcified, so my evening with the girl [Ji-hong] I'll probably never see again didn't upset me much. She seemed distant from the moment I saw her. I've always known her personality is rather chilly, but usually it's thawed frequently by bursts of warmth. Not tonight. She had little to say, so I tried to sustain a conversation alone. We ate in a Vietnamese restaurant, then circumnavigated the downtown area because she didn't like my suggestions of activities, then went to the bookstore so she could buy a book for her student, and then she went home. We were together for an hour. I wasn't surprised when she said, "I'm very sorry, but I want to go to my house". Nor did I try to dissuade her. I was relieved. As I started to walk home, drizzle began to fall, as though on cue. I was without an umbrella; when the drizzle turned to a downpour and I was sprinting through the streets, I couldn't help smiling at the cliché I'd become. I was the hero of a parody of a *comédie larmoyante*.

We haven't one thing in common.

She returned *The Gay Science* to me. It was a symbolic act.

Listening to "Un sospiro" for an hour has coaxed me into an agony of platonic heartache—

agonizing not least because it's only platonic.

Edward de Vere had reached the worldly wisdom I have when he wrote this poem:

If women could be fair, and yet not fond,
Or that their love were firm, not fickle still,
I would not marvel that they make men bond
By service long to purchase their good will;
But when I see how frail those creatures are,
I muse that men forget themselves so far.

To mark the choice they make, and how they change,
How oft from Phœbus they do flee to Pan;
Unsettled still, like haggards wild they range,
These gentle birds that fly from man to man;
Who would not scorn and shake them from the fist,
And let them fly, fair fools, which way they list?

Yet for disport we fawn and flatter both,
To pass the time when nothing else can please,
And train them to our lure with subtle oath,
Till, weary of their wiles, ourselves we ease;
And then we say when we their fancy try,
To play with fools, O what a fool was I!

Monday, May 10

Dinner with the Euns and Hyo-jung, in an Italian restaurant. (I'm sick of rice.) Later we drank in a pub. I entertained them with stories of all the "crazy" girls I've known in this country. (Koreans' favorite English words are 'crazy', 'psycho', 'baby' and 'monkey'. Nobody knows why, but when they hear them they collapse in laughter. So I use them a lot.) As usual, Eun-sung was the only one who talked with me. At 11:00 we parted, I satisfied with my charismatic performance (rare as such). At 11:30 Hyo-jung sent a message saying she was sad and wanted to talk to me. When I called her to arrange the meeting-place she told me it was too late, that she'd wanted to talk to me alone before I'd left but hadn't had a chance to say so. Apparently her sadness had to do with loneliness and her frustration with her poor English. I consoled her, enjoying my role as the respected friend to whom she was obviously attracted. We agreed to meet tomorrow night.

I read a slew of 19th century poetry today. Wordsworth, Coleridge, Keats, Shelley, Tennyson, Browning, Whitman, Poe, Longfellow, Emerson, Arnold.... I've decided that Byron was the greatest English poet of the 19th century. I'll tell you my reasons later—but they should be obvious if you read the poetry [especially *Don Juan*] yourself.

Tuesday, May 11

Generally I meet friends purely for nepenthean purposes. Tonight as I talked with Hyo-jung the waters of Lethe diluted the acid memories of work.

Thursday, May 13

These days I have a fever to *write* and a fever to *learn*. I'm humbled by Byron's erudition. When I'm too tired to write I stay up late reading classics—but I haven't done it systematically. Now I will. I hate reading on the computer, so I'm going to buy whatever classics I can find in the bookstore. I'm tortured by my lack of literary knowledge. It shames me. Last night I read Byron's satire *The Vision of Judgment*.

The motto of AA is "One day at a time". My motto at work is "One minute at a time". With this attitude I might persevere through the next four months.

I've been reading the *Collected Poems* of A.E. They're short, lyrical, wistful, mystical, and pithy. Almost too pithy: I have to reread them several times to grasp concretely what's being communicated, and even then I have difficulty. They're full of rich images that often don't seem logically connected. I suppose their purpose is primarily to evoke and pay tribute to certain moods rather than to express a series of definite *thoughts* (as Byron does, for example). Their rhythmical regularity is impressive—and I appreciate it, because when reading poetry¹ (if paying undue attention to the meter) it's frustrating to interrupt myself in the middle of a line and start at its beginning because I've placed the accent on the wrong syllable. A.E. consistently maintains the same meter, whether it's iambic, trochaic or even anapestic. (I suppose I shouldn't read poems in that puritanical way, but when I read slowly—which I usually do—it's hard to resist the temptation.)

Wrote emails to Jae-eun and my parents. Edited Eun-sung's resumé for an internship in the U.S.

Friday, May 15

I'm reading (a selection of) Montaigne's *Essays*, which I bought at the bookstore. Also bought *Ivanhoe* and Tacitus's *Histories*.

Saturday, May 16

Montaigne, the precursor of modernity, insists on the fickleness of the self, the impossibility of pinning down its traits and thoughts, which are always changing. This capriciousness was what compelled him to write the essays in the first place: he was going through a "crisis of melancholy" caused by his retreat from the public sphere to his private estate and the consequent array of contradictory thoughts that beleaguered him in his idleness. His eighth essay remarks on the danger inherent in idleness, when the mind isn't occupied by one pursuit but can follow its whims and thus ranges over everything indiscriminately, getting lost. The first essay points out that through different means we can attain the same ends (again, because humans are inconsistent and unpredictable): e.g., while submissiveness and supplications are the means most commonly employed to "soften the hearts" of people who are angry with us, often the opposite measures have a stronger effect: in war the victor is sometimes moved to mercy by displays not of weakness but of bravery and defiance. Montaigne gives anecdotes to support all his arguments.

....Disgust with my faineant lifestyle pervades my thoughts night and day. My mind is idle, my body is idle, my passions are idle. Nothing I do has direction or purpose. It's like I'm sleepwalking—except that this somnambulism isn't of the body but of the soul. Yet it's so powerful it extends to the body as well, making me tired all day long. It prevents me from writing: it saps my mental energy and drains whatever molecules of inspiration are perspired by the ever-sanguine little man inside me. It's why my students sometimes dislike me—while they are partly why *it is*—and it's why I'm not very personable with my coworkers and it's why I no longer try to meet strangers. It's a component in my precocious Byronic cynicism—which, incidentally, is why I dislike 'introspecting' in my diary. (Introspection demands a self-centered naïveté, a fascination with oneself that has withered in me.) The universal doubt in which I live is making me wonder again why I don't end this hovering and instead embrace the only life I'm capable of embracing at this time, the life of dissipation. It would at least give me a purpose and a degree of pride, and

¹ Especially lyric poetry.

it might catapult me back to health.

Sunday, May 16

I skipped Montaigne's last essay because I wanted to read the culmination of his wisdom, his ideas on how one ought to live. Not surprisingly, he praises the Mean in all things. He defends the pleasures of the body against philosophical contempt for them, but, like Socrates, he prefers those of the mind "as having more force, constancy, suppleness, variety and dignity". Yet he knows that the two go hand-in-hand. He believes that the great-souled man lives according to nature—according to what nature obviously intends—neither getting lost in intellectual pursuits and ecstatic reveries nor treading the "primrose path of dalliance". Accomplishing something glorious and immortal is merely an accessory to the most important task facing us, which is "to live our life fittingly"—not striving for greatness or trying to exceed our own abilities, but simply managing and examining our lives. Socrates is his ideal man. Old age and illness and other unpleasant necessities we must learn to accept with grace, even to be grateful for them. The last essay—indeed, the whole book—pullulates with epigrammatic gems of wisdom, tidbits of humane advice, charming and skeptical self-descriptions, cheerfulness in adversity—and nowhere is there a hint of self-righteousness. Montaigne was a man of whom Emerson and Nietzsche would surely speak with reverence.

His frank discussions of sexuality are remarkable for the age in which he lived.

...I wrote a few paragraphs of the story. Now I'm reading *Ivanhoe*—an activity far more congenial.

Tomorrow, Massachusetts, which has always been the most progressive state, will become the first to allow gay marriages. I love you, Massachusetts!! In thirty years, such marriages will be allowed in most states. In the meantime, though, I can't read about opposition to gay marriage without wishing for the demise—by any means necessary—of its opponents. Their bigotry and lack of historical perspective are stupendous. Were I a columnist for the *New York Times*, the opprobrium I'd heap on them would have no bounds.

Monday, May 17

Byung-su is going to Thailand for a year on Thursday; he met us—Eun-sung, Hyo-jung and me—one last time tonight. I won't miss him, but I do wish he weren't leaving. He's a character. Reminds me of a hyena.

[...]

Thursday, May 27

The first few classes today were wonderful. The last was pandemonium. I didn't lose my temper, though, because...I've lost my 'caring' faculty. After work I met the Euns and Hyo-jung. Soon they started speaking only in Korean (arranging their schedules for our planned trip in June). I sat there helplessly and dwelt on thoughts by no means foreign to me. Was conscious of *absolute isolation*, and the inability even to talk about it to my friends because they wouldn't understand me (and, besides, I'd feel weak and burdensome and...I don't know...overly serious, *romantic*, Chateaubriandesque, as though made of clay). As we walked to the taxi Eun-sung remarked that I looked tired and cynical; I said I was, and added the word "horribly". In the taxi, which we took together, she tried to comfort me. Despite my disguising it and making light of it, she could see the pain I'd lived in for months. I was so unaccustomed to such expressions of sympathy that the calluses on my soul melted for a moment and threatened to give way to tears, but I held them back. She suggested we go to a traditional Korean market someday soon.

I'm setting my alarm for 10:00 tomorrow, so I can go to the gym early. This time I'm doing it not out of optimism, as I was in March, but out of pessimism. I'm a force for the Negative—so that even something as inherently positive as exercising is done for the sake of its *destructive* element. I want to feel pain, I want to express my contempt for the world somehow, I want to *war*, push myself beyond my physical limits. Everyday I want to do it. Create for the sake of nihilating. No breaks, no comforts, no slothfulness, no *softness*.

If hope wasn't strong enough to keep me doing something I dislike, maybe *hate* will be.

Friday, May 28

Went to bed at 1:00 and fell asleep at 5:30. Woke up at 9:30 and went to the gym. Now I need a nap.

Worked at a different school than usual. Excellent students. Denise worked with me. Invited me to the salsa lessons she takes (for five hours!) on Sundays and Thursdays; I said I'd come this Sunday.

Almost done with my story. Another week or two. Can't wait to be rid of it.

Sunday, May 30

My plans are always foiled. The salsa lessons were cancelled. Now I have nothing to do but write. Mozart is the Shakespeare of music. He's the most human of composers, the ablest at portraying humanity in music. He's also the most concerned with beauty. Even Beethoven wrote *ugly* pieces of music, however brilliant. (Listen to the final string quartets, the last movement of the Hammerklavier sonata, and parts of the Diabelli variations.)

The state of mind from which I'm never free, despite cynicism, anger, and reason, is perfectly described in Keats' poem "Woman! when I behold thee flippant, vain". The pure light of chivalry is lodged forever in my breast. —That's why what I wrote on Thursday was only a half-truth. I want women to like me, so I can express *my love*. Hope is still an important reason for tearing my muscles. (I couldn't say that on Thursday because it would have adulterated the literary effect I was aiming for.)¹

Monday, May 31

Yesterday evening Denise called me: the salsa lessons were happening after all. I met her and her friend Daniel (a Korean) near the bar "Salsita". Inside were about ten couples dancing to Latin music. They were intimidating. How are the men able to improvise their moves? Denise and I drank and spectated for a while, till Daniel pulled us out and introduced us to each other. As we danced, so did he; I tried to copy his moves, though my failure was as complete as you'd expect. Fortunately Denise has a sense of humor. Later Daniel gave me a systematic lesson on the basic moves of the salsa and the merengue. I wish I'd joined the group in the beginning of May: now it's in the middle of a two-month session and the next won't begin till July. But I'll keep going: some dancers are nice enough to teach me individually. After a few hours everyone left to eat ice cream, whence they dispersed, homeward bound. Denise, a Korean and I drank at a bar till midnight. [...] Indeed, I like Denise more than any foreigner here except Jim. She's neither dull-witted nor requires that her friends have loud personalities—which are the two almost universal faults I've noticed among Westerners. Usually if someone is immune from the first, he isn't from the second. Denise asked if she could sleep in my room; I certainly had no objections to that, so I took her home. We stayed up most of the night playing card-games and discussing ourselves. Her ambition is to be a Latina, to live in

¹ I meant what I wrote, but, you know, there's always the knowledge that when something is completely one-sided it's only half the truth.

Guatemala (where she taught for nine months before coming to Korea) and “date assholes”—and, in general, have a wild life. That’s why she’s learning Latin dancing. After telling her I’d majored in philosophy and history I launched into an exposition of Marxism, with barely a segue—probably an incoherent exposition, since I was wholly inebriated—but it seemed to impress her: at the end she said I’m a totally different person than she’d thought I was. Whatever that means. [...]

Wednesday, June 2

Last night I met Jim at a bar. We got hammered. Gripping conversation, as always. Went to Bubble Club. Mistake. Neither of us wanted to dance—though I did for a few minutes, alone, feeling like the butt of a joke every second—so we drank for an hour and lusted after the beauties around us. When we left we had a bite to eat—Jim schmoozed with the friendly Korean who served us, as well as others, while I said something here and something there. At 3:00 we were in no mood to go home; I suggested we go to a massage parlor, though I didn’t know where to find one. After some discussion he agreed. The adventuresome aspect is what we’d latched onto. To my amazement we found a place ten minutes later...but the proprietor told us it was full. I waved my two hundred thousand won at him and Jim accused him of lying, but he didn’t let us in. We continued walking along the street next to the Lotte department store, which is in a prostitution district. I was having a grand ol’ time—uncertain of what was to come—whether we might even end up in a brothel—and loving the company of this guy who’s unlike anyone I’ve ever known. Finally we entered another place, where we weren’t shooed away. The price was 60,000 won, which we paid without a second thought. The man led us into a dark, long room curtained off from the lobby. There was a row of cots, on which were lying about twenty sleeping men. Hardly a word had been spoken to us; we hadn’t the foggiest idea what was going on. More than once I had a barely repressible urge to giggle. The situation was so absurd! Jim and I were guided to neighboring cots (separated by a partition), though neither of us knew it. The man gave me a loose shirt and a pair of shorts, which I took to mean that I was supposed to disrobe. I lay down and he put a cloth over my eyes. Then I waited forty minutes. Soon it occurred to me that, in this vulnerable position, someone could easily slit my throat (I was still a bit drunk, remember), so I took off the cloth and looked around. Saw nobody but the sleeping men at first; then silhouettes of two women appeared. One of them came to the cot next to mine—not Jim’s—and proceeded to give the man a long massage. I sat up to get a better look, but it was still obstructed. So I lay down again and grew feverish with impatience. I thought they’d forgotten me. Making noises like finger-snapping and sighing loudly accomplished nothing. *At last* a woman came. I got one brief look at her and threw the cloth back over my eyes: in that split-second I’d seen an old hag, maybe sixty years old, and I was worried that if I looked again I wouldn’t be able to go through with this. I didn’t lift the cloth again until she’d left, which allowed me to fantasize that my eyes had played a trick on me. But I soon stopped caring. Although her hands were rough, her skill was consummate. It was a hard, vigorous massage. First she worked on my legs for what seemed an eternity; then she kneaded my arms and chest (straddling me, twisting my legs around her fat hips). After thirty minutes my muscles felt like liquid. And she hadn’t come to the best part. Earlier I’d heard a slurping sound coming from the cot next to mine, which I’d known could mean only: blowjob. Sure enough, it happened. My first professional blowjob. [...]

Jim is my best friend in Korea. He’s one of those friends I’ve always wanted who can reduce me to delirious laughter continually. And he’s more than that.

Friday, June 4

Went to the salsa bar last night. Girls in flamboyant dresses and iridescent skin-hugging pants and bikini tops were laughing and pirouetting around the room as their partners spun them. It was hard to believe that this haven of color and vivacity was in Daegu. I felt as though I’d walked into Latin America. The dancing itself was as *unbelievable* as it had been on Sunday. I sat and drank for an hour or two, until I asked

someone to give me a short lesson. Then I practiced with Denise, which was awkward enough. Learned a couple new moves. I don't actually *enjoy* it yet—I doubt I ever will—I feel ridiculous doing it—but I'll keep trying anyway. Maybe I'll wait till the next session starts in July.

This morning, Yunhee, Sunhye, Bobbi, Elias (an American teacher who came here two months ago), and I took a bus to Gyungju. This city, which was the capital of the Silla dynasty fifteen hundred years ago, is a popular tourist attraction and has a reputation for beauty. It's surrounded by mountains and is littered with rice paddies, but, from what I saw, it isn't much to boast of. Sunhye was our guide; she first took us to a museum of ancient Korean history and the Silla dynasty. The best part of that was its scenic location. Next we had lunch in a Korean restaurant; later we went to Anapji pond, which was dug in the 600s to commemorate the Silla unification of the Korean peninsula. The original palace is long gone. It's a pleasant little spot—the pond (still edged by the original stones) is large—and there's a trail around it through a small forest, which we walked along. The sweltering heat was (somewhat) neutralized by the breeze. Our last stop was the amusement park. Best part of the day. I could have got whiplash from the rollercoaster, though. (In America the park would be sued in a flash.)

Now I'm going to the club Funkaholic. I don't really want to, but Jim convinced me. (His tactic was to call me a pansy.) You never know what'll happen at night.

Saturday, June 5

Yes you do. I got drunk. And that's all.

Gym Thursday and today. Afterwards sat in the park and watched children chase each other around the fountain and play with their young mothers. They were so simple and happy in their blissful ignorance of suffering that I couldn't help feeling quite tender towards them. Not envious, because they have a lifetime of sorrow ahead and I would *never, never* want to be a child again—and I never want life again, I want this life to end and I want never to wake up from oblivion. But I was happy watching them, bittersweetly happy. I knew that I'd lost my innocence, that pain is inseparable from every second of existence, but the mere sight of untarnished joy coaxed tears from me. Later I bought a couple of shirts; then ate dinner in a restaurant I've gone to more than once where a lovely teenage girl works who likes me. [...]

And let me tell you something else: in the end, nobody has anybody but himself to rely on. Friends don't mean a thing. They're gone in a flash and they'll hardly ever stick their necks out for you, or even do the slightest thing to help you.

Wednesday, June 9

It's hard to motivate myself to finish the story. Writing dialogue ain't easy, especially when one's talent is Salieriesque.

I ought to be careful lest [my] life's loss of its once-sapid savor brand me with a seeming normality in your eyes, reflective of your own robotic self-pleased uncomplexity though caused by my lack of interest in presenting my foibles in a personal document the original purpose of which was precisely the artless honesty that can exist, I've learned, only so long as an excess of experience has not caused one to reach the plateau of disillusionment that has been substituted in my life for the "Blue Mesa" on which I was once so grateful to live. [...]

Thursday, June 10

I'm in love. Or something like it. Kate—or Sun-hyun—barely fits the label 'human being', being too *good*. Though her beauty (which is more *angelic* than *sexy*) might have easily coaxed her into vanity and self-conceit in a life of twenty-two years, she seems perfectly down-to-earth. Laughs often, has a subtle

sense of humor—which was unfortunately dulled by her imperfect English—is intelligent and isn't shy. We ate dinner and then went to a bar, where most of the prior awkwardness evaporated. What remained was caused by the language barrier. We had to keep introducing new topics of conversation because the old ones petered out. It was clear she liked me, but I don't think it was in the romantic way.

I miss her already.

[...]

Friday, June 18

I'm reading Tacitus's *Histories*, which tells the story of the "Year of the Four Emperors"—A.D. 69.

[...]

Here's the story: (I'll polish it in the future)

Atrabibulous

Tristan Malincauley had a face that looked as if it had been withdrawn prematurely from the divine kiln wherein faces are seared onto clay. It was in a permanent state of partial liquefaction. It dripped and drooped but never quite dissolved. The nose was a frozen stalactite formed from a primal rivulet down which had coursed excess flesh from the forehead, the remaining trace of which was a delta of wrinkles between the eyebrows. The tip of cartilage overhanging the mouth was a flabby hawk-like hook caused apparently by the momentum of the flowing flesh. The corners of the mouth didn't end till they'd reached the bulbous chin, which was complemented by the thick hanging lobes of the ears. The jutting eyebrows cast shadows over the sagging eyes, making them look like cavernous pits with small sunken eyeballs in the back. In short, Tristan Malincauley's face resembled an oversized anthropomorphized teardrop.

He hovered over his beer as he sat at the bar in the bar he frequented, "Lonely Hearts Commune". It was early on Thursday night and he was the lone customer. Around him were tall upholstered chairs placed neatly alongside oak tables shadowed by lights dimmed for atmosphere. On the wall were small cork bulletin boards to which hundreds of napkins had been pinned, most bearing inky messages advertising love and sex and beer and the good life. The bartender, bored, was reading them and chuckling, though he had read them a hundred times before. "When I'm sad I drink—and get sadder." "Hello Julia my darling." "I love you!" "Wherefore art thou, beer?" "Delicious in a most bittersweet way." "Youthful follies. Only youthful follies." He wondered who had written them and why. What histories were hidden behind them? What straits would drive a man to write on a napkin "I'm tired of all this living"? He himself had never known such despair as would cause him to write that on a napkin. It's appalling, he thought. But this is at least the proper place for it. He peered at the rotting rafters crisscrossing the ceiling, their corners covered in cobwebs; he looked at the rotten wood in crevices in the decaying walls; he saw the warm light of the lamps spread in ugly splotches across the floor and tables; and he regretted having accepted this job. Suddenly he remembered his customer and returned to the bar. A woman opened the door, stepped over the threshold, let the wintry air seep in, and left as abruptly as she'd come.

"Give me another," Tristan said.

"Here you are. Not too much tonight, okay?"

Tristan didn't answer and gulped half the glass. He licked the fringe of foam from his upper lip and then absently wiped the lip dry with his finger. One hand still grasped the handle of the glass, unwilling to relinquish it; his eyes were focused listlessly on the liquid inside, the color of urine. He didn't notice a second customer sit down across from him. She looked curiously at his face, almost startled by the saturnine features, and suppressed a giggle that bubbled up like a hiccup.

She had an urge to talk to him, to find out what kind of person this unique specimen was, but he was evidently brooding on something, so she ordered her beer and let her mind wander. Tristan took another sip, slowly, pensively. This time after letting his arm with the glass sink onto the counter he ran his coarse fingers through his hair, greasy and matted, wearily, and let them stop in the middle, so as to rest his head on his palm. It lay there, cocked to one side, motionless and silent, while his long face sagged softly. His eyes, glistening, were downcast, the lids heavy, half-shut. His hands were still, his breathing imperceptible.

* * *

He was recalling an incident twenty years ago, an incident from his youth. He was a college student then; it was his nineteenth birthday. His friends were dragging him to a party on the campus, in somebody's house. There was to be free liquor, and their goal was to get him drunk. He had never been drunk. He was apprehensive, but also, though he tried to conceal it, excited. He had tasted alcohol before and found it rancid, but his intoxication with the idea of being drunk, which his imagination had inflated to a semi-divine state of blissful freedom, overwhelmed his squeamishness. They arrived at the party overflowing onto the street, and jammed a path through the people crammed into three small rooms. Clouds of smoke inhaled from dwindling cigarettes and exhaled from stained mouths through half-open stained lips into the reeking air trailed them as they nudged and prodded their way into the kitchen. Fellow hopeful drunks were clustered around the table upon which was cluttered a miscellany of bottles and glasses and paper cups and cigarette butts and puddles of spilled beer. Tristan's friend pointed to a bottle of rum and yelled something, which Tristan took to be an invitation to drink. With some effort he gained the table and poured himself a cup. His friend did the same, and after toasting alcoholism, they downed their shots. Tristan's face reflexively shriveled in protest and he shook his head as if to shake the taste from his mouth. It's vile, he said. This his friend found amusing but ignored as he poured another cup. I don't want another. Yes you do. Drink. Tristan drank.

Hours later he had lost count of how many shots he had drunk. He didn't care. He was too caught up in the joy of chaos, the delirium of his senses. He felt as if he were swimming, but in an ocean that offered no resistance to his strokes. He forgot time even as he remembered it. He was outside of space even as he passed through it. Never had he felt so inexplicably free, free from the burden of social norms, from his shyness, from the structures of rational consciousness he had always thought to be impenetrable. His whole life he had been a slave to convention. Maybe he had never been happy, except in the Eden of early childhood, in the arcady distant from the bustle and anxieties of society. Yet now, suddenly, for the first time, he felt he could forsake the whole charade. He could act however he wanted, on any whim, heedless of people's opinions because they hardly existed, they were but illusions in heads whirling around him, heads attached to bodies with limbs gesticulating stupidly. He meandered through the crowd, tottering occasionally but undaunted in his new, thickly sensuous aloofness, thrilling with the novelty of the experience. He closed his eyes and felt himself sinking deliciously, falling, hurtling through mental space, his stomach somersaulting as on a rollercoaster, his body balanced on a wobbly world that would toss him in any moment—and when he opened them he was back in the smoke-filled room. He found himself sitting on a couch staring at a voluptuous girl who was talking to someone. He couldn't hear her and had trouble seeing her, but somehow he knew she was intelligent and beautiful. Her carefree laugh absorbed him, as did her blonde hair tied in pigtails flopping against her neck. She's Pippi Longstocking, he thought, minus the freckles—and everything else. Look at her legs. Wow they're long. And her graceful piano fingers. I wonder if she plays. We could play together if she plays. (He was having trouble stitching his thoughts together.) Chopin? Chopin doesn't have duets. Mozart does. Delightful ones, not too hard. With such melodies... I love Mozart. So much better than this crap we're listening to. Compare the Jupiter symphony with punk rock. Ha! What's happened to music? Why can't I see? What's wrong with my vision? Depth perception, something about depth perception. What was I thinking about? *What?* Don't know. It's gone. Look at all these people, sweaty bodies. Smoking. Heads swimming. It's so fun! Weird! Can't explain it. Who's this

girl here? Pippi Longstocking. Except I don't see any stockings. But I shouldn't trust my eyes now. (He giggled.) I wanna talk to her. But she's still talking. -He closed his eyes and laid his head on the cushion. Sinking, sinking... The somersaulting grew intolerable and he opened his eyes and raised his head to look at the girl. She was alone. He swimmingly stood up and approached her.

"Hi," he said.

"Hello...?"

"You sound a little suspicious. Do I look menacing?"

"Ha! No, I'm not suspicious. But you do look...unusual. No offense."

"Huh?"

"I've seen you around campus. You're easy to spot. Your face is unique."

"How so?"

"I don't know. It has a lot of character. It looks 'lived in', you know, even though you're young."

"Oh. Thanks, I guess." He was taken aback by this girl's forthrightness.

"No! It's a—compliment. It's good to be different. It's attractive." She looked shyly at the floor.

"Oh, in that case, I'm flattered. You know, you look unusual too." She jerked her head up, smiling curiously. "Well, not unusual. Just not like everyone else. You remind me of Pippi Longstocking. Though I don't know who that is. This is my first time being drunk, by the way."

"Your first time?! How old are you?"

"Nineteen."

"Oh. You're young."

"How old are you?"

"Twenty," she said.

"Wow, a lot older than me. How often do you drink?"

"I don't know, not very often."

"It's a really bizarre experience. Before, I thought it would be—I didn't know what it would be, but—I thought it would be less confusing. I didn't know I'd have no depth perception!"

"No depth perception? You mean you can't see?"

"Not very clearly."

"Yeah, I guess I know what you mean. The brain can't integrate the two images. So they hover around each other."

"But I'm not complaining. I love it. Usually I'm a bumbling fool, but now suddenly I'm...well, I probably still am, but anyway I don't *feel* like it."

She laughed. "You're funny. When you drink anyway. You should drink more often."

[Deleted more meaningless dialogue--the point of which, admittedly, was its meaninglessness, but still, it's bad writing.]

"Yeah, well... I don't know. I guess so. What were we just talking about?"

"You forgot?"

He smiled. "I think so. It's my drunken stupor. Actually I have no idea what our whole conversation has been about. Has it been fun?" He tried to smile charmingly.

"For *me* it has. Though apparently not for *you*." She smiled back. "It's only been five minutes long though."

"Oh, so I haven't missed much." Trisha tucked her hair behind her ear, adorably, as it seemed to Tristan. Exhausted by his effort to talk intelligibly, and beginning to feel sick, he wanted only to kiss her, to lie down with her and end this pointless conversational charade. Suddenly he remembered her lovely fingers. "Do you play the piano?" he asked.

"A little. Why?"

"Your fingers are a pianist's fingers. Slender and graceful." He took them in his hand. "How...how long have you played?"

"Maybe four years."

[...]

“Maybe we could, uh, play together...sometime. A duet.”

“I’d love to!” She smiled up at him broadly, sweetly. “Why don’t we continue this conversation in my house? It’s nearby. It’s too noisy here.”

“Okay...” Tristan was vaguely aware that this might be an offer of sex, but it didn’t register. The world was cloudy, spinning. He felt as if he were falling backwards in a viscous liquid. He closed his eyes. The moment he did so he lost his balance, stumbled and almost fell.

“Are you okay?!” Trisha grabbed his arm to steady him.

“I...” He looked at her blurry face and tried to smile. He succeeded only in grimacing. “I...I don’t feel so...” A wave of nausea passed through him. “I think I should go... Is there a bathroom?”

“Yes, over here.” Holding his hand she weaved through the mob that spilled into every nook and cranny. Tristan caught snippets of conversations as they passed: “I told her she was pretty, which was unoriginal but it did the trick, because the next thing I know she...” “Tomorrow night we’re gonna smoke in my room if you wanna...” “The Bulls, on the other hand, are good but—well, like the Yankees, they’re good but nobody likes the Yank...” “Want another? I’m going to the kitchen now. How ’bout a beer?...” “You are the sexiest girl I’ve ever—especially in that skirt...” “Sex? I don’t know. Ten times maybe? I was drunk half of them. But I remember pretty...” “I gotta hurl. Too many shots. Wait a...” Tristan felt sicker every minute. Several times he leaned against the wall to still his churning stomach.

“Are we almost there?” he said finally.

“Yes, but there’s a line. You’ll have to wait.”

“Ooohhhh... Forgive me if I...I’ll try not to, but...”

“Don’t worry. It happens to everyone.”

“If I don’t make it to the bathroom.”

“Don’t worry.”

“I’m worried. How many...people...”

“Four or five.”

He groaned and bent over, supporting himself with his hands on his knees. He saw Trisha’s diminutive feet half-concealed in her high heels, her toes wriggling as she changed her position to caress his back. She said something. Her voice was distant and thin, an angel’s voice, or a herald of doom, calling upon him to do penance for his sins and vanities. She was taunting him, he thought, taunting him in mellifluous tones while caressing him, two-faced—anyhow she was laughing at him in her *thoughts*. He had been so stupid, so stupid to drink so much, to be so weak and listen to—who was it?—to let himself be pressured to drink so much. Such a noxious drink, nauseating, he had drunk again and again, brutishly, bingely, masochistically. Now he was paying the price. He was going to vomit on those pretty feet down there, those dainty alabaster feet with their little toes. That would be bad, but it would come to that. It was coming. It was coming.

“It’s your turn.”

“Huh?”

“It’s your turn. Go in.”

He staggered into the bathroom. On the floor was a splash of some thick colorful liquid; he stepped over it and lunged to the toilet, where he wretched repeatedly. He didn’t know how long he stayed there, hugging the toilet as though clinging to existence. He was aware of nothing but nausea. Somewhere behind him was banging on a door, muffled voices, sounds from another world, perhaps an imaginary one. Everything seemed imaginary. He stood up with effort, swayed with the swaying of his vision, wiped his mouth and drank from the faucet in the sink. He looked in the mirror. An embodied ghost stared back at him. He groped to the door and opened it and pushed past the throng in the dark hallway. Murkily he remembered that a girl had been standing out there—waiting for him?—somewhere, but he didn’t see her and forgot about her. Mechanically putting one foot in front of the other he made it outside to the cool fresh air, away from the sickening

smells and sounds within, and the press of hot bodies, but his misery didn't abate. Hidden behind bushes around the corner of the house he convulsed and wretched again. Tears discharged with bile streamed down his cheeks, gobs of viscid spittle hung from his lips. He rested his head against the side of the house for what seemed an eternity, taking care not to move lest his stomach erupt, wishing for a return to sanity in muddled self-forgetfulness. Apart from this wish his mind was empty. Dimly he perceived people passing him, walking home or to their cars, probably staring at him. Spoken sounds struck his eardrums and left no mark on his mind.

“Hoozat”

“Dunno”

“Yokay”

“Izzycrying”

“Jussic”

“Olook”

“Isee”

“Itsgross”

“Watchyershoos”

“Itsonispants”

“Wherdyaliv”

“Forgitit”

Tristan stood stock-still for an hour. The shivering leaves on the trees moved more than he did. His breathing was measured and regular as he waited patiently for a convalescence that never came. Indeed, he felt the burden on his mind increase as the minutes passed in a surreal succession that was rather an intermingling than a sequence. The past weighed heavily on him, obliterating all knowledge of the future. During this lull in the tumult of physical distress he let his mind roam around memories that savored of the Dionysian but contrasted with the ignominy of his present state. He remembered his first bewildered acquaintance, at the age of eight, with a nude beach on the Greek island of Paros. He smiled as he recalled the baffling but delightful welter of thoughts and feelings that had arisen in him, from disinterested curiosity to feckless sexual arousal to undisguised revulsion, and that had left their imprint on his mind ever since. His first kiss had been a less ambiguous experience. More experimental than passionate, it had nevertheless filled him with elation, not only from the electric pleasure of two tongues flirting inside one mouth but also because his partner was a close friend on whom he'd had a crush. While his hands felt her hair and timidly ran along her back, hers rested on his shoulders, as though moving them would have distracted her from the very serious task in which she was immersed—and his knowledge that those wonderful little hands were sitting right there beside his neck gave Tristan almost as much joy as the kiss itself. Later in the night, when his dazed memory had exhausted the sexual motif, he thought nostalgically about his adolescent attempts to write literature—about the surges of inspiration he'd felt and the equally sudden and frequent desiccation of the creative wellspring. Though his situation had at times been similar to that of a fluttering leaf at the mercy of a capricious breeze, his artistic whims had at least made him feel *alive* and *healthy*. Musing on this lost happiness, which he saw as lost innocence, he grew melancholy. Slowly his melancholy turned to real despair. At length he raised his head in an effort to come to himself.

His stomach seemed to be settling. Waves of unrest ebbed and flowed, but they were less frequent than they'd been an hour ago. He backed away from the house, stumblingly and lethargically, his vision and his mind still thick. The word 'molasses' entered his thoughts and was gone instantly. Turning the corner of the house he saw a porch, towards which he fumbled and tripped, a fall threatening at every step. He managed not to collide with anyone, for, although bodies milled about the lawn, the party was waning and the crowd thinning. People were walking home in pairs, some holding hands. In shadows couples kissed noisily as spectators greedily took in the sight and sighed. One boy was sucking the neck of a girl who was reputed to be promiscuous; another was kissing a girl who periodically turned her head to kiss a second girl, who then kissed

the boy, and so on, the group composing a threesome that titillated onlookers. Tristan was one of the few who wasn't watching; all he saw was the clouded vision of the porch. He collapsed onto it and sunk his head in his hands. The black world swirled, but he didn't open his eyes. He was past caring about dizziness; all he felt was shame, remorse and self-contempt. The couples continued to kiss in carnal ecstasy; he cursed life in carnal despair. A well of sorrow rose in his throat, mirages of memories flitted by, imagined cares oppressed him. All his past follies drummed against his brain, as his past pleasures had earlier. He remembered the time he'd smoked marijuana in the dark room with his friend and had felt only boredom and an acute consciousness of wasted time; he remembered his abortive attempts at romance, the time he'd finally found a girl who liked him in high school and they'd gone to a movie but he'd been too shy to kiss her or even talk much and she'd left early feigning dislike of the movie but barely concealing dislike of him; [...] and then he remembered swallowing cup after cup of rum. Self-pity perverted into self-hatred collected in his eyes and overflowed onto his face buried in his hands. The world was collapsing on him, it seemed; his life was coming to pieces all around him, he was ruined, and deservedly. I'm so sorry, I'm so sorry, he wept absurdly, forgive me! I didn't know what I was doing. I was weak I was weak, but it wasn't malicious it was stupidity, forgive me! Peer pressure, weak peer pressure, friends didn't care, I was alone I didn't know what to do, just wanted to try. (A car started somewhere nearby but it melted away.) I wanted to try it once—why, why—innocent, I was innocent, a child, weak, I'm a baby, an infant out of the womb, stupid stupid, what was I thinking? Was I thinking? No I was an animal, I am an animal, animal lust in dirt, base—nothing, dust clay and dirt, not human inhuman. Nothing nothing, death. What have I done? What have I done? He saw the benevolent image of his parents who had done so much for him and sacrificed so much, his mom smiling at him, loving him blindly, blindly because he was contemptible and unworthy of love, smiling and hugging him, placing hopes on him he'd betrayed, failed, he'd been a bad son. How could he have been so stupid? This was the culmination of a worthless life, meaningless, floundering, a metaphor for how he'd lived, an appropriate ending to a life littered with mistakes. (Flashing self-consciousness—"Overreacting!"—the silliness of taking himself seriously.) He had reached his end, he was drowning, and all he had accomplished was vanity. [...] Why me? Selfish I'm so selfish—and a good actor, I'm only acting now of course charade but that's just more selfish, selfish that's why I did it, care only about myself, just wanted escape from my life, this—mistake of a life, only mistakes, only floundering, drowning, sadness, tears all these tears, people staring but I don't care, they're happy and I'm not, happiness what a joke a sham nobody's happy we're all lost, lost in the—drowning in tears this vale of tears veiled eyes in tears dripping cheeks, crying stupid I drank had rum horrible, and now a fool no worse a fiend, ungrateful brat spoiled human sapienspoiled crying baby O God look at me what I've come to, abject selfhatred selfmortifying sadness on burning cheeks flushed—this is stupid what am I doing lying here in a puddle of piss of my own making and rum rum rummy game its a game all a game meaningless and Im the loser undisputed everyone knows the peeping toms staring at me laughing the neckcraners neckcraning exulting in misery fellowmisery on the road highway accident death mort blood more blood and gore more we love it relish grim reapers reaping sorrow pain suffer I suffer unto beer suffer it not to come to me hatefull fathomless hatefull ocean of hatefull drown sinking down abyssmal panicstricken against tides toeing under toes her were small dainty white pretty under loved them clean vomited over toes splashed chunky orange wriggling pieces of gobby spit in poison inhaled like air at the behest of mine enemy despite death likely coming to bingers not thinking on consequences always heres mine suffocation in rum and swirly whirlypool nauseous careful dont move abstain from motion abstinent motion shunned sex in toegirl caressed me fluently massaged back along thighs nakedless with no stockings but pigtails pointy and pippy at me like two hard nipples I want lick but cant have for now she ran fled the freak drooling tears maudlin mudtears slimy down slick bile slipped on it grassly and splashed on pants soiled good clean earth cool in moonlight with dew on fingers wet with vomitjuice slimy like cuntjuice in trishasvagina who wanted but didnt me from rum that rooned and reduced to bibbling drunkin despair saddy for

lovelost in mommy as child grateless child still child yet playacting allways in sick and in health yet still real painfull misery misery soleful agony save him

Something jabbed Tristan's shoulder. Without turning his head to see what it was he pitched forward and stood up. The earth rushed at him and he recoiled instinctively, in the process almost falling back onto the porch. He shuffled forward, hunchbacked, a ghostly misshapen figure illuminated by livid moonbeams, of which his face shared the hue. His cheeks were sodden with tears, which he had, however, forgotten, in his peremptory desire to be unconscious in bed. He fell against a parked car, supporting himself on it before embarking on the trek home, which was to last fifteen minutes though normally it would have taken five. Days later he had no recollection of walking or reaching his home or unlocking the door or falling onto his bed. All he remembered was waking up consumed with nausea, noticing vomit on the floor beside his pillow, and spending the next two days in a levitation between life and death, during which he felt such misery that he longed for the struggle to be decided in favor of death. His torment was not only physical; it was mental. As throes of hunger can impart unnatural keenness of sight to the sufferer, so Tristan's illness, it seemed, provided him with terrifying insights into the essence of life. The convulsions he underwent as his body purged itself contradicted his humanity, pressing on him the horror of his animality. He was a beast, a brute relocated from the ranks of nature but not thereby less natural. Life, founded on pain, had no value. Resistance was futile, ideals were ignorant, hopes were misguided, pleasures were delusional, and life was a hoax. Tristan saw this and succumbed to a prolonged depression.

* * *

He looked up from the empty glass before him. "Give me another." The bartender obeyed. Tristan was oblivious of the swelling numbers of customers and the drone that emanated from them. They, in turn, were oblivious of him, this solitary hunched man whom the world seemed to have forgotten. Only one person noticed him: the woman who sat across the bar and couldn't refrain from peering inquisitively at his face. From watching him the whole night she knew beyond doubt that this was someone in need of comfort. Her heart went out to him as she saw him wipe his eyes for the third time. Shyness had prevented her from acting on compassion, but now she resolutely flung it aside and walked to the empty seat beside him, not knowing what she'd say but knowing something had to be done.

"Excuse me," she offered timidly, "sorry to bother you, but I couldn't help noticing that you look a little sad. I know it's not my business, but..." She paused, suddenly afraid her pity would offend him. "May I sit down?"

Tristan looked at her apathetically. "Sure."

"Do you come here often?"

"Yes." He sipped his beer. "Too often."

"Why here? I find it rather depressing." She smiled. "It's old and creaky and... dilapidated."

"I wouldn't say that. It's not so bad. Anyway, some people are more at home in 'dilapidated' conditions than in others."

"I must admit it has character. It makes me think it has a *history*, maybe not a great one, but at least a long one. I wonder when it was built."

"Yes. It looks ancient doesn't it?"

"But look at those cobwebs on the ceiling! Why doesn't someone clean them out?"

"Because they give it character." Tristan smiled, a fragile smile that evaporated almost immediately.

"So you say you're comfortable here?"

"Yes, I am, disconcertingly so."

"You must be a pretty grim person to come here often!" She laughed as if to reassure him it was a joke. But he only mumbled, "You've hit the nail on the head, my dear." She eyed him quizzically. "What do you do?" she asked.

"What do I do? I sit here and dwell on things. Usually the past. But as for my job, I used

to work in a bank, doing God knows what. Now I'm unemployed." He cast a sidelong glance at her once or twice as he talked. "What do *you* do?"

"I'm a student in graduate school. Studying literature."

"Really? There was a time when I wanted to study literature. But I gave it up, stupidly. What kind of literature do you study?"

"English, mostly nineteenth century."

"I like Shelley. 'My name is Ozymandias, king of kings: look on my works, ye mighty, and despair!' Poor Ozymandias forgot about time. Time..."—he looked at his drink—"which has such a muddled relationship with this poison." He sipped it again and sighed.

His companion looked at him wryly. "'Beauty is truth, truth beauty—that is all ye know on earth, and all ye need to know.' But apparently you don't agree."

Tristan raised an eyebrow. "Touché! I might have seconded that opinion when I was your age. How old are you, anyway?"

"Twenty-eight."

"And what's your name?"

"Maria. What's yours?"

"You'll laugh. Tristan. Tristan Malincauley. I think my parents had it in for me when they named me."

Maria giggled. "At least your name and—forgive me—your face go well together. They both have character, like this old building. Imagine if you were called John—how boring that would be!"

"I'd prefer that kind of boredom to being branded from birth." He chuckled. "I've been told more than once that my face resembles the living dead. A dubious honor, don't you think?"

"Whoever said that didn't know what he was talking about. You're much more attractive than the living dead!—who probably have rotting flesh hanging off them and no teeth."

"No, no, you flatter me. But thanks anyway." He laughed for the first time. "The teeth, though, you're wrong about that. They have teeth. Just not pearly white ones like mine—or rather, yours. You must brush them three times a day!"

"No, they're just naturally flawless." She smiled and raised her glass. "To flawlessness!"

Tristan frowned. "Flawlessness doesn't need to be toasted. How 'bout...to lawlessness!—of the psyche. It's a more realistic goal than perfection." Maria hesitated, but Tristan clinked his glass with hers and they drank.

"I drank to flawlessness, by the way," she said a moment later.

"Okay. You're entitled to your idealism."

"Lawlessness...mental lawlessness can't be a goal. It's the opposite of a goal. It's painful and useless. Chaos—what's so great about chaos?"

"Nothing's great about it." He looked at her intently. "But if you want to take a stand, and you want to have intellectual integrity at the same time, then I think you have to go with the lawless despair. Because that's what life is." He turned away sadly, his moment of levity pushed aside by this short speech, and ordered another beer.

"Life is despair?" Maria looked at him pityingly. "I don't want to pry, but—how did you reach that conclusion?"

"By living."

"You must have had a hard life. A lot of disappointments."

"I've had my share."

"No, you must have had more than your share! I don't know anyone who thinks like you."

"Lucky you."

"I have friends who've failed in most things, but even they manage to hold onto some happiness."

"Lucky them."

"I know someone," she continued, ignoring his brusqueness, "who dropped out of college

to be an actor, failed in every audition he ever had, became an alcoholic, worked at a restaurant for a couple years, got married and divorced soon after, and is now a construction worker, which he complains about whenever I see him. But even he has a positive attitude most of the time...somehow.”

“Lucky him.”

“I hope I don’t sound like I’m criticizing you. I’m not. I guess I *am* being a little forward...”—she paused, as if the thought had startled her and she suddenly regretted everything she’d just said—“...but beer loosens my tongue. Anyway, I only want to understand what you mean.”

“And why is that?” Tristan turned to her with an expression of cynical amusement. “Why do you care so much?”

“I don’t know. Curiosity?”

He snorted and turned away.

There was something rather pathetic, Maria thought, in this man who seemed to have no pride. She felt strangely comfortable with him, and at the same time was increasingly interested in him.

“Well, why are you so sad?” she asked. “Can’t you tell me, a little?”

He raised his eyebrows. “Sure. No reason not to. But it’s always the same. It’s always gradual—it sneaks up. Disappointments pile up. Time bears down and suddenly your youth is gone.”

“So you think you’re getting old? You’re nostalgic?”

“No, no, that’s not it. And stop acting like a psychiatrist. I don’t even know why I’m saying this to you, a total stranger.” He grunted and smiled, crookedly, at the absurdity of the situation. “It isn’t a mystery, for you to figure out. The simple fact is that things haven’t gone my way. I was married once, and that ended badly, partly because of this vile drink. I’ve hated my jobs, they’ve been more soulless than construction work. I never had the ambition or energy to follow my ‘dreams’, so-called; instead I frittered away years making money. Following the road *more* taken. Besides, unlike your friend, I was a depressive to begin with. It’s who I am.”

“Well, you still look fairly young. In your thirties probably. Right? Why don’t you...I don’t know...do something—go somewhere—start again—see if you can do what you wanted to do when you were younger—whatever that was.”

He laughed. “At my age? No way.”

“Well you’re obviously intelligent. I don’t see why you can’t—”

“Because you need more than intelligence. You need energy.”

“And you’ve lost yours?”

“Yup.”

“Maybe coming to this place all the time has something to do with it.”

“No, when I started coming here the damage was already done.”

“When was that?”

“A year ago.”

“I wonder if...” She tried to think of a way to phrase it delicately. “I wonder if this ‘vile drink’ has anything to do with the rut you’re in.”

Tristan stared blankly at the napkins pinned on the wall. For a while he didn’t answer. “When you came over here,” he said at last, “I was thinking about the time I lost my virginity.” Maria looked puzzled, but he didn’t notice. “Not the sexual loss, that *formality*, but the *real* loss, the fall from—grace, such as it was. I got wildly drunk one night, horribly sick. For two days I didn’t get out of bed. The whole time I was thinking that life is worthless. A bad joke. We’re all pawns in the hands of...some animal force, some physical, defecating nature. Consciousness and everything ‘noble’ is superimposed on *shit*. I saw it clearly. Wanted to kill myself. But I recovered. Physically. I forgot about the physical pain and remembered the mental. So I kept drinking. Living like a libertine. I got into this routine, a materialistic thing I thought was a phase, but it lasted longer

and longer, and finally it dominated me. I...lost myself...and finally I realized I'd squandered myself...and I ended up here. *Here*." He turned away and drank more; Maria saw that his eyes were misty. He wiped them with the back of his hand but tears continued to accumulate. Maria's instinct was to look down on someone with so little dignity, but she also liked him. She liked his potential charm, his sense of humor, his self-knowledge. She thought she could see an intelligent, strong person underneath the ignoble exterior. She wanted to help him.

His tears stopped after a minute and he turned to look at her—for the first time, really. He saw this lovely girl with black hair and a kind face, who was looking at him with compassionate eyes. He couldn't fathom it: why would anyone look kindly on an embarrassment like him? Might as well be fond of a dirty secret. He smiled at her sheepishly and cast his eyes downward.

"I'm sorry," he said. "I usually don't do this. I guess I drank too much. All these people are laughing at me, I suppose. Staring, anyway."

"Don't worry. It doesn't matter. I just feel bad you've had such a troubled life. I wish there were something I could do."

"No, there's nothing. I have to help myself, nobody can do it for me." He paused. "You know, you're a very kind person. Nobody's ever been so concerned about me—no stranger, anyway. I don't understand it. You're like an angel!"

She laughed quietly. "No, I like you," she said.

"You like me?"

"You're more interesting than most people I know."

"Thanks. But enough about me." He laughed. "*More* than enough. What about you? The only thing I know about you is that you can quote Keats. And that you think the truth of life is beauty... But tell me more about yourself."

Her smile made Tristan think of a young girl's first confused experience with flirtation. "Well, where should I start? I'm single, I want to be a writer, my favorite poet is Keats and my favorite novelist is Tolstoy, I live in an apartment around the corner, and...what else do you want to know?"

"It's funny, but I wanted to be a writer too. I tried my hand at poetry when I was still fresh, but it wasn't very good. What do you write? Poetry? Fiction?"

"I like writing poetry. Especially haiku."

"Yeah, Eastern poetry is wonderful. I love Li Po. There's one poem called 'Self-abandonment'; it goes something like..."

'I sat drinking and did not notice the dusk,
Till falling petals filled the folds of my dress.
Drunken I rose and walked to the moonlit stream;
The birds were gone, and men also few.'

Maria was silent. "I know that drunken feeling of isolation," Tristan continued. "Usually it isn't quite so poetic, though."

"But you can *make* it so! That's the beauty of writing. You can transform any situation into whatever you want it to be!"

Tristan smiled. "If you have the talent."

[Deleted stuff.]

Maria hesitated, and the smile faded from her face. "Actually, I'm tired. Maybe I'll go home. But if you want—you could walk me there..."

His eyebrows moved imperceptibly. "Sure, I'd love to."

They paid for their drinks and walked outside. Snow was falling faintly, laying a *tabula rasa* over everything in sight. Even the crumbling rooftop of the old building they had left behind was buried in purity and freshness. Their footsteps fell soundlessly onto the padded sidewalk. A seductive, sensuous silence hung over the empty streets as Tristan and Maria walked without talking. Their hearts were beating quickly and purposefully. Both were wondering what would happen when they'd reached Maria's apartment—and both were hoping it wouldn't be a simple

“goodnight”. Maria was thinking that she’d never met anyone like this man, intelligent, worldly wise, melancholy and interesting, and she was fascinated by him. Her pity only intensified her attraction. Tristan, on the other hand, was increasingly enamored of the young woman whose compassion and vitality were able to cure him temporarily of his depression. Walking by her side he felt strangely happy and hopeful. The past seemed far away, dreamlike and unreal. What was real—the only reality—was this girl here. Maria. Maria and the falling snow, washing over him, intoxicating in the still night, were all that mattered. They were *here*; the rest was nothing.

They reached her apartment. Shyly she invited him in, on the pretext of getting warm. They sat down on the couch. Their conversation was innocuous. Both were embarrassed and uncertain of what to do. Tristan had had one-night-stands before, but he hadn’t respected those women and there had been no awkwardness. Maria he not only respected but felt very tender towards, and he didn’t know how to proceed. It had been so long since he’d experienced this emotion that he was lost, his mind swimming, confused. He wanted only to kiss her, to embrace her. Lovingly he gazed at her face and lips as she talked while trying to pretend that nothing was out of the ordinary. His words gradually seemed less his own as his impatience dominated him. She, too, looked increasingly expectant. Finally Tristan overcame his nervousness and leaned forward to kiss her lips softly. He cringed momentarily at the thought that his comical face was about to be joined with Maria’s, thus contaminating her beauty, but he forgot that concern when he felt Maria returning his kiss. They hugged tightly, each absorbed in the other. Tentatively but excitedly they began to shed their clothes. Tristan’s heart was racing, bursting as he kissed Maria’s naked shoulders and breasts and caressed her body with his rough hands. [...] He was lying nearly naked next to this woman who *wanted* him, who liked him and wanted to be with him, who wanted to see not only his body but *him* naked, as he did her, as he cared only about her and knowing her and feeling her...

But it wasn’t working. That was obvious by now. It was paralyzed. It was dead. It was hopeless. Tristan sat on the bed naked, ridiculous, broken. Maria hugged him gently and whispered words of comfort, but he was inconsolable. Tears ran down his sagging cheeks.

Tristan isn’t modeled after me, not even his youth. A sentence here and there does apply to me—and the drunken episode is based in part on what happened to me in my sophomore year—but I’d like to think I’m *very* different from him.

One of the purposes of the first dialogue is to show that drunkenness isn’t an escape from the Great Charade, as at first it seems. One of the purposes of the whole thing is to contrast various forms of ‘intoxication’, the healthy and the unhealthy.

Sunday, June 20

I’ve been reading the Book of Job to prepare for writing the Book of Joe. It won’t be easy. In fact, I know I’m not equal to the task.

I’ve started writing. The hardest part is staying close to the original text—using some of its ideas and modes of expression—yet at the same time distancing myself from it.

Thursday, June 24

I’m back [from Jeju Island, where Eun-sung, Hyo-jung and I went for a few days]. Too tired to rehash all the details. We climbed Mt. Halla (a volcano), walked through caves made of petrified lava, went to parks, beaches, waterfalls and traditional villages. The weather gods doted on us until today, when a storm killed our plans to see the little island of Udo. While Jeju-do’s beauty, culture and whatever don’t compare with those of most countries I’ve been to, it does have majesty and charm and more attractions

than any other place in Korea. (So much the worse for Korea.) We spent most of our time driving—well, the girls drove; I don't have an international license. Those hours on the road were hard for me. Eun-sung is the worst driver I've ever encountered, Hyo-jung the second worst. We almost crashed a dozen times, almost ran over a little girl once, didn't park the car correctly more than a few times. My eyes were riveted to the road ahead of us the whole time, as much to prepare myself for the inevitable crash as to point out to the driver that we were in the wrong lane and a car was speeding for us headlong. By the way, this was the first time I've experienced the wonders of the GPS navigation system. We had only to touch a few numbers on a remote control and there would appear on the small screen in front of us the route we had to take from our present location to our destination! When we had to make a turn a tinny voice would tell us so! I was blown away. *How—how* is that possible?? How is such technology *possible*? Am I to believe that a satellite orbiting Earth is watching us, able to pinpoint our *precise* location and send us electronic directions through the atmosphere every half-a-second? I'm pleased that maps are going out-of-date, since I'm retarded at reading them, but I'm frightened that we humans are fast losing our ability to operate independently of machines—partly because independence is fun—as it's fun and satisfying to plan a trip while huddled over an old map uncrumpled on the kitchen table—and to have need of a (human) navigator in the passenger seat—and to have the stress of getting lost in an unfamiliar country and having to rely on your own wits to save yourself.

The companionship on this trip could have been closer, and would have been had we spoken the same language—and *wasn't*, I'd like to think, *only* because we don't speak the same language—but it wasn't *all* 'them against me':—we talked occasionally, joked a lot, suffered almost no awkwardness—though often I was pissed at being ignored by Eun-sung, who's less friendly and more moody than Hyo-jung—and whose *prima facie* unpretty face grew in ugliness as unpleasant character-traits manifested themselves—but she always returned to gaiety after the clouds had passed—as societies pass through upheavals and catastrophes like those that happened to Rome in 69 but always return to stability in the long run—the Shakespearean theme that's truer than his idea that murderers are tortured by their consciences—for they aren't, unless they're Raskolnikov or Macbeth—and that is, I suppose, why they become murderers in the first place. But getting back to the trip....what made the greatest impression on me was the Yakcheonsa temple, which we saw at night: its size was "heavenly" (to quote Schumann's judgment of the length of Schubert's last piano sonata), but that wasn't its most awesome aspect—or rather, *none* were, in isolation, for *all* its aspects—its size, its artistry, the gold leaf on the walls, the silence inside as old women knelt to pray on cushions and stood up to bow to the giant Buddha and knelt again and stood up again hundreds of times (literally), the semi-nirvana that washed over me as I washed away into nothingness and prayed and bowed myself to enter fully into the spirit of the place—all these things, taken together, were over-awesome and made the experience what it was—a sudden and shocking refascination with Buddhism, with escape from noise and strife, which those old crippled women had left behind them in the simplicity of their faith in those moments of undegrading, dignified prostration before the smiling idol on the altar—*so* dignified, *so* voluntary in comparison with the abject submission to God and Prejudice sermonized in most Christian churches, where there's a mediator between the high and the low (despite the pretensions of Protestantism) who somehow by his mere existence detracts from the human dignity (autonomy) of people who *could* have a direct relationship with nirvana if they so chose by worshipping in the cacophonous silence of temples rather than communally in the sanctimonious air of *good God-fearing citizens* being harangued by a holy fool who by forcing his own (bigoted?) ideas on them saves them from the hardship of having to work things out for themselves. I wanted to spend hours in the temple, but the girls wanted to leave after a few minutes. When I'm an old man—when the "passions of youth" have subsided and the time is right for tranquility—I'll write my own interpretation of Buddhism and become a revisionist Buddhist myself.

On July 9th Eun-sung is going to New Zealand for a year. I'll never see her again. Oh well.

Saturday, June 26

Returned to work today.
 Finished Tacitus's book. Reading *Frankenstein* now. Written when the author was 18 and 19. Her talent was unparalleled.

Tuesday, June 29

Drank with Sun-hyun after work. Conversation a little difficult. I like her a lot, more than most Koreans, but...oh, I wish she were fluent in English!

Frankenstein is annoying. That over-literary, over-ornate, gushing, *false* style of writing is hard to read.

I want to read more modern stuff. I want to know *what's going on*—what's *been* going on for the last sixty years. I just read a review of a collection of short stories by David Foster Wallace called *Oblivion*, and then I read various webpages about him, as well as excerpts from his frenzied and brilliant stories, and I realized that I'm living in a vacuum. I've been mimicking—and cheapening—the literary styles of dead white aristocrats whose talents are in any case beyond mine and, besides, are totally alien to this world that demands a different language, but one that I'd like to think could be more accessible and aesthetical than Wallace's overwrought and turbid albeit original and exuberant idiom that is peculiarly adapted to the fecundity of his mind, next to which my own has the creative power of soil tilled for a decade. No more! No more of “dappled the blank slate of consciousness in unharmonious hues” and “flaming tendrils licking the air as though consuming it” and any other sappy false romantic slobber.¹ No more, no more! Better Wallacean über-intellectualism than that Mary Shelleyan triteness.

Thursday, July 1

I bought *One Hundred Years of Solitude*, *Herzog* by Saul Bellow, and an anthology of poetry from the last six hundred years. Reading the first now.

Sometimes I think that irony is turning into a cliché. Our society has passed or is passing that stage. Even satire is...superfluous. Maybe sincerity is the way to go again. Maybe seriousness is coming back into fashion. D.F.W. thinks so. And if seriousness, maybe...dare I say it?...reform?...radical reform?...sometime in the near future, perhaps? Doubtful. But possible.

[...]

Wednesday, July 7

In the last few days I reread my entire Korean journal. As usual, I felt like I was reading about someone else. Not me. Some person who's sort of talented as a writer and thinker but just isn't fleshed out as *me*. It's a strange feeling, like a losing-touch with reality or a sudden epiphany that changes the way you think about things. Combined with my impressions from reading Marquez's book it's given me a perspective, a broad perspective, that's told me I'm preoccupied with something that doesn't warrant preoccupation: sex and romance. I mean, *who really cares?* Marquez treats sex as something casual, more than casual, almost a non-event, and he's right. Why have I insisted on being so *sensitive*? What's going on with me? I'm not a *victim*, not a prisoner with no options. If it bothers me I can stuff my wallet and take a taxi to a whorehouse. There's always a way out. Do I *like* wallowing in victimhood? Is that why I do it? No, I hate it, as far as I know; it seems forced on me. It's like, if you exert every ounce of effort there is in

¹ [Those quotations were from “Toward the Summit” before I deleted them.]

you to achieve something and you fail again and again and again you'll start to grow a little resentful and bitter, especially if you've done the best job you know how to do and it's better than most other people's who are more successful than you, you'll start to think a lot of it has to do with bad luck, as though the cards are stacked against you as they were against me in the poker game I played, and you'll get illusions in your head that always have a basis in fact but are magnified in those moments when you write down your thoughts (often only for aesthetic reasons) so that you come across as someone full of self-pity even though you know that's far from true and that you *hate* being a defeatist and that your instinct is to rise above it all but that you're hampered in acting on your instinct because for some reason your best-laid plans keep coming to grief. You know the whole time that there's an easy way to cheat and its prospect becomes tantalizing, but still you don't want to from rosewater notions of honor and the sanctity of your goal in its unbastardized form. But underneath it all you know that your problem is really just that you're looking at the world through a microscope that magnifies some things and minifies others, and that if you could attain a Marquezian lucidity marvelous for its unsentimentality you'd realize you're unfairly magnifying the significance of your goal as well as the harm in cheating. And then you work yourself into such a state that even *thinking* about any of this seems tantamount to making mountains out of molehills, and you give it up with a laugh.—

I have to agree with critics that *One Hundred Years of Solitude* is one of the greatest books of the twentieth century. I haven't read even half of it yet, but its greatness is obvious. It describes most things that are possible in life (and many that aren't), and that with perfect objectivity, without a single judgment anywhere. It's poignant but not melodramatic; it's tragic and comic; above all, it's humane. It's easy to read, unlike many great novels; its sentences are more poetic and haunting than those you'll read in most of the romantic authors (who think that poetry consists of aureate prettiness or emotional-aesthetic self-indulgence), not to mention realists like Tolstoy, Dostoyevsky, Dickens and Balzac. Marquez is a realist too, an uncompromising one, in that he presents vast stretches of human existence with unflinching honesty, exactly as they are, but he manages to inject his prose with a magical, naïve quality, partly because he dryly describes fantastic episodes like a priest's levitating by eating chocolate and an insomnia plague in a village, and partly because he has a gift for creating sentences that leave an aftertaste of *pith* in the mind, even if they aren't quite 'pithy' in themselves. And what an imagination he has!

Friday, July 9

Gym yesterday.

Last night Jim and I had dinner, drank a lot of soju, and went to a prostitution district near downtown. I'd suggested we go whoring, and, although he was worried about STDs (as I was, despite my condoms), he latched onto the idea. So we walked the gauntlet of ten or so prostitutes stationed on a two-hundred yard stretch of the sidewalk, who pulled our arms and basically begged for sex. That was the getting-oriented trip. Then we wandered through dark alleys for a while, wondering what to do. He was nervous and we both felt sleazy, and I thought it would be anticlimactic for my first experience to be with a hooker. [...] So we decided on a massage. Took a taxi to Chil-gok, where he lives; went to a massage parlor, where two women worked us over—massage and blowjob—my girl interrupted her BJ to tell me to hurry up and come!—and then she spent most of the time trying to talk to me, which made it hard to concentrate on the massage—which wasn't all that good anyway. At 3:30 I went home.

[...]

The cult of experience is bullshit. Experience? It teaches you to be callous; and when it finally happens it isn't that special anyway. The cult of innocence makes more sense.

Sunday, July 11

Ohh, the canicular heat of the Daegu summer!—the dead air, the sodden air!

Worked this morning. Was supposed to go to salsa this afternoon but took a nap instead. Energyless as usual.

Jim came over tonight, just got back from his trip to Seoul with his parents who are visiting him. He loved it there. Said we made a mistake in choosing Daegu to live in. I've always known that. [...]

Monday, July 12

Worked at Samduck today. The first class was a private lesson with a 23-year-old girl and her 19-year-old brother. I didn't care much about him—he said nothing, knew no English—but *she* impressed me. First of all, and most importantly for first impressions, she's possibly the most beautiful girl I've had personal contact with in Korea. Second, she speaks pretty good English, not great but not bad; third, although she's shy she isn't afraid to ask questions and talk; fourth, her personality's appealing. And she doesn't have a boyfriend. But wants one. At times our conversation was rather strained—to be expected—and I had moments of lostness and stupidity—to be expected—but an hour and a half went by pretty quickly and I think we enjoyed ourselves, even the boy. I tried to talk to him, and I tried to play down my love-at-first-sight for his sister, both with questionable success. I got her phone number, suggested we meet again, gesturing at her brother too as if to include him in the next meeting but secretly praying he wouldn't come. My God this girl is a bombshell. Her name is Joo-yun. I felt a surge of amorphous inspiration afterwards.

Tuesday, July 13

Writer's block for the last week or two. Almost done with Garcia's book.

I was reading the preface to *The Fountainhead*. Stunned, once again, by Ayn Rand's obnoxiousness and obtuseness. The misinterpretation of Nietzsche didn't surprise me—he wasn't a “mystic” and an “irrationalist”, but the opposite—in fact, none of it surprised me—but what made an impression on me, too much of one, so that it became redundant, like *The Passion of the Christ*, like being hit over the head too many times—even in those few pages—was the brutal insistence on the worthlessness of people who don't try to achieve greatness. ‘Only the great people, people like me, matter; the rest of you are contemptible revolting scum.’ It wouldn't have grown tiresome so quickly if it weren't such a trite and intellectually futile opinion. And self-aggrandizing. Her arrogance shone through every sentence. Even Nietzsche had the good taste to hide the size of his ego, except in *Ecce Homo*, but there he's magnificent and funny and eloquent, while Rand is boring and really has nothing to say. It amuses me that someone as intelligent as she could be self-deluded for an entire lifetime.

Wednesday, July 14

I have trouble with artists who subordinate art to philosophy, like Ayn Rand and Sartre and to a lesser degree Camus. It shouldn't be a medium for the communication of a philosophy. It seems less *serious* that way, less rich, less exuberant, less take-what-you-want-from-it, more *propaganda*. It can still be rich and satisfying, but behind the richness is its being an extension of a philosophical system and thus less dignified—not an end in itself, as it is or seems in most great artists. Art should really be a “stimulant to life”, subordinate only to *life*—and even then, in a way, above it—and to be a good stimulant it has to be chaotic and saturnalian, not systematic and lifeless (or utilitarian).

[...]

Wow it's extraordinary how lost I am. Not often has depression turned me into an insomniac. I just—can't—take it—any more. Fuck whores, fuck that idea. What a stupid fucking idea. [...]

If you don't already know what this is like you can't, and if you do, you do, so there's no reason for me to describe it. I know what it's like, and I'll *always* know what it's like, so there's no point in trying

to illustrate it with metaphors and images that I can read in fifty years so as not to forget what I felt when I was 23. I really want to, just because that's how I deal with pain, but out of consideration for the reader and my own legacy I won't. I want to ramble and ramble, write until I have no thoughts left, thoughts that pop up and pop halfway up but can't come out the whole way because they're locked in my repressed and repressing ego, or some other psychobabble that has no meaning for *me* anyhow because nothing does these days not even—not even myself. It's just a floating world, a floating future, the only certain thing of which is its uncertainty—yeah, even a floating past, it can be interpreted however you want and in the end nothing's certain except immediacy, immediate subjectivity, objectivity is Doubt, intense immediacy is all you can be sure of, and what is intense immediacy but love and, ya know, passion and all that nice stuff that's hard to take seriously on paper but hard *not* to in life. So I sit here and feel all this and you read all this and you think shut up fool I'm tired of your sensitiveness and I think yeah I'd feel the same way if I were reading it and tomorrow I will but *now* I can do only what I can do and this is all I can do.

Friday, July 16

Last night Jim called me at work, asked me to meet him and three of his adult students (two pretty girls) at Chilgok. I went to the school, waited for their class to end, and then we went to a pub. The Korean guy, a big, boisterous fellow, was enamored of Jim, couldn't stop touching him and saying how much he liked him. Pretty entertaining. I felt out-of-place, like an observer. The girls were too, but that's what girls do, so it was okay for them. Gary, a teacher in his 60's, came later—friendly, likable guy. We drank ddong-ddong-ju and soju till we were sufficiently foggy-headed to go to a *norae-bang*. I wish I knew more songs. Had to sing Billy Joel and a few others I could barely recall. We left at 2:00. The rest went home, Jim and I went to a massage parlor. His idea this time, since he knew of one that includes sex. It was basically the same old thing, the same mediocre massage given (this time) by a large woman (not unattractive) with callused fingertips. But after the massage she took off her underwear and climbed on top of me, and, well, the rest is history. My virginity, such as it was, is gone. I didn't know what to make of it. The sex itself wasn't different from what I'd expected. Wasn't spectacular, of course. It was nothing, really. A nice sensation—rather amusing—but nothing to write home about. I'm glad it happened, just so I can stop bugging myself about that 'knowledge of sex as the mass public's obsession'-induced sense of inadequacy that isn't. I wish it had been with Sofia when I was 21—would have been more meaningful—hell, I *really* wish it had been with Sangeetha, but that was out of my control—but I'll settle for the prostitute. I did, in fact.

So...that's it. Funny how life works.

In some ways America reminds me of ancient Rome at the end of the Republic. But there are too many differences to draw conclusions from that.

...Listening to the third movement of Beethoven's ninth and the second movement of Tchaikovsky's fifth symphony. Listen to it—the beginning—and there'll be no reason for you to read the rest of this entry. I'm sitting here in a kind of swoon of nostalgia for my fetal Platonic wisdom. The passivity that suffuses my mind and permeates the air around me, the languorous summer air, the troubled passivity born from incipient spiritlessness. When I turn off the lights and lie down in a restless repose amidst the silence I feel it. I was thinking that the worst thought is knowledge of contingency, and the best is that life's windings are necessary. The second is a comfort and a lie, the first a sorrow and a truth. What happens is contingent, and when you look back on your life at the end you can see only a string of *what-ifs* and *whys*, more a vacuum than a plenum, more a question than an exclamation, not death but not life. And you could look back and regret without end, pile regrets in heaps and stack them into a mountain on the summit of which you perch yourself, but that would be as foolish as asking yourself what it all meant and inventing a significance to tie it all in a bundle. Both are tempting, both are futile. Silence is the answer. When words fail you have silence to fall back on. Renunciation. When your ambitions crumble, as mine are in the process of doing, and you can't ground yourself in anything, and you feel like you've lived a dream, you can take comfort in abandonment and sleep and, as your consciousness is becoming fluid and more fluid, the

knowledge that this is what life is—*this is what life is*—and nothing can be done about it, and you've understood it by not understanding it, and there's nowhere else to go. In a way that's comforting. Renounce it all, if only for a moment.

Saturday, July 17

Still spending hours looking for jobs on the internet, preferably freelance writing.

Finished the novel. Writing a critique of it now, partly because I have nothing else to do and partly because of the satisfaction I'll feel upon finishing my first formal foray into literary criticism.

Sunday, July 18

Met Joo-yun for lunch. She didn't bring her brother, thank God. We were together until 4:00 (when I went to salsa). Had a good time. I can't say she seems terribly intelligent, but she's not stupid either. And she talks a lot—asks a lot of questions, doesn't let the conversation dry up. But I doubt this'll lead to anything special.

Monday, July 19

Last night Jim installed LimeWire on my computer, which, if you've lived under a rock your whole life like me, is a program through which you can download music and movies. It sucks up hours and days of your life if you let it. I wasted the night fiddling with it. Downloaded a lot of Eminem. Brilliant wordsmith. Vicious, but—whatever. Doesn't bother me, though it doesn't reflect well on him.

Work was good today. The kids liked me.

Monday, July 26

Conservatives versus liberals. It's startling how much one major political group can be in the wrong and another can be in the right. It's ignorance and prejudice vs. (comparative) truth and justice (with some exceptions). There's hatred of abortion and gay marriage, obsession with "values"—"family values"—religious fanaticism, defense of big business against the common man, obsession with the right to bear arms, fiscal irresponsibility, disregard of environmental problems....and then there's—common sense.

Tuesday, July 27

I ended the essay abruptly tonight after reading it and deciding I'd basically failed to communicate my ideas, or to communicate them in a way that doesn't make the reader think I'm so high on methamphetamines that any attempt to understand them is doomed. It seems to consist mostly of hints and suggestions each of which could be elaborated on for pages but which I glide over either because I don't have the discipline to do that or I don't know how or maybe both.

One Hundred Years of Solitude, by Gabriel Garcia Marquez, has been an object of almost universal reverence among reviewers, whose written reactions to it pullulate with superlatives and an intemperate use of vague but impressive-sounding words like 'magnificent', 'unforgettable', 'irresistible', 'fecund'. Bill Clinton called it the best novel in any language since Faulkner died. It has been translated into dozens of languages; it has been compared with *Don Quixote* and its Nobel

Prize-winning author with Cervantes; it is certain to be one of the enduring classics of the twentieth century. So the question naturally arises, 'What's all the hype about?' Once you've read it you ought to have a fairly firm intuitive grasp of the answer, but its complexity and richness are such that you may have difficulty not only giving a well-reasoned explanation of your admiration but also ordering your impressions and placing them in the tidy schema one desires whenever one finishes reading a thought-provoking work of art. The purpose of this paper is to help you with the task of assimilation and interpretation.

Now, in offering interpretations I might be assumed to be speculating on the author's intentions, but, strictly speaking, that is not my purpose. It seems a less dignified, more picayune endeavor to ask unceasingly 'What did the author mean here?' than simply to formulate your own ideas of what you think *should* be, or *could* be, the significance of the passage in question--because, after all, if you care so much about what the author was thinking you might as well just ask him and save yourself some time. Of course, wondering what the author meant is precisely one way to arrive at your own ideas, but as a *goal* of literary analysis (rather than a means) it seems fruitless and degrading, since it implies an exaltation of a *person* rather than of his creation--admittedly, a person with a privileged perspective and perhaps more insight than you, in that he *wrote* what you're only *reading*, but nevertheless a person whose interpretation is merely one among many and is not The Interpretation. Any work of art is independent of its creator, and a knowledge of his conscious intentions is at best a good starting-point for gleaning all that the work can say to us.¹ In regard to the justifiability of *praising* him for ideas and themes that a reader has imposed on the work it is indeed important to know whether he in fact had those ideas and themes in mind when he wrote it, because if he didn't it makes no sense to praise him for them²--though it *does* to praise him for having created a work that is rich enough to be susceptible of such and so many interpretations. However, this concern with praising and criticizing the author, as irresistible and sensible as it is, is really superfluous and has nothing to do with literary criticism, which is concerned only with the meaning and value of the *work* (and with the author insofar as his comments illuminate possible interpretations). Thus, I'll refrain from speculating on Marquez's purposes and making unnecessary judgments about his talents, confining myself to suggesting themes and meanings that can plausibly be read into the novel.

One Hundred Years of Solitude is, first of all, a history of a mythical town named Macondo, founded sometime in the 19th century by José Arcadio Buendía, his wife Ursula, and a group of young families who leave their old homes to embark on their adventure with Buendía. The story traces the growth of the village from a tiny settlement of twenty families to a bustling and prosperous town, and then its decline to a dusty outpost with hardly any inhabitants that finally succumbs to oblivion. On another level it is the history of the Buendía family, in relation to which all the action in the novel takes place. On a third level it is an allegory of human history, from its 'idyllic' beginnings (modeled after the Book of Genesis) to its extinction. This symbolism is clearly the main purpose of the book, and much of the action has a broad historical significance. To give only a few examples, in the beginning José Arcadio Buendía represents Eve, for he strives passionately to attain scientific knowledge, to become wealthy by mining for gold, to invent a powerful weapon of war, and to realize schemes the unbridled ambition of which is essentially the

¹ Psychologically it is difficult to separate the creator from the creation, partly because when the reader makes judgments like 'The purpose of this scene is...' and 'This character symbolizes...', the way he phrases them suggests the existence of an intelligence that originally intended the purpose of the scene (for example) and the symbolism of the character, and to which he must defer. But both implications are unnecessary. The judgment can as easily and more justifiably be 'The most aesthetically appropriate purpose of this scene, the purpose that *I choose* based on my knowledge of the rest of the work, is...', and in that case there's no omniscient authorial intelligence before which he must prostrate himself.

² In the actual practice of literary criticism it can be assumed that the author did have in mind most of the reader's ideas.

same force that will cause Macondo's loss of innocence and its eventual downfall. Ursula represents Adam, the archetypal character by whose homely industry mankind remains grounded in reality and doesn't succumb--at least not for a while--to the well-intentioned but ultimately pernicious plans of the dreamers who drive history forward. The whole book mirrors history in revolving around the dialectic between these two spirits (the first of which is embodied in the male characters, the second in the female--but especially Ursula). Another example is Colonel Aureliano Buendia's twenty-year-long civil war, the futility and destructiveness of which are obvious indictments of real wars. The meaningless political struggle between Liberals and Conservatives, which is, significantly, nothing but an *excuse* for the war,¹ serves the same allegorical purpose. The occasional impositions of martial law, as well as the slaughter of the three thousand workers at the train station, symbolize the evils of authoritarianism. The American banana company that invades Macondo, and through the harshness of its treatment of the natives it employs causes labor strikes and eventually (in a Conservative reaction) mass slaughter, is a portrayal of imperialism. The historical stage of industrialism is represented in the construction of the railroad. The constant necessity of the Buendias to defend their house against voracious red ants and termites, the threat of which intensifies at the end of the novel (when the town itself is falling apart), reminds the reader of the age-old battle between man and nature, as well as the knowledge that nature must triumph in the end--which of course it does in the book, when the ants finally disintegrate the house and the winds obliterate the town, thereby erasing the memory of man from the annals of time. Similarly, the characters are in some cases symbolic of universal 'types': José Arcadio is the restless, untamed adventurer, the 'proto-male', the hunter-gatherer; Colonel Aureliano Buendia is the Latin American dictator, the warlord, the man obsessed with glory and made brutal and solitary by his quest; Melquiades is the personification of timeless wisdom; Aureliano Segundo is the libertine, the glutton and the spendthrift; Amaranta Ursula is the sexually liberated, self-confident modern woman; Aureliano Babilonia is the hermitic scholar. Even the characters who don't seem to represent a 'type' are obviously symbolic on occasion: for example, Remedios the Beauty ascends to heaven because she is impervious to the temptations and passions of the world (despite the fact that they literally clamor after her) and thus lacks a distinctive mark of humanity.

The book's symbolism, however, is not always so cut-and-dried, and even the foregoing sketches are simplistic. The characters are not, as in the dramas of Goethe, merely representative types devoid of real life; they have too many idiosyncrasies and their fates are too involved. The same is true of the action: individual episodes are usually too particular to bear on universal themes in a clear and direct way. Practically every page furnishes examples. To approach the book with the idea of seeing in all the characters and all the plot some kind of deep and obvious allegorical meaning is not to do it justice. I made that mistake occasionally, misled by the few episodes that *are* clear commentaries on broad swaths of life, and as a result I found myself bewildered and uncertain of what was being said. When I tried to decipher the hidden meaning behind such incidents as José Arcadio Buendia's insanity and Rebecca's obsession with eating dirt and chips of whitewash off the walls I had so much trouble that in many cases I decided there *was* no deep symbolism, that these details existed only to give the characters depth and to make the story interesting. Most of the time they seemed thematically irrelevant. So I thought there was tension in the book between its macrocosmic allegorical plan and its microcosmic personal narratives. This seemed all the more likely in that it has at least three major levels of meaning. I was wrong, though. The plot of *One Hundred Years of Solitude* is not supposed to be like that of *Crime and Punishment* or *Anna Karenina* in always bearing *directly* on the overarching themes--or, to be more precise, in its details it is (generally) not supposed to be directly symbolic of abstract categories of real-life situations or to make judgments about them (as it is and does in its totality). Rather, it describes a

¹ Aureliano Buendia says at one point that the reason he's fighting is his *pride*. And he starts the war not as a Liberal but as a private citizen outraged by the murder of a woman, which, it so happened, was committed by Conservative soldiers.

separate world, a world that is an explicit and self-conscious symbol of discrete categories of *our* experience only in its outlines and in scenes like the massacre at the train station and Remedios the Beauty's ascension to heaven--scenes that have a 'universal', 'symbolic' feel to them, or to which symbolism can be applied fairly easily. The rest of the plot is there to create a world that only in the fact of its *richness* hearkens to ours. It reminds us that life is a subtle, morally ambiguous, comical and tragic phenomenon, that an awesome complexity characterizes the life of the collectivity and even of individuals and their families, that history is made by collisions between the most diverse types of people and events. The reader should not constantly analyze personal narratives to understand their 'deeper meaning'; they exist, on the whole, only to replicate the wealth and diversity of life. It would indeed be easy to draw facile parallels between the characters and vague archetypes like 'the religious bigot' or 'the star-crossed lovers' or 'the pedophile', but in most cases that would be pointless and contrary to the spirit of the book.¹ Even some of the examples given above are rather gratuitous than insightful. It doesn't much matter that José Arcadio can be considered to represent 'the adventurer'; what matters is the way his character develops, and the scope and complexity that he adds to the novel. On the other hand, the symbolism of Amaranta Ursula is significant because it tells the reader that the description of her is a description of the 'modern woman'. The reader must rely on his own discretion--his aesthetic sensibility--when deciding whether to apply such abstract symbolism to a character or a scene. Another example of an incident to which it can be related is Colonel Aureliano Buendía's gift of the Aztec shawl to Amaranta and the funny stories he tells after fighting his war for many years, which are "simple leftovers from his humor of a different time", and which draw attention to the demoralizing and transforming effect that the war and glory have had on him and thus tie into the thematic condemnation of violence. On the other hand, Aureliano José's passion for Amaranta doesn't seem to have an obvious 'thematic' significance besides its contribution to the book's realism.

Thus, there is no tension between the concreteness of the characters and the vast allegorical sweep of the novel, between the seemingly opposed imperatives of uncompromising realism and symbolism, because there are two types of symbolism: it can be a 'hidden meaning' behind the words--behind individual episodes and characters (in which case the text is less concerned with being perfectly and impartially realistic)--a hidden meaning pointing to, and saying something about, classes or aspects of experience; or it can be a simple, judgment-free reconstruction of reality (that doesn't break up experience into classes but acknowledges its fluidity and reconstructs *that* instead). *One Hundred Years of Solitude* makes use of both, but it places an emphasis on the second. Many scenes apparently lose themselves in the story (so that it feels like you're brutalizing them if you force some kind of allegorical 'meaning' on them), but that isn't a flaw because in their aggregate it allows them to recreate our world without bias, objectively. One of the reasons why the second type of symbolism seems more prevalent than the first--why episodes seem to "lose themselves in the story"--when you read the actual sentences is that they embody a seamless realism that almost never pauses for philosophical or psychological reflections and almost never includes judgments about what is happening in the story. Sometimes judgments are buried in the sentences, barely noticeable, as in the example given above of Colonel Aureliano Buendía's gift to Amaranta, but even that is rare. Most of the time the book just *describes*, and the author's thoughts and biases are absent. The reader gets the impression that to impose an easy symbolism on most of the plot is to be *crude*, not to appreciate the book's subtlety, not to treat it as it *wants* to be treated, so that most conjectured 'meanings' behind characters and incidents feel forced and unnatural. One of the measures of the book's greatness is that despite its epic scope, which encompasses six generations and the communal life of a town, each character has a complexity that forbids simple interpretations, a complexity that mirrors life.

Another measure is the 'haunting' quality of the sentences, which exists, in part, precisely because of their remarkable objectivity. The literary style of the book has been called "magical

¹ See the next paragraph for what I mean by 'contrary to the spirit of the book'.

realism”, because unbelievable events are related in the same “brick-faced” way as ordinary ones. An insomnia plague in Macondo is treated like something common and unexciting, as is a priest’s levitation after eating chocolate, as is a gypsy’s making himself invisible by drinking a potion. Its combination of exceptional realism and a plot that includes miraculous events sets *One Hundred Years of Solitude* apart from other novels I’ve read, and it makes the novel itself unreal and magical. But what thematic purposes does the inclusion of supernatural events serve? For one thing, in giving the book a mood of fantasy it lays across all human history a halo of unreality. If the novel is a dream--or dreamlike--so is our world. One quality of dreams is transience; another is a delicate equilibrium: both of these qualities are transferred to humanity. History becomes a brief, miraculous but tragic affair, full of hope and beauty but, as it turns out, destined to end in misery and ignominy. Our last descendants will, like Aureliano Babilonia, finish deciphering the parchments we’ve left behind at the moment when the “city of mirages” (our global civilization) is being wiped away by winds,¹ to be forgotten for eternity, as if it had never happened. This is the main thematic reason for the book’s “magical realism”, though other reasons can be thought of. (For example, the equality of the amazement with which Macondo’s citizens greet wonders of technology and wonders of magic tells the reader that really it is arbitrary for him to believe in the first kind and laugh at the second, and that technology (and the natural world) itself is remarkable and beautiful. Thus, the greatness of our potential highlights the tragedy of our fall.)

Closely related to the use of magic is the vague sense of time in the novel (which is another reason why it’s so haunting). Although on a broad scale it’s clear that time is progressing conventionally--linearly, year after year--on smaller scales the book is reminiscent of Melquiades’ parchments, which “[did] not put events in the order of man’s conventional time, but concentrated a century of daily episodes in such a way that they coexisted in one instant.” It is often impossible to tell over how many months or years a particular episode takes place, and even *when* it’s happening, for events continually overlap. The tenuousness of this reality calls to mind Ursula’s idea that time is progressing in circles, that it keeps returning to earlier points. She realizes that fundamentally her family does not progress; themes recur, the same failings appear again and again. Macondo experiences a historical progression, in that it starts out as a primitive village and gradually absorbs technologies and cultures and increases in complexity; therefore, the book’s macrocosmic structure incorporates a linear notion of time, appropriate to the fact of Macondo’s historical development. But within this general ‘linear’ background--primarily in the life of the Buendia family--is temporal repetitiveness, temporal ambiguity, temporal uncertainty. José Arcadio Buendia goes insane when he decides that time is no longer passing, that it has stopped, that the world is locked in a perpetual Monday. He perceives that recently there has been no change in the natural world; likewise, history brings no real changes in the human world, in how people interact, in what they think and feel. People remain essentially the same generation after generation; what changes is the technological and thus ‘social’ backdrop against which they act, and that is why ambitions that failed once may succeed later, and catastrophes that didn’t happen in the beginning happen in the end. Because the Buendia family represents concrete humans, the building blocks of society rather than society (and history) itself, temporality on its level is muddled and circular and abstract, overlaps itself and never seems palpably to *pass*; things don’t happen in an obvious succession but instead have a dreamy quality, in that they seem to happen at the same time as one another. *This* dreaminess, incidentally, is reminiscent of the *magical* dreaminess: the two reinforce each other.

The rest of the book’s symbolism I’ll let the reader interpret however he wants. The purpose of this essay was only to sketch a few general themes and lay a basis for whatever detailed meanings may be read into the novel.

Pretty funny ending. A dejected ending.

¹ It’s significant that wind is the most ‘magical’ and ‘ghostly’ or ‘ephemeral’ destructive force in nature.

Sunday, August 1

I just made the somewhat idiotic and desperate move of paying \$200 for a detailed professional analysis of my screenplay.

Yesterday I went on an outing with some teachers and two new guys—linner, then bookstore where I almost bought *The Elegant Universe* but decided not to because these days my focus is literature and reading *that* would be a waste of time and I'd forget it all so I'll read it when I enter my science phase, whenever that is, so I bought *The Unbearable Lightness of Being* instead, then worked out at the gym, then went home alone, but Jim called me to call me back to them at the bar, which was okay until I drank so much that I hurled in the bathroom and left in a stupor without saying bye to anyone and walked home, where I was sick all day today in bed. Looked closely in the mirror for many minutes and saw eyes that looked back at me deadly, tired baggy eyes that have cried too much and will cry too much and cried then too much because my resistance falls off me when I'm sick and the scruffy tired face that I realized was mine startled me and I thought this is how I'll look when I die. Don't care much now, the past doesn't matter and I can forget about it, it's the future that worries me, the abyss of the future. But I'm fricking hungry but it's too late to eat anywhere.

My narcissism¹ bothers me and makes me constantly doubt the sincerity of my friendships and their durability because I can see Jim and the others throwing me away if they knew how "lame" I am how lame self-involved and weak. Or maybe it's just my depression speaking, my tears, and I'm really wrong. All I know is that I fear I lack something most people have, don't know what it is but it has something to do with the ability to love and be close to people and get past all the doubts.

I read the first pages of the novel. Insightful interpretation of Nietzsche's eternal return that I hadn't considered. Kundera's right that nothing matters in a world of transience where everything happens once, and "everything is pardoned in advance and therefore everything cynically permitted". It's all over after it's happened, so it doesn't matter anymore. Time takes away the meaning from everything, as I've said before. But if that's true it makes no sense to care more about a society to come than this one and to use that as a justification for what's done in this one, because the society to come will end too, though we tend to think of it as somehow more permanent or important than this one. I guess if the "long run" lasts longer than the present it isn't totally senseless to use it as an excuse (for the war in Iraq, for example), because in that case more people will benefit 'later' than are suffering now—but the problem is that the long run is never here, it's always in the future and so there's always an excuse for unending misery. But that reasoning taken to its conclusion would condemn all pain suffered for the sake of the future, which is too extreme a condemnation. But when the pain isn't chosen but imposed the conclusion probably holds. So our Iraqi venture isn't morally justified. But neither is inaction when people are terrorized as they were by Saddam. [...]

Wednesday, August 4

It's pathetically easy to reverse hierarchies of values, as Nietzsche did and postmodernists like to do. To argue for the 'other side': to show that strength is actually weakness, arrogance is actually insecurity, progress is actually regression, genius is actually immaturity, love is actually selfish, and to invent a thousand other 'actually's that may be interesting in the beginning but quickly become banal.

¹ Whenever I use this word I mean it in something like Christopher Lasch's sense (if I remember), namely as denoting a fixation on oneself that is closely related to excessive self-doubt mixed with excessive self-love, as well as the desire to be the center of attention (and yet, sometimes, a dislike of being the center of attention). Other authors associate it with a hugely over-inflated ego, a love of lying (even to oneself), a charismatic personality, a lack of empathy, social exploitation of others, envy, haughtiness—none of which applies to me.

Friday, August 6

Gym. Dinner alone. Don't want to go out tonight. Too tired.

...Nights are hard. So hard for me. All the pain that's repressed during the bustle of the day pushes its way to the surface. And there's nothing I can do. Can't sleep, can't write, can't think except to regret and panic. My problem is neither that life is unbearably light nor that it's unbearably heavy: it's both. It's heavy because it's my only life—every moment is heavy because it's gone—it's irrevocable—and I feel under constant pressure to *live*; but life is light because it's all luck, contingency, it's meaningless; and its lightness makes it even heavier, increases the pressure on me, highlights the burden of time and the necessity but impossibility of triumphing over chance. I have the feeling that no matter what I do after I leave Korea—and I really haven't any idea where I'll be two months from now—I'll regret it. Kundera is right that life is essentially a rehearsal for itself, which is the comedy and the tragedy of it.

My ambitions, which are as boundless as the sky and as undefined, have always conflicted with my knowledge of my own limitations. That adds to the weight I have to bear. Basically my existence is founded on conflicts and schisms—within me, between me and the world, and between the world and itself (I internalize those conflicts and they're reproduced in my psyche, in my dreams and thoughts and confusions)—but in the absence of these conflicts I'd have no reason to live, so in a way I'm grateful for them, though I also hate them and am driven to despair by them. My life is one great hunk of metaphysical weight, made heavier by its infinite lightness.

Nevertheless, I'm comforted by Oscar Wilde's claim—made when he was in prison, after two years of soul-crushing isolation—that he'd rather be a prisoner than a businessman. I too would rather experience these moments of intense, painful beauty than go out with everyone and get drunk. I've done that, and I've even liked it, but right now I'd rather be here.

Sunday, August 8

The Unbearable Lightness of Being is unlike other novels I've read in a lot of ways. I like the philosophical digressions that aren't really digressions because they fit so well into the self-consciousness of the book and its being a “novel of ideas” rather than characters and plot—or characters only insofar as they illustrate ideas. I love the discussion of kitsch. But at times (like in part 7) the writing is pedantic and plodding—labors the point—does too much explaining. But the end is touching. The two main characters find happiness—they wish for repetition,¹ which (wish) is how Kundera defines happiness—wish for the repetition of their life in the countryside, its eternal repetition, because they're together and away from the vagaries of chance and they've finally found peace. So Kundera says that although we can't live again and again eternally and thereby have a ‘weighty’ life, if we *desire* this situation forever we'll escape from unbearable lightness and find meaningful happiness. (= Nietzsche) And he says also that although the path our lives take is horribly contingent, contingency can lead us to happiness, as it did Tomas and Tereza, even if it forces us to abandon what seems to be the “*Es muss sein!*” of our fate, as Tomas was forced to give up his destiny of practicing medicine by a series of chances that started with Tereza's arrival in his life. Indeed, such chances can conceivably make us happier than following our inner imperatives can—as Tomas was unhappy being an “epic womanizer”, even if he was addicted to it. But T. and T.'s life together was governed not only by lightness but also weight, by constant doubts about each other's love, by unbearable pain (in Tereza) and unbearable compassion (in Tomas)—and hence both lightness and weight were essential in guiding them to happiness. On the other hand, Sabina was forever unhappy with her ‘light’ life, her betrayals and lack of lasting attachments—and Franz was unhappy with the weight of his loyalty to Sabina's memory, the weight of his love, and in the end it caused his death. So Kundera's answer to the

¹ That's the meaning of the butterfly flying in circles around their room.

question that opens the book—Is lightness better than weight or vice versa?—is that neither is better: both can be bad and both good, both are risky, and both are necessary in order for us to achieve happiness. But happiness itself is more like heaviness than lightness—meaning than meaninglessness¹—and so the two happy lovers die “under the sign of weight” (by being crushed under a truck).²

Now that I think about it, it’s truly a beautiful ending and a beautiful book. Philosophically more fertile than Marquez’s, and equally symmetrical, though not as well-written. Its poetry is in its ideas and the ways they play out rather than its sentences. I should have written a critique of this book instead of the other one.

Lately I’ve woken up a few times and been unable for two minutes to lift myself an inch off the bed. Still very groggy, I am physically unable to raise myself. I am, in fact, paralyzed, as though trapped under something incredibly heavy. I panic and exert a tremendous effort to move, but it’s useless. The experience is terrifying like nothing else. Finally, by sheer force of will, I succeed in lifting myself. I can’t even begin to imagine what it must be like to be *really* paralyzed.

The children cackling like jackals buzzing around carrion make me hate children and doubt I’ll ever want to have one not only because of the clatter but also their living in filth and the having to deal with dung and piss and all the shit that my kitschy life is organized to deny.

Thursday, August 12

Gym yesterday.

The review of my script was mostly negative. A lot of its criticisms I was already aware of. The writer thinks that in order to make it more dramatic I should focus on Marx’s early years and his development as a character. Since he stayed the same guy for the rest of his life he gets a bit monotonous in the script. And there has to be something driving the action, some thread around which the story is organized. That’s the main thing that’s always bothered me about it. If I hadn’t written it when I was only 19 and with no prior experience I would have made sure to clarify that all-important element.

Had dinner with Sun-hyun after work. On Sunday we’re going to a national park somewhere (with her friend). She’s applying to be a flight attendant—has already submitted (unsuccessful) applications—so tonight she asked me to proofread her cover letter and resumé. At dinner I edited the latter; at home I totally rewrote the former.

[...]

Sunday, August 15

If I ever put an end to the celebration of pain that is called my life, my journal will be my suicide note.

Sun-hyun called me at 8:30 this morning, when I was supposed to meet her. I was still asleep (having got to bed at 5:30). Threw on clothes and ran to the meeting-place. We met her friend, Eun-ran, and took a bus to Juwang Mountain National Park. The friend was—how can I describe her?—she was *eine kleine Nachtmusik* of a girl who spoke decent English. I was happy being around these two fine examples of nature’s craftsmanship, and two wonderful human beings, as far as I can tell. My happiness gave me

¹ But it’s a ‘light’ meaning, not a heavy one. A simple acceptance and love of the way things are. Living according to a “mission” (like Tomas’ medical vocation) would be a heavy meaning, and Tomas condemns the idea.

² Obviously another reason for the nature of their death is that the unbearable type of weight is what characterized most of their life together.

energy and they obviously had fun too. We ate lunch outside a restaurant in the park—beneath the beaming sun in its “cloudless clime”—and then hiked along the mountain trail for hours. Nice scenery, but Eun-ran was the object of my attention (though I didn’t let that show). She flirted with me shamelessly despite her shyness and eventually led me to believe she was attracted to me. In America her behavior would have screamed “I have a desperate crush on you!” By the end of the day I was looking forward to asking her out—a little worried about the language problem, but hopeful that that could be forgotten through passion. I was developing a dangerous fondness for her—she’s so “sweet”!—and constantly wanted to sweep her up in my arms and lock her lips against mine, but Sun-hyun was with us so I couldn’t. I settled for imagining the happiness of that kiss. We took a bus back home at 6:00; slept part of the way. (Three-hour trip.) Suddenly I awoke from my doze to hear Sun-hyun telling me “We have good news!” Oh yeah? I thought. Only if it’s that Eun-ran wants to see me again tomorrow. “Eun-ran’s boyfriend is picking us up at the bus station!” Oh. Even better. Yeah, that’s good news all right. “Great!” I said mechanically. “That *is* good news. Good.” I turned away from them and pretended to fall back asleep. The pressure that had been on my chest for the last four hours, the pressure of desire, changed into the pressure of heartache. I grew very sad. Gave up initiating conversation and sat there hopelessly. Then more passengers came and Eun-ran had to move over to my side of the aisle, but I still didn’t say anything. At last she said something and we started talking about movies, and I mentioned Michael Moore’s and launched into a diatribe about the current factious but fascist state of America, masking my bitterness as cultural outrage. Later we had a more intimate pseudo-conversation about our private lives—especially mine—resting our heads against the back of the seat and looking into each other’s eyes dreamily—or what would have been dreamily in any other country—and then I gave it up and stared out the window. Finally we arrived. Walked to her boyfriend’s car, and went home. In my room I couldn’t hold it in longer. The tears were excruciating.

Today I kept thinking ‘Finally maybe I have something that’ll get me through the next month, something that’ll make me happy.’ I was excited even though I knew it probably wouldn’t work out. I told myself that but I didn’t want to *feel* it, so I made myself emotionally vulnerable.

Monday, August 16

Dreamt about her of course and still feel miserable but have to work. Soon I’ll invite Sun-hyun to dinner to talk about my problems because I need sympathy as a plant needs sunlight. Two days ago after a lot of introspection I decided to apply to the Washington Internship Program that costs a shitload of money and doesn’t pay me any but through which I’m “guaranteed” an internship of my choice which would be in journalism but which I doubted I had the energy for being so depressed and loathing the prospect of getting up early everyday and interviewing Congressmen and having to write two articles a week and being under constant pressure but I decided I wanted to do it anyway for the “experience” and to see if I liked it but now I’m not so sure anymore because my depression just jumped to a new level and I think that in order to have the necessary inspiration to carry out that job I’d have to have a girlfriend first even if only for a month and even if I won’t see her again after leaving Korea.

[...]

Tuesday, August 17

And no, this year wasn’t a waste. Nothing’s ever a “waste”, but a year spent in a foreign country at a job one has never had isn’t even *remotely* like a waste. It’s hard to pin down in what ways I’ve truly benefited from it...but it hasn’t been entirely bad—and I’ve broadened my perspective on the world (as ho-hum as that sounds)—and I’ve earned the money with which I can live in D.C.—and my ‘inner being’ feels more mature than it felt in September. Etc.

Thursday, August 19

Hyo-jung called me today. We had dinner. Discussed Korean women. She confirmed my impression that even if I spoke their language perfectly, they'd be wary of dating me just because I'm a foreigner. On the other hand, if I were a Korean man, even an ugly one—as most of them are—it would be a cinch to date women all the time. There'd be nothing to it. It's easy to be envious of those guys, those jerks who don't appreciate their women and treat them badly, but I imagine that if I were in a relationship with cuteness personified I'd lose interest sooner or later, because when cuteness is personified that's all the person is. [...]

The human spirit is truly a meisterwerk. You can feel old and ready to die, certain you'll never be happy again, but in the blink of an eye you can be ready to seize life and celebrate it.

Saturday, August 21

I'm worried about Jim. For the last week he's felt so fatigued he's been worried he caught HIV from the masseuse. He took a test and the result was negative, but it can take six months for the antibodies to appear. I saw him on Thursday and he looked fine, but now I hear he didn't show up to work yesterday and today, he's moved to his sister's home at the army base and he hasn't called anyone. His phone doesn't work, so no one can call him. Unless some new development has occurred there's no reason for him to go to such extremes—so maybe there's been a new development.

In retrospect I'm surprised we were stupid enough to do what we did.

Went to a DVD room with Bobbi, Eun-jung and a new teacher named Chris, a friendly guy my age. Watched a Korean romantic comedy, one of the worst movies I've seen in my life. The popular phenomenon of obnoxious, insipid slapstick comedies that have characters with whom it's impossible to sympathize supports my impression that Korean culture is in some ways at the stage of America in the 1950s. It's interesting to observe the paths that collective consciousness follows, which in their broad strokes seem preordained because countries developing at different speeds nonetheless experience the same progression from unsophistication to a more nuanced and critical understanding of the world, which may include an increase in forms of activism, and then to cynicism and apathy, which may be punctuated by outbursts of fanaticism that are actually manifestations of lostness and despair. On one side of the Pacific is the interaction of a sort of 'earlier' collective consciousness with modern conditions and ultramodern consciousness—which (interaction) is of interest in its own right—while on the other side is the future of this society, more or less. The past and the future coexist, united by the similarity in material conditions and the trappings of government but essentially at different historical stages—which makes genuine cultural understanding between them difficult. They have very different outlooks on the world.

Sunday, August 22

[...] Late at night. It's raining, it's been raining all day. A cold, sad inundation from a gray sky, cutting us off from one another. Outside somewhere someone is wailing, a prolonged moan utterly without hope. It goes on and on. The voice is sexless. No sense of urgency, just a quiet articulation of a soul's agony.

I slatterned away the whole day. —Okay, enough. I've wasted too much time lately. If I'm too cramped in this city, this country, this job, this room to create anything of my own, I'll at least treat my mind as a receptacle for something more estimable than jokes on Comedy Central. (Been watching the *Daily Show*.) I've skimmed passages in the poetry anthology I bought; from now on I'll read it systematically and write memory-buttrussing comments in this 'ere journal.

The selections from William Blake don't much resonate with me. His language isn't as elevated as

Byron's (and Keats's), though the sentiments are more so. Too many trite rhymes, occasionally too ponderously metaphorical (as in "To Spring"). I don't mind the nature-worship—I like nature, nature's nice—but it's dangerous in that it degenerates easily into simplistic schlock. I guess it made sense in those times, but it tends not to age well (unless expressed by, e.g., Keats). Sure, I like sunflowers that strive after sweet golden climes, and lambs are indeed blessed by God, and tygers are fearsome creatures when they burn brightly in the forests of the night, but....this all reminds me of *René* (if I remember rightly), a mite too much so. But Blake is no Chateaubriand, and he manages to avoid raving romanticism. Simplicity is his thing (in these short pieces)—no excess (or very little). So: kudos, William! You're not Keats, but you're not bad.

I have nothing against promiscuous women. If it's okay for men to be sluts, then it's okay for women. Nor will I judge prostitutes. What a waste of mental energy. They can do what they want. The world is too ambiguous for me to judge anyone other than people who judge.

Monday, August 23
